Burgmüller, Johann August Franz (*b* Magdeburg, 28 April 1766; *d* Düsseldorf, 21 Aug 1824). German musical director and composer. Burgmüller's father intended him for an academic career, but a love of the theatre drew him into stage management. At 20 he held a post as theatre director in Weimar and subsequently obtained similar positions in various south German centres. In 1805 he married Baroness Anne Therese von Zandt and settled in Düsseldorf the following year, remaining there until his death. He founded the Lower Rhine Festival in 1818, an important event in the German musical calendar to this day; and while principally an organizer and director, he also found time to compose many songs, sacred pieces and stage works, some of which (e.g. the Singspiel *Das hätte ich nicht gedacht* and the incidental music for *Macbeth*) contain elements of Romanticism. His sons Johann Friedrich and Norbert became prominent composers and pianists. Friedrich settled in Paris after 1832, where he established himself as a fashionable writer of songs of little merit, descriptive piano studies mostly intended for children, and stage works including a ballet, *La péri* (1843).

RICHARD KERSHAW

Burgmüller, (August Joseph) Norbert (*b* Düsseldorf, 8 Feb 1810; *d* Aachen, 7 May 1836). German composer and pianist. A son of Johann August Franz Burgmüller, Norbert possessed far greater ability than his father or his brother Friedrich, but lacked their ambition and worldliness. One of his early patrons was Count von Nesselrode-Ehreshoven, who brought him to his estates near Kassel after his father's death and had him educated there. From 1826 to 1831 Burgmüller studied composition with Moritz Hauptmann and Spohr, his most important teacher.

During these years Burgmüller made frequent appearances as a pianist and composer, for instance performing his Piano Concerto op.1 in January 1830. The following year he moved to Düsseldorf, hoping to obtain a permanent appointment in the flourishing musical atmosphere of that city, but the project came to nothing. He was suffering very frequent epileptic fits at this time, and his decline in social status began, partly because of financial problems but also because of the reclusive life he led, remaining in contact with only a few close friends including the poet C.D. Grabbe.

Burgmüller's compositions attracted an increasing amount of attention, and won the approval of Mendelssohn, who performed his Symphony in C minor op.2, among other works. But his social situation remained insecure, and he was considering moving to Paris when he died of an epileptic fit while staying at Aachen to take the waters. In an impassioned obituary, Schumann wrote: 'Since the early death of Schubert, nothing more deplorable has happened than that of Burgmüller' (*Gesammelte Schriften*, 111, 145), and a funeral march composed by Mendelssohn himself (op.103) accompanied him to the grave.

During Burgmüller's short career his musical language underwent a remarkable development. Whereas the chromaticism of the early string quartets (op.4 and op.7) reflects not only his passionate Romantic feeling but also the influence of his teacher Spohr, he soon moved on to a classical fluency of style which also marks several of his songs. On the other hand his Piano Concerto op.1 in F♯ minor, a key seldom previously used in an instrumental concerto, is notable for its large-scale form, particularly in the very expansive orchestral introduction, and is not solely designed for brilliant virtuosity. The same formal expansiveness distinguishes the Symphony no.1. The Second Symphony (in D major) remained unfinished. The finale breaks off after 58 bars, and Amalie von Sybel, in a letter to Karl Immermann, wrote that Burgmüller had 'not been able to find' the continuation of the finale, and that it was 'half comical, half moving, to hear him answer enquiries with the words: "It's not come yet".' Schumann applied himself to this work during his years in Düsseldorf; he orchestrated the scherzo and thought of completing the finale, but gave up the idea.

In the second half of the 19th century several of those who championed music of the school of Mendelssohn and Schumann tried to reintroduce a number of Burgmüller's chamber works, songs and overtures into the repertory, as well as his two symphonies and the very substantial Rhapsody for piano op.13, which anticipates Brahms. They also had some of his scores printed for the first time, but Burgmüller's music has really been rediscovered only in 1986 in connection with the 150th anniversary of his death, and with more intensive research into the early 19th century.

MATTHIAS WIEGANDT

Burgo, Cesare. *See* BORGO, CESARE.

Burgon, Geoffrey (Alan) (*b* Hambledon, Hants., 15 July 1941). British composer. An early ambition to become a jazz trumpeter gained him entry to the GSM, London (1960), where he studied composition with Peter Wishart and trumpet with Bernard Brown; he later studied composition privately with Lennox Berkeley and received the Prince Pierre of Monaco Award for his *Five Sonnets of John Donne* in 1968. He abandoned his career as a freelance trumpeter in 1971 in order to concentrate on composition, providing scores for BBC television and ballet companies, and achieving his first major concert success in 1976 when his Requiem was performed at the Three Choirs Festival in Hereford. Later television scores earned him considerable popular exposure: the Nunc dimittis from *Tinker, Tailor, Soldier, Spy* (BBC) entered

the UK pop charts in 1979, while the soundtrack album from *Brideshead Revisited* (Granada) achieved gold status. His output of concert works remained prolific, and in 1992 he was composer-in-residence at the Bury St Edmunds Festival.

Burgon's early stylistic development was influenced by both medieval music and the Balinese gamelan (the latter celebrated in *Gending*, 1968), while his incidental music at times reveals the influences of Britten and the earlier English pastoral school. The unusual accessibility of his idiom, in which expressionistic boldness can co-exist with strikingly simple material and a broad melodic appeal, has remained constant since his early works for children and amateurs in the 1960s. His interest in metaphysical and mystical poetry inspired a series of song cycles to widely contrasted texts, many of which feature the countertenor voice: among the most intense are his settings of the Renaissance Spanish poetry by St John of the Cross (*Noche oscura*, *Canciones del Alma*, *Veni spiritus* and the Requiem).

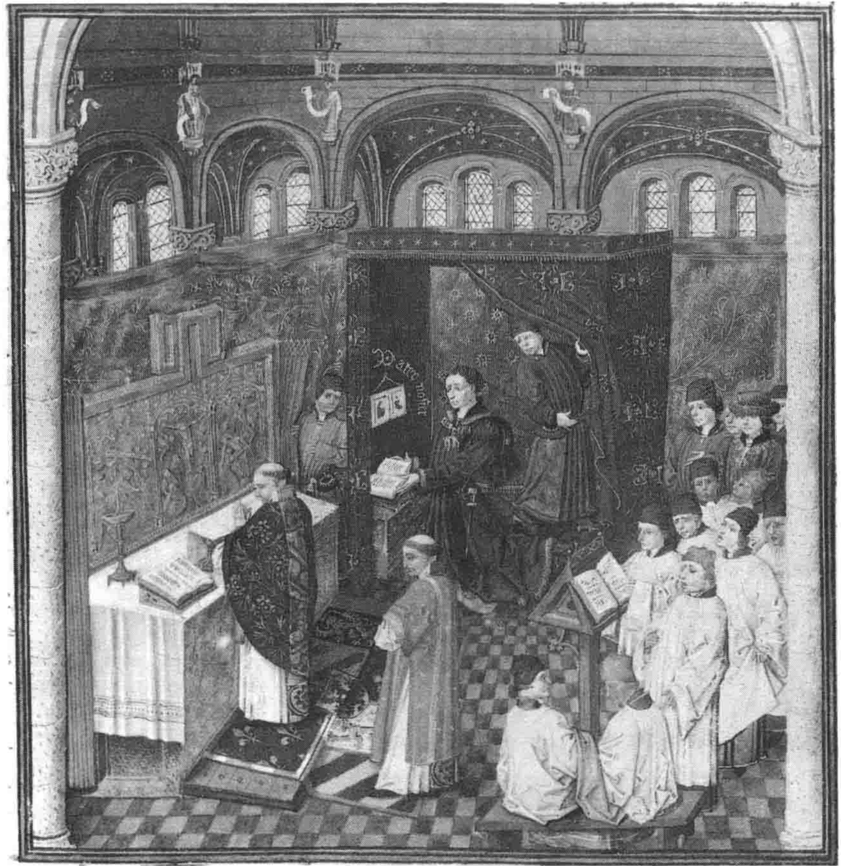
Burgundy. French region, south-east of Paris. During the Middle Ages Burgundy was successively a kingdom (*c*500–800), a group of counties (800–956) and a duchy (956–1477). Under the dukes of Burgundy of the house of Valois (1364–1477), the Burgundian domain became the most powerful political entity in western Europe (fig.1) and the Burgundian court a centre of musical activity. The importance of the dukes of Burgundy as patrons of music was such that the entire era has come to be called 'the Burgundian epoch' and the composers of the period 'the Burgundian school'. These designations do not mean that music or musicians native to Burgundy were important. The Burgundian court was a cosmopolitan centre, French in language and culture, and the music that emanated from it was international in style.

For music history, the term 'Burgundy' is geographically misleading. It is important to note that the 'Burgundian era' in music had almost nothing to do with either the Duchy of Burgundy (with its capital in Dijon and a major residence in Beaune) or with the adjoining County of Burgundy, also known as Franche Comté (with its capital in Besançon). Initially the dukes were mainly resident in Paris; and their culture was entirely French. But with the onset of political difficulties surrounding Duke John the Fearless the centre of activity moved to the richest acquisitions of Philip the Bold, namely Flanders and Artois; after about 1410 the Burgundian court was almost permanently resident in the Low Countries, though the dukes were normally buried in Burgundy and they retained an accounting office there (which became subsidiary to the far larger accounting office at Lille established in 1419). When Philip the Good annexed Brabant, Hainault and Holland, he had amassed a formidable economical entity that also had considerable political power, since he owed allegiance to the King of France for some of his lands but to the Emperor for others.

For this reason, the grand flowering of the 'Burgundian' era in music happened in the courts at Lille, Arras, Bruges and (from about 1430) particularly Brussels – then, as now, a reluctantly French-speaking city within a thoroughly Flemish area. The chapel singers were almost all drawn from the great churches of the Low Countries. That is why the word 'Burgundian' has been a continued matter of dispute among musicologists, many of them preferring terms such as 'Franco-Flemish', 'Netherlandish', 'Low Countries', 'Flemish' or 'Northern'.

The domain ruled by the dukes of Burgundy was a patchwork of disparate territories and not a geographical unity (fig.1). Philip the Bold (1364–1404), the first duke, formally received the duchy of Burgundy from his brother, King Charles V, in 1364, and by marriage he added to it the county of Flanders with its wealthy commercial centres of Ghent, Bruges and Ypres. John the Fearless (1404–19) maintained and consolidated the Burgundian holdings at a time when France was being dismembered by the events of the Hundred Years War. Holland, Brabant, Hainault, Limbourg and Luxembourg were added to the patrimony during the long reign of Philip the Good (1419–67). A precipitate attempt by Charles the Bold (1467–77) to seize new territories between Burgundy and the Low Countries led to his untimely death at the battle of Nancy (1477). The duchy of Burgundy was then annexed to the French crown lands, but the Burgundian possessions in the Low Countries were passed to Charles's daughter and only heir, Marie of Burgundy (1477–82), and ultimately to her son, Philip the Fair (1482–1506).



Such an illustrious dynasty naturally supported a large, resplendent court. The dukes patronized music on a munificent scale and took a personal interest in the art. Charles the Bold, for example, played the harp and is said to have composed chansons and motets (Fallows, D1978, pp.300–24). The musical institutions the dukes maintained consisted of two totally separate forces: a chapel and an assemblage of minstrels.

The chapel of Burgundy was first organized by Philip the Bold in the spring of 1384, and by the time of his

1. Map of the acquisitions of the dukes of Burgundy up to the death of Charles the Bold, 1477

death in 1404 it had grown to 28 in number, surpassing in size and splendour the chapels of the king of France and the pope of Avignon. Eight of the new Burgundian singers were engaged from the household of the recently deceased count of Flanders and eight others directly from the papal court. After his father's death Duke John the Fearless was forced to disband the organization, although he did maintain three to five choirboys under the direction of Johannes Tapissier and later Nicolas Grenon. In summer 1415 the chapel was reconstituted and included the composers Pierre Fontaine, Nicolas Grenon and Cardot. John the Fearless drew most of his singers from the cathedral and collegiate churches of northern France. The Burgundian chapel achieved its greatest fame under Duke Philip the Good. In 1445 it numbered 17 chaplains, two clerks and four *sommeliers* (porters) and was reported

2. Philip the Good attends Mass: miniature by Jean le Tavernier from the 'Traité sur l'oraison dominicale', 1457–67 (B-Br 9092, f.9r)

to have been 'among the largest and best maintained chapels that could be found anywhere'. Besides Fontaine, the ducal musicians included Binchois, Constans Breuwe, Robert Morton and Gilles Joye, all of whom composed. Hayne van Ghizeghem was in the service of Charles the Bold as a singer and chamber valet, and Busnoys was a musician at Charles's court. The poet Martin le Franc asserted in *Le champion des dames* (*c*1440) that he saw Du Fay at the court; in 1446 Du Fay was described as 'capellanus' of the duke. Although his appointment at Burgundy was undoubtedly only an honorary one, he specified in his will that Duke Charles should receive from him six books of 'divers chanteries'.

A member of the chapel of Burgundy was expected to serve as priest, performer, composer, teacher and scribe, assisting at the daily celebration of the Mass and canonical hours. The liturgy at Burgundy was normally sung in monophonic plainchant. On the major feast days of the church year, however, the divine service was made more splendid by the interpolation of polyphonic hymns, mass movements and motets sung from the music books of the chapel library. John the Fearless owned three manuscripts of sacred polyphony and two volumes of works by Machaut; Philip the Good and Charles the Bold added to the collection. Yet despite the attention they gave to religious observance, the dukes of Burgundy at their worldly, luxury-loving court also encouraged secular music.

Much of the secular music in Burgundy was provided by the resident minstrels. Instrumentalists from France, England, Italy, Germany, Portugal, Sicily and the Low Countries were employed. Most played the 'haut' (loud) instruments (trumpets, tambourins, bagpipes and shawms); the 'bas' (soft) instruments (vielles, harps, flutes, crumhorns and lutes) were less favoured by the dukes. The trumpets and shawms heard at Burgundy were invariably made in the Low Countries, usually at Sluis, Bruges or Brussels. Banquets, baptisms, weddings, jousts, ceremonial entries and conferences of state all occasioned an instrumental display. The Feast of the Pheasant given by Philip the Good in Lille on 17 February 1454 achieved especial renown: 28 minstrels placed in a pie played various instruments including a trumpet, a bagpipe, a crumhorn, tambourins, lutes, flutes and vielles. Like the singers of the ducal chapel, the minstrels of the court were required to follow their lord in all his progresses, even when he went to war.

After the death of Charles the Bold at the battle of Nancy the musical institutions of the court of Burgundy were maintained by Marie of Burgundy and her husband Maximilian I. In 1493 they passed to Charles's grandson, Philip the Fair; he retained such talented composers as Pierre de La Rue and Alexander Agricola, and so increased the size of the chapel that by the time of his death in 1506 it numbered 33. Under Philip's son and successor, Emperor Charles V, the musical traditions of the dukes of Burgundy merged with those of the Spanish Habsburgs.

Despite the court's cultural and musical fame, reported mainly by chroniclers of the time, there is a remarkable shortage of direct evidence for the actual music performed at the court. In the 1980s it became gradually clear that the famous chansonniers of the 1460s and 70s normally

3. 'The Hunt of Philip the Good': 16th-century copy of a lost original, ?1430 (destroyed 1608), by a follower of Jan van Eyck (Château de Versailles); a sackbut, trumpet and two shawms can be seen on the left

called 'Burgundian' (among them *D-W* 287 Extrav, *DK-Kk* Thott.291 8°, *F-Dm* 517 and *US-Wc* M2.1 L25) were almost certainly copied in central France, around the French royal courts. The only musical manuscripts of the 15th century that can possibly be connected with the court of Burgundy are the chansonnier *E-E* V.111.24 of the late 1430s, the chansonnier fragments *D-Mbs* cgm 902 (early 1440s) and Mus.Ms.9659 (1460s), the elegant Basse Danse manuscript *B-Br* 9085 (dated variously between 1465 and 1500) and the choirbooks *B-Br* 5557 (1470s) and *I-Nn* VI E 40 (1470s, *see* L'HOMME ARMÉ); these last three can be associated with Charles the Bold's very special enthusiasm for music. While it can be assumed that most of Binchois' sacred music – much of it extremely simple – was composed for the court chapel, it is harder to feel confident about much of the other music by the few named composers in the court: it seems increasingly clear, for example, that much of the surviving music by Busnoys was composed before he arrived at the court in 1465; and all but the very earliest songs of Hayne van Ghizeghem seem to be from after he disappears from the court records in 1477. Only after 1500, with the rise of the great scribal workshop later associated with Pierre Alamire is there a substantial body of surviving manuscripts from the court circle.

While the exceptionally extensive and detailed financial records of the duchy report regular and very high payments to the court musicians, there seem to be only two moments in the 15th century when ducal patronage of music was active and enthusiastic. The first was around the time when Duke Philip the Good married Isabella of Portugal (1430), at the same time founding the Order of the Golden Fleece – an institution that seems to have patronized music enthusiastically and has often been associated with the earliest group of masses on the melody *L'homme armé*. The second was with the brief and stormy reign of Charles the Bold, who has left a splendidly detailed account of the duties of his musicians (ed. in Fallows, D1983); it was evidently Charles who brought Busnoys, Morton and Hayne to the court.

CRAIG WRIGHT/DAVID FALLOWS

Buri, Bernard de. *See* BURY, BERNARD DE.

Burian, Emil František (*b* Plzeň, 11 June 1904; *d* Prague, 9 Aug 1959). Czech composer, stage director and writer. His father, Emil Burian, and more especially his uncle Karel Burian were outstanding singers, and his mother taught singing. He studied at the Prague Conservatory, graduating from Foerster's composition masterclasses in 1927. Before completing his studies he was active in the Prague avant-garde theatre as director, dramatist and actor for the Modern Studio and the Artistic Society (1923). He also appeared as an actor and musician in Voskovec and Werich's theatre Na Slupi (1925) and in the Dada Theatre (1927). From 1920 he organized with his mother concerts of new works, and in 1924 founded Přítomnost, a society for contemporary music. In 1927 he founded the Voice Band, which attracted attention at the Siena ISCM Festival and on an Italian tour in 1928. From 1929 to 1932 he worked as a director in Brno, then in Olomouc, then again in Brno where, with the literary critic Václavek, he formed the left-wing cultural organization Levá Fronta. Back in Prague he worked for the cabaret 'Červené eso' as a jazz band leader, vocalist, composer and director, and in 1933 established his own theatre, D 34, where he was able to concentrate his musical and dramatic efforts. During the German occupation the theatre was closed and Burian was sent to a concentration camp, but after returning to Czechoslovakia he reopened D 34 and worked as a director in Brno (1945–6) and at the musical theatre Karlín, Prague (1946). He also became active politically, giving regular radio commentaries, founding his own weekly paper *Kulturní politika* and acting as a deputy to the National Assembly.

Despite the variety of Burian's spheres of interest, composition remained the foundation of his creative work. He began to write in a Straussian style, shown in the first operas *Alladine a Palomid* (1923) and *Před slunce východem* ('Before Sunrise', 1924), but he was soon influenced by jazz, Les Six and dadaism. The ballet *Fagot a flétna* ('The Bassoon and the Flute', 1925) and the parody opera buffa *Mastičkář* ('The Quack', 1925) document this new orientation. At about the same time he became interested in folk music. This interest developed, and his enthusiastic use of fairground songs, urban music and national songs culminated in the folk play with songs and dances *Vojna* ('The War', 1935), influenced by Janáček and, in particular, by Stravinsky's *The Wedding*. An important aspect of Burian's activity in the 1920s was his work with the Voice Band, a choral group whose material, provided by Burian, stressed speech sounds, with onomatopoeic effects and non-verbal vocal utterances. Their performances were usually accompanied by a percussion ensemble, piano and jazz group. The most interesting of Burian's works for the Voice Band was *Máj* ('May', 1936); he never returned after the war to the methods developed here.

Another major work is the opera *Maryša* (1938), for which Burian was composer, dramatist and director. Continuing Janáček's melodic style, the vocal parts often take a middle position between singing and excited speech. The naturalist approach is furthered in the stark harmony, the violent interjections and the general expressive quality of the orchestral writing, but the promise of the work was never fully developed. After World War II Burian adopted the precepts of socialist realism, composing political and work songs and a few orchestral pieces. His best work had been completed in the inter-war period, when he was a leader of the Czech avant garde. Although he lacked strong individuality, he knew how to weave the techniques of others into clever, grotesque or amusing music.

JOSEF BEK

Burian, Karel [Burrian, Carl] (*b* Rousinov, 12 Jan 1870; *d* Senomaty, nr Prague, 25 Sept 1924). Bohemian tenor. He made his first appearance at Brno on 28 March 1891 as Jeník in Smetana's *The Bartered Bride*; after singing the title role in the same composer's *Dalibor* the next day, he was offered a contract. By 1899 he had reached the National Theatre in Prague, but he did not remain for long with that company, having by then become a Heldentenor much in demand in Germany. For over a decade before World War I Burian was a leading and much-admired tenor at the Dresden Opera, where he made a powerful impression in the première (1905) of Strauss's *Salome* as Herod, repeating this role in the first productions of the opera in both New York and Paris in 1907. Wagner was the mainstay of his international repertory; as well as singing Tristan in the Hungarian première of *Tristan und Isolde*, he sang several of the chief Wagner roles at Covent Garden in four seasons between 1904 and 1914, and virtually all of them (*Die Meistersinger* excepted) during seven seasons at the Metropolitan. He appeared in *Parsifal* at Bayreuth in 1908. In Burian's numerous but somewhat primitive recordings, the penetrating clarity of his tone is more in evidence than the golden quality for which he was also praised. Reminiscences of Mahler and Toscanini are included in his memoirs, *Z mých pameti* (Prague, 1913).

DESMOND SHAWE-TAYLOR

Burke, Solomon (*b* Philadelphia, 1936). American soul and gospel singer. He came from a family of Christian ministers and became known as the 'Wonder-Boy Preacher' after appearing on the radio in Philadelphia at the age of nine. Burke developed what he called his 'rock and soul music' in the early 1960s, recording hit versions of Harlan Howard's country and western song *Just out of Reach* (*Of my Two Empty Arms*) and *Cry to me*. Most of his best recordings were melodramatic ballads such as *If You Need Me* and *Goodbye Baby*, although the insistent dance song *Everybody needs somebody to love* was one of his biggest hits. Like Ray Charles, Burke helped to shape the soul music genre by adapting the vocal motifs of black American religious music to secular themes. This approach was in turn a major influence on Mick Jagger, and the Rolling Stones later recorded versions of *Everybody needs somebody to love* and *Cry to me*. By the 1980s Burke's histrionic but controlled approach was out of fashion, and he subsequently emphasized his gospel music roots in recordings on which he was billed as 'Bishop Burke of the House of God for All People'.

DAVE LAING

Burke, Thomas [Tom] (**Aspinall**) (*b* Leigh, Lancs., 2 March 1890; *d* Sutton, Surrey, 13 Sept 1969). English tenor. He studied at the Manchester College of Music and the RAM, and in Italy with Ernesto Colli and De Lucia. He made his début at the Teatro Dal Verme, Milan, in 1917 as the Duke in *Rigoletto*. He first sang at Covent Garden in 1919 as Rodolfo, returning in 1920 as Rinuccio and Luigi in the English premières of *Gianni Schicchi* and *Il tabarro*. Puccini said of him: 'I have never heard my music sung so beautifully'. He returned to Covent Garden in 1927 and 1928, when he sang Turiddu. Burke sang opera and song alike with full-blooded tone and extraordinary conviction, as his recordings amply confirm.

HAROLD ROSENTHAL/ALAN BLYTH

Burke of Thomond. *See* THUMOTH, BURK.

Burkhanov, Mutal' (Mutavakkil) Muzainovich (*b* Bukhara, 5 May 1916). Uzbek composer. He graduated from the Academic Research Institute of Uzbek Music and Choreography in Samarkand in 1932, and from the Moscow Conservatory in 1949, where he studied composition with Vasilenko and conducting with Stolyarov. Burkhanov played the tambura at the Khamza Drama Theatre, Tashkent (1932–3); he was artistic director of Tashkent Radio (1950–1) and chairman of the Uzbek Composers' Union (1955–60).

Burkhanov has written for an orchestra of Uzbek folk instruments, but his compositions are predominantly choral; he is the composer of the first Uzbek polyphonic choral works, including the music for the national anthem of the Uzbek Republic (text by T. Fattakh, 1947). He unites Uzbek monophonic traditions with European polyphony; the choral works interweave homophonic and polyphonic styles and freely interpret rhythmic and modal features of Uzbek folk music, such as the ostinato *usul'* rhythm and consonance in fourths and fifths. These pieces display original and subtle instrumentation and freshly expressive coloration. Burkhanov's numerous arrangements of the folksongs of Uzbek, Kazakh, Tajik, Kara-Kalpak, Iranian and of other peoples of Central Asia and the Middle East are well known. Burkhanov established a number of new genres in Uzbek music.

WORKS

Doch' Uzbekistana [Daughter of Uzbekistan], orch suite, 1938; Pesnya bez slov [Song without Words], Uzbek folk orch, 1943; Tsvetushchiy Uzbekistan [Blossoming Uzbekistan] (cant., Kh. Alimzhan, Uygun), solo vv, chorus, orch, 1949; Mavrigi, Uzbek folk orch, 1950; Partiya – nashe schast'ye [The Party is our Happiness] (Uygun), chorus, 1952; Ogon' lyubvi [Fire of Love] (ballade, Kh. Gulyam), 1v, orch, 1959; Partii Lenina [To the Party of Lenin] (ode, Gulyam), solo vv, chorus, orch, 1959; Alisher Navoy (A. Arapov), solo vv, chorus, orch, 1968; Golos serdtsa [Voice of the Heart] (romance), 1v, orch, 1970

Film scores, incid music, choral arrs. of folksongs from central Asia, various songs and romances (Lakhuti, Uygun, Mashrab, Tula)

ALLA VLADIMIROVNA GRIGOR'YEVA

Burkhard [Burchard], **Johannes** (*b* Niederhaslach, Alsace, *c*1450; *d* Rome, 16 May 1506). Alsatian cleric and liturgist. Born in a town near Strasbourg, Burkhard began his ecclesiastical career in that city. By 1467 he was in Rome, where he rose through the ranks of the papal curia. An assiduous collector of benefices and curial offices, he passed through the households of various cardinals to become a member of the papal household and, as of 29 November 1483, one of the masters of ceremonies in the papal chapel. While still holding this position, he was appointed Bishop of Orte in 1503. As a master of ceremonies, Burkhard collaborated in producing the definitive papal *Caeremoniale* and kept a diary (a major source for the history of the period) recording in detail ceremonies and other occurrences at the papal court. Although the presence of the papal choir is often noted, Burkhard did not describe the specifics of musical performance except when referring to innovations, mishaps and occasions when something happened that he did not like. Thus we learn about various mistakes made by celebrants and papal singers, about the new use of polyphony in the singing of the Passion (apparently introduced from Spain), and about the motet *Gaude Roma vetus*, written in honour of Alexander VI to a text by Johannes Tinctoris (the music is lost). The *Pontificale romanum* of 1485 is Burkhard's revision of a Pontificale written by Agostino Patrizi.

RICHARD SHERR

Burkhard, Paul (*b* Zürich, 21 Dec 1911; *d* Zell, 6 Sept 1977). Swiss composer and conductor. After studies at the Literargymnasium and the Zürich Conservatory, he was conductor at the Berne Stadttheater (1932–4) and conductor and house composer for the Zürich Schauspielhaus (1939–45). He also served as director of the Beromünster RO (1944–57). From 1959 he lived in Zell, Zürich, appearing as a guest conductor, particularly of his own works, throughout Europe. As a composer he was particularly known for entertainment music. He tried to free operetta from antiquated forms, and his song *O mein Papa*, on his own text, achieved international success. In the 1960s he turned to religious vocal music, including a series of Zell plays for schools; the most important of these is *Ein Stern geht auf aus Jaakob*.

WORKS

(*selective list*)

Stage: Hopsa (Revueoperette, R. Gilbert), Zürich, 1935; Dreimal Georges (operetta, R. Schanzer and W. Welisch), 1936; Das Paradies der Frauen (operetta, F. Rogati), 1938; Der schwarze Hecht (musical comedy, J. Amstein, after E. Sautter), 1939 [rev. as Feuerwerk (E. Charell), 1949]; Casanova in der Schweiz (comic op, R. Schweizer), 1942; Tic-Tac (operetta, F. Tschudi and F. Schulz), 1943; Weh dem, der liebt (musical comedy, K. Nachmann), 1948; Das kleine Märchentheater (Märchenspiel, Tschudi), 1949; Die kleine Niederdorfoper (musical comedy, W. Lesch), 1952; Spiegel das Kätzchen (musical comedy, G. Keller), Munich, 1956; Die Pariserin (musical comedy, N.O. Scarpi, Tschudi), Zürich, 1957; Die Schneekönigin (after H.C. Andersen), Zürich, 1964; Bunbury (H. Weigel, after O. Wilde), 1965; Ein Stern geht auf aus Jaakob (Christmas op), Hamburg, 1970

Liturgical plays: Die Zeller Weihnacht, 1960; Der Zeller Josef, 1964; Die Zeller Gleichnisse, 1965; Noah, 1966; Zeller Ostern, 1970

Other works: Das Examen (R. Schweizer), Mez, hp, 1946; Der Schuss von der Kanzel, ov. (1946); Frank V. (incid music, F. Dürrenmatt), 1959; other incid music, film scores, many songs

Principal publishers: Universal, Zürich AG

PETER ROSS/THOMAS GARTMANN

Burkhard, Willy (*b* Evilard-sur-Bienne, 17 April 1900; *d* Zürich, 18 June 1955). Swiss composer. Having attended the teachers' seminary in Berne (1916–20) he began music studies at the conservatory there with Reding and Graf. Further studies took him to Leipzig (Teichmüller and Karg-Elert), Munich (Courvoisier) and Paris (d'Ollone). From 1924 he taught composition, theory and the piano in Berne, where he was appointed to the conservatory in 1928; later he was obliged by reasons of health to live for several years in Montana and Davos. He settled in Zürich in 1942 and taught at the conservatory. In 1950 he received the composer's prize of the Schweizerischer Tonkünstlerverein. A Willy-Burkhard-Gesellschaft was founded in Berne in 1964.

Burkhard quickly turned from the late Romantic subjectivity found in a few early songs to look for formal and technical models in Bach and the Renaissance, evolving a contrapuntal and strictly linear, imitative style that has some affinities with Hindemith and Bartók, although his works from about 1930 are more acrid and less sensuous than those of foreign contemporaries. The organ trio sonatas op.18 (1927) were a starting-point,

and this period found a summation in the *Musikalische Übung* op.39 (1934). From 1934 onwards Burkhard benefited greatly from contact with the chamber orchestra movement of that time and especially with the conductor Paul Sacher (who commissioned several works). In his chamber music and works for chamber orchestra, Burkhard developed a new reconciliation of horizontal with vertical writing. The harmony is based on church modes and on a distinctive chromaticism; 4ths and 5ths play an important part in its construction, and there is a strong relation between harmony and melody. In slow movements in particular the melodic line is widened and has a vocal character. The forms reshape Baroque models, sometimes with patent lines of development connecting a whole work, as in the Second Quartet and the Second Violin Concerto.

Burkhard's main interest, however, was composing for the voice. In his lyric, dramatic and liturgical works, as well as in his oratorios, he achieved convincing syntheses of exact and vivid declamation, strong expression and melodic simplicity. His opera *Die schwarze Spinne* op.80 is an important, but unfortunately little-known, contribution to the experimental music theatre of the 20th century, combining traditions of the Swiss *Festspiel* with spoken parts, dance and operatic elements. Three works display Burkhard's spirituality most powerfully and impressively: the oratorio *Das Gesicht Jesajas* op.41, the Mass op.85 and the cantata *Die Sintflut* op.97. The first, forceful and of woodcut simplicity, is the crown of his pre-1936 sacred works, the last a fully mature masterpiece. In the Mass, Burkhard's treatment of the liturgical text is original, particularly in its distribution between soloists and chorus; some influence of the times may be seen in the suffering cries of 'Miserere' inset in the Kyrie, Gloria and Agnus Dei. Burkhard's music is at its most profound in settings of religious texts, and its Christian quality is supplemented by a feeling for nature, most fully expressed in *Das Jahr* op.62. More relaxed than the earlier oratorio, as befits its subject matter of the four seasons, *Das Jahr* initiated a movement to a more sensuous handling of harmony and instrumentation. With his last work, the Piano Preludes, Burkhard showed an aptitude for 12-note writing, but retained a dependence on tonality in his melodic, harmonic and formal structures. On the other hand, his instrumental melody had become increasingly chromatic with the years, as in the fourth prelude and especially in the last, Burkhard's only pure 12-note composition.

WORKS

DRAMATIC

Im Zeichen des Kreuzes, incid music, 1938–9; Laupenspiel, op.56, radio score, 1939; Oedipus rex, op.72 (incid music, Sophocles), speaking choruses, wind, timp, 1944; Die schwarze Spinne (op, 2, R. Faesi, G. Boner after J. Gotthelf), op.80, 1948, rev. 1954

ACCOMPANIED CHORAL

Choral duets, op.22/1 (C. Morgenstern), male chorus, tpt, trbns, op.22/2 (C.F. Meyer), chorus, vn, fl, 1926–8; Till Ulenspiegel, cant., op.24, T, B, male chorus, orch, 1929; Vorfrühling (cant., Morgenstern), op.27, chorus, str, 1930; TeD, op.33, chorus 2vv, tpt, trbn, timp, org, 1931; Spruchkantate, op.38 (J. von Eichendorff), male chorus, str, 1933; Musikalische Übung, op.39 (Ps xii, trans. M. Luther), chorus, org, 1934; Das Gesicht Jesajas, orat, op.41, 1v, chorus, org, orch, 1933–5; Die Versuchung Jesu, cant., op.44, A/B, unison vv ad lib, org, 1936

Ps xciii, op.49, unison vv, org, 1937; Genug ist genug (cant., Meyer), op.53, chorus, 2 tpt, timp, str, 1938–9; Lob der Musik, cant., op.54, solo vv, chorus, orch, *c*1939; Cantate Domino, op.61/2, S, chorus, str, timp, 1940; Heimatliche Kantate (G. Keller), op.61/3, Mez/Bar, unison vv ad lib, orch, 1940; Kreuzvolk der Schweiz (Meyer), op.61/4, chorus, org, 1941; Das Jahr (orat, H. Hiltbrunner), op.62, solo vv, chorus, orch, 1942; Christi Leidensverkündigung, cant., op.65, T, small chorus, org, 1942; Cantique de notre terre (J.P. Zimmermann), op.67, solo vv, chorus, orch, 1943; Mass, op.85, S, B, chorus, orch, 1951; Psalmen-Kantate, op.90, S, chorus, org, chbr orch, 1952; Ps clxviii, op.96, unison vv, insts, 1954

UNACCOMPANIED CHORAL

2 Choruses, op.2, 1923; Cant. (Bible), op.3, T, chorus, 1923; Motets, op.10, boys' and male chorus, 1925; 8 Sprüche aus dem 'Cherubinischen Wandersmann', 2 sets op.17/1, 2 (Silesius), 1927; Ezzolied, op.19, motet, 1927; 5 Gesänge (R. Dehmel), op.26, 1930; 24 Melodien aus den Hassler'schen Choralgesängen, op.30, 4vv, 1931; Das deutsche Sanctus, 2 unison choruses, 1932; Neue Kraft (suite, Bible etc.), op.34, 1932; 4 Choruses, op.35, male chorus, 1936; Der Tod, chorus 4vv, 1933

Vermahnlied, 2–4vv, 1934; Bärnerlüt, male chorus 4vv, 1935; 2 Gesänge, chorus 4vv, 1936; Choruses, op.47, male chorus, 1936; Die Verkündigung Mariä, motet, op.51, 1938; 5 Choräle, chorus, 1939; Sommerzeit, op.61/1, 1940; 9 folksong arrs. and chorus, female chorus, 1942; 2 Choruses: Mon âme, bénis l'éternel, Oui, glorifiez l'éternel, 1942; Kleiner Psalter, op.82, 1949; Frühlingsglaube (Keller), male chorus, 1950; Wer das längere Lebensteil wünscht, male chorus 4vv, 1950; 2 Gesänge, 2vv, 1952; Die Sintflut, cant., op.97, chorus 8vv, 1954

ORCHESTRAL

Vn Conc. no.1, op.7, 1925; Suite aus der Musik zu einem Weihnachtsmärchen, op.12, 1926; Sym., op.21, 1926–8; Ulenspiegel-Variationen, op.37 [prelude to op.24], 1932; Fantasy, op.40, str, 1934; Kleine Serenade, op.42, str, 1935; Conc., op.50, str, 1939; Hymnus, op.57, 1939; Concertino, op.60, vc, str, 1940; Vn Conc. no.2, op.69, 1943; Sym., 1 movt, op.73, 1944

Conc., op.74, org, str, brass, 1945; Konzertstück, op.75, org, orch, 1945; Canzona, op.76, 2 fl, low str, 1945; Kleine konzertante Suite, op.79, 1946; Piccola sinfonia giocosa, op.81, small orch, 1949; Fantasia mattutina, op.83, 1949; Toccata, op.86, 1951; Sonata da camera, op.89, str, perc, 1952; Va Conc., op.93, 1953; Concertino, op.94, 2 fl, hpd, str, 1954; Divertimento, op.95, str, 1954

FRITZ MUGGLER/ERNST LICHTENHAHN

Burkholder, J(ames) Peter (*b* Chapel Hill, NC, 17 June 1954). American musicologist. He received the AB in music from Earlham College in 1975. He continued his studies at the University of Chicago, where he took the MA in 1980 in composition and music history and theory with Ralph Shapey and Shulamit Ran; he took the PhD in 1983 in musicology with Robert P. Morgan and Howard Mayer Brown. Burkholder began his teaching career at the University of Chicago in 1979. He joined the faculty of the University of Wisconsin, Madison, in 1982, chairing the musicology area, 1987–8. In 1988 he was appointed associate professor of music at Indiana University; he was named associate dean of the faculties in 1995 and professor of music in 1996. He became president of the Charles Ives Society in 1992.

Burkholder's research interests include modernism and meaning in music and musical borrowing and quotations. He has focussed these interests particularly on the compositions and ideas of Charles Ives, but he has also written on Brahms and Berg and authored the study and listening guides for the fifth edition of Grout's *History of Western Music* and the third edition of the *Norton Anthology of Western Music*.

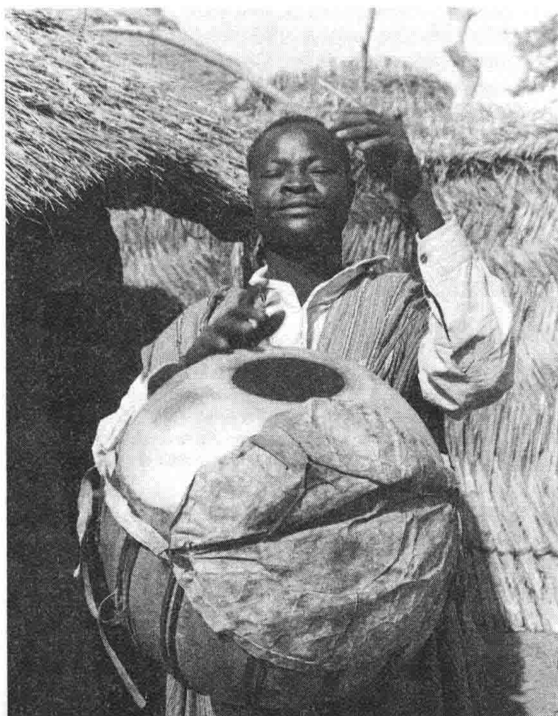
PAULA MORGAN

Burkina Faso, République Démocratique du [formerly Upper Volta]. Country in West Africa. It has an area of 274,122 km², with a rapidly expanding population estimated at 12·06 million in 2000, representing 54–60 ethnic groups. The country was annexed by France in 1896 and granted independence in 1960; the colonial period had a profound effect in the absorption of French customs and the French language. There are, however, three general musical areas, the Voltaic, Mande and Sahelian, which correspond fairly closely with the linguistic, ethnic and geographic divisions of the country, although such generalizations often misrepresent the degree of variation in musical styles.

1. Main musical areas and traditions. 2. Musical instruments. 3. Modern developments.

1. MAIN MUSICAL AREAS AND TRADITIONS. The Voltaic area, made up of central, southern, eastern and south-western Burkina Faso, includes the following groups (fig.1): the Mossi, Gurma, Kurumba, Yarse, Bwa (Bobo), Lela (Lyela), Kasena, Nuna, Ko, Pwo (Pwẽ), Nankanse (Nankani), Birifor, Dagara, Lobi, Gan, Komono (Khisa), Sénoufo (Senufo), Karaboro, Gouin, Wara and Ble (Blé). These groups, as well as the Mande groups listed below, use gourd drums, hourglass tension drums, cylindrical and conical drums to perform complex interwoven rhythms based on ostinato-like figures. There is a strong emphasis on chanting, while solo singing is less common.



1. Map of Burkina Faso showing the distribution of major ethnic groups

The Birifor, Dagara, Lobi and Sénoufo also use xylophones, often for funeral music but also for recreation. These instruments usually have 14–18 keys with gourd resonators. The style and pitch of the instruments vary greatly across the region, with the northern instruments resembling the Malinké *bala*. There is very little information on the music of other Voltaic groups, such as the Bolon, Dorosie (Doghosié), Dyan, Pana, Natioro, Sambla, Siamou, Sisala, Kusasi (Kusaal), Tiefo, Vigye (Viemo), Wala (Dagaari Dioula), Tusia (Toussian), Turka, Nabe (Téén), Degha and Padoro (Kpatogo) from within Burkina Faso, but some studies exist from neighbouring countries such as Ghana.

The Mande area that constitutes western and northwestern Burkina Faso includes the following ethnic groups: the Samo, Bisa (Bissa), Bobo, Dyula (Jula), Bobo-Dyula and Marka. Mande music is distinguished from Voltaic music by the emphasis placed on solo singers; chanting and chorus singing are secondary. Both Mande and Voltaic groups use music in the same or similar social and cultural situations.

The Sahelian area in northern Burkina Faso includes the following ethnic groups: the Fulani (Fula or Fulɓe), Bella, Tuareg and Songhay (Songhai). Their music shows prominent Saharan and Islamic influences in the use of melisma, a tense voice production and songs that often have a religious and moral content. The most commonly used instruments are the single-string plucked lute, the three-string plucked lute, the single-string fiddle, transverse bamboo flutes, oblique end-blown flutes and inverted gourd percussion vessels. Drums are rare, although the Songhay use hourglass tension drums and barrel drums, and some Fulani use hourglass tension drums and cylindrical drums. Hand-clapping and the use

2. *Binderi (gourd drum) played by Mossi musician Michel Yongma, Koupéla, Burkina Faso, 1970*

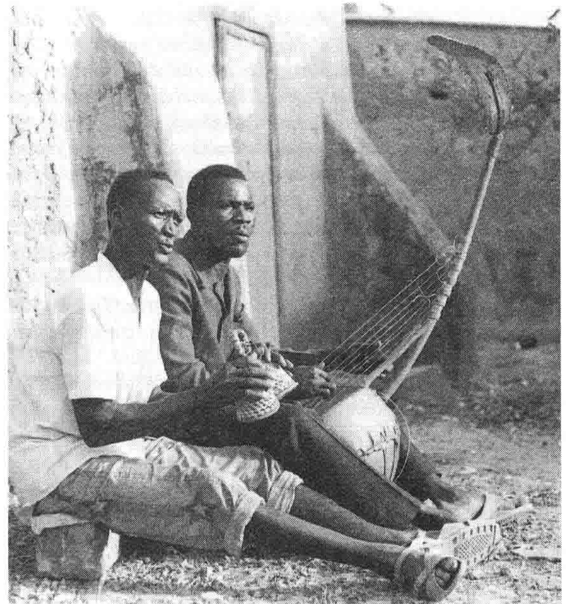
3. *Boũ-kãm (gourd clarinet) played by Bisa musician Bonkare Yabre, Ouagadougou, Burkina Faso, 1971*

of inverted gourds and bracelets provide complex interwoven rhythms based on ostinato-like figures.

Musical patterns do overlap in these three cultural areas and extend beyond artificial international frontiers. Both Voltaic and Mande societies, but not Sahelian societies, use gourd drums, mirlitons, the *bala*, lamellophones, water-drums, gourd rattles, vertical end-blown flutes, trumpets, musical bows, raft zithers and harp-lutes (bridge-harps). Voltaic and Sahelian societies, but not Mande societies, use oblique end-blown flutes. In addition, many peoples from surrounding countries have settled in Burkina Faso, bringing their music with them. The Yoruba are found in urban communities, the Hausa in urban trade centres and in rural south-east Burkina Faso, the Dogon and the Somono in rural north-west Burkina Faso, and the Bamanakan and Bambara in the west of the country.

The most common occasions for music-making in most societies in Burkina Faso are name-giving celebrations, initiation rites, marriages, Christian, Islamic and animist religious rites and celebrations, funerals, post-funeral celebrations, agricultural and household work, harvest celebrations, and the praising of chiefs, elders and other important men and women. Drums, xylophones, flutes, rattles and iron plates struck with a ring are used to accompany singing and chanting for agricultural work. Household work done in rhythm and usually involving singing or hand-clapping includes grinding and pounding grain and leaves for food, pounding floors, weaving and spinning cotton, building and other work.

Most of the Voltaic and Mande languages are tonal so that messages and signals can be sounded on gourd, hourglass, conical and cylindrical drums. In many cases, especially with the xylophone, flutes and drums, music has a linguistic basis, so that even in the absence of singing or chanting, an underlying text is understood. Mossi musicians transmit the history of their empire, dating back to the 14th century, by the use of gourd, hourglass and cylindrical drums. This tradition may or may not be accompanied by a voice which translates the drum language.



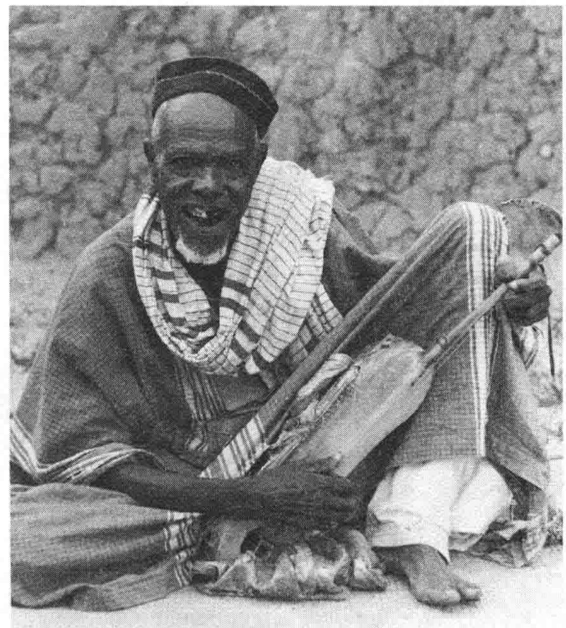
In many groups in Burkina Faso, musicians form a professional caste and belong to families that specialize in one instrument or in one category of instruments. Mossi and Gurma drummers who belong to specialist families

perform mainly in the courts of chiefs and pass on their tradition from generation to generation. Fulani professional musicians who perform on the three-string plucked lute travel extensively in the savanna of West Africa, singing the history of empires, chiefdoms and families, and praising men and women as a means of livelihood. On the other hand, many professional musicians in these and other societies do not belong to an accepted musical family.

Some of the finest and most renowned musicians are blind and have become musicians because of the lack of opportunities for other work. Many blind Mossi men and boys travel throughout Burkina Faso and the coastal countries to the south making a living by performing on fiddles and by singing historical accounts, praise-songs and songs of amusement. Most musicians are, however, amateurs and perform most often for amusement and village activities, such as work parties, marriages and name-giving celebrations usually involving dance.

2. MUSICAL INSTRUMENTS. The gourd drum is made from a spherical gourd with a large hole cut out and covered with goatskin (fig.2). The hourglass tension drum, the cylindrical drum and the conical drum are all made from a hollowed-out trunk or branch of a tree covered with goatskin or cowhide. The frame drum is made from rectangular slats of wood and goatskin and the barrel drum from a metal barrel covered with cowhide. The various kinds of drum can all be struck with one or two hands, with one hand and a stick (except gourd and frame drums), or with two sticks in the case of cylindrical and conical drums.

Bamboo transverse flutes and oblique end-blown flutes, which are made of millet stalk or a metal tube, have four finger-holes. Vertical end-blown flutes have one, two or three finger-holes, or none at all, and are all made of wood. Ocarinas are made of clay or a globular fruit and have one or two finger-holes. The gourd clarinet is made from a hollowed-out millet stalk with an idioglot reed, one finger-hole and two small gourd-resonators placed over the ends of the stalk (fig.3). Another clarinet is formed from a thinner hollowed-out millet stalk with an idioglot reed, no finger-holes and the right or left hand used as a resonating chamber. Trumpets are made of



5. Konchuhun (seven-string harp-lute) played by Massa Sonlama and sansagene (rattles) played by Jamo Hema, Gouin musicians, Banfora, Burkina Faso, 1971

wood or of antelope or cow horn. Bullroarers and whirling discs are also used.

The stick zither is made from a solid millet stalk with a single idiochord string that is struck by a stick. The eight-string gourd-resonated zither and the twelve-string raft zither are made of millet stalks, the former with a large gourd-resonator attached beneath (fig.4). Harp-lutes with seven or twelve strings, plucked lutes and bowed harps have strings made of nylon, goat leather or wire. Harp-lutes in Burkina Faso are similar in construction to the

4. Pandaa (gourd-resonated raft zither) played by Sumo musician Leko Drabo, Nouna, Burkina Faso, 1973

6. Hodu (three-string lute) played by Fulani musician Yeru Boly, Pouytenga, Burkina Faso, 1970

KORA of Mali, Senegal, Guinea and The Gambia and, like bow harps, have a large gourd as resonator (fig.5). The one-string plucked lute has a tin can as a resonator, the two-string plucked lute a gourd-resonator and the three-string plucked lute a hollowed-out block of wood (fig.6). The single-string fiddle is made of a hemispherical gourd covered with an iguana skin and has a wooden neck; its strings and bow are made of horsehair. Musical bows can be mouth- or gourd-resonated. Struck idiophones include pentatonic xylophones, iron forks or plates struck with a ring or stick, wooden slit-drums, concussion sticks, percussion vessels made from inverted gourds, and water-drums. Shaken idiophones include gourd rattles, wicker-work rattles, metal-can rattles and suspension rattles of various kinds. Scraped idiophones include notched iron rods and plucked idiophones include lamellophones with five or 12 keys.

Xylophones are made with 12–21 wooden keys on a frame with a gourd-resonator attached beneath each key. These are struck with wooden sticks, the heads of which are traditionally covered with rubber, but the rubber is now frequently replaced by a disc cut from a truck tyre (fig.7). Mirlitons are made from membranes taken from a spider's egg-case and glued over holes in the gourd-resonators of a xylophone to add a vibrating buzz. With the increase of concrete housing, the spider is becoming scarce and mirlitons are now often cut from a high-density plastic bag.

The ocarina, lamellophone, water-drum and stick zither are children's instruments. The water-drum is an inverted half-gourd placed in a larger gourd or pan containing water and struck with a spoon. The inverted half-gourd is struck with hands, elbows or fingers, or is rubbed with the hands. The five-key lamellophone is made from umbrella supports attached to a soundboard placed or fixed on to a tin can. The twelve-key lamellophone is similarly constructed with a larger can as resonator.

3. MODERN DEVELOPMENTS. There is a strong Western music influence in Burkina Faso, especially in urban areas and trade centres where youths play Spanish guitars and perform in rock and highlife bands using electric guitars, electric pianos, saxophones, trumpets, flutes, drum kits, conga drums, güiro and maracas. Sometimes these musicians use traditional instruments such as the gourd rattle or the hourglass drum. They look to Cuba, the Democratic Republic of the Congo, Guinea and African America for inspiration, imitation and adaptation. Western popular music heard on radio or cassette has permeated traditional music and dance ensembles, even at the village level. Xylophone and drum ensembles, children's singing groups using hand-clapping and the water-drum, as well as modern bands, perform their own versions of popular tunes.

National ensembles sponsored by the government have adapted traditional music and dance forms for theatre audiences in Burkina Faso, other African countries,

7. Cho (xylophones), long cylindrical drum and bwī (gourd drum) played by Bwaba musicians, Boromo, Burkina Faso, 1970

Europe and America. Religious belief in the region is divided between animism, Christianity and Islam. Christian churches often adapt and use traditional musics. Traditional music and dance ensembles perform at government-sponsored competitions, regional fairs, youth weeks, Independence Day activities, state receptions and the public opening of new buildings. At the same time modern band leaders and musicians compose in new forms and adapt traditional songs and dances to popular music styles.

There are few traditional music apprentices today, and rapid social and economic changes are largely responsible for the orientation of the young people towards the modern urban culture with an almost total abandonment of traditional music, dance forms and styles in their traditional contexts. There is a growing awareness of the importance of cultural heritages. Some traditional music is preserved by semi-professional and cultural ensembles, and the influence of traditional styles is a continuing strand through much local popular music.

JIM ROSELLINI/TREVOR WIGGINS

Burla (It.: 'jest'). A term used occasionally during the 18th century, together with its diminutives BURLETTA and *burlettina*, to indicate comic Italian operas. In about 1720 the *buffo* singer Francesco Belisani used it to distinguish between comic operas and the intermezzos inserted between the acts of serious operas. It has been suggested that *burla* is probably a colloquialism, as no operas of the period are specifically entitled such; but Benedetto Marcello's polyphonic five-voice satire of castrato singers, *No' che lassù ne' cori* (1721), is entitled *burla*. A later use of the term is the *burla* in Schumann's *Albumblätter* (1832–45). (*ES*, N. Pirrotta) □

Burlas, Ladislav (*b* Trnava, 3 April 1927). Slovak composer and music theorist. Initially a pupil of Schneider-Trnavský, he studied aesthetics and musicology at Bratislava University (1947–51, PhD) and composition with Alexander Moyzes at the conservatory in Bratislava then at the Academy of Music and Dramatic Art (1951–5). He worked at the Institute of Musicology of the Slovak Academy of Sciences (1951–5, 1961–90), later serving as its director (1964–74); he also taught at the University of Bratislava and at the academy of which he became a full professor in 1993. He was president of the Slovak Composers' Union (1983–9) and in 1982 he was awarded the title of Merited Artist.

As a writer, Burlas rose to prominence in Slovakia in 1957 when he spoke of the trend among younger Slovak composers (with their polemical attitude to the Moyzes generation) towards current European modernism. In addition to music theory and history he became engaged in the study of new compositional techniques. His own music (e.g. *Symfonický triptych* and *Spievajúce srdce*, 'A Singing Heart') uses chromatic and modal extensions of tonality enriched with elements of Slovak folk music. In works such as *Metamorfózy krás* ('Metamorphoses of Beauty') this is combined with new sonorities and typically linear thinking. Inspired by Bartók and the techniques of new music, his greatest achievements are highly individual in their organization of musical material: modal structures are combined with clusters in *Planctus* and with dodecaphony in Music for Violin and Orchestra. His works, especially those for strings (e.g. *Koncertantná sonáta* and the Third String Quartet), often possess a meditative quality. In later works, for example *Poetická hudba* ('Poetic Music') and *Stretnút' človeka* ('To Meet a Man'), this becomes nostalgic retrospection.

VLADIMÍR ZVARA

Burlas, Martin (*b* Bratislava, 23 Oct 1955). Slovak composer. Born into a family of musicians (his father and brother are also composers), he studied privately with Hatrík while attending secondary school. In 1975 he entered the College of Music and Performing Arts in Bratislava, where he continued his studies under Cikker until 1980. He has held appointments as producer at the recording company and publishers Opus (1980–86) and with Slovak Radio (1987–94). During the 1980s he founded several rock groups, and in the 1990s became a member of Slovak experimental music ensembles, including Vapori del Cuore and Veni.

Burlas was among the first composers in Slovakia to commit wholeheartedly to the aesthetics of minimalism. By writing in a repetitive style and promoting the new wave he became a protagonist for a young generation of Slovak postmodernists. His minimalist works include *Kol'ajnice bez vlakov* ('Rails without Trains'), *Predposledné leto* ('The Summer before Last') and *Decrescendo*. For the avant-garde rock groups he founded he has composed pieces and songs, the texts for which contain criticism of the political and social conditions in Slovakia during the 1980s. His rock-song style is that of sophisticated underground rock music. In the late 1980s Burlas started to combine his rock and minimalist styles: the melodic-rhythmic phrase remains the basic structural element but is attached to freely progressing harmonic sequences. This later music has a wider range of expression, including aggression, paradoxy and chaos. As with rock music, new sounds are created by combining electronic music with acoustic instruments, as in *Simultánne kvarteto* (1986) and *33* for chamber ensemble. The importance of experimentation and random selection in his music is represented, for example, by a simulation of re-tuning a radio in *33* or by the stage presentation of a doll's execution in *Hexenprozesse* ('Witch Trials').

WORKS

(*selective list*)

Stage: Ružové král'ovstvo [Rose Kingdom], op, chbr orch, 6vv, chorus, 1985; Hexenprozesse [Witch Trials], inquisition pieces, chbr ens, 1990; Súmrak bohov [Twilight of the Gods], trad. songs, tapes, bicycle, projection, synth, 1993

Large ens: Sotto voce, chorus, orch, 1982; Predposledné leto [The Summer before Last], hp, cel, vib, mar, pf, chbr orch, 1984; Logika kriku [The Logic of the Cry], tpt, orch, 1986; Bricks Game, chbr orch, 1994

Chbr ens: Lament (Nenia), str qt, 1979; '13', cl, vn, va, vc, 1980; Hudba pre Roberta Dupkalu [Music for Robert Dupkala], fl, 2 sax, str qt, bells, hpd, accdn, synth, elec gui, b gui, 1981; Hymnus pre zabudnutých [Hymn for the Forgotten], vn, vc, synth, 1984; Rozlúčka duše a tela [Separation of Soul and Body], vc, pf, tape, 1984; Decrescendo, ob, bn, vc, hpd, 1986; Simultánne kvarteto [Simultaneous Quartet], synth, chit, vc, perc, trbn, 1986; 33, chbr ens, 1987; Zavesené žily [Hung Veins], chbr ens, 1991; Agónia [Agony], vc, pf, 1995

Solo inst: Kol'ajnice bez vlakov [Rails without Trains], pf, 1984; Uspávanky [Lullabies], kbd inst, 1984; Z môjho života. . . [From my life. . .], insts, noises, 1992

El-ac: Hudba pre modrý dom [Music for the Blue House], 1979; Plač stromov [Weeping Trees], ob, tape, 1981; Oáza [Oasis], 1985; Kríž a kruh [Cross and Circle], 2 tpt, tape, 1989; Talking about Paradise Lost, 1993; Záznam siedmeho dňa [Record of the 7th Day], str qt, tape, 1994; Bratislava, vykládka prístavu [Bratislava, Unloading at the Port], fl, tape, 1995; Mutrance, 1996; Overload, 1996

YVETTA LÁBSKA-KAJANOVÁ

Burleigh, Henry [Harry] **T(hacker)** (*b* Erie, PA, 2 Dec 1866; *d* Stamford, CT, 12 Sept 1949). American composer and singer. He received his earliest musical instruction from his mother and later had piano lessons. By the age of 16 he was singing in three church choirs near Erie. In 1892 he won a scholarship to the National Conservatory, New York, where he met Victor Herbert and Antonín Dvořák. His performances of African American spirituals strengthened Dvořák's conviction that America possessed a rich folksong repertory. In 1894 Burleigh became the baritone soloist at St George's Episcopal Church, New York, a position he held for the next 52 years. Six years later, he became a soloist at Temple Emanu-El, where he sang for 25 years. From 1911 he was a music editor at Ricordi.

Burleigh was one of the first important African American composers born after the Civil War. His arrangements of African American folksongs set a standard for several generations of composers. The majority of his 265 vocal compositions are solo settings of spirituals, characterized by sparse piano accompaniments that add subtle counterpoint to the melodic line. Among his most acclaimed compositions are: *Six Plantation Melodies for Violin and Piano* (1901); the song cycles, *Saracen Songs* (1914), *Passionale* (1915) and *Five Songs on Poems of Laurence Hope* (1915); and *Jubilee Songs of the USA* (New York, 1916), a collection that includes his popular arrangement of the spiritual *Deep River*.

WILLIE STRONG

Burle Marx, Walter (*b* São Paulo, 23 July 1902; *d* Akron, OH, 28 Dec 1990). Brazilian composer, conductor and

pianist. His early musical studies were with Henrique Oswald and Angelo França, and at the age of 12 he appeared in a two-piano concert with Artur Napoleão. He continued his preparation in Europe with Kwast for the piano (1924–6), Rezniček for orchestration (1926–8) and Weingartner for conducting (1928–9). In 1925–6 he made a concert tour of Europe as a pianist. On his return to Brazil he made his début as an orchestral conductor and founded the short-lived Rio de Janeiro PO in 1931. Thereafter he lived for a period in the USA, where he conducted performances of Brazilian music at the 1939 New York World's Fair. In 1947 he was made director of the Teatro Municipal in Rio de Janeiro, and in 1952 was appointed to teach the piano and composition at the Settlement Music School, Philadelphia. In addition to symphonic works he has written cantatas, other choral pieces and songs.

JOHN M. SCHECHTER

Burlesque (Fr.; It. *burlesca*; Ger. *Burleske*). A humorous piece involving parody and grotesque exaggeration; the term may be traced to folk poetry and theatre and apparently derived from the late Latin *burra* ('trifle'). As a literary term in the 17th century it referred to a grotesque imitation of the dignified or pathetic, and in the early 18th century it was used as a title for musical works in which serious and comic elements were juxtaposed or combined to achieve a grotesque effect. In England the word denotes a dramatic production which ridicules stage conventions, while in 19th- and 20th-century American usage its principal meaning is a variety show in which striptease is the chief attraction.

1. Instrumental music. 2. English theatrical burlesque. 3. American burlesque.

1. INSTRUMENTAL MUSIC. J.G. Walther (1732) described burlesque music as 'jocular' and 'amusing' ('schertzhafft', 'kurzweilig') and referred to 'burleske Ouvertüren' as pieces in which 'laughable melodies, made up of 5ths and octaves, appear along with serious melodies'. This probably referred to the comic effects achieved by composers of Italian *opera buffa* in the early 18th century, effects that doubtless helped to set a standard of musical humour for the 'burlesca' movements sometimes included in contemporary suites. The example in Bach's Partita BWV827, which is called a minuet in Anna Magdalena's Notebook (1725), has nothing particularly jocular about it, although it displays some striking harmonies, as well as a passage in parallel octaves. J.L. Krebs placed a 'bourlesca' between the saraband and the minuets of his Partita no.2 in B♭; the movement is not a dance, but rather a small-scale sonata form with a few melodic and harmonic surprises. François Couperin subtitled some of his harpsichord pieces 'dans le goût burlesque'; two examples are *Le gaillard-boiteux* (*ordre* no.18) and *Les satires* (*ordre* no.23). *Les satires* exploits the lower registers of the harpsichord, using percussive chords and harsh dissonances. *L'arlequine* (*ordre* no.23) surely belongs to the burlesque category, for it is marked 'Grotesquement'.

'Burlesque' is used as a title for some independent characteristic piano pieces, of variable length and with no special formal characteristics (e.g. the fourth of Paderewski's *Humoresques de concert* op.14). Schumann planned a set of 12 'low-comedy' *Burlesken* in 1832 as a companion to his *Papillons* op.2. Some of them, under different titles, found places in his *Albumblätter* op.124 and in the third movement of his Sonata op.11. Britten's Introduction and Rondo alla burlesca for two pianos op.23 no.1 (1940) is playful and humorous; the Introduction is in the manner of a French overture, and the Rondo begins with a march-like accompaniment to a striding and angular theme based on melodic 7ths and 4ths.

The titles of some explicitly comic pieces for various media include the word 'burlesque'. Leopold Mozart's *Sinfonia burlesca* (1760) is scored for two violas and two cellos with an independent bass part for bassoon and violone, a combination whose unusual register accords with the symphony's name. The last two movements are titled after *commedia dell'arte* characters: 'Il signor Pantalone' and 'Harlequino'. Méhul's *Ouverture burlesque* (1808), for three mirlitons, drum, violin and piano, is almost grotesquely comic in both its scoring and its musical content. Richard Strauss alternated the wickedly humorous with the lyrical in his *Burleske* for piano and orchestra (1885–6): the piece begins with a timpani solo in galliard rhythm, there is a quotation from Wagner's *Die Walküre*, and the piccolo provides shrill and grotesque punctuation. Bartók's *Three Burlesques* for piano (1908–11) are witty and full of wry humour; in the third of the set even the rests are used in a jocular manner. Other works that use the word in their titles to evoke a sense of irreverence include Reger's *Sechs Burlesken* op.58 for piano duet, Ernst Toch's *Burlesken* op.31 for piano, Casella's *Sicilienne et burlesque* for flute and piano (1914; arranged for piano, violin and cello, 1917), Bartók's Scherzo (Burlesque) op.2 for piano and orchestra, Messiaen's *Fantaisie burlesque* for piano and Florent Schmitt's *Ronde burlesque* for orchestra op.78.

2. ENGLISH THEATRICAL BURLESQUE. Burlesque was related to and in part derived from PANTOMIME and may be considered an extension of the introductory section of pantomime with the addition of gags and 'turns' such as traditionally accompanied a transformation scene. But whereas pantomime most often took its subject matter from stories familiar to children – fairy tale, nursery rhyme, folk story, familiar fiction or exotic tales – burlesque tended to employ more elevated and serious models: mythology, classical or historical legend (Medea, Ivanhoe), literature, Shakespearean drama and history (Guy Fawkes, Lucrezia Borgia). Among the objects of ridicule were the conventions of serious theatre and melodrama. Burlesques followed the appearance of virtually every major opera, as for example J. Halford's *Faust and Marguerite* (1853) after Gounod's *Faust*.

Like pantomime, burlesque became a largely seasonal entertainment, appearing in legitimate theatres at Christmas and Easter in place of more serious bills. Occasionally a burlesque appeared as a companion piece to other works. Whereas pantomime entertained all classes and all ages, the burlesque and extravaganza tended to appeal to a relatively educated and sophisticated audience. In both genres dialogue was cast in rhymed couplets of iambic

pentameter verse (less often in blank verse). Music was an essential if often a minor feature, consisting chiefly of arrangements of songs and incidental music to underscore the action or for comic effect. In operatic burlesques, numbers were appropriated from the model, with new words and often with humorous touches; additional numbers were interpolated from a variety of familiar sources (such as music hall and minstrel songs). Rarely was there any attempt at musical parody.

The heyday of burlesque began with Lucia Elizabeth Vestris's production in 1831 of *Olympic Revels, or Prometheus and Pandora* by James Planché, written with Charles Dance with music by John Barnett. Planché virtually invented this style of burlesque and for a generation he dominated the genre. A master of refined, delicate effect, he deplored the absurdity, inconsistency and broader physical and verbal foolery found in the works of later and lesser dramatists. The appearance of W.S. Gilbert (1836–1911) signalled the last important phase of burlesque. His first dramatic work, *Dulcamara, or The Little Duck and the Great Quack* (1866), was a successful burlesque on Donizetti's *L'elisir d'amore*. Gilbert's five operatic burlesques (each announced as an EXTRAVAGANZA) led to the evolution of the genre into the more sophisticated Savoy-style comic opera, characterized by original stories, absurdity regulated by internal consistency, satire in place of parody, the absence of travesty and clowning, close directorial supervision and highly developed musical scores.

Although the works of those such as Planché and Gilbert had literary merit, with sophisticated word-play and current and historical allusions, works of lesser providers seldom seem satisfactory on the printed page. Their success in the theatre may be explained by their eccentric and often lavish staging, with interpolated physical humour and sometimes extraneous displays of skill and spectacle, as distinct from their unsubtle verbal humour, with an emphasis on punning and often inept verse. Although an almost indispensable element of burlesque was the display of attractive women dressed in tights, often in travesty roles, the plays themselves did not normally tend to indecency.

The extravaganza was a special, highly developed species of burlesque. The various genre terms were always applied freely, however, often in combination with such other equivocal terms as BURLETTA; by the 1860s their use had become arbitrary and capricious.

3. AMERICAN BURLESQUE. In the USA, burlesque followed the English form until the 1860s. From the late 1830s burlesques of operas and romantic plays were presented in New York, and the English émigré John Brougham wrote and acted in numerous burlesques from 1842 to 1879. Brougham's *Po-ca-hon-tas* (1855, after Longfellow's narrative poem) is peopled with 'Salvages', its dialogue is a string of *doubles entendres* and its songs were selected from such popular tunes as *Widow Machree* and *Rosin the Bow* and Tyrolean melodies. Several minstrel troupes presented such satires; in the 1860s the Kelly & Leon Negro Minstrels performed burlesques of Offenbach (*La Belle L.N., Grand Dutch S.*) throughout the north-eastern states, and Sanford's Minstrel Burlesque Opera Troupe advertised a 'change of programme every night'. From about 1860 burlesque often provided the framework for elaborate spectacles, beginning with those produced in New York by Laura Keene, who employed ballet troupes of women whose costumes exposed their legs; nearly all New York theatres presented shows that relied less for their effect on dramatic elements, wit or satire than on female beauty, and the term 'burlesque' gradually shifted in meaning from the ridicule of stage conventions to an emphasis on women in various degrees of undress, with striptease elements prominent by the 1920s. The burlesque was banned in New York in 1937.

Burletta. A type of English operatic comedy that flourished in the late 18th and early 19th centuries. The term was one of several used for Italian comic operas of the light intermezzo variety: for instance Pergolesi's *La serva padrona* was so described at its first London performance in 1750. Several Italian burlettas were played at Dublin with great success in the 1750s, and Lord Mornington commissioned Kane O'Hara to write an English imitation of one. The result was *Midas*, the first English burletta, performed privately near Belfast in 1760, and publicly at Dublin in 1762 and at Covent Garden in 1764. It was a burlesque on classical mythology; the music was a pasticcio, partly folksongs and partly tunes from Italian and English operas, with recitative. Its compiler is unknown.

Midas was a great success and was imitated both in Dublin and in the London patent theatres. These early burlettas, in verse throughout and all-sung, satirized the mythological and historical conventions of *opera seria*, though the music rarely participated in the joke. Prominent examples were *The Judgment of Paris* (Barthélemon, 1768), *The Portrait* (Arnold, 1770), *The Golden Pippin* (J.A. Fisher, 1773) and *Poor Vulcan* (Dibdin, 1778).

The decline of the burletta began with an adaptation of the burlesque tragedy *Tom Thumb*, revived at Covent Garden in 1780, a spoken play with added songs from various sources, compiled by J. Markordt. According to George Colman the younger, it was 'inadvertently announced by the managers ... as a burletta', thus giving the minor theatres a precedent for the evasion of the Licensing Act (1737), which had conferred a monopoly in legitimate drama on the two patent theatres, Covent Garden and Drury Lane. Comedies of all sorts, often with no burlesque element, were now put on at the minor

theatres under the general title 'burletta', and they departed increasingly from the original model. The orchestra was reduced to a harpsichord or piano. Songs became shorter and scarcer. The dialogue was still supposed to be in rhyme and sung in recitative: in 1812, according to the *Theatrical Inquisitor*, 'the tinkling of the piano and the jingling of the rhyme' were still the distinctive marks of the burletta. But by degrees the recitative became indistinguishable from spoken dialogue. In 1824 Colman told the Lord Chamberlain that a burletta must have at least five or six songs 'where the songs make a natural part of the piece, *and not forced into an acting piece*, to qualify it as a burletta', but even this was an optimistic description. In some of John Barnett's early stage pieces the few songs, though often highly successful in themselves, were mere 'music-shop ballads', introduced irrelevantly into a spoken play for subsequent sale as sheet music.

The term 'burletta' did not long survive the repeal of the Licensing Act in 1843, although it was occasionally used later in the century in the USA as a synonym for BURLESQUE.

NICHOLAS TEMPERLEY

Burlini, Antonio (*b* Rovigo; *fl* 1612–17). Italian composer. A Benedictine monk, he is known to have been at Siena in 1612 but took up the post of organist at S Elena, Venice, later that year. He was one of many minor Italian church composers to adopt the small-scale concertato style in the second decade of the 17th century; all his music belongs to this genre except the double-choir publication of 1615. But he did not treat it imaginatively. Although solo motets in the two collections of 1612 display a rudimentary approach to musical form, the vocal lines are undistinguished, and the optional instrumental parts in the second are, though an interesting idea, musically superfluous. Single added instrumental parts appear again in the collections of 1614 and 1615. The first of these is a set of Lamentations, not commonly set to measured music at this period, while the preface of the second includes interesting advice about making several copies of the basso continuo part for various instruments, including chitarrone and lute, in polychoral music. (J. Roche: *North Italian Church Music in the Age of Monteverdi*, Oxford, 1984)

JEROME ROCHE

Burma. *See* MYANMAR.

Burmeister, Joachim (*b* Lüneburg, 1564; *d* Rostock, 5 March 1629). German theorist, composer and teacher. He was one of the leading German theorists of his time and one of the most influential, especially for his work on rhetorical figures in music.

1. Life. 2. Writings. 3. Music.

1. LIFE. Burmeister studied music at the Johannisschule, Lüneburg, under the Kantors Christoph Praetorius and Euricius Dedekind and the vice-Rektor Lucas Lossius, who particularly impressed him with his textbooks on rhetoric and dialectic. In 1586 he matriculated at Rostock University, where his academic teachers included, among other widely educated humanists, the mathematician and professor of medicine Henricus Brucaeus. He took his master's degree in 1593. From Easter 1589 he was on the staff of the Rostock town school and was Kantor, first of the Nikolaikirche, then, from the autumn of that year, of the principal church, the Marienkirche; from 1593 until his death he was regular teacher (*collega classicus*).

2. WRITINGS. None of his published works dates from his four years as Kantor. He wrote no school singing manuals, for it was his objective to regain for music its rightful place among the sciences. He emphasized the connection between the three parts of music theory and the dependence of *musica practica* and *musica poetica* on *musica theorica*; nevertheless he laid most emphasis on the teaching of composition, which he developed through three published treatises. For example, his important list of 22 musical-rhetorical figures in *Hypomnematum musicae poeticae* (1599) grew to 25 in *Musica autoschediastikē* (1601) and to 26 in *Musica poetica* (1606). The definitions of some figures were substantially altered, and the musical examples became sometimes more specific, sometimes less. *Musica autoschediastikē* was by far the most extensive of the three treatises, including such topics as the ancient modes and genera, tuning, mensuration, transposition and the art of singing. The term *autoschediastikē* (meaning 'improvised') apparently refers to the random organization of the volume; musical improvisation is not discussed.

Burmeister's approach to composition reflected the period's growing emphasis on the vertical, harmonic aspect of music. After treating consonant and dissonant intervals, he began his instruction not with two-part counterpoint, as had earlier been the custom, but with the theory of chord construction, which he called 'syntax'. His formulation and illustrative charts owed much to the example of Johannes Avianus's *Isagoge in libros musicae poeticae* (1581). He described chords as consisting of three 'conjugate' notes: a *basis*, a *media* a 3rd above the *basis* and a *suprema* either a 5th or a 6th above the *basis*. Octave equivalents could be substituted for the *media* and *suprema*, but in a four-part chord only the *basis* was to be doubled. In Burmeister's theory 5th chords and 6th chords remained different species; he had no concept of 'root' or 'inversion'. Though he was clearly an important forerunner of triadic theory, he never used the term 'triad' in the main text of his treatises. However, in *Hypomnematum musicae* he included a poem extolling the manifestations of certain mysteries of the Divine Triad (*triados mysteria diae*), the Trinity. One of these manifestations, he wrote, consists of the three pitches that make a

concordant harmony; the Divine Triad is also heralded by the three structural pitches in every mode (the final, 5th and 3rd) and by the three main cadential pitches (again the final, 5th and 3rd).

This amalgamation of modal theory with triadic theory had originated in the teachings of Gioseffo Zarlino and spread throughout Protestant Germany through the mediation of Seth Calvisius. But Burmeister also suggested a fascinating taxonomy of musical affections that combined triadic theory with the 12-mode system in a way that foreshadowed the major-minor typology. He explained the affects associated with each mode in terms of the position of the semitones relative to the three governing scale degrees. In the first place Burmeister treated the modes in which one of the semitones, located between the 6th and 7th degrees, was isolated from the *basis*, the 3rd and the 5th. The Mixolydian mode (and its plagal, Hypomixolydian), having the other semitone above the 3rd degree, was 'happy and uplifting'; the Dorian, with the semitone beneath the 3rd, was 'serious and weighty'. The second pair was more extreme, having both semitones in the same relation to the *basis* and the 5th: Lydian, with its semitones beneath, was hard, 'tragic and turbulent', while Phrygian, with its semitones above, was soft, 'lamenting and tearful'. Finally, if the two semitones were in opposite relations to two of the governing degrees, Burmeister defined the affect as 'moderate'; he showed how this worked in the case of the Ionian mode, with one semitone beneath the *basis* and the other above the 3rd, but he left implicit the case of Aeolian, with one semitone beneath the 3rd and the other above the 5th. Presumably the former mode would be identified as moderately hard or happy and the latter moderately soft or sad.

Burmeister is justly famous for his application of rhetorical doctrine to music. From the start he, and colleagues who had read his writings prior to publication, were conscious of the pioneering import of his accomplishment. He aimed to assimilate extensively the language of music theory to that of grammar and rhetoric (compare the concepts, already mentioned, of 'syntax' and 'conjugation'), and went further than earlier German *Lateinschule* masters like Johannes Frosch in adopting a classicizing vocabulary in place of the traditional musical terms. His substitution of the word *disparatum* ('a prefix of opposition') for 'accidental' to describe the sharp and flat signs, for instance, is not only explicitly Ciceronian but also implies a more modern conception of the effect of the signs, indicating inflection of pitch rather than an alteration of nature. While Burmeister's general terminology, which was never widely imitated, may seem pretentious or distracting, his goal was to make the language of theory more precise, and this was especially fruitful in the realm of rhetoric.

Through his development of a doctrine of musical-rhetorical figures, Burmeister sought to grasp abstractly the means for musical decoration and text emphasis, just as in rhetoric the figures are the artistic means for the orator to deviate from ordinary speech. Burmeister's figures served not only for expressive purposes, but also (as Palisca has pointed out) for musical construction. While 16th-century music theory had discussed as artistic compositional means only cadences, imitation, syncopation, and dissonance, Burmeister tried, using as examples Lassus's motets, to list and name all the special musical details and all the divergences from normal musical language, which for him was represented by the homophonic structures of the *genus humile*. In order to underscore the analogy between rhetorical and musical text explication, he chose most of his terminology of figures from rhetoric. It is as necessary for musical figures as for rhetorical ones that a deviation from the norm should occur, so that the listener can grasp it as a figure. A deviation from normal language must be legitimized or excused by the text; otherwise all gross violations of the rules were forbidden because they offended the ear. The relationship between Burmeister's names for musical figures and their rhetorical analogues was sometimes remarkably close, but more often the association was with the root meaning of the word rather than its technical sense. For example, in rhetoric *hyperbole* (Gk.: 'throwing beyond') signifies exaggeration, *hypobole* (Gk.: 'laying under') verbal substitution; Burmeister used the terms to mean the extension of pitch respectively above and below the limits of the modal octave. He also refined his nomenclature of figures in successive treatises. A prominent example concerns the terms for motivic repetition. In *Hypomnematum musicae* he defined *pallilogia* as the repetition of a motif in several voices, whereas *anaphora* was repetition in the bass voice alone. In *Musica autoschediastikē*, however, *pallilogia* was redefined as repetition in any single voice, while *anaphora* now signified a repetition in several but not all voices (one in all voices would be *fuga*), and *climax* was introduced as a term for sequential repetition.

Most of the examples that Burmeister provided for each figure come from motets by Lassus. In *Musica autoschediastikē* and *Musica poetica*, he went on to discuss analysis, especially as a foundation for the imitation of models. Using Lassus's motet *In me transierunt* as a paradigm, he expounded the analysis of five musical criteria: mode, genus (diatonic, chromatic, enharmonic), style (*simplex, fractus, coloratus*), quality (*durus, mollis*), and division into 'affections' or periods (*see* ANALYSIS, fig.1). These last need not correspond to grammatical divisions in the words, but might be signalled by a cadential gesture followed by new thematic material. Burmeister named composers as models of the 'lowly', 'grand' or 'elevated', 'middle' and 'mixed' (of grand and middle) styles; he identified Lassus with the last. Although he often referred to specific loci in Lassus's works, he seldom provided notated examples, partly in order to avoid inflating his book, but also to spur his readers to transcribe the music themselves as models for imitation (in the didactic rather than the strict musical sense).

As regards *musica practica*, Burmeister was concerned to systematize the elements of notation – a knowledge of which he assumed – by means of a clear and unambiguous terminology that would satisfy scientific criteria. To the existing solmization syllables he added *se* for Band *si* for B♭ in order to avoid the problems of mutation and make the syllables correspond to the octave structure of the scale. He thought that there were too many mensural signatures, since a conductor could make the semibreve beat faster or slower according to the character or affection of a composition. Burmeister transferred to singing much of what Quintilian said about the delivery, voice and gesture of the orator. He also recommended keeping to the right tempo in the execution of vocal embellishments.

Burmeister's last publication, *Musica theorica* (1609), concerns the mathematical calculation of intervals and is based on the manuscript of a lecture by his teacher Henricus Brucaeus, with an extended commentary for each section. It deals only with Pythagorean intervals; the proportions of pure 3rds are not considered.

3. MUSIC. As a composer, Burmeister ranks lower than other leading theorists such as Zarlino and Michael Praetorius. His collection of 1601 contains 91 harmonizations of hymn tunes and a few sacred school songs and *Benedicamus* settings by other composers. His hymn settings are in a very simple note-against-note style following the model of Lucas Osiander and thus correspond to the rules that Burmeister gave for musical syntax in the *genus humile*. The individual lines, however, lack the singability that distinguishes comparable pieces by Praetorius. The four motets that Burmeister composed as examples of the chromatic genus and the three types of counterpoint (*aequale*, *fractum* and *coloratum*) in the first two versions of his theory of composition are modelled on Lassus's. The example of the *genus aequale* is homophonic but contains several instances of syncopation that help expressive declamation of the text. Transposition by a 3rd would have avoided the artificially complex notation of the chromatic example, in which the essential variability of the 3rd and the 7th is clear. In the other two motets Burmeister used numerous rhetorical musical figures like those he identified in Lassus's motets. It is clear, however, that an ability to imitate Lassus's stylistic devices does not guarantee music of comparable quality.

BENITO V. RIVERA, MARTIN RUHNKE

Burnacini, Giovanni (*b* ?Cesena, *c*1605; *d* Vienna, 21 July 1655). Italian stage designer and architect. His first known works as an artist were the tournament theatre and stage designs for Marazzoli's *Le pretensioni del Tebro e del Po* (1642, Ferrara). These show the influence of Alfonso Rivarola ('il Chenda'), whose pupil he may have been and whom he may have succeeded as stage designer and engineer at the Teatro SS Giovanni e Paolo, Venice, about 1640, where he probably staged operas by Monteverdi. He was active there in 1643 and 1651 and may have built the small Teatro SS Apostoli (opened 1648), for which he directed and designed until 1651. With his brother Marc'Antonio he was summoned to Vienna by Ferdinand III in 1651, and until his death, assisted by his son Ludovico Ottavio, he was responsible for the décor of the operatic and festive productions at the imperial court.

In the librettos of *La finta savia* (1643, music by Ferrari and others) and Lucio's *Gl'amori di Alessandro magno e di Rossane* (1651) Burnacini was hailed as the true pioneer of Venetian theatrical machinery. His stage designs, preserved in a number of engravings (A. Bertali: *La gara*, 1652, and *L'inganno d'amore*, 1653), confirm this high estimate and show that in both technical and artistic respects he was the equal of his better-known rival Giacomo Torelli.

MANFRED BOETZKES

Burnacini, Ludovico Ottavio (*b* ?Mantua, 1636; *d* Vienna, 12 Dec 1707). Italian stage designer and architect, son of Giovanni Burnacini. He went to Vienna in 1651 as his father's assistant and pupil. After his father's death (1655) he at first succeeded him as stage designer at the imperial court, but on 30 June 1657 he was dismissed by the new emperor, Leopold I, in favour of G.B. Angelini. Re-engaged from 1 January 1659, for nearly five decades he designed all the stage sets, machines and costumes for the theatrical performances, *sacre rappresentazioni*, festivals and memorial ceremonies of the Viennese court. He also did architectural work, including the building of the new court theatres, 1666–8.

Burnacini's unique scenic imagination stamped Viennese opera in the 17th century – the works of Bertali, Cesti, Draghi and the Zianis – with an unmistakable imprint. Surpassing even the masterly theatrical machinery of his father, he developed a spectacular style of courtly stage design, particularly in the great 'homage operas' of the 1660s and 70s (e.g. Cesti's *Il pomo d'oro*, 1668, and Draghi's *La monarchia latina trionfante*, 1678; see illustration). This style satisfied most effectively his employer's demands for supreme strength, both at an emotional level, by virtue of its ostentatious splendour, and at a didactic one, through a stringent symbolism. His costumes, notably for masquerades, ventured into the grotesque. He also trod new paths with his stage designs for comic operas and with the stage presentation of religious works.

MANFRED BOETZKES

Burnand, Sir **F(rancis) C(owley)** (*b* London, 29 Nov 1836; *d* Ramsgate, 21 April 1917). English librettist and dramatist. Educated at Eton and Cambridge, where he founded the Amateur Dramatic Club, he studied for the church and later read law and was admitted to the bar. But he soon became instead a prolific writer of farce, pantomime, burlesque and extravaganza for the London stage. In the 1860s he was a chief provider of burlesque for the Royalty Theatre, where his first marked success was *Black Eyed Susan* (1869). He was knighted in 1902.

Grotto scene of Draghi's festa musicale 'La monarchia latina trionfante', Theater auf der Cortina, Vienna, 1678: engraving by Matthäus Küsel after the design by Ludovico Ottavio Burnacini

Although one of the most popular of Victorian dramatists, Burnand was a facile and slapdash writer; his favourite devices included puns, topical references and slang. His only piece to hold the stage was *Cox and Box* (1866), adapted from J. Maddison Morton's 1847 farce *Box and Cox* and set as a one-act operetta by Sullivan. He wrote nearly 20 pieces for the German Reeds' entertainments and it was Reed who brought Burnand and Sullivan together again for *The Contrabandista, or The Law of the Ladrones* (St George's Hall, 1867), later expanded as *The Chieftain* (Savoy Theatre, 1894). Among Burnand's other collaborators in comic opera were Alexander Mackenzie, Alfred Cellier, Edward Solomon, J.L. Molloy and German Reed himself. He also provided translations for London productions of operas by French composers, including Audran, Lecocq and Planquette.

FREDRIC WOODBRIDGE WILSON

Burnett, Avery. Gentleman of the Chapel Royal in 1526; he may be identifiable with AVERY.

Burnett, Duncan (*fl* Glasgow, 1614–52). Scottish composer. He was related to the illustrious family of Burnets of Leys in Aberdeenshire. In 1614 he was described as schoolmaster in Glasgow, and in 1638 he was granted a licence 'to tak up ane musik schooll' there. His will is dated 1652 and was made in Glasgow. Burnett's surviving music, which is for keyboard, is in an early 17th-century manuscript collection (*GB-En*), probably made by the composer in about 1615, and comprises a named pavan, two other pavans, a set of variations on a ground and two song arrangements attributable to him on internal evidence of style. The pieces range from decorative (possibly early) song transcriptions (which include Lassus's popular and much arranged *Susanne un jour*; ed. in EKM, xv) to elaborate and effective dance movements, which reveal a liking for sombre key, low tessitura, expressive harmony and a contrapuntal texture. These include a powerful pavan and a spectacular setting of *The Queine of Inglands Lessoune* (both ed. in EKM, xv), the latter on a theme known elsewhere as *Pavanne d'Angleterre* (Gervaise, *Sixième livre*, 1555), *Prince Edward's Paven* (ed. in MB, xv) and *Heaven and Earth* (in the Fitzwilliam Virginal Book). Burnett's manuscript also contains most of the surviving keyboard music of William Kinloch, as well as keyboard music by Byrd, consort versions of 16th-century Scottish and French partsongs, Scottish consort music by John Black and 44 settings of the Proper psalm tunes by Andrew Kemp.

KENNETH ELLIOTT

Burnett, Richard (Leslie) (*b* Godstone, Surrey, 23 June 1932). English fortepianist. He studied at the RCM with Geoffrey Tankard and privately with Peter Katin and Maria Donska. His interest in early pianos was first stimulated by the tenor Nigel Rogers, with whom he recorded Schubert's *Die schöne Müllerin*. From the late 1960s Burnett built up a collection of harpsichords, chamber organs, clavichords and especially early pianos, which has been housed at Finchcocks in Kent since 1971. He has developed this manor house as a museum and music centre with many of the instruments in playing order. Burnett has made about 30 recordings of the Finchcocks collection including *Die Winterreise* with Ian Partridge, Classical clarinet sonatas with Alan Hacker and Mozart piano quartets, as well as solo works of the English Piano School.

GEORGE PRATT

Burney, Charles (*b* Shrewsbury, 7 April 1726; *d* Chelsea, London, 12 April 1814). English musician, composer and music historian. A fashionable and popular teacher of music, he was a composer and performer of modest talents whose greatest success and legacy are his writings on music.

1. LIFE. His father, James Macburney, was a dancer, violinist and portrait painter who dropped the prefix from his surname about the time that Charles was born. Charles and his twin sister Susanna, born to Macburney's second wife, were the last of 20 children in the family. Before the age of eight he was sent to Condover under the care of a nurse. He returned to Shrewsbury to enrol in the Free School, and in 1739 rejoined his family in Chester, where he entered Chester Free School as a King's Scholar. Here the early introduction to music he had received at Condover was continued under the direction of the organist of the cathedral, and he was soon able to perform the services. His education and interest in music were heightened by the many famous musicians who travelled through Chester on their way to or from Ireland.

In 1742 Burney returned to Shrewsbury to assist his half-brother James, who had become the organist of St Mary's Church. James proved to have limited talents and Burney's autobiographical reflections on this period are of intense self-guided study in music, letters and practising. In 1743 he returned to Chester 'inflamed with a rage for composition'. He again benefited from association with the many notable musicians in transit between London and Dublin. The visit of Thomas Arne in 1744 ultimately led to Burney's becoming apprenticed to him for a period of seven years. Burney's association with Arne was troubled. He was obliged to carry a very heavy burden transcribing music, teaching Arne's less important singers, giving lessons to Arne's instrumental pupils and playing in various orchestras. All of the income from these activities accrued to Arne. Nonetheless, Burney gained invaluable experience and important associations. In 1745 Arne sent him to Handel, who engaged him to play in the orchestra for his new oratorios *Hercules* and *Belshazzar*. He eventually obtained a regular place in the orchestra of the Drury Lane Theatre and performed at Vauxhall Gardens.

In 1746 Burney met Fulke Greville, a well-travelled and sophisticated gentleman, who took an interest in Burney because of his uncommon intellect and social ability. For several years Greville purchased a portion of Burney's time from Arne so that Burney could entertain his friends at his country home. In 1748 Greville purchased the remaining years of Burney's apprenticeship from Arne. Burney became apprentice, music-master and intellectual

companion to Greville. However, after less than a year, in May 1749, Burney was released from all obligations to Greville so that he could marry Esther Sleepe, who had clandestinely given birth to their first child one month earlier. Freed from all apprentice obligations, he quickly established himself. He became a Freeman of the Musician's Company in July 1749. The friends he had made during his service to Arne and Greville assisted all of his efforts. With their help he was appointed organist of St Dionis Backchurch. In 1749 he replaced John Stanley when the fashionable series of concerts held at the Swan Tavern were relocated, after a fire destroyed the former site, to the King's Arms Tavern. Burney states that he 'began to be in fashion in the City, as a Master, and had my hands full of professional business of all kinds with scholars at both ends of the town, Composition, & public playing'. Among his pupils were Giulia Frasi and Gaetano Guadagni, two of Handel's leading singers. In 1750 Burney provided the music for the comic opera *Robin Hood* (with a libretto by Moses Mendez) under the name of the pretend Society of the Temple of Apollo, an institution of which Burney repeatedly asserted he was the sole member. The 'Society' also provided music for the pantomime *Queen Mab*, based on a libretto by Henry Woodward, to great success. Burney subsequently provided many new songs for Garrick's production of *The Masque of Alfred* (1751), but it was only moderately successful.

Burney fell seriously ill in 1751. Forced to leave London for the cleaner air of the countryside, he settled in King's Lynn, as organist of St Margaret's Church. For nine years he served as organist, music instructor to the best families in the area, and as impresario and performer for concerts. He continued his course of self-directed study of languages, literature and music history and befriended many of the leading citizens in the region. In 1760 he returned to London, where he quickly re-established himself as a leading music teacher. He did this in part by displaying the talents of his daughter Esther, who was already an impressive harpsichordist at the age of ten. His many influential friends ensured the rapid success of his return to London; however, his wife's protracted illness and subsequent death in 1762 deprived him of the full enjoyment of this success. In 1763 David Garrick enlisted him as musical director for his production of *A Midsummer Night's Dream*. Burney provided 14 of the songs for the production which, however, was unsuccessful and quickly withdrawn. He visited Paris for the first time in 1764 to enrol his daughters in a school, and used the occasion to become acquainted with the state of theatre, opera and music. Burney collaborated with Garrick again in an English adaption of Rousseau's pastoral *Le devin du village*. Burney had translated the work during his stay in King's Lynn and he reworked this version for the production in 1766. Adapted as *The Cunning Man*, Rousseau's work enjoyed moderate success. Burney was to produce nothing more for the theatre.

In 1767 Burney married his second wife, Mrs Stephen Allen, the widow of a close friend from his time in King's Lynn. In 1769 he sought and gained an appointment to write the ode for the installation of the chancellor of the University of Cambridge, but withdrew over disagreement about the cost of the orchestra. Instead, he wrote an exercise for Oxford and matriculated from University College in June 1769 with the degrees of BMus and DMus.

Burney's lifelong interest in astronomy, as well as his passion for literature, found expression in 1769 in the anonymous publication *An Essay towards a History of the Principal Comets that have Appeared since the Year 1742*, a work calculated to benefit from the scheduled reappearance of Halley's Comet that autumn. Burney next turned to writing about the history of his own art, but determined that he would need to engage in research in France and Italy to augment his broad acquaintance with the relevant and available material in England. In June 1770 he left England on a tour of the leading cities of France and Italy, bearing numerous letters of introduction to leading intellectuals and musicians on the Continent. Burney's published account of this tour, *The Present State of Music in France and Italy*, established him as one of music history's keenest observers and most entertaining commentators. By virtue of its reflection of his wide ranging intelligence and interest, it laid the foundation for Burney's acceptance as a man of letters rather than what his daughter Fanny would call 'a mere musician'.

In 1772 Burney undertook a trip through the Low Countries, Germany and Austria, motivated in part because of his desire to know more about the music in these countries and in part at the prompting of Christopher Daniel Ebeling, who was translating Burney's Italian tour into German. His sojourns in the great musical cities (such as Vienna, Berlin, Potsdam and Hamburg) included visits to Metastasio, Hasse and Gluck, as well as to C.P.E. Bach. Less than a year later he published his extensive *The Present State of Music in Germany, the Netherlands and the United Provinces*. His work, which contained criticisms of German manners and taste, drew strong protests from loyal Germans, but was highly successful in England.

The success of his writings only increased his fashionable status. His home was the gathering place for prominent musicians, men of letters, politicians and artists. The Sunday Evening Concerts held there were justly famous (fig.1). His musical activities continued unabated and he secured the post of organist of Oxford Chapel (now St Peter's, Vere Street) in 1773. Burney moved to the former home of Sir Isaac Newton in St Martin's Street, Leicester Fields in 1774.

Three years in the writing, the first volume of Burney's *General History of Music* was published in 1776, two years later than proposed. He barely succeeded in his ambition to beat to publication the history of music written by Sir John Hawkins. However, Hawkins published his complete five-volume history at one time, whereas it was to take Burney until 1789 to complete his task. Contemporary reviews cast the books as rivals and the relative merits of the two histories have been in debate continuously since. Burney's initial volume enjoyed immediate success and very positive reviews, some of which Burney contrived to manipulate to ensure favourable comment. The second volume of the *History* was delayed by a relaxing of Burney's ambition, partly because he enjoyed his earlier successes and because of his distaste for the Gothic music that was his subject; it did not appear until 1782. The volume was a critical success, nevertheless, and drew notable attention because its publication coincided with the publication of *Cecelia* by his daughter Fanny. Work on the third volume of the *History* was

1. Sunday Concert at the home of Charles Burney: engraving by Charles Loraine Smith, 1782; among the performers are Ferdinando Bertoni (piano), James Cervetto (cello) and, behind them, Cariboldi (double bass), Hayford (oboe), Gasparo Pacchierotti (castrato), Johann Christian Fischer (oboe), Langani (violin) and Jacques-Joseph-Toussaint Pieltain (horn), with Burney gossiping in the foreground

interrupted by Burney's involvement with the Handel Commemoration of 1784. He was appointed official historian of the event, which caused him considerable difficulty and expense. He found himself in the hands of the exclusive admirers of Handel, who expected him to surrender all of his earnings to the charitable fund that was the beneficiary of the event. As a result of the direct intervention of the king, and others whom Burney could not afford to offend, the essays on Handel and his music in the *Account of the Commemoration of Handel* do not always reflect his honest critical opinion.

In 1789, at the age of 63, Burney published the third and fourth volumes of his *History*. A new, somewhat revised, edition of the first volume was also published, enabling the purchase of all four volumes (the first volume had gone out of print many years earlier). The completed work, though inevitably compared with that of Hawkins, was favourably received. The following year Burney began writing a biography of Metastasio. He worked on it only sporadically, not completing the work until 1796. In addition to his broad participation in the social and cultural life of London, his work was delayed by Haydn's two visits to England. It was to Burney that Haydn came when he first arrived in England. Burney published a poem of welcome and the two spent a great deal of time together during a total of the three years Haydn spent in England between 1791 and 1795.

In 1801 Burney undertook his last large-scale project, the writing of the articles on music for Rees's *Cyclopaedia*. This task occupied him for much of the rest of his life. In 1806 he received a pension of £200 a year. In 1810 he was appointed a Correspondant of the Institut de France Classe des Beaux-Arts. During the final years of life Burney worked on his memoirs, attempted to bring order to an immense correspondence and spent time organizing his very extensive library. After his death, his library was separated into three lots. The Miscellaneous Library and his collection of music were sold at two separate auctions. His extensive library of books on music was sold as he had wished, without being separated, to the British Museum. In 1817 a monument to Burney was erected in the North Choir Aisle of Westminster Abbey.

Burney joined the Royal Society of Musicians in 1749 and was elected a Fellow of the Royal Society of Arts in 1764 and the Royal Society (FRS) in 1773. He was a member of the Music Graduates Meeting throughout its existence. In 1767 he was appointed 'Extra Musician' in the King's Band, and in 1774 he was promoted to musician-in-ordinary. He made a number of attempts to achieve more notable and more lucrative appointments but without success.

Portraits of Burney exist as follows: (1) Reynolds (original, fig.2, now in the National Portrait Gallery, and formerly the property of the descendant of the Rev. Dr Charles Burney; copies in the Music Faculty, Oxford, and the Conservatorio di Musica G.B. Martini, Bologna; engraving by Bartolozzi in the *History*). (2) Drawing by Dance (in the National Portrait Gallery). (3) Engravings in the *European Magazine*, 1 April 1785 (possibly after the now lost portrait by Sir Joshua Reynolds's sister, Frances). (4) Bust by Nollekens (exhibited at the Royal Academy in 1802; copies in the British Museum and the

2. *Charles Burney: portrait by Joshua Reynolds, 1781 (National Portrait Gallery, London)*

Music Faculty, Oxford). (5) Drawing in black chalk, done at Calais, 1770 (collection of J.M. Osborne, Yale University).

Burney figures in Barry's huge painting *Commerce*, or the *Triumph of the Thames* (1783) in the Great Room of the Royal Society of Arts, John Adam Street, London. Finally, there is a well-known colour-print caricature, *A Sunday Concert* (1782; fig.1), recalling the celebrated musical parties at Burney's St Martin's Street residence: a silhouette copy of this on glass formerly belonged to Percy A. Scholes.

2. ACHIEVEMENTS.

(i) Compositions. Burney's compositions are competent and reflect his activities as a performer, impresario and church musician. None has achieved lasting fame, although the link to Rousseau's *Le devin du village* has attracted attention to *The Cunning Man*. Late in life he described his own music as negligible.

(ii) Literary works. Burney's *Tours* and the *General History of Music* remain wellsprings of observation and insight into 18th-century musical life and practice. The *History* remains an impressive, if inconsistent, work of great value even after more than 200 years of specialized scholarship. The distinguishing mark of Burney's history, in comparison to that of Hawkins, is his greater familiarity and interest in contemporary music and his skill in addressing the general reader. Burney intended his work to be a distinctively English history of music directed to improving the taste of his readers. He wrote for a specific audience and sought the help of his collaborators, particularly Thomas Twinning (1735–1804) as much to assist him with the literary and general interest aspects of his work as with its musical content. The extensive treatment of Handel in the fourth volume of the *History* is the result both of Burney being granted access to the king's great collection of Handel manuscripts and of his catering to the general enthusiasm for Handel's music that dominated English taste for many years. Burney himself was a modernist who, though capable of admiring what was exceptional about Handel's music, was unprepared to accept Handel or any other composer as the greatest that ever lived or ever would live.

It is essential in reading Burney's writings to pay due attention to the tenets laid out in his 'Essay on Musical Criticism'. Many misinterpretations, such as the often-repeated notion that Burney was an 'enemy of counterpoint' can be avoided by considering his comments against the principles he followed in making his critical judgments. The prudent reader will remember that Burney wrote in a period and under conditions quite different from those available to contemporary authors. Throughout his life he was hopeful of receiving positions through patronage and later pensions. He consciously avoided placing his ambitions in jeopardy and this affected the content of his work. At its least intrusive this anxiety led him to 'praise what is worthy and to be silent about the rest'. In at least one instance, his *Account of the Commemoration of Handel*, Burney's reliance on the favour of those who might be his beneficiaries caused him to alter his opinion to the point of prevarication.

The *Memoirs of . . . Metastasio* are largely unsuccessful. His articles for Rees's *Cyclopedia* are inconsistent and have been frequently ridiculed: they are an uneven compilation of material drawn from other authors, especially from Burney's early translation of Rousseau's *Dictionnaire de Musique*, and from his own works. Nevertheless, they are valuable in that they offer a good deal of new material, including assessments of Mozart and Haydn, and even mention of Beethoven. The comparison of essays in their original form in Burney's early works with the versions found in the Rees articles yields many interesting insights. Burney assembled his own memoirs late in his life, but his incomplete work was taken up by his daughter Fanny, whose editorial work reshaped his career to her own conception, protecting her sense of family dignity by emphasizing his accomplishments as a man of letters. Her wish to de-emphasize the place of music in Burney's later life led to the destruction of material of inestimable value, including what was essentially a diary of Haydn's activities in London.

(iii) A man of letters. Unquestionably one of Burney's greatest accomplishments was his transcendence of the cultural and practical limitations of musicians in his time to a place in London's best society. He was largely self-educated, yet could hold his place in the company of England's finest intellects. He was not without character faults – one observer noted that he had no fault save that of obsequiousness – yet he presented himself in such an agreeable manner that Samuel Johnson could say of him 'my heart goes out to meet him. I much question if there is in the world such another man for mind, intelligence, and manners'. Although he succeeded in moving to such levels of society that he would be in the company of the king and queen, he was constantly aware of the necessity of protecting his success by accommodation to the powerful or merely influential. Not surprisingly, this affected his writings to a greater or lesser degree, depending on his subject.

(iv) His children. Several of Burney's children achieved recognition in their right: Esther (Hester, 'Hetty'), a well-known harpsichordist; Frances ('Fanny', Madame d'Arblay), diarist and novelist; Rear Admiral James Burney, FRS, who twice sailed round the world with Captain Cook and wrote an important five-volume *History of the Voyages and Discoveries in the South Sea or Pacific Ocean*; the Rev. Charles Burney, DD, LlD, FRS, one of the most eminent classical scholars of his day, whose magnificent library together with his extensive collection of newspapers and materials about the history of the theatre was purchased for the British Museum; and Charlotte Ann (Mrs Broome) and Sarah Harriet, both minor novelists. The musician Charles Rousseau Burney (who married Hester) and the artist Edward Francis (or Francesco) Burney were his nephews, sons of his brother Richard.

WORKS

printed works published in London, unless otherwise stated

INSTRUMENTAL

6 Sonatas, 2 vn, vc/hpd, op.1 (1748)
VI Cornet Pieces . . . and a fugue, hpd (1751)
VI Sonatas or Duets, 2 fl/vn, op.3 (1754)
6 Sonatas, 2 vn, b, op.4 (1759)
6 Concertos a 7, 4 vn, va, vc, bc, op.5 (*c*1760)
6 Sonatas, hpd (1761)
2 Sonatas, hpd/pf, vn, vc, 1st set (1769)
2 Sonatas, hpd, pf, vn, vc, 2nd set (1772)
4 Sonatas or Duets for 2 performers, pf/hpd (1777/*R*)
A 2nd set of 4 Sonatas or Duets, pf/hpd (1778/*R*)
? Sonate à 3 mains, hpd (*c*1780)
Preludes, fugues and interludes, org, bk 1 (*c*1787)

OTHER WORKS

6 songs composed for the Temple of Apollo, bk 1, op.2 (*c*1750)
The Cunning Man [adapted from J.-J. Rousseau: Le devin du village], Drury Lane, 21 Nov 1766 (*c*1767/*R* 1998 in RRMCE, l suppl.)
Ode on St Cecilia's Day (burlesque, B. Thornton), Ranelagh Gardens, 1769, ?1760/1763, ?lost
I will love thee, O Lord my strength (Ps xviii), solo vv, chorus, orch, DMus exercise, 1769, *GB-Ob*
XII Canzonetti a 2 voci in canone (P. Metastasio) (*c*1790)
Other songs, airs, etc., some perf. in stage works, pubd singly and in 18th-century anthologies, see Scholes, 1948

WRITINGS

Journal of Burney's travels in France and Italy (MS, 1771, *GB-Lbl* Add.35122) [see Poole, 1969]
The Present State of Music in France and Italy, or the Journal of a Tour through those Countries, undertaken to collect Materials for a General History of Music (London, 1771, 2/1773) [based on Journal, 1771; see Scholes, 1959, and Poole, 1969]
Lettere del defonto Signor Giuseppe Tartini alla Signora Maddalena Lombardini inserviente ad una importante lezione per i suonatori di violini/A Letter from the late Signor Tartini to Signora M. Lombardini (now Signora Sirmen) published as an Important Lesson to Performers on the Violin, Translated by Dr Burney (London, 1771, 2/1779/*R*)
The Present State of Music in Germany, the Netherlands, and the United Provinces, or the Journal of a Tour through these Countries, undertaken to collect Materials for a General History of Music (London, 1773, 2/1775) [see Scholes, 1959]
A General History of Music from the Earliest Ages to the Present Period, to which is prefixed, a Dissertation on the Music of the Ancients, i (London, 1776, 2/1789), ii (1782, repr. 1811–12), iii–iv (1789); ed. F. Mercer in 2 vols. with the 1789 text of the orig. vol. i (London, 1935/*R*)
'Account of an Infant Musician [W. Crotch]', *Philosophical Transactions of the Royal Society*, lxix (1779), 183–206; also pubd separately (London, 1779)

KERRY S. GRANT

Burnham, Robertus de. *See* ROBERTUS DE BRUNHAM.

Burno, [Bruno] **Rinaldo** (*fl* 1546–70). Italian composer. He was one of the circle of composers and noblemen living in Naples during the 1540s who contributed to the early history of Neapolitan song. Seven of his works were included in *Elletione de canzone alla napoletana a tre voci* (RISM 1546[18]), which was compiled in Naples by his friend, Dionisio de Palii, but probably printed in Padua by Fabriano and Bindoni. The print was listed by Antonfrancesco Doni in his *Libraria* (1550). The characters in Burno's strophic songs (five *napolitane* and two *mascherate*) are complaining lovers whose colourful anecdotes are saturated, like Nola's, with local proverbial expressions. Only the bass partbook of the *Elletione* is extant, but it reveals that Burno cultivated two essential features of the Neapolitan style: syllabic declamation on short note values (flagged semiminims are common) and spirited truncation of words and phrases. A *napolitana* by Burno in the later style, *S'io havesse tantillo*, was published in Primavera's first book of *napolitane* (RISM 1565[17]) and reworked, possibly by Arpa (RISM 1570[29], 1570[31]).

DONNA G. CARDAMONE

Burns, Robert (*b* Alloway, Ayrshire, 25 Jan 1759; *d* Dumfries, 21 July 1796). Scottish poet and songwriter. His father was a poor tenant-farmer, an occupation Burns himself followed though with no success. He decided to emigrate but was dissuaded, partly by the success of his first published volume, *Poems, Chiefly in the Scottish Dialect* (Kilmarnock, 1786), and then trained as an excise officer. He had little formal education, first at a local school, then from his father, but his appetite for wide reading, and his intense interest in and love for the Scottish countryside and the oral literature and music of its people, gave him an enviable command over two languages, English and Scots, and a deep appreciation of the wide range of sentiment expressed in Scots traditional melody. In 1786 he began supplying material to James Johnson for publication in *The Scots Musical Museum* (six vols., 1787–1803) and later also to George Thomson, editor of the *Select Collection of Original Scottish Airs* (five vols., 1793–1818). His work entailed drawing on the vast store of Scots songs he already knew and collecting others, using fragments of existing lyrics as a basis for his own poems and selecting suitable airs on which to compose new lyrics. He produced over 350 songs, including more than one third of those published in the *Musical Museum* and about 114 of those printed in the *Select Collection*: this represents the major part of the published repertory of Scottish national song. Those tunes printed in the *Musical Museum* were given basses by Stephen Clarke, Johnson's musical editor; both airs and lyrics in the *Select Collection* were probably subjected to a considerable amount of editorial tinkering and were given 'Symphonies and Accompanyments for the Violin and Piano Forte' by Pleyel and others, out of character with the simple and affecting nature of the songs. Though few of his songs were published before his early death, they soon became immensely popular and have since appeared in innumerable arrangements and editions. Among the most recent have been those of the American pianist-composer Serge Hovey, who, in collaboration with Jean Redpath, a professional Scots folksinger, published seven volumes of his arrangements on disc and cassette.

PETER COOKE

Buroni [Burroni], **Antonio.** *See* BORONI, ANTONIO.

Burrell, Diana (*b* Norwich, 25 Oct 1948). English composer. After studying music at Cambridge University (BA 1971) she worked as a teacher and freelance violist before concentrating on composition, in which she has largely been self-taught. Her first work to attract critical attention was *Missa Sancte Endeliente* (1980) for five soloists, chorus and orchestra, in which she set the liturgy in both

Latin and Cornish and used a characteristically wide range of sonorities and harmonies within a clearly defined structure. She has fulfilled a steady stream of commissions in a variety of genres for many different performers, festivals, ensembles and orchestras, including the City of London Sinfonia, with which she was composer-in-association (1994–6).

Burrell has said that her works begin with the idea of a visual form and that she composes her music as 'architectural shapes on paper'. She has developed a bold, distinctive and deeply spiritual musical language that is always concerned to communicate directly with the audience, while refusing to compromise its rhythmic and harmonic complexity. Central to much of her work is a vivid depiction of place. *Landscape* (1988), for orchestra, creates a primeval urban landscape, using the unusual sounds of steel pans, scrap metal and tenor recorders, while *Das Meer* (1992), for strings, is a dark, teeming seascape. The massive *Symphonies of Flocks, Herds and Shoals* (1995–6) reflects the abundant life forms of the universe. Burrell's places are often inhabited by swooping, shrieking birds, as in her string quartet *Gulls and Angels* (1993) and the orchestral *Resurrection* (1992), which also incorporates one of her favourite themes, that of rebirth. The english horn plays a central dramatic role in *Resurrection* and in *Dunkelhvide månestråler* (1996), for contralto, english horn and orchestra, where it reflects on the agony behind Tove Ditlevsen's words with a virtuoso keening.

WORKS
(*selective list*)

Dramatic: Dalliance of Eagles (elec ballet), 1986; The Albatross (op, Burrell, after S. Hill), 1987; Sequence, vc, tape, 1993

Orch: Praeludium, 1983; Io!, 3 tpt, 3 trbn, str, 1984; Archangel, 2 ob, eng hn, 3 tpt, str, wind, 1987; Landscape, 1988; Landscape with Procession, 1988; Scene with Birds, 1989; Das Meer, das so gross und weit ist, da wimmelt's ohne Zahl, grosse und kleine Tiere, str, 1992; Resurrection, chbr orch, 1992; Anima, str, 1993; Va Conc. '... calling, leaping, crying, dancing ...', 1994; Enchaînements, chbr orch, 1994; Cl Conc., 1996; Symphonies of Flocks, Herds and Shoals, 1995–6; Fl Conc., 1997

Vocal: Pavan (B. Jonson), S, Bar, va, vc, pf, 1979; Missa Sancte Endeliente (liturgy in Cornish and Lat., trad. hymn), S, C, Ct, T, Bar, chorus, orch, 1980; Io Evoe! (ancient Gaelic and Amerindian texts), chorus, 3 tpt, 3 trbn, str, 1984; Angelus, S, vc, db, perc, 1986; Creators of the Stars of Night (trad. hymn), chorus, eng hn, org, 1989; Lights and Shadows (trad. spells), children's choir, chorus, recs, brass insts, perc, str, 1989; Night Songs (Burrell, P. Verlaine), S, chorus, orch, 1991; Invocation for Justice (Carmina gaedelica, ed. A. Carmichael), S, cl, va, 1992; Heil'ger Geist in's Himmels Throne (trad. Lutheran chorale), chorus, perc, org, 1993; Tachograph (S. Armitage), Bar, pf, 1993; Dunkelhvide månestråler (T. Ditlevsen), C, eng hn, orch, 1996; Mag & Nunc, treble vv, org, 1996; Michael's Mass, unison vv, org/pf, 1997

SOPHIE FULLER

Burrell, John. *See* BURELL, JOHN.

Burrian, Carl. *See* BURIAN, KAREL.

Burrowes, John F(reckleton) (*b* London, 23 April 1787; *d* London, 31 March 1852). English organist and composer. He was a pupil of William Horsley. He lived in London, where for nearly 40 years he held the post of organist at St James's, Piccadilly. His works include an overture produced at the concerts of the Philharmonic Society (of which he was one of the original associates), songs and piano pieces, and arrangements of operas. Burrowes was the author of *The Piano-Forte Primer* (1818) and *The Thorough-Base Primer* (1819), both of which passed through many editions and were used for nearly a century. He was also a correspondent of R.M. Bacon and the *Quarterly Musical Magazine and Review*, and supplied his own entry, with work-list, for Sainsbury's *Dictionary*. (*DNB*, W.B. Squire; *SainsburyD*)

W.H. HUSK/LEANNE LANGLEY

Burrowes, Norma (*b* Bangor, Co. Down, 24 April 1944). British soprano. She studied in London at the RAM, where she sang Thérèse in Poulenc's *Les mamelles de Tirésias* (1968), Monteverdi's Poppaea and Magda in *La rondine* (1969). In 1970 she won a Gulbenkian Foundation Award and made her professional début with Glyndebourne Touring Opera, as Zerlina. That year she sang Philidel in Purcell's *King Arthur* with the English Opera Group and made her Covent Garden début as Fiakermilli in *Arabella*. In 1971 she appeared at Salzburg as Blonde, a part she also sang with the ENO, the Netherlands Opera, the Paris Opéra and the Metropolitan (1979), and recorded with Colin Davis. Other roles in her repertory included Fiorilla in *Il turco in Italia*, Elisa in *Il re pastore*, which she sang at Wexford in 1971, Oscar, Alison in Holst's *The Wandering Scholar* (which she recorded) and Sophie. At Glyndebourne (1970–81) she sang Papagena, Janáček's Vixen, Pamina and Susanna. Her pure, bright-toned voice, secure coloratura technique and charming appearance were much admired when she sang Zerbinetta for Scottish Opera (1975). Burrowes was also a delightful singer of Purcell and Handel, as can be heard in several recordings; she gave many recitals and appeared on television, notably as Susanna and Nannetta. She retired in 1982.

ELIZABETH FORBES

Burrows, (James) Stuart (*b* Cilfynydd, nr Pontypridd, 7 Feb 1933). Welsh tenor. A schoolteacher before winning the tenor solo competition at the Royal National Eisteddfod in 1959, he studied at Carmarthen. He made his début in 1963 with the WNO as Ismaele (*Nabucco*), also singing Rodolfo (*La bohème*), Macduff, Jeník (*The Bartered Bride*), the Duke of Mantua and Ernesto (*Don Pasquale*). At Athens in 1965 he sang the title role in *Oedipus rex* under Stravinsky. He made his Covent Garden début in 1967 as Beppe (*Pagliacci*), returning for 22 seasons as Fenton, Elvino (*La sonnambula*), Faust, Lensky, Jack (*The Midsummer Marriage*), and in Mozart roles. He made his San Francisco (1967) and Vienna Staatsoper (1970) débuts as Tamino and sang Don Ottavio at Salzburg (1970) and for his Metropolitan début (1971), returning there as Belmonte, Des Grieux (*Manon*) and Alfredo. He also sang in Aix-en-Provence and Santa Fe. He was a renowned exponent of Idomeneus, Tamino and Titus. His sweet-toned voice of great

flexibility was ideally suited to Mozart and it was used with skill. He recorded many of his best roles, notably Don Ottavio, Tamino and Lensky with Solti and Titus with Colin Davis.

ALAN BLYTH

Burt, Francis (*b* London, 28 April 1926). English composer, active in Austria. He studied at the RAM (1948–51), where his teachers included Ferguson and Lennox Berkeley, and at the Berlin Hochschule für Musik (1951–4) with Blacher, among others. After a scholarship enabled him to spend close to a year in Rome, he settled in Vienna as a freelance composer (1956). By that time he had already made a name for himself with his String Quartet op.2, which received its first performance at Darmstadt in 1953. He received increasing recognition in the following years with his stage and orchestral works. His opera *Volpone*, for example, was produced by five different companies. In 1973 he was appointed professor of composition at the Vienna Hochschule für Musik und Darstellende Kunst, where he also directed the institute for electro-acoustic music (1989–91).

Burt took an expanded vision of late Romanticism as his starting point, but also found inspiration in the work of Stravinsky and in Nigerian drum music, with which he became familiar during a year of army service in Nigeria (1946–7); dance and gesture became particularly important, aspects of expression that led him to the world of music theatre. Through Blacher he became acquainted with a varied palette of stylistic and technical possibilities. In his works, rhythms often become germ-cells for development and expressive melodic lines converge to form dense chordal structures. Later compositions retain a greater linearity, so that even dramatic concentrations of material can be heard as the interaction of individual voices. He has also composed music employing quarter-tones and rhythmic phasing.

WORKS

Stage: Volpone (Der Fuchs) (op, 2, B. Jonson, trans. A.E. Eichmann), op.9, 1952–8, rev. 1960–61, Stuttgart, 2 June 1960; Der Golem (ballet, E. Hanka, Y. Georgi and Burt), op.11, 1959–63, Hannover, 31 Jan 1965; Barnstable (Jemand auf dem Dachboden) (op, 1, J. Saunders, trans. H. Spiel), op.13, 1967–9, Kassel, 30 Nov 1969

Orch: Jamben, op.5, 1953; Espressione orchestrale, op.10, 1958–9; Fantasmagoria, op.12, orch, 1963; Morgana, 5 Bilder, orch, 1983–6; Blind Visions, ob, small orch, 1994–5

Vocal: 2 Songs of David, op.1, chorus, 1951; Hüte (C. Sandburg), 7 lieder, medium v, pf, 1952; The Skull (Der Schädel) (C. Tourneur), op.6, T, pf/orch, 1955; Bavarian Gentians (D.H. Lawrence), op.8, 4 solo vv, pf, 1956; Unter der blanken Hacke des Monds (P. Huchel), Bar, orch, 1974–6; Und GOtt der HErr sprach (Betrachtungen nach einer goldenen Hochzeit) (from Bible: *Old Testament*, trans. M. Luther), Mez, Bar, B, 2 mixed choruses, orch, 1976–83

Chbr and solo inst: 3 Little Pieces for J.J., pf, 1949; Str Qt, op.2, 1951–2; Musik, op.4, 2 pf, 1952; Serenata notturna, op.3, ob, cl, bn, 1952; Duo, op.7, cl, pf, 1954; Echoes, fl, cl, hn, tpt, perc, str trio, 1988–9; For William, fl, cl, hn, tpt, perc, pf, str trio, 1988; Für AlFrED SCHIEE (Ein postmoderner Geburtstagsgruss), str qt, 1991; Str Qt no.2, 1992–3; Hommage à Jean-Henri Fabre, 2 fl, vn, mand, perc, 1993–4

HARTMUT KRONES

Burt, Warren (*b* Baltimore, 10 Oct 1949). Australian composer of American birth. He studied at SUNY, Albany (BA 1971), where his teachers included Joel Chadabe, and at the University of California, San Diego (MA 1975) with Robert Erickson, Kenneth Gaburo and others. His appointments have included the posts of composer-in-residence at the American Composers Forum, St Paul, Minnesota (1994–5), and visiting lecturer in computer music at the Australian Centre for the Arts and Technology, Canberra (1994–6). Among his numerous honours are the Bicentennial Commission for the Australian Broadcasting Corporation (1988) and the Australian Council Composers' Fellowship (1998–2000). An important figure in the development of Australian avant-garde music in the 1970s and 80s, he is best known for his algorithmic and multimedia works. His other interests have included microtonality and extended tunings, and acoustic instrument building. His live electronic and computer music often involves a degree of physical interaction.

WORKS
(*selective list*)

Nighthawk (media op), 1972–6; Le Grand Ni, live elecs, 1978–9; Green, bn, str trio, 1981–5; Meditations, video, elecs, 1986; Sensus, installation, 1988; The White Room, installation, 1992; Two Enharmonic Cycles, SATB, tuning forks, 1993; Dense Room, installation, 1994–9; Three Bicycles, tape, 1996; Diversity, multimedia theatre piece, 1998

MICHAEL C. FRENGEL

Burthen. *See* BURDEN.

Burtius, Nicolaus. *See* BURZIO, NICOLÒ.

Burton, Avery [Averie]. *See* AVERY.

Burton [Burten], **David** [Davy]. Gentleman of the Chapel Royal at the beginning of the 16th century; he may be identifiable with AVERY.

Burton, Gary (*b* Anderson, IN, 23 Jan 1943). American jazz vibraphonist, band leader and writer on music. He taught himself to play the vibraphone, and made his first recordings, for RCA with the country guitarist Hank Garland, when he was 17. After studying for two years at Berklee College of Music he joined George Shearing's quintet (1963), then rose to prominence as a member of Stan Getz's quartet (1964–6). From 1967 Burton led his own groups. In the early 1970s he made tours of Europe, Japan and Australia. Burton's ensembles have included the guitarists Larry Coryell, Pat Metheny and John Scofield. He has also performed in duos, notably with Chick Corea (*Crystal Silence*, 1972, ECM), and as a soloist, and in 1986 he recorded at the Montreux Jazz Festival as a member of the ensemble New Tango led by the Argentine composer Astor Piazzolla. He has occasionally played marimba. Burton's activities as a teacher form

a major part of his career. In 1971 he became a member of the staff at Berklee, and by the 1990s he had become Dean of Curriculum there. He has published method books and *A Musician's Guide to the Road* (Ontario, 1981) and has toured the USA with his groups presenting lecture-concert programmes.

A virtuoso vibraphonist, Burton developed an original style of improvisation quite distinct from those of his influential predecessors on the instrument, Lionel Hampton and Milt Jackson. In the early 1960s he promoted a playing style that made use of four mallets at once, and in many ways he created a compromise between contemporary jazz wind and piano styles (he cites Bill Evans and Thelonious Monk as inspirations). He has employed electronic attachments that produce fuzz tone and reverberation, and has performed on a vibraphone that has no pulsator. Burton is one of the few modern jazz improvisers not to have drawn substantially on the melodic conceptions of the bop pioneers Charlie Parker and Dizzy Gillespie. He replaced their vocabulary with a fresh one that emphasizes 20th-century classical music as well as country music. He frequently employs accompanying devices rich in vamps and pedal points, reminiscent of country music, as well as the flavour of Latin American styles.

MARK C. GRIDLEY

Burton, John (*b* Yorks., 1730; *d* Portici, ?3 Sept 1782). English harpsichordist, organist and composer. A pupil of Keeble, he acquired considerable celebrity as an organist and harpsichordist. Burney remarked that Burton 'was an enthusiast in his art: but having in his youth exercised his hand more than his head, he was not a deep or correct contrapuntist. He had, however, in his pieces and manner of playing them a style of his own'. In 1754 he made a successful concert tour of Germany, where he must have become acquainted with the new continental fortepianos (probably he was among the first Englishmen to do so).

Burton's *Ten Sonatas for the Harpsichord, Organ or Piano-forte* (1767) represents one of the earliest known references to the instrument on an English title-page. Busby observed that 'a movement in one of this master's lessons, called the "Courtship", was, for many years, upon the harpsichord desk of every practitioner in England'. In fact, two other titled pieces, equally tuneful ('The Chace' and 'Tit for Tat'), shared this popularity. Some of his keyboard music was included in a manuscript anthology compiled by Thomas Attwood, dated 1779. Burton wrote in an assured pianistic style, reflected in his liberal but precise indication of dynamics. Contemporary advertisements indicate that he played organ concertos between the acts at Drury Lane; and a keyboard concerto by him survives in manuscript. He apparently played the harpsichord at the London residence of Lord Clive in March 1765, at the time of Mozart's visit.

Burton travelled to Italy in the 1770s; he is reported to have played the harpsichord at concerts in Rome on 20 December 1775 and in March 1776. In 1782 he accompanied William Beckford to Portici, near Naples, where he died of malaria at the home of Sir William and Lady Hamilton. He is said to have left a personal estate worth £9000.

GERALD GIFFORD

Burton, Robert (*b* Dewsbury, 1 Sept 1820; *d* Harrogate, 2 Aug 1892). English organist and conductor. He studied under Cipriani Potter and succeeded S.S. Wesley in 1849 as organist of Leeds Parish Church, a post he occupied till 1880. As conductor and chorus master of many Yorkshire choral societies, at York, Leeds, Bradford, Huddersfield, Halifax, Barnsley, Harrogate and elsewhere, he took an important part in directing and improving the choral music for which the West Riding of Yorkshire became famous. He was chorus master to the first Leeds Festival in 1858 and again in 1874, but resigned the position after differences of opinion with the committee. With Vincent Novello he jointly edited *The Choral Service, as used in the Parish Church of Leeds* (1855) by James F. Hill. His most important work was perhaps in connection with the Bradford Festival Choral Society, which he trained and conducted from 1878 to 1887. The essence of his method was his careful attention to vocal phrasing.

HERBERT THOMPSON/R

Burton, Stephen Douglas (*b* Whittier, CA, 24 Feb 1943). American composer. He was educated at the Oberlin and Peabody conservatories (MM 1974), and at the Salzburg Mozarteum with Henze. In 1973 he was appointed professor of music at George Mason University in Fairfax, Virginia. He has received commissions from major orchestras, including the Berlin PO, the Chicago SO and the Orchestre National de France. His many awards include a Guggenheim Fellowship and grants from the National Opera Institute and the Coolidge Foundation.

Burton's compositional aesthetic centres around melody, supported by a rich range of harmonies and enlivened by a fluid sense of rhythm. He handles large forms with assurance, and the eclectic diversity of his style is particularly apparent when he is responding to a text. He writes artfully and colourfully for the voice, and his music is challenging to the singer in its requirements of both range and expression. His choice of stories for his stage

works demonstrates a sophisticated literary sense as well as a bold concept of dramaturgy. He makes use of all the resources of the modern orchestra and has the symphonists's characteristic capacity to sustain and develop a musical line.

SAM DI BONAVENTURA

Burundi. Country in Central Africa. *See under* RWANDA AND BURUNDI.

Bury, Alison (Margaret) (*b* Woking, 20 Jan 1954). English violinist. She studied the violin at the RCM with Sylvia Rosenberg and Jaroslav Vanáček, and the viol and Baroque performance practice with Francis Baines. Aided by a Boise Scholarship and a Countess of Munster Award, she studied in Salzburg (1976–7) with Sandor Végh (modern violin) and Nikolaus Harnoncourt (Baroque performing practice), and at this time also performed with Vienna Concentus Musicus. She has subsequently played with a large number of the leading period instrument orchestras (frequently as leader and soloist): the Academy of Ancient Music (1975–90), with whom she recorded Vivaldi's 'Four Seasons' as soloist, the Taverner Players (1976–92), with whom she made a second recording of the 'Seasons', the Ars Musica Baroque Orchestra (1978–80), the Amsterdam Baroque Orchestra (1980–86), the Raglan Baroque Players (1980–) and, most importantly, Gardiner's English Baroque Soloists (1979–), which she has led from 1983. She is also a co-leader of the Orchestra of the Age of Enlightenment (1986–). Bury has made recordings of the Bach Double Violin Concerto with both Monica Huggett (Amsterdam Baroque Orchestra) and Elizabeth Wallfisch (Orchestra of the Age of Enlightenment) and is highly respected as a chamber musician, working with groups including the Chandos Baroque Players (1981–9), L'Ecole d'Orphée (1982–9) and the Geminiani Trio (1983–90). She teaches at the RCM and directs its Baroque Orchestra. Bury's playing style is characterized by a beautiful open sound and sensitive phrasing.

LUCY ROBINSON

Bury [Buri], Bernard de (*b* Versailles, 20 Aug 1720; *d* Versailles, 19 Nov 1785). French composer. The son of Jean-Louis Bury, *ordinaire de la musique du roi*, he came of a musical family, many of whom held court appointments. He was a pupil of his father and Collin de Blamont. At about 15 he published his *Premier livre de pièces de clavecin*, five suites in the style of François Couperin, and at 19 he composed the music for a three-act ballet produced by the Duke of Tremouille. On 25 November 1741 he bought for 6000 livres the reversion of Marguérite-Antoinette Couperin's post of keyboard player to the *chambre du roi*. In 1743 he was commissioned to write a three-act *opéra-ballet*, *Les caractères de la folie*, for the Paris Opéra; the following year he married a niece of Collin de Blamont, who assured him in a note of 27 February 1744 of the reversion of his post as *maître de chapelle* and also of his patronage. In 1745 Blamont suggested to Bury that he compose a divertissement in honour of the victory at Fontenoy; as a result the five-act tragedy *Jupiter vainqueur des Titans* was performed in the Grande Ecurie at Versailles for the dauphin's wedding on 11 December 1745, being acclaimed as the highlight of the festivities. In 1751 Bury was given the reversion of Rebel's post as *surintendant de la musique du roi*; he later relinquished the position to Pierre Berton and then to François Giraut for a sum of 10,000 livres and an annuity of 1000 livres, payable also to his widow and children. He was commissioned to edit the operas of Lully, and in May 1770 he collaborated with Dauvergne, Rebel and Francoeur on a revival of *Persée* for the marriage of the dauphin to Marie Antoinette. He had earlier composed a new prologue for the same opera, of which the *Mercure de France* (March 1747) remarked: 'L'ouverture, qui est dans le goût moderne, passe, avec raison, pour une des plus belles de ce genre. Toutes les paroles sont fort bien exprimées, il y a un Choeur très-beau, et les symphonies sont agréables, mélodieuses, pleines de tours de chant heureux, et faciles à danser'. From 1779 he received a royal pension, and in June 1785 he was ennobled by Louis XVI: he died little more than five months later.

While Bury's early works are in the style of Lalande and Collin de Blamont, his later compositions show the influence of Mondonville and Rameau, especially in the descriptive instrumental symphonies. Although rather conventional in melodic invention, Bury excelled in dances and in his treatment of the orchestra, notably when writing for flutes and bassoons. Almost all his works were very successful: the divertissement *La nymphe de Versailles* was repeated at the personal request of the queen, and the third entrée ('Les caprices de l'Amour') of *Les caractères de la folie* (which the *Mercure* of September 1743 stated to be 'sans contredit, la plus belle de ce Ballet ... elle a parû trop courte, quoiqu'elle soit une des plus longues du Théâtre Lyrique') was selected together with 'Les Incas' from Rameau's *Les Indes galantes* for a gala performance in March 1744. Only the pastorale *Titon et l'Aurore* (1750) appears to have had little success: according to the *Mercure* of April 1751 'l'ancienne et grande reputation de M. Roy; les charmes de M. Jeliotte et beaucoup de fort bonne musique répandue dans cet ouvrage, n'ont pû le faire réussir'.

Burzio, Eugenia (*b* Turin, 20 June 1872; *d* Milan, 18 May 1922). Italian soprano. She appeared first as a violinist, then studied singing at the Milan Conservatory, making her début in 1899 at Turin in *Cavalleria rusticana*. Specialising in the new *verismo* school, she sang throughout Italy, in South America and at St Petersburg. Among her many appearances at La Scala were admired performances in Gluck's *Armide* and Bellini's *Norma*. For a while she was one of the leading dramatic sopranos in Italy, but suffered from nerves and ill-health. She made her final appearance in 1919 in Ponchielli's *Marion Delorme*. Her recordings show a vibrant voice and a passionate style, which was imaginative and exciting at best but open to many criticisms on grounds of unevenness and overemphasis.

J.B. STEANE

Burzio [Burtius, de Burtiis, Burci], **Nicolò** [Nicolaus] (*b* Parma, *c*1453; *d* Parma, Aug 1528). Italian music theorist, poet and chronicler. He was a member of a noble Parmesan family and was destined for the religious life. During the course of his seminary training he studied music with the well-known theorist Johannes Gallicus. He was ordained as sub-deacon on 28 March 1472 and promoted to priest by 1478. He then began to study canon law at Bologna, where he seems to have enjoyed the patronage of the powerful Bentivoglio family. When Annibale Bentivoglio married Lucrezia, daughter of Ercole d'Este, in 1486, Burzio celebrated the event in verse: his *Musarum nympharumque* is dedicated to Antongaleazzo Bentivoglio. By 1498 Burzio had returned to Parma and by 1503 he held benefices in two Benedictine monasteries. In December 1504 he was named *guardacoro* at Parma Cathedral, a post he held until his death.

Although Burzio was active as a poet and historian of Bologna and Parma (on these works, see Rizzi), his most significant work is the *Musices opusculum*, printed by Ugo de Rugeriis in Bologna on 30 April 1487 (facs. in BMB, section 2, iv, 1969; ed. as *Florum libellus: introduzione, testo e commento*, Historiae musicae cultores: biblioteca, xxviii, Florence, 1975; trans. in MSD, xxxvii, 1983). It consists of three tracts: the first, in 30 chapters, treats the nature of music, the elements of musical sound, solmization, modal theory and the conservation of the voice; the second, containing six chapters, discusses the rules of counterpoint; and the third contains 21 chapters on notation, number theory and the division of the monochord, and a final chapter on astrology. The treatise includes a number of musical illustrations printed from woodcuts, which are the first of their kind (*see* PRINTING AND PUBLISHING OF MUSIC, fig.2*a*).

Burzio wrote his *Musices opusculum* as a defence of the hexachord system of Guido of Arezzo, which had been vigorously attacked by the Spaniard Bartolomeus Ramis de Pareia in his *Musica practica* (Bologna, 1482), in which Ramis advocated an octave system based on a new solmization pattern. Burzio's counter-attack, defending his teacher Johannes Gallicus as well as Guido, was part of a controversy which lasted almost half a century and involved Hothby and later Gaffurius on one side and Spataro, Ramis's principal defender, on the other. Burzio claimed that he had lent a treatise by Guido to Ramis but that the Spaniard had not understood it. The vehemence of Burzio's attack on Ramis was without precedent, though Ramis's sarcastic remarks and personal criticism set the tone. Burzio's colourful and vitriolic comments reveal the intensity of his emotions; his most polite description of the Spanish theorist is 'prevaricator'. Ramis himself remained silent, but Spataro, in his *Honesta defensio* (Bologna, 1491), replied in equally heated invective.

Musices opusculum is based, in part, on the *Ritus canendi* of Johannes Gallicus, which Burzio copied in 1478 (*GB-Lbl* Add.22315). Several sections use a question-and-answer pattern of disciple and teacher; since Burzio called himself the 'primus discipulus' it is quite possible that he was the pupil. He certainly quoted extensively from Gallicus in his own treatise, and several of his woodcuts are exact copies from the *Ritus canendi*. He also shared Gallicus's view that an enormous gulf existed between the ordinary singer and the educated musician.

In support of his theses Burzio cited numerous authorities, including Euclid, Aristotle, Theophrastus, Pliny, Pythagoras, Boethius, Guido, Hothby, Gallicus and many others. The woodcut in book 2, chapter 5, is the first complete polyphonic composition in print. It demonstrates the technique of successive composition, in which the soprano is written first, then the tenor, and finally the lowest part, called the contrabassus. In compositions based on plainchant, however, the tenor is created (i.e. mensuralized) first, then the soprano and lastly the contrabassus. Burzio was well aware of the compositional techniques being developed in his time and in one of his contrapuntal rules (bk 2, chap.2) he observed that the best method of writing a soprano part against a given tenor was to use imitation or *fuga*, a procedure he found applicable in contemporary mensural music. He also discussed (bk 2, chap.6) two-part improvised counter-

point, based on the theory of sights, and gave principles which he said were used daily in royal chapels in Gallic territories.

The *Musices opusculum* is a Janus-like treatise. Burzio was essentially conservative and presented in a compendious but thorough way the traditional teachings based on Boethius and later medieval writers. Yet he appreciated current trends, as is evident in the tract devoted to mensural music and in his comments on the imitative style of composition. In the history of printing his treatise is an important landmark among musical incunabula. He also wrote a number of non-musical treatises (for details see Rizzi).

Bus, Gervais de. French notary and writer. *See also* FAUVEL, ROMAN DE.

Busatti [Busatus], **Cherubino** (*b* early 17th century; *d* Venice, before 15 Aug 1644). Italian composer and organist. He was a priest who in 1638 was organist of S Sebastiano, Venice. He composed a number of short, secular strophic arias, but nearly all are lost. Those that survive are mainly pleasant, urbane pieces. The three solo madrigals in his 1638 book are more ambitious, and the sonnet *Angela siete* in the same book uses both an ostinato bass and the *genere concitato*.

JOHN WHENHAM

Busby, Thomas (*b* Westminster, 26 Dec 1754; *d* London, 28 May 1838). English composer, writer and musician. He was the only surviving son of Thomas Busby, a coach painter of Southwark, and had instruction in music from Jonathan Battishill, Samuel Champness and Charles Knyvett. In summer 1769 he was engaged to sing at Vauxhall Gardens. The changing of his voice terminated the engagement soon afterwards, and he was articled to Battishill for five years as resident pupil, taking advantage of Battishill's library to educate himself in science and general literature. Busby sang tenor at the 1784 Handel commemoration. He was organist at St Mary's, Newington, Surrey, from 23 March 1784 and from 1798 at St Mary Woolnoth, Lombard Street. In 1786 he married Priscella Angiers, with whom he had seven children. In summer 1800 he entered Magdalene College, Cambridge, and received the MusD in June 1801. His pupils included Thomas Adams, the actress Mrs Edwards, Thomas Howell and Giovanna Sestini.

Busby composed pianoforte sonatas, odes, songs and assorted theatre music. *The Prophecy* (1799) was billed as the only oratorio 'composed in this Country, nearly these 30 years', and enjoyed some success. Busby also introduced London audiences to the French melodrama, spoken drama in which musical cues punctuate action and portray mood. His most popular scores were for Thomas Holcroft's *A Tale of Mystery* (1802), claimed as the first English 'Melo-Drame', and Matthew 'Monk' Lewis's *Rugantino* (1805).

Throughout his life, Busby was also concerned with literature and journalism. He was for several years connected with the Literary Fund, the New Musical Fund (1805) and the Wittinagemot Club that met at the Chapter Coffee House. In the winter of 1795–6 Sir Richard Phillips lodged there, looking for contributors to his new venture, the *Monthly Magazine*. Phillips supported liberal writers, among them Busby, who contributed signed and unsigned articles and reviews to several of Phillips's undertakings. He also wrote many separate works, edited the first four numbers of the *Monthly Musical Journal* (1801) and achieved contemporary notoriety for his translation of Lucretius's *De rerum natura*: it was much reviewed, discussed and parodied.

Because of the furore in connection with Busby's Lucretius, his *A General History of Music* attracted more notice than was its due. The powerful *Edinburgh Review* accused Busby of plagiarism, an accusation that is not altogether valid. Busby was a popularizer, and his writings must be seen in this perspective. Like most of his other books, the *History* was a compilation; by compressing subject matter contained in the massive tomes of Burney's and Hawkins's histories, Busby attempted to reduce the size and cost of his own volumes, thereby making them accessible to a wide audience. Of value to present-day scholarship are Busby's biographies of his contemporaries, for they present information not to be found elsewhere. These lie scattered throughout the periodical literature, in the last chapter of the *History*, in some pages of the *Anecdotes*, and in a preface to a collection of music. An engraving of Busby by R. White was published in *Public characters for 1802–3* (London, 1803).

WORKS

STAGE

The Man the Master (afterpiece), ?1774, inc., unperf., lost

Joanna of Montfoucon (musical drama, 5, R. Cumberland, after A. von Kotzebue), London, CG, 16 Jan 1800, vs (London, 1800)

Alfonso, King of Castile (tragedy, 5, M.G. Lewis), London, CG, 15 Jan 1802, 1 song pubd in *Monthly Magazine* (April 1802), 249

A Tale of Mystery (melodrama, 2, T. Holcroft, after R.-C. Pixérécourt: *Coelina*), London, CG, 13 Nov 1802, vs (London, 1802)

The Captive (tragic monodrama, 1 scene, Lewis), London, CG, 22 March 1803, lost

The Fair Fugitives (afterpiece, 2, A. Porter), London, CG, 16 May 1803, ov. and 7 songs (London, 1803), song texts pubd

Rugantino, or The Bravo of Venice (melodrama, 2, Lewis, after Pixérécourt: *L'homme à trois visages*), London, CG, 18 Oct 1805, vs (London, 1805)

Macbeth (burletta, J. Cross, after W. Shakespeare), London, Royal Circus, 30 Aug 1809, lib pubd in Sprague

ORATORIOS, ODES

The Prophecy (orat, after A. Pope: *The Messiah*), ?1776, London, Little Theatre, Haymarket, 29 March 1799
The Creation (orat), 1788, unperf., excerpts pubd in The Divine Harmonist (London, 1792)
Ocean (ode), London, Little Theatre, Haymarket, 29 April 1799
Britannia (orat, after T. Gray: *The Progress of Poesy*; addl text by J. Gretton and T. Dutton), excerpts perf. London, King's, 28 May 1800; London, CG, 16 June 1800
Thanksgiving Ode on the Naval Victories (ode, M. Crespigny), private perf., St Mary the Great, Cambridge [as doctoral degree exercise], ?May/June 1801; London, Little Theatre, Haymarket, 14 May 1801
Secular Anthem (ode, H. Pye), London, Little Theatre, Haymarket, 14 May 1801

4 odes, lost: Ode to Peace, ?1783; British Genius (after T. Gray: *The Progress of Poesy*), ?1800; Comala (after J. Macpherson: *Ossian*), ?1800; Ode for St Cecilia's Day (A. Pope), ?1800

OTHER VOCAL

Nymph of the Hill, ballad (London, ?1772)
Thou worthy cask, glee (London, 1773)
When I drain, glee (London, 1776)
Ode to Philanthropy, song (Busby) (London, 1794)
Love, Wine and Friendship, song (Busby), 1v, 2 vn, pf (London, 1797)
Go, dimpled boy, glee (London, ?1800)
William and Jane, ballad (Baltimore, 1802)

Sacred: O God, thou art my God (Ps lxiii), anthem, S/T, SAATB (London, ?1780); pubd in Harmonia sacra, ed. J. Page (London, 1800); vocal works in A Collection of Hymns, ed. J. Page (London, 1804)

INSTRUMENTAL

6 Sonatas, hpd/pf, op.1 (London, ?1785); no.4, E, ed. in LPS, vii (1985)
10 marches, pf/military band, in The British Military Library or Journal (London, 1798–1801)
Other vocal and inst works in *The Anacreontic Magazine*, *La belle assemblée*, *The Monthly Magazine* and in works ed. by Busby

EDITIONS

The Divine Harmonist, or Sunday Associate (London, 1792)
Melodia Britannica, or The Beauties of British Song (London, *c*1794), lost [a few nos. only]
attrib. H. Purcell: A New Edition of the Celebrated Music in the Tempest (London, *c*1800 or later)
Songs sung by E. Billington in T. Linley (i) and T. Linley (ii): The Duenna, S, pf (London, 1801) [incl. vocal embellishments by Billington]
Songs sung by E. Billington in T. Arne: Artaxerxes, S, pf (London, ?1805) [incl. vocal embellishments by Billington]
T. Arne: 'Let not rage', 1v, pf, from Artaxerxes (London, ?1805)

WRITINGS

An Universal Dictionary of Music (London, 1783–6) [inc., issued in pts in *The New Musical Magazine* without title-page or attrib.; probably Busby compiled the literary portion, Samuel Arnold the musical portion]

JAMIE C. KASSLER/LINDA TROOST

Busca, Lodovico (*b* Turin; *fl* 1670–88). Italian composer. He was a Cassinese monk at S Simpliciano, Milan. Earlier he had probably been in the service of the court of Savoy. His *Mottetti* op.1 (Bologna, 1672) and *Ariette da camera* op.2 (Bologna, 1688), both for one voice and continuo, survive. He also composed operas. The music of most of these is lost, but the librettos of three operas by him presented at the Teatro Ducale, Milan, survive: *La Regina Floridea* (?1669, text by G. Pancieri with P.S. Agostini and F. Rossi), *L'Ippolita, Reina delle Amazzoni* (1670, text by C.M. Maggi with Agostini and P.A. Ziani; score in *I-Nc*) and *Amor tra l'armi, overo Corbulone in Armenia* (1673, text by Maggi).

SERGIO LATTES

Busch. German family of organ builders. Johann Dietrich Busch (*b* Mesmerode, Hanover, 27 Dec 1700; *d* Itzehoe, 18 Jan 1753) studied organ building in Copenhagen, Stockholm and Danzig. From at least 1721 he was working in Itzehoe as the principal journeyman of L.D. Kastens, a former pupil and co-worker of Arp Schnitger. Eight years later Kastens moved to Copenhagen, leaving the management of his Itzehoe workshop to Busch; after Kastens's death in 1744 Busch also took over his organ-building licence in Schleswig and Holstein. Johann Daniel Busch (*b* Itzehoe, 6 Sept 1735; *d* Apensen, 12 Sept 1787), a son of Johann Dietrich, was trained in his father's workshop, and in 1753 took over the management of the family firm. He died on a journey, and is buried in Itzehoe. The Busch family were among the best organ builders of their time, and continued to build in the Arp Schnitger tradition, though in a rather conservative way. Most of their organs were built in Schleswig, Holstein and

Hamburg; owing to his close relationship with the Moravian Brethren, Johann Daniel exported organs to other parts of Europe, including Sarepta (now Krasnoarmeysk, near Volgograd) in Russia. Façades from several of Busch's organs have survived in northern Germany and southern Jutland, and some organs, such as those at Jade and Neuenkirchen (both near Oldenburg), retain a considerable portion of the original parts.

OLE OLESEN

Busch, Adolf (Georg Wilhelm) (*b* Siegen, 8 Aug 1891; *d* Guilford, VT, 9 June 1952). German violinist and composer, brother of Fritz Busch. He was taught the violin by his father from the age of three, and when only 11 entered the Cologne Conservatory as a pupil of Willy Hess and Bram Eldering. He also studied conducting and composition with Fritz Steinbach, the director of the conservatory, and in 1908 became a composition pupil in Bonn of Hugo Grüters, whose daughter he married in 1913. From 1907 he was associated with Reger, and played many of his chamber works with him. In 1912 he became leader of the orchestra of the Konzertverein in Vienna, under Ferdinand Löwe, and in 1918 he succeeded Henri Marteau as a violin teacher at the Hochschule für Musik in Berlin. In 1913, with Löwe's encouragement, he founded the Wiener Konzertvereins-Quartett, but the war intervened, and it was not until 1919 that it was reformed as the Busch Quartet, with Karl Reitz, Emil Bohnke and Paul Grümmer. Two years later, Reitz and Bohnke were succeeded by Gösta Andreasson and Karl Doktor, and in this form the quartet achieved international fame. In 1930 Busch's brother Hermann (*b* Siegen, 24 June 1897; *d* Bryn Mawr, PA, 3 June 1975) became its cellist (see illustration).

Busch settled in Basle in 1927, and adopted Swiss nationality in 1935. He toured in many countries both as a soloist and with his quartet. In England in the late 1930s, he established the Busch Chamber Players, whose small-scale performances of Bach's Brandenburg concertos were highly praised. He also formed a piano trio with Hermann Busch and Rudolf Serkin, who often accompanied him in sonatas, and who later became his son-in-law. In 1939 all three musicians moved to the USA, and a year later the other two members of the quartet followed. Apart from a lapse of three years (1945–8), the quartet was active until Adolf Busch's death, but from 1948 the second violin and viola were played by Ernst Drucker (later Bruno Straumann) and Hugo Gottesmann. While in the USA, Busch continued to perform as a soloist, in chamber works with Serkin, as leader of the re-established Busch Chamber Players, and also as a conductor of larger-scale orchestral works. In 1950 he founded the Marlboro School of Music in Vermont.

Busch was greatly admired as a soloist, especially in the concertos of Beethoven and Brahms, but his outstanding importance was as a player and director of chamber music. Although he commanded a superb technique, he disliked showmanship and superficial charm, and concentrated on showing the true qualities of the music with honesty, clarity and intensity. Among the characteristics of his playing were a careful control of vibrato, sparing use of portamento, and subtle variation in shades of staccato and legato. His quartet was especially famous for its fervent and lucid performances of Beethoven, and for its ability to make the supposedly difficult late quartets perfectly comprehensible. The Busch Chamber Players, which he directed from the violin, brought to the music of Bach and Handel clear textures, sensitive moulding of melodic lines, and a degree of rhythmic poise and vitality that has seldom been equalled. His recordings include string quartets by Beethoven, Brahms and Schubert, Bach's complete Brandenburg concertos and orchestral suites, Handel's concerti grossi op.6 and, with Serkin, several works by Brahms, among them a famous performance of the horn trio with Aubrey Brain. His compositions, rarely performed, show the influence of Reger, and include orchestral and choral works, concertos, songs and a large number of chamber works. Busch was a distinguished teacher, and Yehudi Menuhin was among his pupils.

ROBERT PHILIP

Busch, Carl (Reinholdt) (*b* Bjerre, Denmark, 29 March 1862; *d* Kansas City, MO, 19 Dec 1943). American composer, conductor and teacher. He studied at the Copenhagen Conservatory with J.P.E. Hartmann and Gade (1882–5), at the Brussels Conservatory (1885) and in Paris with Benjamin Godard (1886). In 1887 he emigrated to the USA and settled in Kansas City. He founded and conducted several musical organizations, including the Kansas City SO (1911–18), and appeared as guest conductor with orchestras throughout the USA and Europe. He was a noted teacher of string instruments and of theory and composition, numbering among his pupils Robert Russell Bennett and William Dawson. From 1924 to 1938 he taught at the Chicago Musical College, Brigham Young University, Notre Dame University, Kansas City-Horner Conservatory and Kansas City University. As a composer, he was especially noted for works based on American subjects, particularly the Amerindian; his several award-winning compositions include *A Chant from the Great Plains*, which won the first Goldman Band Composition Contest (1920). He was knighted by the kings of Denmark and Norway. (D.R. Lowe: *Sir Carl Busch: his Life and Work as a Teacher, Conductor, and Composer*, diss., U. of Missouri, 1972)

DONALD R. LOWE

Busch, Fritz (*b* Siegen, Westphalia, 13 March 1890; *d* London, 14 Sept 1951). German conductor, brother of Adolf Busch. He was the eldest child of Wilhelm Busch, an itinerant musician who settled at Siegen as an instrument maker. As children, Fritz and Adolf played dance music with their father in taverns. In 1906 Fritz went to the Cologne Conservatory, where he joined Steinbach's conducting class. His career began in 1909 with a season as the conductor at the Deutsches Theater, Riga. In 1912 Busch was appointed music director at Aachen, with responsibility for the city's distinguished choral society (from this period dated his close friendship with D.F. Tovey). In 1914 he volunteered for the army; in 1918 he conducted the Aachen Municipal Opera for six weeks, then became music director at the Stuttgart Opera. There he brought a fresh mind to widening the repertory and encouraging new artistic developments: for instance, with first performances of the young Hindemith's one-acters *Mörder, Hoffnung der Frauen* and *Nusch-Nuschi*; the inclusion of five Verdi operas, and three by Pfitzner; the choice of Appia's designs for *Das Rheingold*.

From 1922 to 1933 Busch was music director of the Dresden Staatsoper; in addition he made many guest appearances, including the reopening of Bayreuth with *Die Meistersinger* in 1924, visits to New York in 1927 and 1928, and to London in 1929. Though he was not immediately accepted as the fine opera conductor he became, and was criticized for not doing enough German repertory, Busch and his Intendant Alfred Reucker between them brought the Staatsoper to high renown. First performances given by Busch included Strauss's *Intermezzo* (1924) and *Die ägyptische Helena* (1928), Busoni's *Doktor Faust* (1925), Weill's *Der Protagonist* (1926), Hindemith's *Cardillac* (1926). The German Verdi revival, too, was now in its stride; and as well as the new works, Strauss's earlier operas were given, often with the composer conducting. Guest designers included Max Slevogt, Oskar Kokoschka and Oskar Strnad. Nonetheless Busch remained dissatisfied with the difficulty of maintaining repertory performances at the level of new productions, and with the inability of the solo ensemble to do justice to Mozart. In 1932 he found a congenial spirit in Carl Ebert. The two worked harmoniously on Mozart's *Die Entführung aus dem Serail* for that year's Salzburg Festival, and subsequently on Verdi's *Un ballo in maschera* at the Städtische Oper, Berlin. Busch held that production to mark the culmination of his work in Germany. Outside events now intervened. Busch was not Jewish and, until he began openly to express dislike and mistrust of the Nazis, was not politically active. Bitter intrigues led to his dismissal from Dresden in March 1933.

Busch left Germany in May, refusing to take his friend Toscanini's place at Bayreuth, but accepting an invitation to the Teatro Colón, Buenos Aires. On his return to Europe that winter to start a long association with the Danish RSO and the Stockholm PO, he was greeted with the proposal to become music director of the private opera house John Christie had recently built at Glyndebourne. He accepted, on condition that Ebert was made artistic director. The level achieved by the carefully chosen and rehearsed ensemble at the summer festivals, 1934–9, is part of operatic history. The repertory was based on Mozart but included Donizetti's *Don Pasquale* and the first staging by a British company of Verdi's *Macbeth*. Ironically, it was at patrician Glyndebourne rather than at Dresden that the democratically minded Busch came nearest to his ideal of being able 'to build up an opera production in the smallest detail and with … complete respect for the work'. He conducted three more seasons in Buenos Aires (in 1934 he gave there the first complete *St Matthew Passion* on the American continent). Winters up to 1940 were spent in Scandinavia, Busch having grown so attached to Copenhagen that he turned down the offer of Toscanini's post with the New York PO. From June 1940 to 1945 he was mostly in South America, except for a Broadway experiment (New Opera Company) and guest appearances with the New York PO, both in 1942. In 1945 he conducted at the Metropolitan Opera and toured with the company for four seasons. Busch was never entirely at ease in New York, where one concert promoter complained that 'he was not a showman'. He conducted the Chicago SO in 1948–9 and 1950,

Fritz Busch: portrait by 'Dr Desiderius', watercolour, 1929

resumed work in Copenhagen and Stockholm in 1949, and went back to Glyndebourne for the 1950 season. That year he took the Danish RSO to the Edinburgh Festival, then appeared as a guest conductor at the Vienna Staatsoper. Early in 1951 Busch revisited West Germany, conducting the North-west German radio orchestras at Cologne and Hamburg. At Glyndebourne in 1951 he conducted four Mozart operas including *Idomeneo*. The Glyndebourne *Don Giovanni* he repeated at the Edinburgh Festival, adding Verdi's *La forza del destino*.

Busch was the soundest type of German musician: not markedly original or spectacular, but thorough, strong-minded, decisive in intention and execution, with idealism and practical sense nicely balanced. Recordings of three Mozart operas remain as testimony of his work at Glyndebourne, where a plaque dedicated to his memory and bearing his effigy is on the wall of the main foyer.

RONALD CRICHTON

Busch, Hermann. German cellist. *See under* his brother BUSCH, ADOLF.

Busch, Lou(is) [Bush, Louis Ferdinand; Carr, Joe 'Fingers'] (*b* Louisville, KY, 18 July 1910; *d* Camarillo, CA, 19 Sept 1979). American ragtime pianist, composer and recording executive. At the age of 16 he left home to tour as a pianist with the Clyde McCoy band, a popular dance orchestra of the 1930s. He later served as a pianist and arranger with a series of big bands, notably those of George Olsen, Ray Noble, Vincent Lopez and Henry Busse. In 1941 he settled in Los Angeles and, after a period as accompanist to Lena Horne, was employed by the newly formed West Coast record label Capitol. When Euday L. Bowman's *Twelfth Street Rag* (recorded in 1948 by Pee Wee Hunt) sold more than 3 million copies worldwide, Busch was placed in charge of Capitol's artists and repertory department and invited to capitalize on the success of the recording. He then adopted his pseudonym, Joe 'Fingers' Carr, and agreed to be marketed on record covers as a typical black bar-room pianist with gartered sleeves, cigar and derby hat; despite this promotional gimmickry, he played fine ragtime piano. He also wrote a long series of sturdy hit rags. His 36 singles and 14 albums during the 1950s created a congenial setting for the ragtime revival and inspired many young musicians who later developed the second revival in the late 1960s. Under the name Lou Busch he also enjoyed success in Britain with his recording *Zambesi* (1956). After moving to Warner Bros. Records he was associated, as music director, with the comedian Allan Sherman, and in the late 1970s he toured with a former pupil, Lincoln Mayorga, as a ragtime duo called the Brinkerhoff Piano Company.

IAN WHITCOMB

Busch, William (*b* London, 25 June 1901; *d* Woolacombe, Devon, 30 Jan 1945). English composer and pianist. Both parents were of German birth but naturalized British subjects. He studied the piano in Berlin with Leonid Kreutzer – and to some extent with Backhaus and Egon Petri – and harmony and composition with Hugo Leichtentritt. From 1924 onwards he completed his training in London: with Mabel Lander (piano), and Ireland, van Dieren and Alan Bush (composition).

He first became known as a pianist, making his début in London in 1927, and later in Berlin and New York. During the 1930s he was well known in England and was a regular broadcaster. However, composition was his chief interest, and from about 1935 he devoted more and more time to it. For several years before his early death he was a sick man, often unable to work. It was in pursuit of better health that he settled at Woolacombe, in Devon, where his last compositions, mainly elegiac in tone, were written.

A distinctive minor composer, the works from Busch's most active period include the Prelude (1936) for orchestra, *Ode to Autumn* (1937) for voice and string quartet, the Piano Concerto in F minor (1937–9) which was first

given by the BBC with Boult conducting and the composer as soloist, the four-movement Piano Quartet (1938–9), the Cello Concerto (1940–41) and the *Nicholas Variations* for piano, inspired by Busch's young son. One of Busch's last compositions was the cycle to poems by Wilfrid Gibson, *There have been happy days*. There are some 20 songs, four of which were recorded by Henry Cummings for Decca, the second in a series of recordings made by the Council for the Promotion of New Music in the 1940s.

WORKS
(*selective list*)

Inst: 2 Pieces, op.1, wind insts, 1927; Theme, Variations and Fugue, pf, 1929; Gigue, pf (1933); Allegretto quasi pastorale, pf (1936); Prelude, orch, 1936; Pf Conc., f, 1937–9; Pf Qt, str, pf, 1938–9; Vc Conc., 1940–1; Suite, vc, pf (1946); Nicholas Variations, pf

Songs: Ode to Autumn (J. Keats), 1v, str qt, 1937; The Centaurs (J. Stephens) (1944); Come, o come, my life's delight (T. Campion) (1944); If thou wilt ease thine heart (T. Lovell Beddoes) (1944); Rest (1944); 2 Songs (W. Blake) (1944): Memory, hither come, Laughing Song; 2 Songs of William Blake (1944): The Echoing Green, The Shepherd; There have been happy days (W. Gibson), song cycle; other songs

HUGH OTTAWAY/LEWIS FOREMAN

Busch Chamber Players. Ensemble founded by ADOLF BUSCH.

Buschop, Cornelius Symonszoon. *See* BUSCOP, CORNELIS SYMONSZOON.

Busch Quartet. String quartet founded by ADOLF BUSCH, a continuation in 1919 of his Wiener Konzertvereins-Quartett.

Buscop [Buschop, Boscoop, Boskop etc.], **Cornelis** [Cornelius] **Symonszoon** (*b* before 1531; *d* Amsterdam, bur. 9 Oct 1573). Dutch organist and composer. He was organist at the Grote Kerk, Alkmaar (1 May 1551–4), at the Oude Kerk, Delft (1 May 1554–March 1573), and finally at the Oude Kerk, Amsterdam (June–October 1573, as successor to Peter Swybbertszoon, father of Sweelinck, who in his turn succeeded Buscop). He composed the *Psalmen David, Vyfftich, mit vier partyen, seer suet ende lustich om singen ende speelen op verscheiden instrumenten, gecomponeert by M. Cornelius Buschop Ende nu erstmaell ... in druck gestelt* (Düsseldorf, 1568; ed. in UVNM, xxii, 1899; an edition of 1562 was formerly believed to exist, but the book's title suggests that this is unlikely). The dedication is to Duke Erick of Brunswick and Lüneburg, Baron of Liesvelt and Master of Woerden, and was written at Delft. Towards the end Buscop stated that he had composed other psalms in five- and six-part settings, which he would, perhaps, be able to publish; as far as is known, these never appeared. In the series of 'Souterliedekens', based on van Zuylen van Nyevelt's Dutch translation of the psalms, Buscop's book takes an important place. The simple polyphony, with some imitation and ornamentation, makes no great demands on the performers, so these psalms are likely to have been intended for domestic use.

GODELIEVE SPIESSENS

Busenello [Businello], **Giovanni** [Gian] **Francesco** (*b* Venice, 24 Sept 1598; *d* Legnaro, nr Padua, 27 Oct 1659). Italian librettist, poet and lawyer. He was born into a wealthy and prominent Venetian family, and his elder brother Marc'Antonio played an active and varied role in Venetian public life. He probably studied at the University of Padua just before 1620. According to his own account, Paolo Sarpi and Cesare Cremonino were his teachers. In 1620 he was named a dean of the Scuola Grande della Misericordia della Val Verde. In 1623 he was admitted to practise law, his primary profession and one in which he enjoyed much success. His supposed international travels, notably to Madrid, have been doubted (see Livingston, 1913). He was a member of several academies: the Delfici, the Umoristi, the Imperfetti and most notably the Accademia degli Incogniti, a circle of libertines, including Venice's most prominent authors, who dominated the literary, and to some extent the commercial, side of Venetian public opera in its first years. A follower of G.B. Marino, he entered briefly into the polemics over *L'Adone*. He wrote a great deal of verse in Italian and in Venetian dialect, including a poetic exchange with Giacomo Badoaro and a number of poems to singers.

Busenello's significance for music history derives mostly from five librettos written for Venice, set to music by Cavalli and Monteverdi and published collectively in *Delle hore ociose* (Venice, 1656). As one of Venice's earliest librettists he played a significant role in establishing the literary conventions of Venetian opera. The succession of his dramas exemplifies the variety of ways in which this first generation of Venetian librettists transformed myth and history in a manner that was appropriate for musical setting and spectacle, while serving the political, social and commercial interests of the Republic. Busenello drew upon a broader range of ancient sources than did his predecessors at the courts of Mantua or Florence, infusing Ovid, Plutarch, Lucan, Tacitus and Virgil with the ideologies in currency among the members of the Accademia degli Incogniti, ignoring the Aristotelian unities of time and place, and deftly combining the comic, the serious and the erotic. In *Gli amori d'Apollo e di Dafne* (1640, Teatro S Cassiano, music by Cavalli), he juxtaposes two contrasting love stories from Ovid's *Metamorphoses* (Apollo and Daphne with that of Cephalus and Procris), citing Guarini's *Il pastor fido* as a precedent for its multiple love affairs. *La Didone* (1641, Teatro S Cassiano, music by Cavalli) is the first operatic treatment of Virgil's *Aeneid*; it emulates the epic structure of the poem by devoting the entire first act to the fall of Troy, yet contradicts its model with the obligatory happy ending in which a guilt-ridden Dido eschews suicide in favour of marriage to the suitor Iarbus. *L'incoronazione di Poppea* (1643, Teatro SS Giovanni e Paolo, music by Monteverdi) is today among the best known of all early operas, largely because of its strong musical setting, although in its own day it had no greater currency than Busenello's other works. Specially striking

features of *L'incoronazione di Poppea* are the variety of character types portrayed and the fullness of relationships between them. The apparent amorality of its conclusion – in which Nero exiles his wife Octavia and marries his mistress Poppaea – violates the nascent Venetian tradition: a rejected spouse would nearly always have been re-embraced at the last. It shares with Busenello's other dramas a language rich in erotic expression in keeping with his place in the Marinist tradition and with the literary conventions and political aspirations of the Accademia degli Incogniti. *La prosperità infelice di Giulio Cesare dittatore* (meant for Teatro SS Giovanni e Paolo, supposedly performed in 1646 with music by Cavalli, but perhaps never even composed) resembles *L'incoronazione di Poppea* in its historical origin and wealth of character type. Like Badoaro's *L'Ulisse errante* it is in five acts (instead of the more normal three) separated by time and place, each a discrete episode with largely different characters. The decade between *La prosperità infelice di Giulio Cesare dittatore* and *La Statira* (1655) saw a rise of intricate and multi-layered dramas to which Giovanni Faustini and G.A. Cicognini were principal contributors. *La Statira* adheres to many of the same conventions, such as disguise, multiple pairs of lovers, and exotic settings and characters. A sixth drama by Busenello, *La discesa d'Enea all'inferno*, survives in manuscript and was apparently not set to music.

THOMAS WALKER/WENDY HELLER

Buset, Martin (*b* ?Hennuyères, Hainaut, *c*1565; *d* Madrid, 29 Nov 1618). Flemish composer and singer. Engaged as a singer in the chapel of Philip II of Spain, he arrived at the Madrid court on 28 June 1586 together with seven other singers recruited in the Low Countries, among them Englebert Turlur. After studying composition with Philippe Rogier, the *maestro de capilla*, he served Philip II and Philip III as singer and composer. He enjoyed the goodwill of Philip III, who on several occasions bestowed financial favours on him. The music library of King João IV of Portugal, destroyed in the Lisbon earthquake of 1755, contained several works by him: two masses, for five and eight voices; eight motets, for four, six and eight voices; a five-part hymn; and two settings of Spanish texts, both for one and six voices.

PAUL BECQUART

Bush, Alan (Dudley) (*b* London, 22 Dec 1900; *d* Watford, 31 Oct 1995). English composer, pianist and teacher. He studied music at the RAM (1918–22) with Corder for composition and Matthay for piano, winning numerous scholarships during this period. In 1921 he met Ireland and in the following year began to study composition with him privately, continuing until 1927. He took further piano lessons privately from Moiseiwitsch, Mabel Lander and Schnabel (1924–9). To complete his training he studied philosophy and musicology at the University of Berlin (1929–31). In 1925 he was appointed a professor of composition at the RAM; he was elected FRAM in 1938 and continued teaching there until 1978. From 1925 he took an active role in working-class movements, joining the Communist Party in 1935. In 1929 he succeeded Boughton as music adviser and conductor to the London Labour Choral Union (until 1940) and in 1936 founded the Workers' Music Association, of which he became president in 1941. During the years up to World War II Bush made various appearances as a pianist and conductor in performances of his own works. He served in the army (1941–5) and then made several tours as a conductor, mainly in eastern European countries. For a time he conducted his own string orchestra.

Bush's first success as a composer was in 1924 when his String Quartet op.4 won a Carnegie award. Another work for quartet, *Dialectic* (1929), did much to establish his reputation abroad when it was played at the Prague ISCM Festival (1935). The successful performance of the Piano Concerto at a BBC concert in 1938, with Bush playing the solo part and Boult conducting, was followed by that of the First Symphony at a promenade concert in 1942. In 1949 the Nottingham Cooperative Society commissioned a symphony for the quincentenary celebrations of the granting of the royal charter to the city. Bush's opera *Wat Tyler* was one of the four prize-winning works

in the Arts Council's Festival of Britain opera competition in 1951. Its first stage production took place at Leipzig in 1953, where it had 14 performances during the season and was revived the following year; a further production took place at Rostock in 1955. Following this success Bush received three more commissions from East German opera houses, and also wrote his Byron Symphony for performance in Leipzig (1962). Of his four important operas, however, only *Wat Tyler* received a professional English production (1974), though his second, *Men of Blackmoor*, was staged by the Oxford University Opera Club in 1961. Bush was awarded the Händel Prize of the city of Halle in 1962, was elected a corresponding member of the DDR Akademie der Künste in 1965, and received doctorates from the universities of London and Durham (1968 and 1971). His Fourth Symphony, the 'Lascaux', inspired by a visit to the famous prehistoric caves in 1982, was first performed at a BBC concert conducted by Downes (1986). Bush continued to compose prolifically until his eyesight failed him in his 90th year. His late works displayed the characteristic features of his postwar music: clarity of tonality and thematic integration, athletic vigour and contrapuntal mastery.

There is an important division in Bush's works between those written before and those written after the end of World War II, when he began consciously to simplify his style. The break was not abrupt, for the works written during the war had already begun the process of simplification, and Bush continued in the later works to employ his 'thematic' method of composition, which, although he expounded it only in 1946 (in the article 'The Crisis of Modern Music') he had always used, if not always consistently or consciously. This method, in which every note must be thematically significant, has something in common with Schoenberg's 12-note method, in which he was always deeply interested, although he came to reject it. Some sort of serial melodic structure can be discerned in many of his works, and there are 12-note themes in the first and slow movements of the First Symphony and of the Violin Concerto. These series, however, are used in a tonal context, with an accompaniment of, or as an accompaniment to, freely moving (though thematically composed) other parts.

Alan Bush, 1974

The harmonic use of series in the Violin Concerto, particularly in common chords, is symptomatic of a general movement in Bush's later works from a strongly contrapuntal and harmonically rather severe style to one more sensuously and directly harmonic. Many of the works up to the Piano Concerto (1937) were written in the most advanced central-European idioms of the 1920s and 30s. Bush's temperamental sympathy and intellectual acuteness enabled him to use such techniques with complete mastery and conviction, and hence in an entirely personal way which is unmistakably English. In later works the national element became more obviously discernible as extreme technical sophistication gave way to a simpler harmonic style, in which Ireland's teaching and Bush's early admiration for Ravel bore fruit for the first time. Mild dominant discords, of consonant effect, are used with great originality in uncommon progressions alive with swift, purposeful harmonic movement. Consonances in unusual relation are typically English, but except in Britten they are nowhere used with more telling expression, colour and sense of movement than in Bush. An excellent example is the introduction to *The Winter Journey*, and there are many others in the Second Symphony and the Violin Concerto.

In his essays (1980) he wrote that for him 'as a musician and as a man, Marxism is a guide to action'. Bush's political beliefs greatly influenced both his work and its reception. In forging the stylistic simplification that came after the war, considerable modifications were called for, but in his later works he never attempted the use of popular idioms that might win support among the musically naive. He often adopted a folklike idiom, but the connections it suggests are with Vaughan Williams rather than Weill. The plots of his operas (three of which have librettos by his wife Nancy) and the themes of his vocal works have been criticized for reflecting his political views too directly and for a lack of psychological subtlety. Yet the issues he chose to treat were a powerful stimulus and gave him a constantly fresh sense of direction.

COLIN MASON/HUGO COLE/D. WATSON

Bush, Geoffrey (*b* London, 23 March 1920; *d* London, 24 Feb 1998). English composer. He was educated at Salisbury Cathedral Choir School, Lancing College and Balliol College, Oxford, where he took the MA in classics and the DMus, both in 1946. He was an extra-mural music lecturer at Oxford and London universities, and from 1969 to 1989 was visiting professor at King's College London. In 1986 he was made an honorary Fellow of the University College of Wales. He was mainly self-educated as a composer, although Ireland helped him with advice and criticism while he was at school. In 1949 his popular overture *Yorick* won the Royal Philharmonic Society prize. His achievement as a composer was enriched by his scholarly pursuits as an editor, particularly of Elizabethan and Victorian music. Aside from contributing to a revival of interest in neglected English composers, these activities had a direct bearing on his vocal and dramatic output. His six operas attest to the affinity he shared with his models Purcell and Britten in their idiomatic vocal lyricism, clarity of text-setting and

theatrically effective accompaniment; such qualities can also be found in the song cycles of the 1980s and 90s (e.g. *Mirabile misterium* and *Four Chaucer Songs*). His insights into Elizabethan polyphony and 19th-century harmony infuse his many transcriptions and Stravinskian arrangements, while his music's chromaticism, within a broadly tonal idiom, its love of counterpoint and its delicate, colourful orchestration betray the influences of Prokofiev. Bush has also edited several collections of music by John Ireland.

WORKS
(*selective list*)

OPERA
librettos by Bush unless otherwise stated

The Blind Beggar's Daughter (ballad op for young people, 3 scenes, S. Bathurst), Farnham, 21 Jan 1954, rev, 1964
If the Cap Fits (1, after Molière: *Les précieuses ridicules*), 1956, Cheltenham, 12 July 1956
The Equation (1, after J. Drinkwater), 1967, London, 11 Jan 1968
Lord Arthur Savile's Crime (1, after O. Wilde), 1972, London, GSM, 5 Dec 1972
Love's Labours Lost (2, after W. Shakespeare), 1988, unperf.

MALCOLM MILLER

Bush, Kate [Catherine] (*b* Bexleyheath, Kent, 30 July 1958). English pop singer. She began performing professionally in 1974, fronting the K.T. Bush band, then came to the attention of Pink Floyd's Dave Gilmour, who was instrumental in securing her a solo recording contract. Her first single, *Wuthering Heights* (EMI, 1978), was an astonishing début and reached number one in the UK charts. The accompanying album, *The Kick Inside* (EMI, 1978), was a moving collection which showcased Bush's affected, almost hysterical, confessional lyrics. She bridged the gap between the earnest melodicism of 1970s singer-songwriter styles and arty progressive rock, and also became well known for her intensely theatrical videos incorporating dance and mime. Perhaps Bush's most realised work was 1980's *Never For Ever* (EMI), which contained the UK hit single *Army Dreamers*, the most telling of any commentary on the 'Troubles' of Northern Ireland. *The Dreaming* (EMI, 1982) and *Hounds of Love* (EMI, 1985), her second UK number one album, saw Bush appropriating ethnic folk influences from Ireland and central Europe into her music. By the mid-1980s, she was one of the most commercially successful, if reticent, pop stars in the UK. Since then she has only made two albums in over a decade, and her unwillingness to perform live has denied her wider global success. Despite this, she has maintained a large popular following and influenced many artists, most notably the American singer Tori Amos.

DAVID BUCKLEY

Bushman music. The music of the Khoisan-speaking people of southern Africa, a semi-nomadic people with a tradition of hunting and gathering. They were historically referred to as 'Bushmen', a name that many still prefer. To avoid negative connotations associated with this term, the Nama name 'San' has also been used, though this is now considered by some to be even more derogatory. The primary social unit of the people is a band usually consisting of between 20 and 50 members related either by blood or by marriage. They have no leaders or formal legal institutions, and their mode of social organization is among the most simple and egalitarian known.

The most common musical instrument used by the Bushmen is the (*goma g!oma*) or (*nao n!ao*) mouth-resonated musical bow, which is usually a hunting bow: the string is stopped by the left hand while the right hand strikes the string with a small stick. Another instrument, the *mbira* (*see* LAMELLOPHONE), is gaining popularity, having been adopted by the Bushmen from Bantu-speaking neighbours.

The heart of Bushman music, however, is singing. The vocal music is usually polyphonic and polyrhythmic, characterized by a kind of yodelling and using a high tonal centre, and the voices are supported by complex hand-clapping, sometimes supplemented by one or two drums. The songs, sung by choirs of women and girls, accompany dances performed mainly by men and are given titles such as *The Giraffe*, *The Elephant*, *The Kudu* etc. These dances are at the core of Khoisan religious life and are frequently used for trance therapy.

Busine. *See* BUISINE.

Businello, Giovanni [Gian] **Francesco.** *See* BUSENELLO, GIOVANNI FRANCESCO.

Busnoys [Busnois, Bunoys, de Busnes], **Antoine** [Antonius] (*b c*1430; *d* shortly before 6 Nov 1492). French composer, singer and poet. He was the most prolific French composer of songs between Guillaume Du Fay and Claudin de Sermisy, and was widely acknowledged, along with Johannes Ockeghem, among the most outstanding composers of the second half of the 15th century.

1. Early years in France. 2. The Burgundian years. 3. Burgundian benefices. 4. Busnoys and the origins of the *L'homme armé* tradition. 5. Musical style. 6. Reception.

1. EARLY YEARS IN FRANCE. The place and date of Busnoys' birth are unknown. In all likelihood he hailed from the tiny village of Busnes near Béthune (Pas-de-Calais) in the province of Artois. He could conceivably have been related to 'Messire et maître Philippe de Busnes', recorded as priest, dean and canon of Notre-Dame, Lens (about 30 km from Busnes), in 1499, a descendant of the noble counts of Busnes. Nothing is known of his early musical training, though he surely attended an ecclesiastical choir school, as did most late-medieval singers, probably in northern or central France.

Literary, musical and other circumstantial evidence points to Busnoys' activity in aristocratic circles surrounding the French royal court in the Loire valley by the 1450s, if not earlier. The recent re-attribution to Busnoys of the motet-chanson *Resjoïs-toy, terre de France/Rex pacificus* (see Lindmayr in Higgins, 1992), probably composed for the accession of Louis XI to the crown in 1461, signals his proximity to French court circles, and the earliest known biographical document places him squarely in Tours. A petition for absolution preserved in the papal archives, dated 28 February 1461, recounts an incident in which Busnoys (then a chaplain in Tours Cathedral), along with a number of unnamed associates, had allegedly beaten a certain priest to the point of bloodshed on five separate occasions. He had then proceeded in open defiance of canon law to celebrate Mass in his state of anathema, actions for which he was excommunicated and afterwards pardoned by Pope Pius II. The document gives no further details about the circumstances of the beatings, but it resembles many similar accounts of clerical violence preserved in the archives of the Sacred Penitentiary.

By 1465 Busnoys had moved from Tours Cathedral to the collegiate church of St Martin, where Ockeghem held the dignity of treasurer; this would have facilitated even more direct musical contact between the two composers than had probably already existed. According to an 18th-century transcript of the now lost chapter acts, 'Antonius Bunoys, clericus de choro et pannus' was promoted to acolyte and the other minor orders on 7 April and to subdeacon on 13 April. Soon thereafter he must have assumed responsibility for the church's *maîtrise*, for he was styled 'currently master of the choirboys of St Martin of Tours' in September 1465, when he proposed himself for the same position at the allied church of St Hilaire le Grand, Poitiers. In doing so he was challenging the incumbent master, one Jehan le Begue, whom most of the canons of St Hilaire preferred to retain in spite of his inadequacy (or even incompetence). Busnoys' reputation by 1465 is made clear by the superlatives his advocates invoked to describe him: 'extremely skilled in music', 'exceptionally qualified in music and poetry, and best able to instruct the boys, especially in music and morals', 'a most dignified and eminent man'. In the end Busnoys was hired, but the chapter continued to disagree about the handling of his appointment. Within weeks of his arrival in Poitiers a flood of new musical talent descended upon St Hilaire. The chapter accepted a new singer named Etienne Aubry, 'expertus in musica', who lodged in Busnoys' house. Shortly thereafter they admitted a certain 'poor tenor', as well as a number of new choir clerks who were identified as 'expertus in musica' and whose admission was contingent on satisfying the succentor of their competence in 'musica et letteratura'. Busnoys' arrival appears not only to have stimulated the chapter to augment its polyphonic resources but also to have served as a magnet for capable singers.

What might have induced Busnoys to leave St Martin, one of the most prestigious churches in France, for an identical position at its equally renowned sister institution – particularly since the ancient ties of confraternity between the two churches formally prohibited the raiding of each other's personnel? One obvious lure was the renowned University of Poitiers, established in 1432. Numerous allusions by 15th- and 16th-century theorists, as well as the profusion of pseudo-Greek terminology in prescriptive texts and canons in his music, suggest that Busnoys' learning and erudition surpassed that of most 15th-century musicians. Scholars have thus supposed that he must have had a university education, but it is not known where he studied. At least two contemporary composers followed precisely such a career trajectory: Johannes Tinctoris studied at the University of Orléans while serving as *magister puerorum* of Orléans Cathedral in the early 1460s, and Philippe Basiron pursued a degree in canon law at the University of Bourges in 1471 while he was master of the choirboys at the Ste Chapelle of Bourges. Busnoys may well have matriculated at the

University of Poitiers in 1465, but it seems unlikely that he made substantial progress towards a degree at this time. By 26 July 1466 he was described as 'master of the choirboys during the year just past', and Le Begue had his old job back. Busnoys' decidedly precipitous departure may have been due to irreconcilable power struggles within the chapter over his appointment. In January 1467 the canons were still trying to find the best way of settling their debt to their 'former master of the choirboys'.

Busnoys seems to have written nearly two-thirds of his chansons by 1466 (see Fallows in Higgins, 1992) – that is, by the time he left Poitiers. Much of the surviving sacred music, too, must have been composed before 1467. The four-voice setting of the Easter sequence *Victimae paschali laudes*, with its unusually high ranges, unique in his oeuvre, may have been written with the choirboys of Tours or Poitiers in mind; likewise the two settings of *Regina caeli*, the second of which has been described as 'one of the loveliest stretches of music ever written'.

2. THE BURGUNDIAN YEARS. Not long after Busnoys left Poitiers his name turns up in a document of 14 March 1467, as a *chantre* in the service of Charles, count of Charolais and heir to Duke Philip the Good of Burgundy. Within a few months of his arrival at the court Busnoys must have composed the motet *In hydraulis*, whose text pays homage to Ockeghem as 'a new Orpheus' and designates Busnoys himself 'the unworthy musician of the count of Charolais' (the count became duke of Burgundy on 15 June 1467). Charles the Bold took a far more active interest in music than his predecessors, and over the period 1467–70 he augmented the vocal forces of his chapel and issued payments for the copying of 'new' musical works into the chapel's choirbooks; Busnoys undoubtedly composed some of these. One choirbook of the Burgundian chapel survives (*B-Br 5557*) with nine sacred works by Busnoys added to its original nucleus. Most of these are in a single hand, and the care with which they were copied – especially the rubrication of the composer's name at the beginning and end of *Anthoni usque limina* ('*Anthoni us*que limina . . . fiat in omni*Bus Noys*'; see illustration) – suggests that the scribe was Busnoys himself.

It is not clear exactly when, how or why Busnoys entered Charles's service in 1466 or 1467, but he did not join the ducal chapel on Charles's accession. From time to time over the next three years he received 'gifts' from Charles's treasury in order to defray his expenses in performing unspecified services. The sums he was given were much less in aggregate than the salary of a chaplain, conforming more to the wages of a domestic servant. Probably he was not working for Charles full-time or officially and had other resources to live on, though the nature of these is unknown. The freelance 'services' he was paid for were almost certainly specifically musical ones, such as composing and performing, but probably included the more delicate diplomatic task of recruiting new musicians from other courts. In November 1470 Busnoys was paid for 'services . . . of which the duke wished no further mention to be made in the accounts', a formula regularly used in payments for embassies and other political missions. It is also possible that Busnoys acted as the duke's teacher in musical or poetic composition. There is no evidence that he served in the dual function of *chantre* and *varlet de chambre*, as Hayne van Ghizeghem and Adrien Basin are known to have done at

Opening page of Busnoys' motet 'Anthoni usque limina' (B-Br 5557, f.48v), perhaps copied by Busnoys

this time; in all the documents before his entry into the ducal chapel he is called simply *chantre*. In any case, with the majority of his chansons having been already composed before he came to Burgundy, there is no need to suppose his status as *varlet de chambre* as an explanation of his chiefly secular oeuvre.

Busnoys finally became an official member of the Burgundian chapel staff as a *demi-chappellain* in October 1470, although the ducal ordinance confirming his appointment was still pending. A separate entry in the next month's accounts refers to him as 'a chaplain in my lord's domestic chapel', but on the next surviving roster of the chapel, from 8 March 1471, he was still on half pay, which may mean that his status was still contingent; by July 1472 he had become a full chaplain of the ducal chapel. He probably had a semi-official connection with the chapel before his appointment, however: a clothier and a furrier had been paid in the autumn of 1469 for the materials for robes matching those of the chapel, which the duke had given to Busnoys and another *chantre*. From 1471 onwards Busnoys' name appears on all the surviving *escroes* or daily rolls of the ducal household up to 1475, which enables us to follow his whereabouts with uncommon precision. Charles the Bold spent much of his decade-long reign on military campaigns, extending his territories and consolidating his power within them; unlike his predecessors, who had taken only a skeleton crew of chaplains into combat, Charles almost invariably travelled with his entire chapel. Chroniclers consistently reported that the duke was nowhere more at home than in his military camps, where foreign dignitaries and ambassadors were received and entertained with as much ceremony

as at his palaces in the Low Countries. It is not surprising that music played an important role in life on the battlefield. The Milanese ambassador Johanne Pietro Panigarola reported from the siege of Neuss in May 1475: 'Even though [the duke] is in camp, every evening he has something new sung in his quarters; and sometimes his lordship sings, though he does not have a good voice; but he is skilled in music'. It seems certain that ducal composers such as Busnoys and Robert Morton would have supplied at least some of the 'new' music performed on these occasions.

Along with the other singers of the Burgundian chapel, Busnoys accompanied Charles to all his major military confrontations before 1476: Liège and Péronne in 1467–8, Péronne, Beauvais and the conquest of the Somme towns in 1472–3, and the siege of Neuss, which lasted nearly a year during 1474–5. The *escroes* for 1476 show a substantially reduced chapel staff, and it is probable that Busnoys and the other singers did not accompany Charles on the particularly brutal campaigns in Lorraine that led to his death early the next year. On 7 December 1476, at the outset of Charles's disastrous siege of Nancy, most of his chaplains were in Ghent serving his wife, Margaret of York. The duke's chaplains may have rejoined him later on his final engagement at Nancy: at least one of the regular chaplains, the Englishman John Stewart, died in that battle, as did the duke himself on 5 January 1477. The appearance of Busnoys' name on the wardrobe accounts for Charles the Bold's funeral marks the end of his association with the mercurial warrior-prince, who balanced an obsession with military conquest with a passionate interest in music and musicians. Busnoys remained in the service of Charles's daughter and heir, Mary of Burgundy, and on her marriage in 1478 transferred to the chapel of her consort Maximilian of Austria. The last appearance of Busnoys' name in the records of the Habsburg-Burgundian court is on 17 April 1483. Nothing more is known of him until his death was reported almost a decade later. It has been conjectured that he may have spent part of the 1480s in Italy, though no supporting evidence has come to light. Certainly his music was well known and highly prized in Italy, to judge from surviving sources of his music, and it is not impossible that, like so many of his contemporaries, he may have sought employment beyond the Alps.

3. Burgundian benefices. Most of what is known of Busnoys after the death of Charles the Bold comes from the records of ecclesiastical benefices he held. Only one benefice is certainly known to have been bestowed on him by Charles himself (though the one mentioned immediately below may well have been): the chaplaincy of St Silvestre in the ducal château at Mons, Hainaut. Charles wrote from Maastricht to the wardens of the château on 4 June 1473 to inform them that on that day Busnoys had resigned the chaplaincy in favour of Bernard Buillot (who was later organ porter in the ducal chapel). The benefice must have been at least partly residential, since the officials of the château needed to know of the change in personnel, but Busnoys is now known to have been absent from the ducal court during the previous two years; he may have resided in Mons at periods when the *escroes* do not survive.

The remaining records of benefices concerning Busnoys are all problematic in one way or another. Jean Molinet referred to Busnoys as 'Monseigneur le doyen de Vorne', which has led to some confusion as to whether he meant Veurne [Furnes] near the Flemish coast or Oostvorne on the island of Vorne in Zeeland. Molinet spoke of Busnoys as flourishing in 'ce bas pays flandrinois', which led Dupire to suppose that Veurne was meant, but Busnoys' name does not appear among the deans of the collegiate church of St Walburge. Fétis, however, working with evidence supplied by the Brussels archivist Alexandre Pinchart, had argued on behalf of Oostvorne, where one of the canonries of the small collegiate church of St Pancrace was in the collation of the dukes of Burgundy. Jongkees (without citing specific documents) confirmed that Busnoys was dean of St Pancrace and canon of Tholen (also in Zeeland) in 1473. It is not known how long Busnoys may have held the deanship in Oostvorne; the as yet untapped archives of the Burgundian court in the southern Netherlands may hold valuable information.

There is a supplication in the Vatican archives, dated on the day of Charles's death, 5 January 1477, requesting a canonicate for Busnoys in the diocese of Thérouanne (the church is not specified but may be that of Saint Omer), but it is not known whether the application was successful. On 10 November 1478 Busnoys, described as canon of an unspecified church (perhaps the one supplicated for), acquired a chaplaincy in St Nicolas, Brussels, through a permutation of benefices with the former Burgundian singer Walter Henrici, only to resign it on 14 November in exchange for another chaplaincy in the park of Tervuren near Brussels, probably in the ducal hunting lodge in the park. A collation list of Maximilian's, dating from about 1480, lists Busnoys' name against benefices in Mons (probably not the same as the chaplaincy in the château he had held earlier), Condé (undoubtedly Notre Dame, where Josquin was later provost and where the dukes of Burgundy had the collation of some of the prebends) and Tholen. Unfortunately this document does not name the churches involved, although it is probable that it refers to benefices actually held rather than nominations, as Jongkees's researches, mentioned above, confirm the canonry in Tholen (the prebends at Oostvorne, unfortunately, are left blank). A tantalizing entry in the list names 'Marie, daughter of Hughes Busnois', who may have been – if not the composer's sister and father – at least relatives.

Vander Straeten published a document recording the permutation of a prebend at Lier [Lierre] on 27 January 1481 from 'Buysnois' to 'Jans bastaert van Brabant'. This must have been at St Gommaire, the only collegiate church in Lier whose benefices were in the collation of the dukes of Burgundy. According to Theunissens, who gave no supporting evidence or dates, Busnoys was among the holders of the tenth prebend; a Jean de Brabant did in fact hold the fourth prebend in 1481, dying in 1486. A number of Busnoys' colleagues in the Burgundian chapel also held prebends in this chapter, including Jean Cordier and Jean Bracconier *dit* Lourdault. Busnoys' final and biographically most significant benefice is also rather mysterious: he seems to have been responsible for directing the choir at St Sauveur, Bruges, in the late 1480s and early 1490s. Busnoys was listed as a deceased member of the choir confraternity of the church about 1510, and a now lost document of 6 November 1492 recorded the appointment of a replacement to 'the job (*onus*) of directing the choir' after Busnoys' evidently recent death. The office of cantor at St Sauveur seems to have united both the normal

responsibility for ruling the plainchant and the duty of teaching the choirboys; Busnoys probably obtained the office after 1484/5, when another singer is described as master of the children. Strohm (*StrohmM*) has suggested that Busnoys may well have owed the position to the nomination of Maximilian of Habsburg, and noted that he was probably not permanently resident. It is striking that, just as had happened when Busnoys become master of the choirboys at St Hilaire, Poitiers, in 1466, the practice of polyphony began to flourish at St Sauveur in the latter half of the 1480s; it undoubtedly owed much to his efforts.

It is worthy of remark that Busnoys is not known to have held any benefices at the most important churches (either musically or ecclesiastically) of France or the Burgundian territories, as so many of his counterparts both among the major composers of the time and in the Burgundian chapel – even if not composers – did. Further research may turn up more benefices than are known of at present, but it seems likely that the only one with much prestige was the possible prebend at Condé; all Busnoys' other benefices were in the geographical and musical backwaters of the Burgundian lands.

4. BUSNOYS AND THE ORIGINS OF THE 'L'HOMME ARMÉ' TRADITION. The most important claim made about Busnoys by 15th- and 16th-century theorest's is Pietro Aaron's statement in his *Thoscanello* (1523): 'It is believed that the tune (*canto*) called L'HOMME ARMÉ was invented (*trovato*) by Busnoys, and that he took the tenor and, because it was short, transferred the beat from the semibreve to the minim in order to have a wider field'. It is uncertain whether Aaron meant that Busnoys had reworked the rhythm of an existing composed or popular chanson, or that he had newly composed it himself, either as a monophonic or polyphonic chanson or as the tenor of his mass. Giovan Tomaso Cimello (*c*1540) stated that Ockeghem had written the original song; in 1613 Pietro Cerone repeated the claim that Busnoys had composed the tune, but added that Ockeghem had been the first to write a mass on it. Perhaps more important than the question of the truth of Aaron's claim (whatever it was) is its testimony to a tradition – three decades after his death and in a country where he is not known to have been active – associating Busnoys with the origin of one of the most stimulating *cantus prius facti* in music history.

Busnoys' *Missa 'L'homme armé'* may or may not have been the original mass in the series of ultimately more than 40 composed on this tune, but in any case it was one of the first, probably written about 1460, and plainly the most influential of the first generation of *L'homme armé* masses. Strunk first pointed out the extreme dependence of Obrecht's mass on Busnoys', employing virtually the identical rhythmic schema in the tenor (though diverging in placing the tune on E rather than the usual G). Wegman (*JRMA*, 1989) has shown how an anonymous *Missa de Sancto Johanne Baptista* similarly appropriates the entire rhythmic plan of Busnoys' cantus firmus. Other *L'homme armé* masses, particularly those of Du Fay, Faugues and Basiron, seem to quote literally from portions of Busnoys'. Taruskin has drawn attention to the careful demonstration of Pythagorean proportions in the mensural relationships of Busnoys' tenor, showing a similarity to the procedure in several masses in the cycle of six anonymous *L'homme armé* masses in Naples, which he argued (as Cohen and others had earlier proposed) were also composed by Busnoys. Taruskin has emphasized the anomalous number of 31 breves that distinguishes the 'Et incarnatus est' section of the Credo, which he associated with the number of 31 knights in the Burgundian Order of the Golden Fleece during the reign of Charles the Bold. This coincidence is regarded with less favour now, especially since the *L'homme armé* tradition in general and Busnoys' mass in particular seem clearly to antedate Busnoys' association with the court of Burgundy. Charles, however, undoubtedly had the opportunity to acquaint himself with Busnoys' mass after 1467, and he is unlikely to have overlooked its potential for allegorizing his own military ambitions.

5. MUSICAL STYLE. Busnoys' musical style is characterized melodically by wide-spanned lines, patterned and organized through the use of melodic and rhythmic sequences, complex rhythmic combinations and syncopation. Contrapuntally, his music shows a propensity for conservative dissonance treatment, invertible counterpoint and frequent use of imitation in all voices, including precocious examples of four-part pieces using paired imitation and three- and four-voice pieces beginning each textual phrase with a new point of imitation. Harmonically, he had a strong preference for triadic sonorities, strong harmonic (quasi-tonal) progressions, V–I cadences and non-quartal harmonies.

Busnoys' long, arching, wide-spanned melodic lines are perhaps his most singular achievement. He was a brilliant melodist, and this undoubtedly accounts for the great appeal of his works and their frequent use as a basis for other composers' creative endeavours. Busnoys shared this melodic style with Ockeghem, who also wrote similar lines consistently, though less frequently. Wide-spanned lines are an important instance of the general trend towards expansion of vocal ranges and increasing independence of voice-parts manifest in the later 15th century. This particular characteristic of Busnoys' music may have arisen as a natural result of his career as a professional singer: to judge from the great rhythmic complexity and wide range of his melodic lines, there can be little doubt that he and the singers for whom he composed were vocal virtuosos of the highest calibre. Perle singled out the virelai *Je ne puis vivre ainsi* as typical of 'the wonderful subtlety and ingenuity of his rhythmic ideas, probably unsurpassed in the entire history of music'. Busnoys' works are characterized by a 'rational' organization of the wide-spanned melodic line into syncopated rhythmic patterns and sequences, as well as an increasing use of structural imitation. For Sparks, Busnoys was the pivotal figure of the late 15th century, in whose works these new trends are most clearly visible:

> Busnois exceeded any of his contemporaries in his exploration of the possibilities of linear organization of the counter-melodies; passages dominated by motifs stated in sequence, close imitation or ostinato appear frequently in his works, particularly at cadences. These passages, which often sound experimental, are of considerable significance, since they point to a direction that Franco Netherlands style was to take for the next 30 years.

Busnoys' ingenious use of syncopated rhythms is a feature of his style that had a great impact on his younger contemporaries. In addition to hemiola, he delighted in accentual displacement and intricate cross-rhythms, often emphasized by close imitation. Evident already in the motet *Anima mea liquefacta est/Stirps Jesse* (in all likelihood his earliest sacred work), one finds stunning

examples in *In hydraulis* as well as in sections of the *Missa 'L'homme armé'* where the cantus firmus is silent (Kyrie II, Agnus II), involving long quasi-canonic duos or trios. Several of these passages bear striking similarities to passages in Josquin's *Illibata Dei virgo nutrix* and *Missa 'Hercules Dux Ferrariae'*, as has been frequently noted in the literature. In equal-voiced pieces, Busnoys' tendency to employ motivically-constructed lines in imitation often results in brilliant passages of ostinato, best exemplified throughout the songs *Bel Acueil*, *Ha que ville et abominable* (canonic version), *A vous sans autre* and especially in the concluding passages of the motets *Victimae paschali laudes* and *Anthoni usque limina*, where the ostinato passages create a strong sense of impending climax and drive to the cadence.

The strong sense of tonality evident in many of Busnoys' works arises not only from his systematic use of V–I cadences as well as linear and vertical triadic sonorities, but also from his preference for eliminating essential 4ths between voices. A concomitant feature of this avoidance of 6-3 chords is an increasing use of parallel 10ths between the outer voices, which also appear in abundance. Trowbridge has shown that Busnoys more than any other composer of his day figured centrally in the general trend towards the greater spacial integrity of individual voice parts, key aspects of which include the employment of textures spanning larger ranges, less frequent voice-crossing, the increasing isolation of the contratenor part as a fundamental bass line and especially the use of non-quartal harmonies, all of which are especially prevalent in Busnoys' style. An important linear aspect of his 'quasi-tonal' harmony is his propensity for writing conjunct melodic lines exploiting the octave species of the prevailing modality. In contrast to many of his contemporaries, whose melodies more consistently articulate discrete species of the 4th or 5th, Busnoys shows a marked tendency towards a seamless expression of the species of the entire modal octave, resulting in wider-spanned phrases frequently encompassing an octave and often a 10th. Striking examples occur at the openings of *Je ne puis vivre ainsi*, *Ha que ville et abominable*, *Joye me fuit* and *Ung plus que tous*; one often finds similar gestures near the conclusion of a work, where syncopated scalar passages sometimes ascend the tonic octave, or the octave of the 3rd degree of the modal scale, from which the final tonic will be approached, as in *Ma plus qu'assez*, *Amours nous traitte*, *Je ne demande aultre degré* and *Bel Acueil*.

One particular gesture appearing so frequently in Busnoys' works as to be a stylistic fingerprint is the ascending scalar passage, spanning an octave and often a 10th, fitted to a sharply syncopated trochaic rhythm. This became perhaps the most striking linear characteristic of the music of virtually every composer of the next generation, especially Obrecht, Josquin, Agricola and Isaac. Examples of these syncopated lines are so pervasive in Busnoys' works that it is difficult to isolate a few of the best, though certainly two of the most brilliant occur at the closing of both *partes* of *Anthoni usque limina*, the first on the words 'psallentem tua dulciter', and the second on the syllables of his own last name. '-Bus noys'. The only other composer who regularly wrote similar lines, albeit infrequently, was Ockeghem. We might draw attention to the parallel moments in the Sanctus of both composers' *L'homme armé* masses, with their soaring bass lines on the words 'Domini' and 'Sabaoth'. One especially memorable passage of Busnoys' that could easily stand comparison with some of the more sublime moments in all the history of Western music appears in the 'Qui tollis' of the *L'homme armé* mass, where the bass begins a majestic, syncopated ascending scale on *D*, soars up a breathtaking span of a 10th to *f* and gracefully winds its way back down to its starting pitch. One cannot help wondering if this unforgettable moment in Busnoys' mass inspired the striking and equally memorable entrance of the bass in the 'Et in terra' of Josquin's *Missa 'L'homme armé sexti toni'*, which follows the opening duo between the upper voices.

Busnoys' penchant for a kind of formal 'rationalism', as Sparks called it, extends to the background level of cantus-firmus organization. Recent studies of individual works have further demonstrated Busnoys' preference for contrapuntal floor plans consisting of a strictly literal presentation of the cantus firmus laid out according to a carefully wrought rhythmic scheme. The *Missa 'L'homme armé'* now appears to have been constructed by planning the lengths of discrete sections according to mathematical ratios corresponding to Pythagorean proportions. *In hydraulis* provides an example of a 'constructed' cantus firmus consisting of a three-note ostinato stated in transpositions at the 5th and octave – corresponding to the Pythagorean intervals named in the text – and in successive proportional diminutions. *Anthoni usque limina* is similarly based on a 'constructed' tenor consisting of the note *D*, whose performance on (or in imitation of) a bell must be rhythmically reconstructed from an obscure verbal and pictorial 'canon' in the sole source (see illustration), and the text itself incorporates Busnoys' full name (*Anthoni us*que limina . . . fiat in omni*Bus Noys*). The four-part hymn *Conditor alme siderum* assigns a different mensuration to each voice-part. The cantus firmus of the virelai *Maintes femmes* is based on an elaborate hexachordal scaffolding ingeniously constructed from notes of the superius in the first section and from solmization syllables in the second, a procedure strikingly evocative of the even more recondite canon in Ockeghem's *Ut heremita solus*. *J'ay pris amours tout au rebours* incorporates the tenor of the well-known anonymous rondeau *J'ay pris amours* in inversion ('au rebours').

6. Reception. Busnoys' musical legacy of some 75 chansons, 10 motets, a *Magnificat* setting, two masses and a Credo survives in more than 50 manuscripts and prints of the 15th and 16th centuries, whose provenances extend from England to Hungary. He is the composer most frequently represented in no fewer than nine major late-15th-century chansonniers – Dijon (*F-Dm* 517), Laborde (*US-Wc* M2.1 L25 Case), Wolfenbüttel (*D-W* Guelf.287 Extrav.), Copenhagen (*DK-Kk* Thott 291 8°), Nivelle de La Chaussée (*F-Pn* Rés.Vmc 57), Mellon (*US-NHub* 91), Casanatense (*I-Rc* 2856), Bologna Q16 (*I-Bc* Q16) and Seville (*E-Sc* 5-1-43/*F-Pn* n.a.fr.4379) – and he figures prominently in the Pixérécourt (*Pn* fr.15123) and Braccesi (*I-Fn* B.R.229) chansonniers as well. More than half of his secular songs are found only in sources of Italian origin, further attesting the international scope of his reputation and specifically to their popularity within the musical circles of the Este family in Ferrara, the Medici in Florence and the Aragonese court of Naples. Busnoys' sacred music can have been no less popular than his chansons. In a rare description of the reception of the now lost motet *Gabrielem*, an Italian instrumentalist

reported in 1494 to Duke Francesco Gonzaga in Mantua that 'in truth, all Venice wishes to hear no other'.

A late exponent of the venerable but moribund tradition of the medieval poet-musician, Busnoys was also exceptional among his contemporaries in enjoying a purely literary reputation as well, happily corroborated by the first-hand testimony in Poitiers of his exceptional qualifications in 'music and poetry'. Quite apart from the likelihood that he wrote the Latin texts of *Anthoni usque limina* and *In hydraulis* as well as the French poems for many of his secular songs, he holds the singular distinction among 15th-century composers of having no less than three poems attributed to him in literary manuscripts and treatises of the period. Pierre Fabri, in his treatise on the *Seconde Rhétorique*, used a text attributed to Busnoys, *Cent mille fois le jour*, as a paradigm of the bergerette (virelai). A poetry manuscript (*F-Pn* fr.9223) emanating from the French court circle of Charles VII and Charles d'Orléans transmits an otherwise unknown rondeau, *Lequel vous plairoit mieulx trouver*, ascribed to Busnoys. The *grand rhétoriqueur* Jehan Molinet, whose poetry contains references to Busnoys and his compositions, paid homage to Busnoys in his clever *Je te rends honneur et tribus*, which uses only the two end-rhymes '-bus' and '-nois'. Busnoys responded to Molinet with the rondeau quatrain *Reposons nous entre nous amoureux*, based in turn on the refrain of Molinet's poem. This is the only one of Busnoys' texts for which music survives – curiously, not by the composer himself, but by Pierre de Manchicourt, in Susato's second book of chansons (RISM 1544^{10}). The texts Busnoys favoured in his own musical settings seem to be those of the French *formes fixes*, particularly the rondeau and the virelai.

Quite apart from his alleged role as progenitor of the *L'homme armé* tradition, Busnoys was among the most imitated and emulated composers of his generation, to judge from the number of composers who used his songs as a basis for their own musical settings. The composer most heavily indebted to Busnoys was Jacob Obrecht, whose *Missa diversorum tenorum* quotes the tenors of Busnoys' *Joye me fuit*, *Mon mignault musequin* and *Acordés moy*, while his mass on *Fortuna desperata*, like that of Josquin, incorporates all three voices of Busnoys' song. One of only two Italian texts associated with Busnoys (the other, *Con tutta gentileça*, is unlikely to be the original text for its music), *Fortuna desperata* gave rise to some 30 further polyphonic elaborations, including multiple secular settings by Henricus Isaac, Alexander Agricola and Ludwig Senfl. (Busnoys' authorship of *Fortuna* has recently been challenged by Joshua Rifkin on stylistic grounds and reattributed to one 'Ser Felice' of Florence.) Johannes Ghiselin employed Busnoys' four-part *Mon mignault musequin/Gratieuse plaisante* in his *Missa 'Gratieuse'* and also wrote a Sanctus-Agnus pair based on Busnoys' *Joye me fuit*. Isaac employed all three voices of Busnoys' *Quant j'ay au cueur* in his mass on the tune, and he also set *Fortuna desperata* at least twice. Busnoys' setting of the popular tune *In myne zynn*, his only piece with Flemish text, may have been the polyphonic model for the some dozen subsequent polyphonic settings by other composers. A version virtually identical to Busnoys' is preserved in a Dutch painting of 1533. *Je ne demande aultre degré* served as the basis for polyphonic mass settings by Obrecht and Agricola, a lost setting by Prioris, an incomplete anonymous setting, a six-voice secular setting by Agricola, a lute intabulation by Spinacino and Compère's *Missa 'Ave Domine Jesu Christe'*.

Busnoys stands out as a composer with an unusual interest in his own self-fashioning as a creator of music. In the quasi-autobiographical motet *Anthoni usque limina*, he concealed his own name in the text itself, wrote a clever verbal canon to ensure the reader wouldn't miss it, and constructed the piece in symmetrical halves corresponding to the numerical cipher (108) of his own name. With *In hydraulis*, while cloaking his last name in the protective shroud of the conventional medieval humility topos, he nevertheless declared himself the 'unworthy musician of the count of Charolais' and as the musical 'offspring' (*propago*) of its dedicatee, Johannes Ockeghem, 'the reincarnation of Orpheus'. The artistic selfconsciousness manifested in these works goes beyond the way Du Fay inserted his name in a petition in his *Ave regina celorum* or the simple acrostic 'here I am' of Josquin's *Illibata Dei virgo nutrix*. His emphasis on his having composed *Anthoni usque limina* and *In hydraulis* betrays the ambition to present himself as an *auctor*. His thematizing of creative genealogy and invocation of the classical past (Pythagoras, Orpheus, Graecizing musical terms) manifests a certain anxiety about legitimation. His description of himself as the metaphorical son of the composer he identified with the greatest musician of antiquity suggests that he had a high opinion of himself. And this apparently arrogant self-assessment seems to have been shared by his contemporaries, who regarded him as a truly exceptional man and consistently invoked superlatives to describe him.

Tinctoris dedicated his *Liber de natura et proprietate tonorum* jointly to Busnoys and Ockeghem as 'the most outstanding and most famous professors of the art of music', whose music was 'worthy of the immortal gods', and in his *Proportionale musices* he referred to them as 'pre-eminent in Latinity' and among 'the most excellent of all the composers I have ever heard'. Adam von Fulda's chronological list (in his *Musica*) of the most important musical figures of all time singled out only two composers of the 15th century: 'the most learned (*doctissimi*) Guillaume Du Fay and Antoine Busnoys'. In crediting him with the creation of the *L'homme armé* tune, Pietro Aaron noted that he was 'a great man and an excellent musician'. The same language was used by the supporters of his bid to become master of the children in Poitiers: 'a very dignified and eminent man', 'exceptionally skilled in music and poetry', who would 'best teach the choirboys'. Even those who would criticize Busnoys acknowledged his authority and power. Tinctoris, who aimed at a thoroughly consistent theory of music, expressed his frustration at Busnoys' 'inconsistent' notational practices, implicitly acknowledging the composer's influence on other practitioners when he emphasized that 'Busnoys *alone* disagrees . . .'. Adrianus Petit Coclico (*Compendium musices*, 1552) categorized Busnoys among his 'mathematicians', identifying his faults as ones of excess: 'In teaching precepts and speculation they have specialized excessively, and in accumulating a multitude of symbols and other things they have introduced many difficulties'.

Some 70 years earlier Bartolomeus Ramis de Pareia (*Musica practica*, 1482) had cited examples drawn from the works of Busnoys to illustrate the ways in which composers might use esoteric inscriptions or cryptic

canons to conceal the resolutions of their contrapuntal manipulations of a cantus firmus. This facet of his creative personality marks Busnoys as the virtually unrivalled *magister ludi* of late-15th-century music. Typical of Busnoys' delight in this sort of musical puzzle is the song *Ha que ville et habominable* (Oh how vile and abominable), in which Busnoys ingeniously fashioned the upper voice to function both as a strict three-part canon at the unison (signalled in the manuscripts with the rubric *trinitas in unitate*) and as the highest voice against two additional lower parts. The text of the song is itself a pun on the name of one Jacqueline de Hacqueville, for whom Busnoys wrote at least three other songs, all of them concealing her name in some form of acrostic or cryptogram. Another of these songs is the three-voice virelai *Je ne puis vivre ainsy tousjours* (I cannot live like this any longer), of which the first letters in each line form the acrostic JAQUELYNE DAQVEVJLE. Benthem (in Higgins, 1992) has demonstrated the probability that Busnoys originally wrote the ostinato tenor of *In hydraulis* as a canonic entity (notated only once with instructions for resolving the mensuration of its successive statements), proposed emendations necessary to effect a correct transcription from the work's two rather corrupt surviving sources, and explored a complex nexus of numerically significant textual and musical relationships that may represent an exegesis in 'sounding number' of Busnoys' identity and his relationship to Ockeghem.

Until quite recently Busnoys has stood very much in the shadow of Ockeghem in the eyes of modern scholarship, even though the two were regarded as equals in their own time. Much of the responsibility for this imbalance lies with one of the defining moments in the evolution of modern musicology: Raphael Georg Kiesewetter's prizewinning essay in the competition, What were the contributions of the Netherlanders to music? (1829). Kiesewetter imposed what is now seen to be an inappropriately strong separation between Netherlandish and French musical traditions in the 14th, 15th and 16th centuries; it is surely no accident that he proclaimed Ockeghem, with his patently Flemish surname, head of the 'First Netherlandish School' rather than the French surnamed Busnoys – never mind that Ockeghem spent nearly all his working life at the French court while Busnoys devoted his last three decades to Burgundy. Furthermore, the preponderance of chansons over masses composed by Busnoys has led to his being viewed as a less serious composer than Ockeghem, who wrote more masses and fewer chansons, in the same way that Chopin is often regarded as less serious than Brahms. The last two decades have gone far to redress this inequity. Although there is still no complete edition of Busnoys' chansons, all of them are now available in modern editions, and the publication of his complete sacred music in 1990 has shown unmistakably how serious and influential he was in that sphere. Even before the quin-centenary year of 1992 there had been an upsurge in scholarly writing and in the performance of Busnoys' music; 1992 saw an exceptionally lively conference devoted to him, and attention to Busnoys has not lost momentum in the meantime. Busnoys is at last taking his rightful place in the attention of scholars and musicians.

The character that emerges from what is known of Busnoys' life and music is one of excess, flamboyance and brilliance, exploding with energy, disrupting convention, thwarting expectation, and determined to experiment with his own way of doing things.

The physical and emotional excess evident in the episode of his beating the priest in Tours, together with the precarious circumstances of his later activity, offers a tantalizing sketch of a somewhat marginal, Villonesque character, headstrong and independent, 'living on the edge', defying ecclesiastical authority. This nascent if incomplete picture of Busnoys as a musical and social renegade may account in part for the attraction his life and music holds for us today. His works are rife with harmonic surprise, abrupt changes of tempo and texture, musical canons, extensive imitation, melodic sequences, and large-scale repetitions of motifs and even of whole passages. He exceeded conventionally accepted limits of the gamut in cultivating wide-spanned melodic lines that prefigure those of Josquin and Obrecht. And in extending the outer ranges of the upper and lower voices and enabling individual musical lines to operate unobstructed by interference with crossing parts, Busnoys essentially reconfigured the existing boundaries of tonal space. Standing at the crossroads of an era that witnessed the ideological transformation of the composer from an able craftsman to an innately endowed creator, Busnoys emerges as a pivotal figure in a critical period of changing styles and one of the most original and powerful musical minds of the 15th century. Further investigation into the activities of Busnoys and his contemporaries, coupled with a more discerning critical scrutiny of Busnoys' individual musical legacy, will gradually dispel much of the mystery still surrounding this enigmatic and ingenious composer.

WORKS

Editions: *Antoine Busnoys: Collected Works*, ii–iii: *The Latin-Texted Works*, ed. R. Taruskin (New York, 1990) [T]

Sechs Trienter Codices, ed. G. Adler and O. Koller, DTÖ, xiv–xv, Jg.vii, xxii, Jg.xi/1 (1900–04/*R*) [A]

Trois chansonniers français du XVe siècle, ed. E. Droz, Y. Rokseth and G. Thibault (Paris, 1927) [D]

Der Kopenhagener Chansonnier, ed. K. Jeppesen (Copenhagen, 1927, 2/1965) [J]

Das Glogauer Liederbuch, ed. H. Ringmann and C. Väterlein, EDM, 1st ser., iv, viii, lxxxv, lxxxvi (1936–81) [R]

Van Ockeghem tot Sweelinck, ed. A. Smijers (Amsterdam, 1939–56) [S]

O. Petrucci: Harmonice musices odhecaton A, ed. H. Hewitt (Cambridge, MA, 1946) [H]

PAULA HIGGINS

Busoni, Ferruccio (Dante Michelangelo Benvenuto) (*b* Empoli, 1 April 1866; *d* Berlin, 27 July 1924). Italian composer and pianist, active chiefly in Austria and Germany. Much to his detriment as composer and aesthetician, he was lionized as a keyboard virtuoso. The focus of his interests as a performer lay in Bach, Mozart and Liszt, while he deplored Wagner. Rejecting atonality and advocating in its place a Janus-faced 'Junge Klassizität', he anticipated many later developments in the 20th century. His interests ranged from Amerindian folk music and Gregorian chant to new scales and microtones, from Cervantes and E.T.A. Hoffmann to Proust and Rilke. Only gradually, during the final decades of the 20th century, has his significance as a creative artist become fully apparent.

1. Life. 2. Works. 3. Transcriptions and editions. 4. The pianist. 5. The writer.

1. Life. Busoni's father, Ferdinando, was a clarinet virtuoso of Corsican origin, his mother, Anna (née Weiss), an Austrian-born pianist. Although he considered himself a Tuscan, the family moved to Trieste when he was only a few months old, transplanting him into a cosmopolitan, German-orientated environment. He had no regular schooling; the theatre and literature were mainstays of his self-education, and he became a talented linguist. Early piano tuition, in which the study of Bach played a major role, came from his father. His first compositions date from 1873, and his career as virtuoso pianist began the same year. Two years later followed his concerto début, with Mozart's Concerto in C minor. During his early years Busoni served as breadwinner for his parents; later he recalled his early maturing and said: 'I never had a childhood'.

With the help of patronage, he entered the Vienna Conservatory at the age of nine. Though encouraged by Ambros, Brahms and Hanslick, he was dissatisfied with the tuition, and left after two years. In 1881 he began composition lessons in Graz with Wilhelm Mayer (W.A. Rémy) who, apart from schooling him in counterpoint, fostered his lifelong attachment to the music of Mozart and stimulated his interest in mysticism and oriental philosophy. There followed a period of study in Leipzig (1885–8), where he befriended Delius, Mahler, Henri and Egon Petri and made contact with leading German music publishers. Three years later he took a teaching post at the Helsinki College of Music, where his circle of pupils and friends (the 'Leskovites') included Sibelius and the Järnefelt brothers. In 1890, in St Petersburg, he won the

Rubinstein Prize for both piano and composition. The following season he taught in Moscow, where he married Gerda Sjöstrand, daughter of a Swedish sculptor. Finding prospects in Russia limited, he emigrated to the USA. But he was disappointed by the low standards he found at the New England Conservatory in Boston and soon moved to New York, where he began to expand his activities as a concert pianist. In 1894 he settled in Berlin, where he established a permanent home. He gave masterclasses at Weimar (1900–01), the Vienna Conservatory (1907–8), where his pupils included Eduard Steurmann and Louis T. Gruenberg, and Basle (1910).

During the 1890s he had devoted his energies primarily to perfecting his piano technique, but from 1898, with the Second Violin Sonata, he turned his attention increasingly to composition. From 1902 to 1909 he promoted and financed orchestral concerts of new music (by Bartók, d'Indy, Elgar, Magnard, Sibelius, Ysaÿe and many others) in Berlin. At the fourth of the series he introduced his monumental Piano Concerto with choral finale, the work with which he signalled the conclusion of his apprenticeship and emergence, in the craftsman's sense, as master. Two years later, with the publication of the *Entwurf einer neuen Ästhetik der Tonkunst*, he proposed bold and visionary guidelines for the future of music. He took a lively interest in Schoenberg, whose move to Berlin in 1911 he facilitated. Other young composers he particularly encouraged at this time were Bartók, Varèse and van Dieren. His most distinguished piano pupil, later his assistant and an authoritative interpreter of his music, was Egon Petri.

The climax of Busoni's pre-war career as a pianist was probably the 1911 series of six recitals in Berlin devoted to the music of Liszt. Yet acclaim in the concert hall served to diminish his reputation as a composer, and his Bach transcriptions were held in far higher regard than his original works. At its world première in Hamburg, the opera *Die Brautwahl*, which had taken six years to complete, scarcely achieved a succès d'estime.

In the spring of 1912 he set out on an Italian tour, which concluded with a series of eight recitals charting the development of keyboard literature since Bach. Shortly afterwards he was offered the directorship of the Liceo Musicale, Bologna. Himself a latterday Renaissance man, Busoni hoped to find in Italy those qualities which in the Renaissance had made the country the centre of European culture. But modern Italy failed to fulfil his expectations, and shortly after the outbreak of war he resigned his post. Early in 1915 he returned to the USA for a four-month tour. Highly critical of the American way of life, but unwilling to return to wartime Germany, he first thought to settle in Italy; but when his home country declared war on its erstwhile allies, in May 1915, he found himself stranded in New York. Only in the autumn did he return to Europe, taking refuge in Switzerland. During his six-year sojourn in Zürich he gave recitals and masterclasses, occasionally travelling to Italy for concert appearances; Volkmar Andreae entrusted him for a season with the direction of the Tonhalle concerts; he composed *Arlecchino* and *Turandot* and completed the libretto of *Doktor Faust*. Among the many other artists and intellectuals seeking shelter from the war, he made the acquaintance of Joyce and Lenin, Jakob Wassermann and Philip Jarnach.

Ferruccio Busoni

With the establishment of the Weimar Republic in 1920, he accepted the invitation of his former pupil Leo Kestenberg, now a high official at the ministry of culture, to lead a masterclass for composition at the Akademie der Künste in Berlin. Of his pupils, the most distinguished were Weill and Wladimir Vogel, but he also held open house for young musicians at his apartment on the Victorie-Luise-Platz, where his many guests included Hába, Hindemith, Krenek, Erdmann, Horenstein and Mitropoulos. Ill health prevented him appearing in concert after 1922. He had always made light of his stupendous abilities as a pianist, preferring to consider himself primarily a composer. Now the completion of *Doktor Faust* became his final goal; when he died, two scenes were left incomplete.

Aside from his undisputed powers as composer, pianist and man of letters, Busoni was an enterprising (if sometimes erratic) conductor, a passionate bibliophile, a talented draughtsman and a bon vivant. Baptized into the Catholic church, he was at heart an atheist; a lucid commentator on world affairs, he remained politically uncommitted.

2. WORKS. Busoni's attitude to his extensive output of juvenilia was equivocal. 'My early works on your desk! I blush', he wrote to Leichtentritt, his first biographer; yet the catalogue of compositions he prepared in 1921 lists every item published during his early years, including many long out of print. Thanks to the recordings of Geoffrey Douglas Madge, the early piano works have become more readily accessible. The young Busoni is revealed as a composer of taste and imagination, impeccable technique, clear, well organized forms and a precise

Ex.1 *Fantasia contrappuntistica*

sense of colour, well versed in counterpoint but of stereotyped melodic invention. In place of original ideas he often alludes to extrinsic material, particularly folksong or plainchant. Melodic pluralism was increasingly to dominate his mature style. He later came to rationalize the 'latently allusive character' of his music (Reithmüller, 1988) by hypothesizing the 'omnipresence of Time'. 'The absolutely modern does not exist', he wrote, 'only that which arises at an earlier or later moment of time ... "Modern" and "old" have always existed' (*Entwurf einer neuen Ästhetik der Tonkunst*, 1907). Another of his catchwords was 'Toujours recommencer', a motto reflected in his disordered opus numberings. He declared the Second Violin Sonata op.36a to be his true op.1 but continued to sanction performances of several earlier works, including the D minor String Quartet, the *Konzertstück*, the Violin Concerto and the *Lustspielouvertüre*.

During his Leipzig years he worked at an opera, *Sigune*, which was abandoned in 1889. Some of the music was salvaged for the *Konzertstück*, and one theme, associated with the building of a cathedral, was incorporated into the Piano Concerto. Verdi's *Falstaff* revived his belief in the future of Italian music and influenced his further development. He began to search for a synthesis of the Nordic and Latin elements of his own personality: the Piano Concerto polarizes the contrast, alternating between architectural solidity and Italianate pliancy, and closing with a setting of the 'Hymn to Allah' from Oehlenschlaeger's *Aladdin* (the remainder of an unfulfilled plan to set the play 'not as an opera but as a *Gesamtkunstwerk* with drama, music, dance, magic').

Although Busoni was never able to implement the boldest prophecies of his *Entwurf einer neuen Ästhetik* – the use of microtones and of mechanical or electronic instruments – his revolutionary dictum 'Music is born free and destined to regain its freedom' echoes through his mature compositions. Striving to break down the barriers erected by 'the law-givers', he set out in search of a new language. The first fruits of his quest, the *Elegien* for piano, explore a nebulous terrain, adjacent to that of the late works of Liszt. From 1909, with the piano pieces *An die Jugend* and the first Sonatina, the influence of Schoenberg's first experiments with atonality became palpable. Yet when Varèse declared his intention of abandoning tonality, Busoni countered: 'Tu te prives d'une belle chose'. In striving for an 'unattainable ideal of perfect beauty', he stressed, the achievements of the past should never be overthrown.

In the *Berceuse élégiaque* (1909) he sensed that finally he had found his individual sound world and succeeded in 'dissolving the form into feeling'. In 1910, between stations of a North American tour, he completed the unfinished final Contrapunctus from Bach's *Art of Fugue* (a composition entitled in its definitive form *Fantasia contrappuntistica*). Applying techniques of symmetrical inversion first exploited in the *Canonic Studies* of Bernard Ziehn, he discovered a new harmony (ex.1) in which 'precise calculation converges with mystic belief' ('The "Gothics" of Chicago', 1910). The introduction to the Chopin Variations (1922) is a locus classicus of this 'free tonality' (ex.2).

During the years preceding World War I Busoni came into contact with progressive artists in other fields – the Viennese Secessionists, the futurists, d'Annunzio, Max Reinhardt, Rilke – and himself entered a phase of intensified experiment, which bore fruit in the *Sonatina seconda* (subtitled 'senza tonalità' at its first performance) and the *Nocturne symphonique* ('woven with nerve fibres' as he described it). Between 1911 and 1916 he composed several works based on folksongs of the Amerindians, the suppression of whose culture he viewed as a crime against humanity. While the *Indianische Fantasie* does not entirely succeed in integrating the idiosyncratic vernacular melodies into a symphonic framework, the other pieces remain at a far remove from the 'brightly-painted frontier posts' of the folksong revivalists. The enigmatic *Gesang vom Reigen der Geister*, connected with the massacre at Wounded Knee, superimposes a Pawnee melody as cantus firmus on a polytonal, triadic background.

Busoni viewed the 1914–18 war as the relapse of Europe into barbarism. When hostilities ceased, he was among the first to perceive the need for cultural change: 'Many experiments have been made in this young century; now ... it is time to form something *durable* again' (letter to H.W. Draber, 9 April 1919). His ultimate artistic ideal

Ex.2 Chopin Variations

he redefined as 'Junge Klassizität' (Young Classicality), a concept which embraces many styles and in theory precludes none. His first essays in this direction were the *Sonatina ad usum infantis* and the theatrical caprice *Arlecchino*. Both works wear a Mozartian mask of wide-eyed, childish simplicity, but in *Arlecchino* the mask cannot entirely conceal aspects of scorn, bitterness and disillusionment. The libretto, Busoni stressed, was his 'confessione giocosa', but the manuscript was initially subtitled 'eine Marionetten-Tragödie'. The score is spiked with ironic quotations from the Italian and German classics; orchestral colours of icy brilliance coupled with turbulent pacing unify the bewildering dramatic structure. In the revised edition of the *Entwurf einer neuen Ästhetik* (1917), Busoni elaborated on his idea of opera as a spectacle which should 'rely on the incredible, untrue or unlikely'. He was convinced that theatre was the 'universal domain' of contemporary music and that his own musical language was essentially theatrical.

Apart from the *Klavierübung* and the *Sonatina super Carmen*, every major work after 1918 was conceived as a study for *Doktor Faust*. The 'Faustian' language of Busoni's final years, rich in extrinsic allusions and numerological symbols, serves to unify such diverse works as the sombre *Sarabande* and its light-footed companion piece, the *Cortège*, the ebullient *Tanzwalzer* and the tense, hard-driven *Toccata*. In the opera score, direct quotation from these and other 'satellite' works (altogether there are 23) is rarer than paraphrase or free adaption. Work on the music of *Doktor Faust* was begun, with the opening orchestral carillon, in 1916. Each 'satellite', once tested in performance, was duly incorporated into the opera. The distant cry of 'Pax', which concludes the *Symphonia*, was penned shortly before the end of World War I; the scene of goose-stepping Protestant students at Wittenberg, composed in 1921, already prophesied the descent of Germany into the maelstrom of Nazism. Commentators at the world première were surprised, even disappointed, that the music represented no further bold leap forward. But *Doktor Faust* represents a final synthesis, a meeting of the myriad paths along which Busoni's imagination led him. As drama, it stands beside Pfitzner's *Palestrina*, Hindemith's *Mathis der Maler* and Schoenberg's *Moses und Aron*, an operatic allegory of the crisis of the 20th-century artist.

3. Transcriptions and editions. 'Every notation is the transcription of an abstract idea. . . . The performance of a work is [also] a transcription. For a musical art-work . . . stands at once inside and outside time' (*Entwurf einer neuen Ästhetik*). The first published transcriptions (Bach's organ Preludes and Fugues in D and E♭, and the Chaconne) date from the early 1890s, the last (a movement from Weill's *Frauentanz*) from 1924. The 'allusive character' of Busoni's music often makes it impossible to draw a line between transcription and original idea. Every work which passed through his hands – even Schoenberg's op.11 no.2 – he adapted to his individual sense of sonority, keyboard geometry and formal equilibrium. Mozart's piano concertos, Field's nocturnes and Mendelssohn's *Lieder ohne Worte* are numbered among the many works of which his concert transcriptions remain unpublished. He considered his copiously annotated edition of *Das wohltemperierte Clavier* his musical testament: the first book for pianists, the second for composers. His editorial work for the Franz-Liszt-Stiftung is a model of scholarship and textual accuracy; the cadenzas to Mozart concertos reveal an imaginative, anti-historical approach.

4. The pianist. The surviving legacy of recordings is too meagre to do justice to a great virtuoso. Busoni felt ill at ease in the recording studio, and his monumental style was unsuited to the brevity dictated by the medium. Of his piano-roll recordings, those of Liszt's *Feux follets* and *Réminiscences de Don Juan* best document the demonic brilliance of his playing. Selden-Goth characterized his powerful sonority as founded on incisive, *non legato* attack combined with 'entirely new use of the pedal, in which single notes or chords were struck or silently depressed and left to resonate through a passage'; Dent recalled in Bach's C major fugue (from Book 1 of the '48') 'a haze of pedal-held sound that was not confusion but blinding clearness'.

Busoni's large repertory (published, with some omissions, in Dent's biography) ranged from Rameau to Balakirev; its mainstays were Bach and Liszt ('The two make Beethoven possible'). His predilection for 'historical' concert cycles was inspired by the idol of his early years, Anton Rubinstein. In later years concert-giving became irksome. Wary of Chopin and disinclined to Beethoven, he was among the first virtuosos to champion the Mozart concertos. Despite his interest in 20th-century piano literature, he rarely performed modern music other than his own.

5. The writer. As much a virtuoso of the pen as of the piano, Busoni commanded a literary style capable of the same variety of attack and nuance for which he was renowned as a musician. He was one of the most copious letter writers of his time: at a conservative estimate, *c*15,000 autograph letters are preserved in archives and private collections. Often brief essays in their own right – travelogue or self-portrait, political statement and, in later life, protest or lament – many letters, including those to his wife, are seemingly directed at a wider public and lend themselves uncommonly well to publication.

In 1887 Busoni published his first major essay, 'Zum Don Juan – Jubiläum', which testifies to his precocious talent as linguist, humanist, philosopher and theoretician. Soon after formulating the ingenious 'Mozart – Aphorismen' (1906), he began work on the *Entwurf einer neuen Ästhetik*, 'the outcome of long-held convictions slowly matured'. Beyond his immediate circle of friends and admirers the book aroused little resonance, but in 1914 Busoni met Rilke, who recommended it to his Leipzig publisher. Hence the revised edition was published in time of war: ideas which had previously been passed over as the musings of a 'loveable dreamer' – deprecating remarks on 'the Apostles of the Ninth Symphony', criticisms of Schumann and Wagner – were now interpreted in Germany as a national affront. A fierce controversy was fought in the press, with Pfitzner leading the fray in a counterblast entitled *Futuristengefahr* ('The Danger of Futurism'). When Busoni returned to Berlin, he was hailed by the younger generation as leader of the anti-establishment, an evaluation which only partly concurred with his vision of a 'sounding universe' as delineated in the *Entwurf einer neuen Ästhetik*.

His distinctive concept of music theatre required Busoni to write his own librettos. *Die Brautwahl* proved verbose, and *Arlecchino*, all wit and brilliance, left the audience, as the author himself admitted, 'at a loss'. D'Annunzio

and Hofmannstahl were consulted for advice on an opera whose hero was to be Leonardo or Dante. After a long period of gestation emerged the 'poem for music' *Doktor Faust*, Busoni's literary and theatrical masterpiece. Eight weeks before his death, he dictated 'Vom Wesen der Musik', in which he proclaimed himself less a leader than a seeker. 'Forced to the opinion that our conception ... is still fragmentary and dim', he concluded that 'Mankind will never know the essence of music in its reality and entirety' and closed with a yearning cry: 'Hail to the prophets!'

ANTONY BEAUMONT

Bussani [née Sardi], **Dorothea** (*b* Vienna, 1763; *d* after 1810). Austrian soprano. She was the daughter of Karl von Sardi, a professor at the military academy in Vienna. On 20 March 1786 she married the Italian bass Francesco Bussani. She specialized in *opera buffa* and made her début creating the role of Cherubino in *Le nozze di Figaro* (1786); she also sang Despina in the première of *Così fan tutte* (1790) and created the role of Fidalma in Cimarosa's *Il matrimonio segreto* (1792). She always pleased the public, and a contemporary wrote that he had never heard such a beautiful and charming chest voice, nor one used

with such humour and so mischievously (*Grundsätze zur Theaterkritik*, 1790). Da Ponte, on the other hand, wrote: 'though awkward and of little merit, by dint of grimaces and clowning and perhaps by means even more theatrical, she built up a large following among cooks, grooms, servants, lackeys and wigmakers, and in consequence was considered a gem' (*Memorie*, 1823–7).

In 1795 she went to Florence and sang in Italy during the next decade. She appeared in Lisbon, 1807–9, and then sang at the King's Theatre, London; Parke later described her as having 'plenty of voice, but whose person and age were not calculated to fascinate an English audience' (*Musical Memoirs*, 1830).

CHRISTOPHER RAEBURN

Bussani, Francesco (*b* Rome, 1743; *d* after 1807). Italian bass. He started his career as a tenor, appearing in Rome in 1763 in Guglielmi's *Le contadine bizzare*. He sang in Venice, Milan and Rome for the next 15 years, and first appeared in Vienna in 1771. In 1777 he was described in Florence as singing *primo buffo* and *mezzo carattere* roles; by this time his voice was a bass-baritone. He appeared in Venice from 1779, and in 1783 was invited to Vienna where he remained until 1794. With 20 years' experience of the theatre he was engaged not only as a singer but also as manager of scenery and costumes, and as such was paid for stage-managing Mozart's *Der Schauspieldirektor* at Schönbrunn in 1786. He also arranged pieces, and in 1784 adapted Goldoni's *Il mercato di Malmantile* as a libretto for music by Barta. He appeared regularly in the Italian repertory and sang Pippo in Bianchi's *La villanella rapita*, for which Mozart wrote the quartet 'Dite almeno' K479 (28 November 1785); he doubled the roles of Bartolo and Antonio in the première of *Le nozze di Figaro* (1 May 1786). He was an active member of the Italian faction in Vienna during the 1780s and according to Da Ponte (*Memorie*, 1823–7) intrigued against him and Mozart when *Figaro* was in rehearsal. Da Ponte described Bussani as knowing something of every profession except that of a gentleman.

Bussani sang the Commendatore and Masetto in the first Vienna performance of *Don Giovanni* (1788) and created the role of Don Alfonso in *Così fan tutte* (26 January 1790). According to Da Ponte, Bussani found little favour with the new emperor, Leopold II. He achieved only moderate success as a singer as he was always in the shadow of Benucci, who had the stronger stage personality and was the public's favourite. In 1795 he sang in Florence, in 1799 in Rome, and in 1800–01 in Naples and Palermo. He remained active in Italy and went with his wife, the singer Dorothea (née Sardi), to Lisbon in 1807.

CHRISTOPHER RAEBURN

Bussani [Bussano], **Giacomo** [Giovanni] **Francesco** (*b* Cremona; *fl* 1673–80). Italian librettist. He was a canon regular of the Lateran Congregation at Scuola Grande della Carità in Venice. He wrote seven librettos for Venetian theatres from 1673 to 1680; five were for the Teatro S Salvador and were set to music by Antonio Sartorio (*Massenzio*, 1673; *Giulio Cesare in Egitto*, 1676; *Antonino e Pompeiano*, 1677; *Anacreonte tiranno*, 1677; *Ercole sul Termodonte*, 1678). The other two were for theatres owned by the Grimani brothers Giovanni Carlo and Vincenzo: the Teatro di SS Giovanni e Paolo staged *Enea in Italia*, set to music by Carlo Pallavicino, in 1675 , and the Teatro S Giovanni Grisostomo staged *Il ratto delle Sabine*, set by P.S. Agostini, in 1680.

Except for *Enea in Italia* and *Ercole sul Termodonte*, Bussani's works are loosely based on history enlivened with added love interests. Most of his works were restaged in several Italian cities within two decades of their Venetian premières. Sartorio's associations with Hanover (he served Duke Johann Friedrich of Brunswick-Luneburg as Kapellmeister) and Bussani's own connection (*Antonino e Pompeiano* was dedicated to the same duke) may have played some part in bringing Bussani's *Giulio Cesare in Egitto* to Handel's notice. In 1724 N.F. Haym's adaptation of this work formed the basis for one of Handel's greatest operas. Native Italian composers also drew upon this old-fashioned work, including L.A. Predieri (Rome, 1728), Giacomelli (Milan and Venice, 1735), Jommelli (Rome and Strasbourg, 1751) and Giuseppe Sarti (Copenhagen, aut. 1763).

HARRIS S. SAUNDERS

Busscher, Henri de. *See* DE BUSSCHER, HENRI.

Büsser [Busser], **(Paul-)Henri** (*b* Toulouse, 16 Jan 1872; *d* Paris, 30 Dec 1973). French composer and conductor. Encouraged by his organist father, Büsser showed early musical aptitude: he sang as a choirboy at Toulouse Cathedral under Aloys Kunc before entering the Ecole Niedermeyer in 1885 to study with Alexandre George. From 1889 he studied organ (Franck) and composition (Guiraud, Gounod and Massenet) at the Paris Conservatoire, taking second Grand Prix in the 1892 Prix de Rome contest. Also that year, Gounod arranged his appointment as organist of Saint Cloud, near Paris, a post he held for 30 years. In 1900, Büsser was appointed conductor at the Théatre du Château-d'Eau. In 1902 he directed the off-stage chorus at the première of Debussy's *Pelléas* at the Opéra-Comique, incurring the composer's criticism when he replaced Messager as conductor after the third performance. In 1905 he succeeded Taffanel as conductor at the Opéra. He taught at the Conservatoire from 1904, becoming professor of composition in 1931, and was elected to the Académie des Beaux-Arts in 1939 in succession to Pierné. From 1939 Büsser was director of the Opéra-Comique, a post from which he was dismissed in 1941 on account of some inflammatory remarks on Wagner printed in *Paris-Soir* attributed to him.

Büsser edited and arranged a vast amount of music. In 1913 he contributed to the final volume of the complete Rameau edition, editing *Pygmalion*, *Les surprises de l'amour*, *Anacréon* and *Les sibarites*. His arrangements include many of works by French composers, such as Lully, Rameau, Berlioz, Franck, Bizet and Fauré, as well as of Mozart, Schubert and Verdi. He also transcribed and orchestrated a number of Debussy's works, including *Petite suite*.

Firmly rooted in the French 19th-century tradition, Büsser's symphonic and choral writing is indebted to Gounod and Saint-Saëns. He is best known, however, for his dramatic works, which betray Wagner's impact in both their form and their use of the orchestra. The influence of Debussy, whose advice Büsser sought over the opera that became his most successful, *Colomba* (*c*1902–10), is also evident in certain harmonic procedures and in an acute sensitivity to orchestral colour. The ballets, such as the light-hearted *La ronde des saisons* (1905) with its amusing descriptive touches, provide further evidence of his keen dramatic sense.

WORKS
(*selective list*)

STAGE

Daphnis et Chloé (scenic pastorale, 1, C. Raffalli), *c*1896; Paris, OC (Lyrique, 14 Dec 1897
Blanc et noir (pantomime, 1, V. Capoul), Paris, Palais du Luxembourg, 1900
La ronde des saisons (ballet, 3, C. Lomon), Paris, Opéra, 1905
Colomba (drame lyrique, prol., 3, Büsser, after P. Mérimée), *c*1902–10, Nice, Casino Municipal, 4 Feb 1921
Les noces corinthiennes (tragédie lyrique, 3, A. France, after J.W. von Goethe), 1916–18, Paris, OC, 10 May 1922
La pie borgne (comédie lyrique, 1, after R. Benjamin), Aix-les-Bains, Grand Cercle, 5 Aug 1927
Le carrosse du Saint Sacrement (comédie lyrique, 1, Büsser, after Mérimée), Paris, OC, 2 June 1948
Roxelane (comédie lyrique, 3, Büsser, after C.-S. Favart), Mulhouse, Municipal, 31 Jan 1948
Le vert galant (ballet), 1951, Paris, Opéra, Oct 1951
Diafoirus 60 (farce musicale, 1), Lille, Opéra, 4 April 1963
La Vénus d'Ille (drame lyrique, 2, Büsser, after Mérimée), Lille, Grand, 15 April 1964

BARBARA L. KELLY

Bussetto, Giovanni Maria del (*fl c*1670–80). Italian violin maker. He worked towards the end of the 17th century, probably in Cremona. In style he combined something of the Amati tradition with a certain individual squareness of outline, and slightly hooked corners foreshadowing P.G. Rogeri of Brescia. Several of Bussetto's instruments can be ranked with those of the greatest makers; others, however, are less inspired and are both tonally and visually weak. His work is very rare, and has often been attributed to better-known Cremonese makers. (*LütgendorffGL*; *VannesE*)

CHARLES BEARE

Bussi, Francesco (*b* Piacenza, 14 Sept 1926). Italian musicologist and librarian. He took the classics degree at the Catholic University, Milan (1948), a diploma in piano at the Piacenza Conservatory (1949), a diploma at the Scuola di Paleografia Musicale, University of Parma (1953), and a diploma in choral music at the Parma Conservatory (1954). He studied the piano with Gino Tagliapietra and Enzo Calace, and composition with Giulio Cesare Paribeni. He then taught music history at Parma Conservatory (1954–9) before becoming professor of music history and librarian at the Piacenza Conservatory (vice-director from 1975) as well as music critic for the Piacenza daily newspaper *Libertà*. His main area of research has been the music of Piacenza, especially its early sacred music; in 1987 he founded the collected edition Monumenti Musicali Piacentini e Farnesiani. He has also studied the instrumental and vocal music of Brahms and the sacred music of Francesco Cavalli, and has translated into Italian and added pertinent information to volumes ii, iv and v of the *New Oxford History of Music* (Milan, 1963, 1968 and 1977). He has been awarded three prizes in recognition of his work promoting the music of Piacenza, including the *Piacentino benemerito* in 1998.

CAROLYN GIANTURCO/TERESA M. GIALDRONI

Bussler, Ludwig (*b* Berlin, 26 Nov 1838; *d* Berlin, 18 Jan 1900). German music theorist and conductor. His maternal grandfather was the famous tenor Karl Bader; his father, Robert Bussler, was a painter, author and privy counsellor. Ludwig studied music with A.E. Grell, Siegfried Dehn (theory) and W.F. Wieprecht (instrumentation). From 1865 he taught theory at the Ganz School of Music (later the Schwantzer Conservatory) in Berlin. In 1874 he was nominated professor at the Mohr Conservatory and in 1877 he resumed his post at the Schwantzer Conservatory. From 1879 he taught theory at the Stern Conservatory, receiving the title of royal professor in 1898. Bussler was also active as a conductor at various Berlin theatres. In 1883 he began contributing music criticism to the *Nationalzeitung*, and he also wrote for other Berlin journals.

Riemann noted that the wide acceptance of Bussler's theoretical works was due to their practical focus. Bussler's texts are full of examples from 18th- and 19th-century masters, and are punctuated by many exercises. Like Riemann, Bussler wrote about a large variety of musical subjects, including harmony, counterpoint, form, melodic construction, modulation and instrumentation. Contemporary appreciation of Bussler's work is indicated by the fact that Russian editions of five of his works were completed in the mid-1880s. S.I. Taneyev personally translated *Der Strenge Satz* into Russian and collaborated on a translation of the *Formenlehre*. Schoenberg used the *Musikalische Formenlehre* in his teaching, and his library contained the *Partiturstudium (Modulationslehre)*.

JANNA SASLAW

Bussotti, Sylvano (*b* Florence, 1 Oct 1931). Italian composer. Born into a family of artists (notably his brother Renzo, and his uncle, Tono Zancanaro), he began to take violin lessons at the age of five. He studied harmony and counterpoint at the Florence Conservatory, where he also attended Dallapiccola's courses on the piano (which were generally more concerned with philosophical and cultural discussion than with instrumental technique). His intense affection for French culture was reinforced by his studies in Paris, where from 1956 to 1958 he attended Deutsch's private courses, and encountered Boulez. Throughout the earlier 1950s, he produced a number of youthful works, including several marionette shows. They remain unpublished, though several have been revisited by the composer in more recent years.

Bussotti first attended the Darmstadt summer schools in 1958, the year in which Cage caused such an effective flutter in the post-Webernian dovecot. There, his remarkable musicality caught the attention of Maderna, and accordingly he was invited to return the following year as one of a group of 16 young composers participating in a special composition course (tutored by Nono, Pousseur and Stockhausen). He rapidly acquired a certain notoriety for the visual aestheticism of his graphic scores – soon to be regarded as art objects in their own right. One of his *Five Piano Pieces for David Tudor* of that year so goaded its dedicatee by its refusal of any obvious relationship with traditional performance instructions, that Tudor was reduced to attacking the keyboard in boxing gloves. (1959 also saw the first appearance at Darmstadt of Cathy Berberian, who was over the next decade to prove one of Bussotti's most persuasive interpreters.)

Sylvano Bussotti

But just as radical, and in many ways more enduring, was his assertion of an affinity between the New Music and eroticism. His espousal of blatantly homo-erotic and sado-masochistic themes left critics in some confusion as to how to respond (there was to be much abashed reference to 'private' obsessions, though given Bussotti's cheerfully provocative exhibitionism, this is a somewhat mysterious choice of adjective). The first step along this road was taken in 1958, when Bussotti wrote his *Due voci* for soprano, ondes martenot and orchestra, based upon a fragment from La Fontaine apostrophizing sexual pleasure. Originally conceived with the two soloists and orchestra pursuing different metric schemes, it was coordinated by Boulez into a workable performing score. Bussotti saw this as an appropriate moment to cast aside the constraints of the serial games then in fashion – he wrote directly onto transparencies, thereby not only bypassing 'pre-composition' but also eliminating the possibility of subsequent alterations. Not for nothing did he thereafter regard *Due voci* as his 'op.1', although it is by no means his first composition. The new direction was consolidated in his collection *Pièces de chair II* (1958–60). These 14 pieces were never performed as a cycle, but certain of them (including the *Five Pieces for David Tudor*) maintained a vigorous independent existence – most notably no.7, *voix de femme*, which remains a classic example of the 'new vocalism' then being pioneered by such singers as Berberian. The leaps between vocal lyricism, every form of spoken and whispered declamation and Sprechstimme, between literary and colloquial texts, and between 14 different languages, set the agenda for some time to come.

The next five years were to see Bussotti consolidate his role as one of the most aesthetically inventive *provocateurs* of his generation. Even when his scores were not as gnomic as the 'occult collection' of graphic scores *Sette fogli* (1959), they conveyed to reader and listener alike a sensual extravagance – an almost unrealizable torrent of notes and gestures – that profoundly perplexed critics. Their patrimony in Expressionist delirium (particularly as reincarnated in Boulez's piano works) was evident, yet in Bussotti's hands the style seemed calculatedly frozen, crystalline. It was, in other words, an aestheticizing objectification of the erotic turmoil evoked by his texts and titles. Scores such as *Phrase à trois* (1960) for string trio, *Fragmentations pour un jouer de harpes* (1962), and above all the calculatedly monstrous *Pour clavier* (1961) – postlude to the *Pièces de chair* – typify the tendency.

All this flowed into his seminal work of the 1960s, the 'mystère de chambre' *La passion selon Sade* (1965–6). The title, impeccably calculated to outrage, was rendered decent by asterisks in the publicity for early performances. (But then, from a radically secular viewpoint, Bach's Passions may well seem exercises in aesthetically mediated sadism.) Bussotti's chamber ensemble hints at a chiselled baroque mannerism. His vocalist, an amalgam of Sade's Justine and Juliette and the heroine of Paulhan's *L'histoire d'O* (memorably incarnated by Berberian), elaborates upon phrases from a sonnet by the 16th-century poetess of erotic suffering, Louise Labé. She is pleasurably constrained by the machinations of the ensemble around her. The aesthetic-erotic object that is the score invites exploration, but evades anything more than partial realization: it is a repository of virtual performances.

In the years immediately following *La passion selon Sade*, Bussotti planned a more grandiose theatrical project, to be entitled *All'Italia*. This came to nothing, but the *Cinque frammenti all'Italia* (1967–8) that are its residue established a neo-madrigalian writing for vocal ensemble that was to remain a central resource. Indeed, it was but one sign of an ever-greater readiness to incorporate into his work musical passions that subverted any aspiration to 'absolute modernity'. Puccini had never been far below the surface of his vocal solos, and now his immersion in the delights and temptations of 19th-century *opera lirica* was to become blatant. From 1968 to 1972 he amassed the materials that were to form a five-act opera, *Lorenzaccio*. Alfred de Musset's play of the same name (1834) – a quasi-Shakespearean saga of corruption in Renaissance Florence, whose profusion of incident and character rendered it unperformable for many years, but had provided a memorably charismatic vehicle for Gérard Philipe in the 1950s – yielded the materials for the first three acts. The final two incorporated Bussotti's concert work *The Rara Requiem* as the frame within which de Musset, played by Bussotti himself, could bid farewell to the characters of his imagination. It was perhaps no accident, granted Bussotti's self-dramatizing career to date, that the hero of the play is shown to be uncertain whether he can distinguish the mask he has adopted from a putative 'real self' beneath.

Lorenzaccio established Bussotti's determination to assume responsibility for all aspects of his theatrical work. The score mixes conventionally notated music and scene and costume designs that form an obligatory part of any performance. The highly eclectic musical idiom owes much to the 'gestural' traditions of 19th-century musical

theatre (or indeed 20th-century Hollywood) but revisits them armed with the textural and harmonic resources of his own generation. As in much of the theatre work that was to follow throughout the 1970s and 80s, the score is conceived as a contribution to a multi-sensory whole, and not necessarily as its dominant determinant. When set apart as *extraits de concert*, the music's fragile self-sufficiency always carries with it a nostalgic whiff of grease-paint.

This insistence upon the integral relatedness of concert works, pieces for dancing and sung musical theatre prompted Bussotti, from 1976 onwards, to adopt the single label of BUSSOTTIOPERABALLET as a genre description for his entire production. Many of these compound works, notably *Oggetto amato* (1975), *Nottetempo* (1975–6), and *le rarità, Potente* (1976–8) originated in collaboration with Romano Amidei (whose initials are echoed by the omnipresent *rara*-based titles of Bussotti's output). All are marked by the presence of dance, by now an insistent feature of Bussotti's work, even to the point, in *Bergkristal* (1974), of re-engaging with the conventions of 19th-century narrative ballet. Indeed, the set of four orchestral collections compiled during the 1980s, each bearing the Da Pontean title *Il catalogo è questo*, evoked contemplation of the body through balletic subtitles, when not teasing listeners with hints of wickedness recalled.

It was merely a further extension of this all-embracing appetite for theatrical adventures that prompted the proliferation of Bussotti's activities as director and stage designer from the mid-1970s on. He became artistic director of the Teatro La Fenice, Venice (1975) and director of the Puccini Festival at Torre del Lago (1982–3), as well as creating a festival and theatre school around his own work. This plethora of activity focussed into one of Bussotti's most long-matured projects. Ever since seeing a performance of Racine's *Phèdre* at the age of 20, Bussotti had resolved to find his own way of working on that text. In 1980 he produced a typically louche interpretation, *Le Racine, pianobar pour Phèdre*, in which an elderly actress, once a distinguished tragedienne, mistakes for Hippolytus various of the gigolos who frequent the thespian-friendly piano-bar. The text is a meticulous dismemberment of Racine's verse, whose 12-syllable structure is reflected in the dodecaphonic series that generates the protagonist's elaborate melodic lines. In the course of the 1980s, Bussotti reworked *Le Racine* for full operatic resources, renaming it *Fedra*. Each of three acts is set in a different historical context – 'ancient Greece' (Racine's source is the *Hippolytus* of Euripides), the Hotel de Bourgogne during the first performance of Racine's tragedy, and contemporary Paris – and reworks different strands of Racine's meditations upon an 'impossible love'. Much of the text is dispersed among a 'madrigalian' background of minor characters, but Acts 1 and 2 both centre upon a major monologue for Fedra that shows Bussotti at his most assured (and extends the dramatic lyrical serial writing that Dallapiccola achieved a generation earlier). Bussotti's designs for scenery and costumes were in the most sumptuous operatic tradition.

Fedra was quickly followed by another theatre-piece, *L'ispirazione* (1986–8) – a more typically extravagant compilation around a narrative sketch by Ernst Bloch. With the musical portrayal of forbidden loves temporarily satisfied Bussotti here resumes another *idée fixe*, that of the creative personality as a focus for theatrical narrative. Bloch's protagonist is an elderly musician at odds with current musical fashion, and sacked from his job in the opera orchestra. His own opera is rescued from obscurity by a loving, though disregarded daughter, who makes of it a vehicle for her own singing career. The work incorporates a memorial to Cathy Berberian.

Bussotti's subsequent project bears the title of *Tredici trame*, each of which is to be realized in a different medium. They include a *verista* operatic fragment, *Bozzetto siciliano*; a film-opera, *Intégrale Sade*; a concerto for orchestra with poems and 'posed figures', *Nuit du faune*; and a characteristically all-inclusive event with chorus, orchestra, singers, speakers and a dancer, *La Maestà*.

WORKS

complete list after 1958

STAGE

Marionette shows: Nottetempolunapark, Arlechinbatoceria, Tre in gloria; Florence and Aix-en-Provence, 1954–6, unpubd
Tema-variazioni 'géographie française' (music theatre, 2, A. Braibanti), Zagreb, 1965 [from concert work Memoria, section b]
La passion selon Sade (mystère de chambre, 1, Bussotti, after L. Labé), 1965–6, part perf. Palermo, Biondo, 5 Sept 1965, complete perf. Stockholm, 1969
Lorenzaccio (melodramma romantico danzato, 5, Bussotti, after A. de Musset), 1968–72, Venice, Fenice, 7 Sept 1972
Raramente (choreographic mystery-play, Bussotti, A. Milloss) [from other works], Florence, 1971
Bergkristall (ballet, 1, Bussotti, U. Dell'Ara, after A. Stifter), 1974, Rome, 1974

BUSSOTTIOPERABALLET

Musica per amici, pf, 1957–71
Novelletta, pf, 1973

DAVID OSMOND-SMITH

Bustelli, Giuseppe (*d* Vienna, before 10 April 1781). Italian impresario, active in Bohemia and Germany. He was a merchant in Brno. On 13 January 1764 he applied to lease the theatre in the Old Town of Prague; his opera company opened at the theatre on 4 October 1764 with *Vologeso* (with Pietro DeMezzo in the title role) by the musical director, Domenico Fischietti. He later introduced *opere buffe*, by Galuppi, Pietro Guglielmi, Gassmann, Hasse, Borono, Piccinni, Righini, Paisiello and others, which gradually came to dominate the repertory. Each summer the company was at Carlsbad (now Karlový Vary); they also visited Laibach (now Ljubljana) (Carnival 1769), Hamburg (1770) and Leipzig (1773). From 1765 Bustelli had a company at Dresden where, in 1770, 1776 and 1778, he negotiated contracts and subsidies from the electoral court. Between 1765 and 1778 the Prague and Dresden companies shared musical directors, repertory and singers. But at the same time Bustelli paid regard to local interests; in Prague he introduced works by the Czech composers Mysliveček and J.A. Kozeluch and in Dresden works by J.G. Naumann. His successor was Pasquale Bondini, a member of his company. Some opera scores from his estate were bought for Haydn's ensemble at Eszterháza.

TOMISLAV VOLEK

Bustijn [Bustyn, Bustin, Bystyn], **Pieter** [Pierre] (*b* ?Middelburg, bap. 25 July 1649; bur. Middelburg, 22 Nov 1729). Dutch organist, carillonneur and composer. His family were French-speaking. He may have studied with Remigius Schrijver (*d* 11 Feb 1681), a Middelburg organist; he completed the music for *Uitbreidinge over het Bouk der Psalmen* (3vv, bc; Middelburg, 1682; lost), begun by Schrijver, who had died before completion of the work. In 1681 Bustijn was appointed organist of the Nieuwe Kerk, and carillonneur of the abbey bell tower in Middelburg. He served as organ adviser in Middelburg and Goes and may have been director of the Middelburg collegium musicum during the period 1681–1729. In 1712 the carillon of the Middleburg abbey tower was destroyed; its replacement, constructed by the famous bellfounders Jan Albert de Grave and Claas Noorden of Amsterdam in 1714, was inspected by Bustijn and Abraham de Coup, organist of the Walloon church and carillonneur of the market bell-tower, and, according to various reports, was of outstanding quality.

Relatively little Dutch keyboard music of the time has survived. Bustijn's *IX suittes pour le clavessin* (Amsterdam, *c*1712/*R* in Exempla Musica Zelandica, i (Middelburg, 1992 [incl. biographical information]); 3 ed. in EMN, i, Amsterdam, 1964) are of great importance to the history of the genre in the Netherlands. Their balanced arrangement by key is reminiscent of the use of symmetrical cycles culminating in the art of Bach. Their style points to that of the keyboard works of Bach and Handel, as well as showing some French influence. The suites were known to members of Bach's circle: no.VIII (in A), in J.L. Krebs's hand, can be found in an anthology of keyboard music (*D-Bsb*) compiled by Johann Gottfried Walther, who also mentions the works in his *Musicalisches Lexicon*.

ALBERT CLEMENT

Buterne, Charles (*fl* 1st half of the 18th century). French composer and organist, son of JEAN-BAPTISTE BUTERNE. Two of his publications have survived: *Six sonates pour la vielle, musette, violon, flûtes, hautbois et pardessus de violles* op.2 (Paris and Lyons, n.d.; ed. H. Ruf, Wilhelmshaven, 1981–3) and *Méthode pour apprendre la musique vocale et instrumentale* (Rouen, 1752).

EDWARD HIGGINBOTTOM

Buterne, Jean-Baptiste (*b* Toulouse, *c*1650; *d* Paris, 28 March 1727). French organist. He was the son of Jean Buterne (*d* before 1687), organist in Toulouse and subsequently Pontoise. When Louis XIV had to appoint a new *organiste de la chapelle du Roi* in 1678 Buterne was one of four to be chosen. He took the April quarter, the others being covered by Nivers, Jacques Thomelin and Lebègue. It may be assumed that the honour reflected his accomplishments; we have no extant music of his to judge by, apart from the manuscript *Petites règles pour l'accompagnement* (*F-Psg*). He was also organist of St Etienne-du-Mont from 1674 and of St Paul from 1684 in succession to Du Mont, his former teacher. In 1721 his court duties were taken over by Jean-François Dandrieu. At St Etienne he was assisted from 1723 by C.N. Ingrain, who succeeded him in 1726. Buterne was also active at court as a harpsichord teacher. In 1702 he was named 'capitoul [magistrate] de la ville de Toulouse', a title he is also given in legal documents. (P. Hardouin: 'Sur Jean-Baptiste Buterne', *RdM*, xxxvi, 1954, pp.66–8)

David Buterne (*d* 1705), Jean-Baptiste's brother, shared the post of organist at St Etienne with Jean-Baptiste from 13 October 1685 until his death.

EDWARD HIGGINBOTTOM

Buth. Sign indicating the lowering of the pitch by degrees in Armenian EKPHONETIC NOTATION.

Büthner [Buthnerus], **Crato.** *See* BÜTNER, CRATO.

Buths, Julius (Emil Martin) (*b* Wiesbaden, 7 May 1851; *d* Düsseldorf, 12 March 1920). German conductor, pianist and composer. He was the son of an oboist and studied with Hiller and Gernsheim at the Cologne Conservatory (1869–71) and with Kiel in Berlin. After winning the Meyerbeer prize (1873) he travelled in Italy and to Paris, there winning success as a pianist. In 1875 he settled in Breslau, where he directed a choral society, and in 1879 became town music director at Elberfeld (near Wuppertal). His most important opportunity came with his appointment in 1890 as music director at Düsseldorf, where he was in charge of the Lower Rhine Festivals and gave a number of outstanding performances of works by composers including Berlioz, Franck, Mahler, Reger, Strauss, Debussy and Delius. He made the German translation of Elgar's *The Dream of Gerontius* and produced it at the festival of 1902. In that year he became director of the newly founded Düsseldorf Conservatory. He also composed a number of vocal and instrumental works.

H.C. COLLES/R

Buti, Francesco (*b* ?Narni, 1604; *d* Rome, 15 June 1682). Italian librettist. A man of some learning, he held doctorates in both church and civil law and served as an apostolic prothonotary. His earliest known musical collaboration is the 20 poems that comprise Girolamo Kapsberger's sixth book of villanelle (Rome, 1632). His poems were also set by the Roman composers Marco Marazzoli, Mario Savioni and Giacomo Carissimi. Marazzoli set Buti's comic morality play *Il Capriccio, overo Il Giuditio della Ragione tra la Beltà e l'Affetto* for a carnival performance in 1643 (lib in *I-Rvat* and *Rdp* as *La Bellezza amata*). The music for another undated comedy, *Il giusto inganno*, no longer survives (lib in *Rvat*). Buti's first known connection with Luigi Rossi was through Cardinal Antonio Barberini whom he followed to Paris in 1645, where he soon gained favour with JULES MAZARIN and became involved with the presentation of Italian spectacles at the French court. In 1647 he helped convert a machine ballet planned by the Duke of Enghien and the Venetian stage engineer Giacomo Torelli into the first Italian opera designed for Paris, *L'Orfeo*, with music by Rossi (lib in *Rvat*; printed in disc notes, *Orfeo*, Harmonia Mundi, France, CD 901358.60, 1991). After Mazarin's fall and restoration, Buti co-wrote *Le nozze di Peleo e di Theti*, set to music by Carlo Caproli and performed in 1654. Following the success of this work, Mazarin obtained for him French citizenship and a substantial benefice. With Jean-Baptiste Lully Buti turned to court ballets: Prunières attributed *Psyché* (1656) and *Impazienza* (1661) to him and Mandosio credits him with *Spropositi* (1657). His final work for Paris was an opera for the wedding of Louis XVI, *Ercole amante* (1662, music by Cavalli), largely fashioned to exploit new stage machines by Gaspare Vigarani. Little is known of him after the death of Mazarin in 1661. Buti also wrote two oratorio texts, *La purificazione della B.V. Maria* and *Il Giuseppe venduto*, set to music by Egidio Magli (both texts in *Rv*).

Buti was a principal figure in the introduction of Italian opera to the Parisian court. His later works manage a fusion of the Italian dramatic tradition and that of the French court ballet. Perhaps through Lully, whose assimilation of French taste recalls Buti's, his librettos appear to have exerted some influence on Quinault.

THOMAS WALKER/MARGARET MURATA

Butler, Charles (*b* Wycomb [?High Wycombe], Bucks., *c*1560; *d* Wootton St Lawrence, 28/29 March 1647). English priest, philologist and amateur musician. He was a chorister at Magdalen Hall, Oxford, from 1579 to 1585, and later served as a Bible clerk at Magdalen College, taking the BA in 1583 and the MA in 1587. On leaving Oxford in 1593 he served for seven years as parish rector in Nately Scures, near Basingstoke, and as master of the Holy Ghost School in Basingstoke. In 1600 he became vicar of nearby Wootton St Lawrence, a post he held until his death. He was buried in the church he served.

Butler's principal contributions were to the science of bee-keeping, the study of the English language, and 17th-century music theory. *The Feminine Monarchie* is devoted to the hierarchy, virtues, benefices and 'music, of bees'; added to the minute detail on bee-keeping are Butler's musical transcriptions of the buzzing of bees. In the first edition these consist of two simple melodies (one for the 'Princess' and one for the 'Queen') arranged in triple time; by the third edition, however, they have expanded into a large-scale four-part madrigal, the *Melissomelos*, including a section with all four voices 'buzzing' together. *The English Grammar* propounds a method of reforming the orthography of the English language by substituting new characters – some derived from ancient Anglo-Saxon and some from phonetics – and by greater consistency in spelling. Butler's *Grammar* itself was printed in his new orthography, as was *The Principles of Musik*, published three years later.

The Principles of Musik is both an instruction manual for the performer and a forum where Butler pleaded the cause of music in sacred and secular usages. Book 1, three-quarters of the volume, proceeds from the rudiments of music through sight-singing to simple and then more

complex composition. Its material owes much to Boethius, Glarean, Calvisius and Morley. Most of the technical rules correspond to the standard theories of the 17th century, but, unusually, and unlike his source authors, Butler classed the 4th as a consonance, possibly because – almost a century before Rameau – he identified an 'affinity' between inverted consonant intervals like the 5th and 4th and the 6th and 3rd. Despite the rapid development of tonality, Butler, like most English theorists of the 17th century, continued to advance the hexachord system as a means of organization. However, he suggests the addition of a seventh solmization syllable, *pha*, which effectively leads him to describe major and minor scales. Book 2, while offering a brief for music in English society, provides much information on instruments, word-setting, performing practice and the mundane problems of the church musician. The argument for church music, backed up by patristic and biblical authority, may be seen largely as a reaction to the growing antipathy to music during the Puritan age. Since both the *Principles* and the *English Grammar* were dedicated to Charles I, it is clear that Butler's sympathies lay with the royalist cause. Burney's high praise of Butler's *Principles* was not misplaced, for its scope, clarity of exposition, pithiness and wit mark it as a major contribution to early 17th-century musical thought.

JAMES W. PRUETT/REBECCA HERISSONE

Butler [Boteler, Botoler], Mrs **Charlotte** (*b c*1660; *d* after 1692). English singer and actress. As a girl Charlotte Butler had connections at court and sang in Crowne's masque *Calisto* there in 1675. She may have appeared on the public stage before this and was acting regularly from the 1679–80 season. Cibber wrote that she was 'not only a good Actress, but was allow'd in those Days to sing and dance to great Perfection'. She performed a number of Purcell's incidental songs, created the roles of Philidel and Cupid in *King Arthur*, in which her performance was praised by Roger North, and was also in *The Fairy Queen*. She had dark eyes and a lively personality and was attacked in satires as a mercenary whore. In 1692 she was tempted to the Smock Alley Theatre in Dublin by a higher salary; an epilogue survives which was spoken by her there in spring 1693.

OLIVE BALDWIN, THELMA WILSON

Butler, Henry [Botelero, Enrrique] (*b* Sussex; *d* 1652). English composer and viol player. He served in the chapel of Philip IV of Spain as *musico violon* or *musico de bihuela de arco* (1623–52). In 1637 he was made a *gentilhombre de casa*. The younger James Wadsworth observed (*The English Spanish Pilgrime*, London, 1629) that Butler 'teacheth his Catholike Maiesty to play on the Violl, a man very fantasticall, but one who hath his pension truely payd him for his fingers sake'. Butler is commended as a composer of 'divisions on a ground' by Christopher Simpson (*The Division-Violist*, London, 1659). Butler's 20 surviving works include preludes, divisions, sonatas and an aria (all ed. in RRMBE, lxvi (1991)). An untitled piece for bass viol and continuo may arguably be the earliest sonata for solo instrument by an English composer. The 13 divisions and two preludes for bass viol and continuo are similar to those by Simpson, although some of the divisions are longer and more technically demanding. The three sonatas for violin, bass viol and continuo display many features of Italian sonatas of the 1620s and 30s and yet their scoring is that of some English fantasia-suites and was not used by Italian or Spanish composers.

ELIZABETH V. PHILLIPS

Butler, Martin (Claines) (*b* Romsey, 1 March 1960). English composer. He studied the piano and composition at the RNCM and the University of Manchester (1978–82), following which he undertook postgraduate studies with Babbitt and J.K. Randall at Princeton University (1983–7). He became a lecturer at the University of Sussex in 1988, and was later appointed reader in music. In 1988 he was awarded the Mendelssohn Scholarship which enabled him to work at Tempo reale, Berio's electro-acoustic studio in Florence, on *Graffiti*. Butler has forged a distinctive musical identity rooted, on the one hand, in the European tradition of Stravinsky and Berio, and, on the other, in American folk and popular music, and minimalism. Concerns for direct melodic expression and dynamic rhythmic working remain pre-eminent in his music. These origins and transcontinental loyalties are most fully evident in his controversial opera, *Craig's Progress* (1993–4), written to a libretto by Stephen Pruslin. It is a modern-day *opera buffa* which maps the characters and settings of 1950s American comic books onto the familiar narrative of a quest opera. It is

selfconsciously plural: the libretto ranges from the Greeks to *Superman*, while the music quotes and parodies ideas from Mozart to the Broadway musical. Other significant works which demonstrate, in particular, the breadth and vitality of Butler's rhythmic imagination, include *Tin Pan Ballet* (1986), *Jazz Machines* (1990) and *O Rio* (1990).

JONATHAN CROSS

Butler, Samuel (*b* Langar, nr Bingham, Notts., 4 Dec 1835; *d* London, 18 June 1902). English writer, amateur painter and composer. His interest in music was encouraged by Henry Festing Jones (a descendant of the 18th-century violinist Michael Christian Festing), with whom he collaborated on a collection of short piano pieces and two quasi-Handelian secular cantatas. The second of these, *Ulysses*, reflected both his interest in the Homeric epics – he translated both of them after writing *The Authoress of the Odyssey* (1897) – and his ardent worship of Handel the man and musician. His admiration for that master, expressed in his letters and occasional music criticism, almost wholly overshadowed every other composer for him, and even his judgment of Bach was derogatory. This unbounded veneration also had its effect on his own music, which is completely devoid of any originality. Butler copied Handel's manner to the letter with (for an amateur) very fair success, without however coming anywhere near it in spirit. His complete literary works, in 20 volumes, were edited by H.F. Jones and A.T. Bartholomew (London, 1923–6).

ERIC BLOM/BRUCE CARR

Butler, Thomas Hamly (*b* London, *c*1755; *d* Edinburgh, 1823). English composer. He was probably the son of the Butler (John or James) who sang occasionally for Handel. As a boy he was in the Chapel Royal under Nares, and later studied for three years in Italy under Piccinni, with whom he travelled to Paris in 1776. In 1778 he became Covent Garden harpsichordist and composed two stage works to words by Cumberland (then being represented at Drury Lane as Sir Fretful Plagiary in Sheridan's *The Critic*). *Calypso* (20 March 1779) was a long, all-sung masque, of which only the words survive; *The Widow of Delphi* (1 February 1780) was a dialogue opera of which only the music was printed. Neither was successful, and in 1782 Butler settled as a piano teacher in Edinburgh, where he composed a profusion of unambitious piano rondos and sonatas on 'Scotch' themes; a rondo on *Lewie Gordon* was popular. He also published a 'Military Rondo' for piano called *The Landing of the brave 42^d in Egypt*, and *A Select Collection of original Scottish Airs* (1800) on the lines of George Thomson's collections, with 'symphonies and accompanyments for the flute, violin & piano forte'.

ROGER FISKE

Bütner [Büthner, Bytner, Buthnerus], **Crato** (*b* Gotha or Sonneberg, Thuringia, 1616; *d* Danzig, 1679). German composer and organist. According to Curicke the inscription on his grave in St Catherine, Danzig, stated that he was born at Sonneberg, but he himself stated that he came from Gotha: he did so in his publication of 1651, which he dedicated to Georg Neumark, who was born at Langensalza, near Gotha, and whom he called his 'friend and countryman'. From 1650 he was organist of St Saviour, on the outskirts of Danzig. He soon became Kantor and director of music at St Catherine; according to Rauschning he was appointed in 1652, though he still described himself as organist of St Saviour in publications up to 1654. In both parishes he was required to teach in schools, and as director of music at St Catherine he could rely on the services on average of eight instrumentalists and six singers. It was to his directorship that the church owed its prominent position in the musical life of Danzig.

Evidence of Bütner's activities and of the extensive and varied cultivation of music in the Danzig of his day was afforded by a collection of printed music (formerly in *PL-GD*, lost since 1945), consisting of some 150 pieces, both instrumental and vocal, by Italian, Polish and German composers and including over 50 sacred vocal works by Bütner himself. His numerous surviving works are very varied both in their forms and in the forces for which they are scored, some of the latter being substantial. Most of them are Lutheran settings of German words which introduced the sacred concerto to Danzig. He took many of his texts from the Bible and particularly from the *Psalms*; he also set sacred poems, though the two types

are never found in the same work. Typical features of his music include short-winded motivic writing, simple harmony, a quick succession of short, compressed sections and the setting off against each other of homophonic groups of voices. The style of his music, even if it is somewhat inexpressive, was something quite new in Danzig, and the particular Danzig tradition of chorale arrangements can also be traced back to him.

MICHAEL SPAETH/LOTHAR HOFFMANN-ERBRECHT

Butor, Michel (*b* Mons-en-Baroeul, Nord, 14 Sept 1926). French writer. His work shows a particular fascination with means of perceiving, organizing and recording periodicity and the passage of time – journals, timetables, the names of months or geological ages – and so it is not surprising that music should be among the objects of his interest; it has profoundly influenced the handling of time in his novels. He has written texts for music, and in his 'dialogue' with the Diabelli Variations he produced a stimulating series of 'interventions', part imaginative elaboration, part analytic and historical exegesis. The conception of *Midi–minuit Stravinsky*, with its complex structuring of a 12-hour span, its exploration of the 'genius of place' (Olympus, Earth, Hell, the Fair, the Arch) and its involvement of Stravinskian character-symbols (Pulcinella, Apollo, Noah etc.), is peculiarly Butorian.

PAUL GRIFFITHS (writings and bibliography with JEAN GRIBENSKI)

Butsko, Yury Markovich (*b* Lubnï, Poltava province, 21 May 1938). Russian composer. Born into a military family, he attended the history faculty of the Moscow Pedagogical Institute and the Moscow Conservatory where he studied composition with Balasanian, graduating in 1966 and finishing postgraduate work in 1968, when he began teaching instrumentation and score-reading in the theory and composition department. His first compositions, which achieved wide currency, continue 19th-century traditions established by Musorgsky in particular – as in *Zapiski sumasshedshego* ('Diary of a Madman') after Gogol – while other works of the 1960s and 70s, such as the cantatas *Vecherok* ('The Soirée') and *Svadebnïye pesni* ('Wedding Songs') are linked to the so-called new folklore wave prominent in Russian music of this period. Butsko has continued to work in both of these areas and has concentrated on developing a special modal-harmonic and polyphonic system rooted in the principles of early Russian monodic religious chants (*znamennïy raspev*). The principal work in the latter style is the *Polyphonic Concerto* for four keyboard instruments which employs original early Russian themes.

In the 1980s Butsko turned to large instrumental forms and opera, the last of which, *Zolotoy treugol'nik* ('The Golden Triangle'), based on a story by the economist and writer Aleksandr Chayanov, employs a plot most reminiscent of that of Mikhail Bulgokov's *The Master and Margarita* which it predates. Since the mid-1960s Butsko has worked extensively in theatre and the film industry, writing music for a number of productions by Yury Lyubimov at the Taganka Theatre.

Butsko does not consider himself linked to any particular direction in contemporary music; his work is rooted primarily in Russian tradition, and is oriented towards a type of national musical thought in which folk music serves as a source of popular religious consciousness. He has lived in Moscow since 1941.

WORKS
(selective list)

DRAMATIC
all with libretto by composer

Zapiski sumasshedshego [Diary of a Madman] (mono-op, 2, after N.V. Gogol), 1964, concert perf., Moscow, 1971; Belïye nochi [White Nights] (op, 1, after F.M. Dostoyevsky), 1968, première, All-Union radio broadcast, USSR, 1969, stage, as Weisse Nächte, Dresden, Staatsoper, 15 Sept 1973; Iz pisem khudozhnika: muzïkal'nïye povesti [From an Artist's Letters: Musical Tales] (mono-op, after K. Korovin), 1974, concert perf., Moscow, All-Union House of Composers, 29 Oct 1979; Prozreniye [Enlightenment], (ballet, 3, choreog. V. Vasilev and N. Kasatkina), Stanislavsky-Nemirovich-Danchenko Music Theatre, perf. Feb 1974; Venediktov/Zolotoy treugol'nik [Venediktov/The Golden Triangle] (op, 4, after A. MARINA PAVLOVNA RAKHMANOVA

Butt, Dame **Clara (Ellen)** (*b* Southwick, Sussex, 1 Feb 1872; *d* North Stoke, Oxon, 23 Jan 1936). English contralto. She studied with Daniel Rootham in Bristol, and in 1890 gained a scholarship at the Royal College of Music, where she was a pupil of J.H. Blower. She made her début at the Royal Albert Hall as Ursula in Sullivan's *Golden Legend* on 7 December 1892, and three days later sang the role of Orpheus in the RCM production of Gluck's opera at the Lyceum Theatre. From that date her success was assured.

It was almost entirely a success of the concert platform, and later of her own platform: that is, in her own concerts, more or less of the ballad type, given all over the British Empire. She was also much in request for other concerts, and particularly for the English festivals. Elgar's *Sea Pictures* (Norwich Festival, 1899) was written for her, and she made his *Land of Hope and Glory* (1902) her own. In 1900 she married the baritone Kennerley Rumford, and thenceforward they pursued their careers together. In 1920 she made a reappearance on the operatic stage, singing Gluck's Orpheus at Covent Garden under Beecham. In the same year she was created DBE for her services during the war (she organized and sang in countless performances for war charities, including a week's run of *Gerontius* in aid of the Red Cross).

Dame Clara was a tall woman, standing 6'2". Her voice was exceptionally powerful (someone remarked that the Albert Hall must have been built in intelligent anticipation of Butt's advent), with a trombone-like boom in the lower register. She made many records. Such majestic and powerful means when applied to a song such as Goodhart's *A fairy went a-marketing* may raise a smile, but the smile is tempered by admiration for the magnificent voice and the beautiful articulation of the words.

J.A. FULLER MAITLAND, H.C. COLLES/ANDREW PORTER

Butterley, Nigel (Henry) (*b* Sydney, 13 May 1935). Australian composer and pianist. He studied privately with Frank Warbrick (piano), and at the NSW State Conservatorium of Music (1951–60), where his teachers included Alexander Burnard (music theory), Nöel Nickson (composition) and Raymond Hanson (composition), and in London with Priaulx Rainier (1962). An employee

of the Australian Broadcasting Commission (ABC) for 21 years, he served as both presentation officer (1957–66) and programme planner (1966–72). In 1973 he was appointed to a lectureship in contemporary music at the Newcastle (NSW) Conservatorium of Music. Upon his retirement in 1991 he was awarded an Australian Artists' Creative Fellowship and appointed to membership in the Order of Australia. Other awards have included an honorary doctorate from the University of Newcastle, NSW (1996). Active as a pianist as well as a composer, he took part in the Australian première of Schoenberg's *Pierrot lunaire* in 1958 and gave the first Australian performance of Cage's *Sonatas and Interludes* in 1973.

Vocal compositions showing the influence of Vaughan Williams, Warlock, Ireland and Britten comprise much of Butterley's early work. Although he first heard Vaughan Williams's *Ten Blake Songs for Voice and Oboe* (1957) after he had written his own settings, the general influence of Vaughan Williams's style is evident not only in his choice of text, but also in his rhythms and harmonies. The *Six Blake Songs* (1956) follow natural speech patterns, are essentially homophonic in texture and make use of harmonies based on perfect intervals. Other settings, such as the cycle *Child in Nature* (1957), are characterized by recurring accompanimental motifs. Stated in the piano at the beginning of each song and repeated throughout, these motifs underscore evocative titles such as *The Cricket* and *The Spider's Web*. Strophic form is common, as is a use of quintuplets, sextuplets and septuplets in the melodic line. Harmonies are employed atmospherically to change a prevailing mood (as in *The Child* and *The Wind and the Songs*) or to heighten a dramatic effect (as in *Brown Jack*).

In 1961 Butterley left Australia for a tour of Europe and the Middle East. Although he had only a few lessons with Rainier, her teaching had a profound effect on him. *Laudes* (1963), the first composition he completed after his study with her, established his reputation at the 1964 Adelaide Festival of the Arts. The work, in praise of God in the context of four European churches, transcends his previous struggle with extended tonality, exhibiting a fragmented yet luminous part-writing that melds plainsong with note rows, impressionistic harmonies and quasi-aleatory writing. After *Laudes*, he frequently employed serial techniques; *The White-Throated Warbler* and the First String Quartet (both 1965) use 12-note rows. Typically, however, his music departs from strict row forms to undergo relatively free development. *In the Head the Fire* (Italia Prize, 1966), commissioned by the ABC, features a range of dramatic and timbral devices, as well as tape manipulation, to blend texts from ancient Irish mystical verse, the Dead Sea scrolls and Greek and Roman liturgies. In *Carmina* (1968, rev. 1990), Butterley attempted to achieve greater lyricism within an avant-garde style. While the vocal line and the accompaniment tend to move independently of each other, recurring motifs help to create unity.

Butterley's works of the late 1960s and early 1970s, such as *Variations* (1967), *Pentad* (1968), *Refractions* (1969), *Explorations for Piano and Orchestra* (1970) and the Violin Concerto (1970), are remarkable in his output for their abstraction. *Meditations of Thomas Traherne* (1968) and *Letter from Hardy's Bay* (1971) are written in a more conservative idiom. Each of the five sections of *Meditations* begins with a solitary held note. *Letter from Hardy's Bay* is also meditative in character. The piano, prepared with metal bolts between the *e′*, *f′*, *b′* and *c″* strings, produces a gong-like chord that is incessantly repeated throughout the piece.

Important works from the 1970s include *Fire in the Heavens* (1973), inspired by the poetry of Christopher Brennan and Judith Wright, and *Sometimes with One I Love* (1976), a setting of Walt Whitman's *Leaves of Grass* (1855). While *Fire* is expansive and exuberant, *Sometimes* is more reflective, marking Butterley's acceptance of his own changing philosophies and growing agnosticism. Textual themes of the lover and poet are assigned in the score to singers and speakers respectively; heterosexual love is allocated to the soprano and homosexual love to the baritone. In the tenth song, the speaker (poet) and Baritone (lover) are united in a celebration and prophecy of the immortality of love. New compositional features in the work include a use of: the whole-tone scale, employed as the motif of love; angular declamation, to emphasize dramatic tension; and Sprechstimme, to represent the union of poet and lover. Simple structural relationships, such as palindromes (seen most clearly in the rhythm and harmonic progression of the first song), are also evident.

In the 1980s Butterley's work reaffirmed its earlier lyricism. The Third String Quartet (1980) suggests a return to the early influences of Britten, Vaughan Williams and Hindemith. *Lawrence Hargrave Flying Alone* (1981), inspired by a sculpture by Peter Taylor, represents musically Hargrave's struggle towards flight. (In 1988 Hargrave's aspirations became the subject of an opera of the same name.) Other works from this period include: *The Owl* (1983), a dramatic monologue exploring emotional states related to everyday reality; *Il Gubbo* (1987), a work depicting the thoughts of a marble hunchback supporting two baptismal bowls in a Verona church as he imagines himself free of his burden; and *Forest I–II* (1990–93), companion pieces that explore isolation and alienation as projected onto the seven tall figures of Alberto Giacometti's sculpture *The Forest*.

Many compositions of the 1990s were inspired by the writings of Kathleen Raine. *From Sorrowing Earth* (1991), prefaced by a Raine verse, is a spiritual journey through the human condition. Originally conceived as a tightly constructed work making reference to June Opie's biography of Priaulx Rainier, the final version develops motifs freely in one evolving movement. Texts for *The Woven Light* (1994) draw on three decades of Raine's work. The main motif of the composition, associated with Siena where the first movement was composed, is a repeating sequence of five descending chords. The Fourth String Quartet (1995), inspired by Beethoven's string quartets, fuses expressive originality and emotional power.

MICHAEL BARKL

Butterworth, Arthur (Eckersley) (*b* Manchester, 4 Aug 1923). English composer, conductor and teacher. He was a composition pupil of Richard Hall at the Royal Manchester College of Music, where he also studied the trumpet and conducting. He played the trumpet in the Scottish National and Hallé orchestras and as a freelance until 1963, after which he combined composing with conducting and teaching at the Huddersfield School of Music. Though he experimented with 12-note techniques as a student, his mature and characteristic compositions are conservative in idiom, influenced primarily by Sibelius and Nielsen, Elgar and other English symphonists of a generation before his own. The major source of inspiration for his music, especially his four expansive symphonies, is the north country in which he lives, its poetry, its painting and its landscapes. His contributions to the brass band repertory have been notable. He was made an MBE in 1995.

GERALD LARNER/RICHARD D.C. NOBLE

Butterworth, George (Sainton Kaye) (*b* London, 12 July 1885; *d* Pozières, 5 Aug 1916). English composer. From an ancient northern family, he was born in London but grew up a gruff, blunt Yorkshireman. His father, Alexander Kaye Butterworth, was solicitor to and later general manager of the North Eastern Railway in York; his mother, Julia Wigan, had been a professional singer before her marriage. Butterworth showed early musical ability. He was educated at Aysgarth (1896–9), Eton (1899–1904), Trinity College, Oxford (1904–8), where he read Classics, and the RCM (1910–11). He studied privately with Christian Padel (a Moscheles pupil) in York, and with C.H. Lloyd and Thomas Dunhill at Eton. While at Oxford he was elected president of the University Musical Club (to the detriment of his studies) and came into fruitful contact with Hugh Allen and fellow-student R.O. Morris. He fell into stereotypical conflict with his father when he decided to pursue a musical career rather than a legal one. This necessitated that he earn a living, which he did first on the music staff of *The Times* under Fuller Maitland (1908–9) and then by teaching (the piano, among other subjects) at Radley (1909–10). At the RCM he studied with Walter Parratt and Charles Wood, but left after a year; thus ended three years of unsuccessful attempts at musical satisfaction. He moved back into the family home (his parents had relocated to London) and

sought fulfilment in the folk revival and, when war came in 1914, on the battlefield.

Too much has perhaps been made of Butterworth's diffident development and fastidious self-criticism (he destroyed compositions before leaving for the front). Many of his generation took, and were given, much longer to find themselves, notably Vaughan Williams, who valued Butterworth's friendship and judgment highly. (Butterworth prompted Vaughan Williams's *A London Symphony* and watched over its early history). Nevertheless, his father's ambitions for him, the death of his mother in 1911 and the fact that he was almost certainly gay, may all have left their inhibiting mark.

Butterworth belonged to the generation of British composers constructing for themselves, after the downfall of Oscar Wilde and decadence, a minimalist masculinity in two pastoral images: the conservation of folk music and the poetry of A.E. Housman. Having met Vaughan Williams and Cecil Sharp at Oxford, he joined the Folk Song Society in 1906 and started collecting. In 1911 he became a founder-member of the English Folk Dance Society and began intensive activities as a morris and country dancer. These seem to have given him more artistic fulfilment than anything else; his fine dancing was captured on film with Sharp and the Karpeles sisters in 1912. He also collected morris and sword dances with Sharp during 1912–13, and was a member of Sharp's original six-man morris side that danced at Stratford and on the Savoy Theatre stage for Granville Barker, inaugurating an important if short-lived historical moment that allied Shakespeare and the folk revival. Although half the members of Sharp's team, including Butterworth, died at the Somme, Butterworth's prediction that 'if ever the opportunity occurs for a truly national production of ballet or opera, the success of the undertaking will rest in the hands of those who have mastered the technique and absorbed the spirit of our English dances and songs' must have rung in the ears of Holst and Vaughan Williams as they wrote their Shakespeare operas and the latter his ballet *Job*.

Butterworth's compositional output was small but influential. While a 1916 review, written just before his death, described him as 'an unknown composer', Boughton had in 1913 already heard in the *Shropshire Lad* songs an 'amazing restraint [and] the same terrible beauty which one finds in the verses', and in 1922 the young Finzi wrote that his music 'sums up our countryside as very little else has ever done'. Not everyone has admired his approach to Housman's formula of metric simplicity foiling lovelorn passion; the opening of his best-known song, 'Loveliest of trees', encapsulates the aesthetic, bare and wan (learnt from Stanford in folksong accompaniments), motivically algebraic like late Brahms, yet emotionally nuanced (a secondary-7th harmonic pang as the cherry blossom falls to earth). Butterworth himself seems to have sensed the need for a more dramatic exposé of Housman when he used material from 'Loveliest of trees' in his orchestral rhapsody *A Shropshire Lad* (first performed by Arthur Nikisch at the 1913 Leeds Festival). Here we find fantasy, perhaps sexual tragedy, with Wagnerian crisis and Debussyan aftermath, from a man who clearly 'knows about' Tchaikovsky (Butterworth could almost have been E.M. Forster's Maurice), all easily masked from ears more attuned to landscape than figure by the framing dorian modality.

Butterworth's rhapsody, which ends by quoting his song 'With rue my heart is laden / For golden friends I had', became his epitaph. He enlisted as a private in August 1914, the first month of the war, received a commission in the 13th Durham Light Infantry, went to France in August 1915, and in the Somme action of July 1916 commanded his company gallantly, receiving the Military Cross. He was killed the following month by sniper fire near Butterworth Trench, named after him.

STEPHEN BANFIELD

Butting, Max (*b* Berlin, 6 Oct 1888; *d* Berlin, 13 July 1976). German composer. Although his father, an ironmonger, wished him to pursue a career in business, he studied musicology, philosophy and psychology at Munich University (1908–18) and composition and conducting at the Munich Akademie der Tonkunst, where his teachers included Courvoisier. In 1919 he returned to Berlin where he worked in the family business and completed a business course, continuing to compose in his spare time. During the 1920s he was also active as a music critic and administrator: he headed the music section of the revolutionary Novembergruppe (1922–5); served as music reviewer for the *Sozialistische Monatshefte* (from 1925); held a managerial position in the Genossenschaft deutscher Tonsetzer (GdT); served on the cultural advisory board of the Berlin Funkstunde; and was a board member for the German section of the ISCM. These activities, as well as performances of his compositions at the Donaueschingen chamber music festival, gradually established his position as a member of the 1920s German avant garde. His intensive preoccupation with radio earned him a reputation as the leading exponent of broadcast theory; in 1928 he was appointed to a

professorship in composition for radio at the Hochschule für Musik, Berlin.

Convinced 'that music is the expression of social perceptions' and that 'music's development must derive from social developments' (1955), Butting embraced the 'pure humanism' of the Neue Sachlichkeit. In 1928 he composed in quick succession two of his most successful symphonic works, the Third Symphony and the *Sinfonietta mit Banjo*. Despite the strong stylistic relationship between these, they nonetheless reflect in both form and aesthetic the dualism of Butting's musical thought. In the symphony dry, often austere atonal elements are intensified with tension-laden expressivity; even in the finale jazz-inspired rhythms are integrated into complex polyphonic structures. In the *Sinfonietta*, composed for mass consumption over the radio, complex polyphonic textures are combined with more transparent musical statements, challenging traditional definitions of 'easy-listening' music.

Butting's early works, such as the *Klavierstücke* opp.31 and 33 (1925, 1927), possess compactness, clarity and an immediate intelligibility. Around 1928, having become preoccupied with popular music, he began composing *Gebrauchsmusik*. He developed this new interest in his second composition for radio, *Heitere Musik* (1929), and in the 15 *Tänze* composed during the 1930s. In 1929, on becoming a member of the GdT's copyright committee, he gave up both his employment in his father's firm and his journalistic activities, and for several years found little time for composition. Initially able to continue his copyright work after Hitler assumed power, his connections with the Novembergruppe and the *Sozialistische Monatshefte* led to his dismissal in 1938, at which time he returned to his father's business. Although he joined the Nazi party in 1939, in response to increasing chicanery against himself and his family, he ultimately turned away from the cultural life of the Third Reich.

The 1940s saw Butting's most serious, introverted compositional phase. He wrote four symphonies, which resume the serious atonal language of the Second and Third, the didactic *Die Schuld*, an answer to the question of collective German guilt, and *Lieder aus Berlin*, a musical critique, to his own texts, of postwar life. Works from late in the decade, among them symphonies and string quartets, do not attain the same degree of musical expressivity as their earlier counterparts. His output, however, does include numerous works for children, pieces of *Gebrauchsmusik* and his only opera, *Plautus im Nonnenkloster*. After the establishment of the DDR, Butting was appointed to a senior editorial post at Radio DDR; he also taught at the East Berlin Akademie der Künste and worked for the Anstalt zur Währung der Aufführungsrechte auf dem Gebiete der Musik (AWA). A regular stream of commissions resulted in a sizable corpus of late works. His honours included the DDR national prize for art and literature (1954) and the medal for patriotic merit (1961).

WORKS

STAGE

Die Schuld (Lehrstück, W. Stehr), op.45, 1946; Plautus im Nonnenkloster (op, 3, H. Zinner, after C.F. Meyer), op.98, 1958, Leipzig, Grosses Opernhaus, 1959

ORCHESTRAL

Sym. no.1, op.21, 1922; Chbr Sym., op.25, 13 insts, 1923; Sym. no.2, op.29, 1926; Sym. no.3, op.34, 1928; Blues und Marsche für Berlin im Licht, op.36, wind ens, 1928; Sinfonietta mit Banjo, op.37, 1929; Heitere Musik, op.38, 1929; Filmmusik, op.39, 1930; Tänze, op.40, 1936–40; Sym. no.4, op.42, 1942; Sym. no.5, op.43, 1943; Sym. no.6, op.44, 1944, rev. 1953; 5 Orchesterstücke, op.60, 1948; Konzertstück, op.64, 1948; Concertino, op.66, 1949; Sym. no.7, op.67, 1949; Sonatine, op.68, str, 1949; Ov., op.69, 1949; Fl Conc., op.72, 1950; 5 Stücke, op.73, youth orch, 1950; Sonntagskonzert, op.76, 1950; Sym. no.8 'Die Urlaubsreise', op.84, 1952

Sinfonische Variationen, op.89, 1953; Orchesterballade, op.91, 1954; 5 ernste Stücke, op.92, 1955; Sym. no.9, op.94, 1956; Sinfonietta, op.100, 1960; Burleske, op.103, 1961; Wochenendkonzert, op.104, 1962; Sinfonische Rhapsodie, op.106, 1962; Serenade, op.107, 1963; Sym. no.10, op.108, 1963; Legende, op.109, 1966; Pf Conc., op.110, 1964; Triptychon, op.112, 1967; Groteske, op.113, 1967; 2 Orchesteretüden, op.114, 1968; Kleine Festmusik, op.115, 1968; Moritat, op.116, 1969; Stationen, op.117, 1970; Gespenstermusik, op.120, 1972; Konzertouvertüre, op.121, 1973

VOCAL

Choral (texts by Butting, unless otherwise stated): 3 a-cappella-Chöre (S. George), op.27, 1924–5; Das Memorandum, op.52, solo vv, chorus, orch, 1947–8; Stille Nacht (cant.), op.57, chbr chorus, chbr orch, 1947; 3 Königslieder Kantaten, op.58/2, solo vv, chorus, orch, 1947; Fröhliche Kantate nach alten Liedern, op.58/3, chorus, chbr orch, 1947; An den Frühling (cant.), op.59, chorus, chbr orch, 1948; Der Sommer (cant.), op.61, chorus, chbr orch, 1948; Der Herbst (cant.), op.62, chorus, chbr orch, 1948; Der Winter (cant.), op.63, chorus, chbr orch, 1948; Lügengeschichte vom schwarzen Pferd (cant., A. Eckener), op.71, Bar, chorus, chbr orch, 1949

Lieder: Lieder aus Berlin (Butting), op.47, chorus, 1946; 5 ernste Lieder, op.48, chorus, 1946; Die 18 Tage, op.49, chorus, 1946; 3 Spottlieder, op.50, chorus, 1946; 4 Lieder und ein Nachwort (J.R. Recher, H. Zinner, W. Herzfelde, Butting), op.105, Bar, pf, 1962

CHAMBER AND SOLO INSTRUMENTAL

5 or more insts: Str Qnt no.1, op.10. 1915; Qnt, op.22, ob, pf qt, 1921; Spiel, op.30, 5 wind, 1925; Hauskonzert bei Langners, op.65, fl, vn, vc, pf duet, 1949; Festschrift für Bach, op.77, fl, eng hn, bn, str trio, 1950; La serenata gentile, op.80, 8 insts, 1951; 4 Sätze, op.101, wind qnt, 1960

Str qts: no.1, op.8, 1914; no.2, op.16, 1917; no.3, op.18, 1918; no.4, op.20, 1919; Kleine Stücke, op.26, 1925; no.5, op.53, 1947; Musik für Feierstunden, op.85, 1952; no.6, op.90, 1953; no.7, op.95, 1956; no.8, op.96, 1957; no.9, op.97, 1957; no.10, op.118, 1971

Other works: 3 Stücke, op.11, vn, 1915; Duo, op.32, vn, pf, 1926; Pf Trio, op.54, 1947; Kleine Kammermusik, op.70, fl, eng hn, vn, vc, 1949; Hausmusik, op.75, 2 rec, gui, 1950; Schnürchen und Steffen, 1950: op.79a, rec, pf; op.79b, 3 rec; 8 Gedichte, op.83, 2 vn, 1951; 3 Sätze, op.86, str trio, 1952; Schulmusik, op.119a, 2 vn, vc, 1971; Hausmusik, op.119b, fl, C-cl, C-tpt, gui, 1971; Vorschulmusik, op.119c, fl, accdn, side drum, 1971

Pf: Fantasie, op.28, 1924; 4 Klavierstücke, op.31, 1925; 15 kurze Klavierstücke, op.33, 1927; 2 Vortragsstücke, op.46, 1946; Spielereien, op.74, 1950; Sonata, op.82, 1951; Sonatine für Gretl, op.87, 1952; 2 Toccaten, op.88, 1953; Diarium, op.93, 1956; Klavierstücke, op.102, 1960, op.111, 1966

NILS GROSCH

Büttner, Erhard (*b* Römhild, Thuringia, bap. 19 July 1592; *d* Coburg, 19 Jan 1625). German composer and writer on music. On 3 December 1616, while still studying at Jena University, he applied for the post of Kantor at the city school at Coburg; he assumed the position before the end of the year and kept it until his death. He was highly respected as both Kantor and composer, though his way of life was by no means irreproachable: this dichotomy is summed up in the description of him as 'Vir optimae artis, pessimae vitae' in a document of 1625 at the Morizkirche. He committed suicide because he had been unfaithful to his wife (whom he had married on 8 February 1619). An estimate of his achievement as a composer is impossible, since virtually all his works – most of which are occasional pieces for princely birthdays, weddings and funerals – survive only in individual parts. His educational textbook *Rudimenta musica* is thus all the more deserving of attention. About a quarter of this very instructive volume is devoted to the most important rules of music. The rest consists of 46 bicinia, some based on chorales, the others freely composed. Of these, 33 (19 of them canons) are by Büttner himself and show that he was an excellent contrapuntist; in those based on chorales he showed a preference for melodies from the time of the Reformation. Melchior Franck, who was Kapellmeister at the Coburg court and whom Büttner doubtless knew, is represented by seven hitherto unknown bicinia. When he published a wedding song in 1617 and another in 1618 he included one by Büttner on each occasion.

WORKS

Psalm cxxvii, 8vv (Coburg, ?1617)
Teutsches Echo ... in dreyen Chören (Wer Gottes Wort flussig lehret) (Coburg, 1618)
Echo (Cum bonus oeconomus), ?3vv, inc. (Coburg, 1618)
Trostgesänglein (Ach wie elend), 4vv (Coburg, ?1619)
D.C.F.S.G. Fewriges Stossgebetlein, 4vv (Coburg, 1622)
Herr Gott mein Jammer hat ein End, 6vv (Coburg, 1622)
Musicalische Glückwunschung (Komm mein Freund), 4vv (Coburg, ?1623)
2 songs, 4vv (n.p., n.d.)
1 sacred song, 5vv (n.p., n.d.)
2 wedding songs, 5, 8vv, 1617[23], 1618[18]

Button & Whitaker. English music publishers. They were active in London in the 19th century. S.J. Button, a bookseller, was a junior partner with Thomas PURDAY in the firm of THOMPSON in London. They directly succeeded Henry Thompson in about 1805 as Purday & Button (from about 1807, Button & Purday), and in 1808 the firm was joined by the organist and composer John Whitaker (*b* 1776; *d* London, 4 Dec 1847) to become Button & Whitaker. Besides republishing works originally issued by the Thompson family, such as *Apollonian Harmony*, the firm produced great quantities of popular songs, small volumes of flute music, collections of glees and country dances, and books of sacred music such as the two volumes entitled *The Seraph* (1818), edited by Whitaker. From about 1814 to 1819 the firm was variously known as Button, Whitaker & Beadnell, Button, Whitaker & Co., or Button & Co., and from 1819 as Whitaker & Co. The business ceased in 1824 and the stock and premises were sold by auction.

FRANK KIDSON/PETER WARD JONES

Buttstett, Franz Vollrath (*b* Erfurt, 2 April 1735; *d* Rothenburg ob der Tauber, 7 May 1814). German composer and organist, probably the grandson of JOHANN HEINRICH BUTTSTETT. Some uncertainty exists about this relationship because his Catholic baptismal record lists his father as Johann Samuel, a 'soldier', and his mother as Josepha, born Schaar. J.H. Buttstett's son Johann Samuel, however, was baptized as Protestant in the Erfurt Reglerkirche and is known to have married Anna Barbara Brückner in the Predigerkirche, where he was organist. This apparent conflict in the facts connecting Franz Vollrath to Johann Heinrich may be explained by a second marriage for Johann Samuel, by which time (between 1730 and 1735) he had changed profession and had been converted to Catholicism. After his parents' early death, Franz Vollrath was brought up by an uncle, Johann Andreas Buttstett, J.H.'s eldest son. For a brief period in 1756 he is believed to have been a pupil of J.F. Doles in Leipzig (himself a former pupil of J.S. Bach). In May 1756 he became organist at Weikersheim an der Tauber and, three years later, married Margarete Eleonore Adami, daughter of a pastor in Rothenburg. In 1766 he applied for the position as successor to the organist Anschütz at the Jakobskirche in Rothenburg, where he moved in the following year. While waiting for the position to be vacated Buttstett was supported by the city council and composed a large amount of music. In 1772 he became assistant to the 84-year-old Anschütz and, finally, in 1776 he gained the position. Almost all of his large output is lost; what remains indicates a gifted composer successfully writing in the pre-Classical, transitional period. His cantatas are similar in style to those of Telemann and Graun. Three extant keyboard sonatas (of more than 40 written as solo and accompanied sonatas) are interesting examples of the integration of *galant* and *empfindsam* components of musical style, and suggest a pre-Classical idiom which was extensively developed in the music of C.P.E. Bach and Georg Benda.

GEORGE J. BUELOW

Buttstett [Buttstädt, Buttstedt], **Johann Heinrich** (*b* Bindersleben, nr Erfurt, 25 April 1666; *d* Erfurt, 1 Dec 1727). German composer and theorist. He was one of four children of Johann Henricus Buttstett (*d* 25 Dec 1702), pastor in Bindersleben, who had been educated at the University of Erfurt. He received his early education in Bindersleben, and at the age of 15 was sent to the Erfurt Ratsschule. As early as 1678 he began to study with Johann Pachelbel, organist at the Erfurt Predigerkirche. Buttstett's first appointment as organist was in 1684 at the Reglerkirche, where he also taught in the church school. In 1687 he held positions as organist and Latin teacher at the Kaufmannskirche and school, and in July of that year he married Martha Lämmerhirt of Erfurt, a distant cousin of J.S. Bach's mother. Their marriage produced ten children between 1688 and 1704, among whom was Johann Samuel, probably the father of Franz Vollrath Buttstett. In 1690 Pachelbel vacated his post at the Predigerkirche; it was held until 1691 by another of his students, Nicolaus Vetter, and then (on 19 July) became Buttstett's. In this appointment Buttstett became the leading organist of the city; he received the title of *Ratsorganist* in 1693, and began a distinguished 36-year career of performing and composing keyboard and vocal music. He also held an organ position at one of the Erfurt Catholic churches and wrote keyboard music as well as masses for the Catholic service. Like Pachelbel, Buttstett gathered around him a number of organ students, including the great lexicographer, organist and composer Johann Gottfried Walther.

Buttstett's life and career were typical of many late 17th-century German musicians. He was an erudite and talented figure who shared the Thuringian-Saxon background and training of several generations of composers living in this central but somewhat isolated region of Germany. His keyboard compositions, which show the influence of Pachelbel, include a number of chorale preludes and one volume of keyboard music, the *Musicalische Clavier-Kunst*, containing a wide variety of preludes, fugues, ricercares, dance movements and an aria with 12 variations. He failed to realize his plan to publish several such volumes of keyboard music, even though he stated that he had available in manuscript hundreds of large fugues and ricercares, as well as 1000 fughettas, short preludes and all kinds of fantasies, as these works were used in the Catholic service. None of this music seems to be extant.

As important as his keyboard works are as examples of the continuing influence of Pachelbel's musical style in central Germany, Buttstett's greatest significance to music history is contained in his remarkable published disagreement with Johann Mattheson. In *Ut, mi, sol, re, fa, la, tota musica et harmonia aeterna* (1716), Buttstett attacked the first major treatise of Mattheson, *Das neu-eröffnete Orchestre* (Hamburg, 1713). In that work Mattheson gave wide-ranging musical information which he hoped would serve to educate the *galant homme*, the composer and musician, the amateur as well as professional, who sought to learn everything about the new art of music – that is, the 18th-century styles of French and Italian secular music. As such, Mattheson's work was the first important treatise in Germany to sever all connection with traditional German theory of the past. Buttstett, however, stood on the opposite side of the musical world, and believed that only in the past could musical truth be found. For this reason, he condemned almost every facet of *Das neu-eröffnete Orchestre*: first and foremost, as the title to his work implies, he derided Mattheson's disparagement of Guido of Arezzo and his system of solmization. He criticized the abandonment of the Greek modes, the glorification of the ear as the sole judge of musical questions, and what he thought were Mattheson's incorrect concepts of musical styles. In sum, he believed that Mattheson was leading musicians to chaos by abandoning the rules of music which had been valid for more than 100 years. Buttstett, however, was no match for his famous Hamburg colleague who in 1717 published *Das beschützte Orchestre*, in which he countered most of Buttstett's arguments with devastating satire and often brilliant logic. Music historians generally have failed to evaluate correctly this extensive polemic drama (Blume is a notable exception). For what occurs in the volumes by Mattheson and Buttstett is the last struggle of German conservative, traditional music theory, with its noble and decisive 17th-century heritage inevitably defeated on the battleground of the 18th century, where new music from Italy as well as France had compelled such writers as Mattheson to formulate an entirely new theoretical approach to the understanding of their art.

WORKS

Musicalische Clavier-Kunst und Vorraths-Kammer, hpd (Leipzig, 1713)
Opera prima sacra, bestehend aus 4 neukomponierten Missen, chorus, insts (Erfurt, 1720), lost

GEORGE J. BUELOW

Buttykay, Ákos (de Gálszécs et Buttka) (*b* Halmi [now Halmeu], Romania, 22 July 1871; *d* Debrecen, 26 Oct 1935). Hungarian composer and pianist. From 1885 he studied the piano with Tomka and Székely and composition with Benkő at the National Conservatory, Budapest. In deference to parental wishes he read law (1888–94), but concurrently studied the piano with Thomán and composition with Herzfeld at the National Hungarian Royal Academy of Music. He went to Weimar in 1894 to complete his piano studies under Stavenhagen, and he appeared in Berlin and elsewhere as a concert pianist. In 1903 he returned to Budapest, where he taught the piano at the Academy until 1923. His music follows French and Italian Romantic models, with little trace of Hungarian material. Considerable technical skill is evident in his counterpoint and harmony, but his orchestration is often over-emphatic and his forms excessively extended. He devoted a lot of time to composing operettas for his wife, Emmy Kosáry.

WORKS
(*selective list*)

Operettas: A bolygó görög [The Vagrant Greek] (A. Pásztor), op.15, Budapest, 16 Oct 1905; A csibészkirály [The Urchin King] (L. Széll), op.16, Budapest, 29 Feb 1907; Ezüst sirály [Silver Seagull] (I. Földes), Budapest, 6 Feb 1920; Olivia hercegnő [Princess Olivia] (Földes and A. Gábor), Budapest, 23 Dec 1922; A császárné apródja [The Empress's Page], Budapest, 24 March 1925; Itt a macska [Here's the Cat]; Happy End; Sonne von Paris (E.B. Kosâry)
Other stage: A bűbájos malom [The Fairy Mill] (ballet), 1895; A harang [The Bell] (legend), 1907; Hamupipőke [Snow White] (fairytale, K. Bakonyi), op.20, Budapest, 26 Oct 1912; Hertha (ballet, F. Korányi)
Orch: Fantasy, op.6, pf, orch, perf. 1897; Sym. no.1, c♯, op.8, perf. 1900, rev. perf. 1907; Scherzo, b, op.9, perf. 1898; Sym. no.2 'Salammbó', d, op.11, perf. 1907; Ünneprontók [Feast Spoilers], sym. poem after J. Arany, op.12, perf. 1905; Szvit magyar stilben, e, perf. 1900; Vn Conc., b, op.19, 1909; Magyar rapszódia, perf. 1931
Other inst: Valse-caprice and Scherzo, op.1, pf; Sonata no.1, a, op.10, vn, pf, 1907–8; Sonata appassionata, op.13, pf; 5 Variations on 'Hej dinomdánom', op.14, pf; Bölcsődal [Lullaby], pf, ?1900; Capriccio, d, vn, pf, 1928; Sonata no.2, f♯, vn, pf, perf. 1930
Songs: 3 Songs, op.2 (J.W. von Goethe, J. Pikler); Ich kann es nicht, op.3 (Rolletschek); Mailied, op.4 (Goethe); 4 Lieder, op.5 (H. Heine etc.); 2 Lieder, op.7 (Heine, N. Lenau)

JOHN S. WEISSMANN

Butz [Putz, Buz]. German family of organ builders. They were active mainly in Tyrol, Bavaria, Carinthia and Upper Austria. Andreas Butz (*b* Rosswangen, Württemburg; *d* Passau, 25 Feb 1657) was living in Salzburg in 1612 but in 1613 he was given the freedom of Passau where he established his workshop, initially with Matthias Aigner who was already a citizen of Passau. On 29 January 1621 the prince-bishop of Brixen (now Bressanone) bestowed on him a coat of arms with three white organ pipes on blue ground. He is known to have built organs in the following places: Franciscan Church, Schwaz (1613; with Matthias Aigner); Benedictine abbey, Tegernsee (1614); Maria Saal (1617); Franciscan Church, Bozen (Bolzano) (1618; with Matthias Aigner); St Andreas, Lienz (1618); parish church, Villach (1619); Clarissan church, Brixen (1620); parish church, Brixen (1621); Benedictine abbey, Kremsmünster (1624 and 1628); Maria-Hilf, Passau (1628); collegiate church, Innichen (San Cándido) (1629; with Niclas Lembricht); parish church, Innichen (1630); Premonstratensian abbey, Schlägl, near Rohrbach (1634-8; with Johann Freund; restored 1986–90); Rohrbach (1636); Aigen, near Rohrbach (1637); Deggendorf (1637); Augustinian abbey, Reichersberg (1638). In 1639 he installed a *Hornwerk* in the Benedictine abbey, Lambach.

Organs by Andreas Butz used the following specifications: the Great Organ had a chorus of 8′, 4′, 3′, 2′ (4′, 3′, 2′ in the treble, sometimes doubled), Mixture, Cimbel, Copl 8′, Spitzflöte 4′ (possibly an open wooden flute 8′, Copl 4′, or a reed). The Choir had a chorus of 4′, 2′, 1½′ (Cimbel); Copl 8′, Spitzflöte 2′. The Pedal chorus was based on 16′, possibly completed by Posaune 8′. An essential component of all Butz organs was the tremulant. The cases, equipped with doors, show three, five or seven flats, the towers being crowned by broken pediments and statues.

Jacob Butz (*d* Tulln), son of Andreas, maintained the organs built by his father in Schlägl and Kremsmünster. Apparently he also built stringed keyboard instruments. He built organs at Thalheim bei Wels (1659); Burghausen (1668); the pilgrimage church, Adlwang (1668); Pettenbach (1674); St Peter and St Johannes Berchtesgaden (1685); Münzkirchen, near Schärding (1689). A positive organ of unknown origin, built by Jacob Butz in 1680, is now in Reichersberg. Martin Butz (*b* Passau, 10 Nov 1666; *d* Passau, 9 March 1704), son of Jacob Butz, was of less importance: he is known only to have carried out repairs.

ALFRED REICHLING

Buus, Jacques [Jakob] (*b* ?Ghent, *c*1500; *d* Vienna, 18 Aug – 1 Sept 1565). Flemish composer. His early career may have been in France, for Moderne published some chansons and a motet by him between 1538 and 1543. He travelled to Venice, probably arriving after 9 January 1541, for the competition for the post of second organist at S Marco. This he won and was installed on 15 July 1541. Most of his compositions were published and probably composed during the nine years he remained at the basilica. However, continuing ties with France are suggested not only by Moderne's publications of his music, but also by Antonfrancesco Doni's request of April 1550, that Buus write to some musicians in France to obtain a list of all the music printed there. Moreover, a collection of *chansons spirituelles* (1550) and a volume of chansons (1543), the latter printed at his own expense and dedicated to the Protestant Renée of France, Duchess of Ferrara, strongly suggest Calvinist leanings on the part of the composer. In the autumn of 1550, finding difficulty supporting his family and in debt, Buus obtained a four-month leave of absence from S Marco, ostensibly to return to Flanders. Late that year, however, he was at Vienna in the court chapel of the emperor, Ferdinand I, to whose son, the Archduke Ferdinand II, Buus had dedicated his 1550 volume of Protestant chansons. An attempt by the Venetian procurators, in March 1551, to make him return to S Marco was unsuccessful, and he remained in Vienna until his death.

The 18 ricercares published in partbooks are the longest in existence, one of them running to 358 breves (bk 1, no.6). There are three types: monothematic, polythematic with different points, varying in number from three to 11, and polythematic with the reappearance of earlier points. Buus's ricercares are two to three times longer than Willaert's or Segni's, and have a clearer profile and individuality in their points of imitation. His polythematic pieces also repeat their points more often, and up to 20 entries of a single point are not uncommon. No.8 of book 2 is an extreme case, presenting its first point 56 times and its seventh 43 times. Buus also more often used the 'learned' Netherlandish contrapuntal devices: augmentation, diminution, treatment of a point both as a stationary and as a migrant cantus firmus (bk 1, no.7, first point), inversion, and cantus-firmus treatment, both inverted and augmented (bk 1, no.8, first point). In a keyboard version of one of the ricercares, embellishment occurs mostly in the top voice, lessening progressively from alto to bass. The added turns, short trills and passing notes correspond to those found in the diminution treatises of the period, particularly Ganassi's *Fontegara* of 1535. Part-writing is treated more freely in the keyboard version, creating a thinner texture in many places. The general stylistic resemblance of the other three keyboard ricercares to this one suggests that they too had partbook models, at present unknown.

19 four-voice motets show strong influence by Gombert, and treat both their biblical texts and their Gregorian melodies very freely. Eight of the 1543 chansons are parodies of chansons by Sermisy, Sandrin and Gombert, among others. In the chansons of 1550 he reshaped existing melodies and then treated them with imitative entries, making a dense texture with virtually seamless counterpoint.

H. COLIN SLIM

Buxheim Keyboard Manuscript [Buxheimer Orgelbuch] (*D-Mbs* Mus.3725; also Cim.352b). *See* SOURCES OF KEYBOARD MUSIC TO 1660, §2(iii).

Buxtehude, Dieterich (*b* ?Helsingborg, *c*1637; *d* Lübeck, 9 May 1707). German or Danish composer and organist. He is best known as a composer of organ music, of which he was one of the most important composers before J.S. Bach. He also left equally impressive repertories of sacred vocal and instrumental ensemble music.

1. Life. 2. Vocal works: (i) Concertos (ii) Arias (iii) Chorale settings (iv) Cantatas (v) Ciaccone (vi) Dialogues (vii) Miscellaneous vocal works (viii) Abendmusik. 3. Instrumental works: (i) Keyboard music (ii) Ensemble music. 4. Sources, chronology and literature.

1. LIFE. No documents exist to verify the date and place of Buxtehude's birth, and even his nationality has been disputed. The only contemporary information comes from a notice (in *Nova literaria Maris Balthici*) shortly after his death: 'he recognized Denmark as his native country, whence he came to our region; he lived about 70 years'. Although his family must originally have come from the town of Buxtehude, south-west of Hamburg, his ancestors had settled at Oldesloe (now Bad Oldesloe) in the Duchy of Holstein early in the 16th century. His father, Johannes (1601/2–74), migrated from Oldesloe to the Danish province of Scania; his presence there as organist of the St Maria Kyrka in Helsingborg is documented for the year 1641. The hypothesis advanced by Pedersen and by Stahl (1951) that he could be identified with a German schoolmaster named Johannes, present in Oldesloe in 1638, and that Dieterich was therefore born in Oldesloe, appears questionable in the light of a review

1. Domestic scene by Johannes Voorhout, c1674 (Museum für Hamburgische Geschichte, Hamburg); Dieterich Buxtehude has been identified as the musician on the right (head on hand), with Johann Adam Reincken at the keyboard and Johann Theile playing the bass viol (the figure behind Theile is thought to be the artist, and the lutenist the artist's wife)

of the archives there. The death notice does not exclude Oldesloe as a birthplace, however, since Holstein was under Danish control at the time. In 1641 or 1642 Johannes moved across the sound to Elsinore, Denmark, to become organist of the St Olai Kirke, a position he held until his retirement in 1671. A son, Peiter, was born there to him and his wife, Helle Jespers Daater, in 1645; it is unknown whether Helle was also the mother of Dieterich. There were two daughters in the family, Anna and Cathrine, both presumably older than Dieterich.

Dieterich Buxtehude most likely attended the Latin School at Elsinore and received his music education from his father. In 1657 or 1658 he became organist at his father's former church at Helsingborg and in 1660 moved back to Elsinore as organist of the Marienkirche, a German-speaking congregation. With the death of Franz Tunder on 5 November 1667 the position of organist of the Marienkirche at Lübeck, one of the most important in north Germany, became vacant. After several other organists had applied for the post and been rejected, Buxtehude was chosen on 11 April 1668. At the same time he was appointed Werkmeister, a post encompassing the duties of secretary, treasurer and business manager of the church; it carried a separate salary but at this period was given to the organist. Buxtehude became a citizen of Lübeck on 23 July 1668, and a few days later, on 3 August 1668, he married Anna Margarethe Tunder, the younger daughter of his predecessor. It is not known whether this was a condition of his employment, as it was to be with his successor, but the practice was not unusual at the time. Seven daughters were born of this union, four of whom survived to adulthood: Magdalena (or Helena) Elisabeth (*b* 1670), Anna Margreta (*b* 1675), Anna Sophia (*b* 1678) and Dorothea Catrin (*b* 1683). Buxtehude's father joined him at Lübeck in 1673 and died there in 1674; his brother Peter (Peiter), a barber, followed in 1677.

Buxtehude's official duties required him to play for the main morning service and the afternoon service on Sundays and feast days and for Vespers on the preceding afternoon. In addition to the customary preludes to the congregational chorales and the musical offerings of the choir, Buxtehude supplied music during Communion, often with the participation of instrumentalists or vocalists, or both, who were paid by the church. Part of his fame, however, rested on an activity totally outside his official church duties: his direction of the concert series known as the Abendmusiken (*see* ABENDMUSIK). Tunder had given concerts in the church on weekdays, but Buxtehude moved them to five specific Sundays in the church year – the last two in Trinity and the second, third and fourth in Advent – and introduced the performance of sacred dramatic works in 1678, the same year as the inauguration of the Hamburg opera. Buxtehude's Abendmusiken were in fact considered the equivalent of operas; Hinrich Elmenhorst, a librettist for the Hamburg opera, referred to them as such in 1688.

There is little evidence of travel, but a painting by Johannes Voorhout from 1674 (fig.1) documents his close friendship with the Hamburg organist Johann Adam Reincken and suggests frequent visits to Hamburg, where he would also have known Christoph Bernhard and Matthias Weckmann. His friendship with Johann Theile is attested by a poem that he contributed to Theile's *St*

Matthew Passion (Lübeck, 1673) and his help in financing the publication of Thiele's masses (Wismar, 1673). The claim that Theile was Buxtehude's teacher (J. Mattheson: *Critica musica*, ii, 1725/*R*) must be discounted in view of Buxtehude's greater skill in composition at that time. Poems by Buxtehude also appear in the *Harmonologia musica* (1702) of Andreas Werckmeister; it was Werckmeister who conveyed many of Buxtehude's organ compositions to J.G. Walther, whose copies still exist. Buxtehude was also friendly with the Düben family in Stockholm; most of Buxtehude's vocal music survives in the large manuscript collection (now at *S-Uu*) that the elder Gustaf Düben assembled.

Among the younger generation of organists, Nicolaus Bruhns was Buxtehude's pupil, and Pachelbel dedicated his *Hexachordum Apollinis* (1699) to him. Mattheson and Handel visited him in Lübeck on 17 August 1703; Mattheson was being considered as a successor to him, but at the mention of the condition relating to marriage described above he quickly lost interest. The documentary evidence for Bach's famous trip to Lübeck rests on the proceedings of the Arnstadt consistory of 21 February 1706, where it is noted that he 'has been to Lübeck in order to learn one thing and another about his art' and that he had requested a leave of four weeks but had stayed 'about four times as long'. Thus he was probably present at the 'extraordinary' Abendmusik performances of 2 and 3 December 1705, commemorating the death of the Emperor Leopold I and the accession of Joseph I. Bach's obituary confirms the length of his stay in Lübeck and the fact that he took Buxtehude, among others, as a model 'in the art of the organ'. But Buxtehude's role as the effective director of music for the city, commanding all genres of music except staged opera, may have inspired Bach as well.

Buxtehude was buried on 16 May 1707 in the Marienkirche beside his father and four daughters who had predeceased him. A successor agreeable to the 'marriage condition', J.C. Schieferdecker, had been serving as his assistant; he was appointed organist and Werkmeister on 23 June and married Anna Margreta Buxtehude on 5 September 1707.

2. Vocal works. Although Buxtehude never held a position that required him to compose vocal music, his vocal works survive in greater number than do his keyboard or ensemble works. They cover an extremely wide range of texts, scoring, genres, compositional styles and length. Texts are found in four languages, and performing forces range from one voice with one instrument and continuo (BuxWV64 and 98) to six choirs (BuxWV113). The very freedom with which Buxtehude composed this music – as communion and vesper music in church services, for the Abendmusiken, for occasions such as weddings and funerals or perhaps on commission from Gustaf Düben (i) – may help to explain its great variety. And Buxtehude seems to have adapted his style to suit the tastes of his patrons and audience. Glimpses of a broad, popular style can be seen in a work such as *Schwinget euch himmelan* (BuxWV96), whose text is directed towards the Lübeck business community, while he dedicated the highly refined, Latin *Membra Jesu* (BuxWV75) to the connoisseur Düben.

German and Latin sacred texts, either biblical prose or strophic poetry, serve as the basis for the majority of these works, with German poetry predominating. Buxtehude usually followed well-established German tradition in setting the prose texts as sacred concertos and the poetic texts either as arias or, in the case of church hymns, as chorale settings of the melodies associated with them. He did not always keep these genres as separate as his predecessors had done, however. In Buxtehude's works concerto and aria can come together in two distinct ways: he could extend one genre by bringing into one or more sections of a work stylistic attributes associated with the other, or he could juxtapose them as separate movements to form composite works that are now generally called cantatas. This term appears in none of the sources, however, and was used in the 17th century mainly with reference to secular music.

(i) Concertos. Buxtehude drew all his German prose texts from the Luther Bible and most of his Latin texts from the Vulgate, with a strong preference in both cases for excerpts from psalms. In addition there are three non-biblical Latin texts (BuxWV11, 83, and 94) in a highly subjective, sometimes mystical, devotional prose which was a popular element of both Catholic and Protestant piety in the 17th century. In setting prose texts as vocal concertos Buxtehude usually followed the procedure, inherited from the motet, of dividing the text into short phrases and giving each a new musical motif closely tied to the words. The musical sections thus generated are often strongly contrasting, but they remain dependent parts of a larger whole and cannot be considered separate movements. The prevailing style is the concertato, where voice or voices and instruments, or voices alone with continuo, toss these word-bound musical motifs back and forth in a manner ultimately derived from the Venetian polychoral style (e.g. BuxWV49). Sections of arioso are often introduced as well, and changes of metre provide additional contrast. Examples of concertos with sections in a more lyrical aria style can be found among both the German works (e.g. BuxWV71, 73 and 98) and those with Latin texts (e.g. BuxWV12 and 64), especially those with non-biblical texts, such as BuxWV83, which approaches the style of the Italian secular cantata.

(ii) Arias. The aria is the central genre within Buxtehude's vocal output and is found both singly and in composite works. All texts are strophic, most of them in German and many from 17th-century hymnals. His favourite poets were Johann Rist, Ernst Christoph Homburg, Johann Scheffler (also known as Johann Angelus Silesius), Heinrich Müller, and Ahasverus Fritszch. His choice of these poems, many of them on topics of love for Jesus and longing for heaven, has raised the question of whether Buxtehude was of Pietist persuasion (see Geck, 1965). But although he may have shared a personal piety with these authors, he could not have espoused the Pietist programme of Lutheran church reform as first set forth by Theophil Grossgebauer in 1661, which criticized the use of Latin texts, italianate concerted style, artful organ music and festive music performed during the distribution of communion (see Snyder, 1987, and Irwin, 1993). Many of Buxtehude's arias betray their roots in the sacred songbooks (e.g. BuxWV105), with pure strophic form, a syllabic or paired-note declamation of the text and a strongly periodic phrase structure. Unlike the songbooks, however, Buxtehude's arias always call for instrumental participation, either in ritornellos or for concertato interjections. And although the sacred song and aria is often considered to be a genre for solo voice, Buxtehude's

arias are more often set for a small or large ensemble of singers and instrumentalists.

The formal range in Buxtehude's treatment of strophic poetry is vast. At one end of the scale is pure strophic form, which is found in all the wedding arias and in some of the sacred arias as well, particularly within cantatas. Most of his arias, however, are expanded in some way, as varied strophic form, completely through-composed or a combination of both. Works in varied strophic form contain changes in the music from strophe to strophe while still maintaining an overall unity and highlighting the strophic nature of the text in some way, with an unvarying strophic bass (e.g. BUXWV58 and the arias in BUXWV75), a ritornello or sometimes a vocal refrain. Although the scoring may change, the metre is constant throughout, and one or more strophes of music recur as the piece progresses. Of the settings of strophic texts where the melody is completely through-composed, some are highly unified by means of a ritornello and/or a homogeneous style (e.g. BUXWV84), and a few show concerto-like sectional contrast that does not always correspond to the strophic structure (e.g. BUXWV87). A small group approach the cantata in their juxtaposition of concerto and aria styles (e.g. BUXWV22). Here the first strophe is a closed section for all the voices in concertato style, with the succeeding strophes set as an aria for solo voices, unified by a ritornello or a refrain. A closing concertato section uses the final strophe or an appended 'Amen' or 'Alleluia', or both.

(iii) Chorale settings. Although in purely poetic terms a chorale text is identical to a strophic poem, there is an important musical difference in that it is usually identified with a specific melody, and with only a few exceptions Buxtehude used this as a cantus firmus. Four different compositional styles can be seen in his chorale settings: the chorale concerto and the chorale sinfonia, both inherited from earlier generations, the concertato chorale harmonization and the transformation of the choral melody into aria style.

In Buxtehude's chorale concertos (e.g. BUXWV32) the voices and instruments engage in extensive concertato interchange as equal partners and the texture is often quite contrapuntal, whereas in the chorale sinfonia (e.g. the opening strophe of BUXWV41) the instruments predominate while a single voice sings the unadorned cantus firmus. The concertato chorale harmonization represents a grafting of the instrumental interjections characteristic of the concerto on to the four-part chorale harmonizations found in hymnals; it is Buxtehude's most characteristic form of chorale treatment for voices. Most of them contain two to eight chorale strophes that vary only slightly from one to the next. The degree to which the instrumental ensemble breaks into the presentation of the chorale varies from slightly (e.g. BUXWV103) to extensively, as in BUXWV10 and 52. Transformations of the chorale *Jesu meine Freude* into aria style are found in BUXWV60, as a concertato aria for bass and instruments in *versus* 3 and as continuo arias for soprano in *versus* 2 and 5. This work, like BUXWV21, 41, 78 and 100, approaches the cantata in its differentiation of separate strophes by means of style and scoring.

(iv) Cantatas. Buxtehude combined independent movements in the different genres discussed above to form composite works that are now generally called cantatas. The concerto and the aria are by far the most important single genres among Buxtehude's vocal compositions, and their combination to form the concerto-aria cantata also produces the largest number of works within the cantatas. Each of these cantatas begins with a concerto movement, usually preceded by an instrumental sonata; beyond this there is considerable formal variety. The aria, however, can always be perceived as the core of the cantata and is quite highly unified in either pure or varied strophic form. Concertato style almost always returns as a framing element at the end, usually by means of a simple repetition of the opening movement, sometimes with a movement on a different biblical text or an 'Amen' or 'Alleluia'. Sometimes the concertato writing appears, in the manner of a rondo, between the strophes of the aria. All Buxtehude's cantatas have German texts with the exception of *Membra Jesu* (BUXWV75), a cycle of seven concerto-aria cantatas dedicated to Gustaf Düben in 1680. Only in isolated instances did Buxtehude combine chorale and aria (BUXWV86) or concerto and chorale (BUXWV29) to form a cantata, but there are four examples of the older mixed cantata, which combines all three elements (BUXWV4, 34, 51 and 112). His method of building cantatas by drawing together these previously diverse elements was shared by many of his contemporaries, providing the foundation for the sacred cantata of the 18th century, with its addition of recitative set to madrigalesque poetry.

(v) Ciaccone. Buxtehude composed six works (BUXWV 38, 57, 62, 69, 70 and 92) over an ostinato bass; except for the opening sinfonia of BUXWV62 the ostinato is maintained rigorously throughout the work without variation or modulation. Four are designated 'Ciaccona' in their manuscript sources, and they include both concertos and arias, with prose and poetic texts. In one work (BUXWV57) Buxtehude set a poetic text in the manner of the concerto. He also used ostinato basses in portions of other vocal works, most frequently in a final 'Amen' or 'Alleluia' section (e.g. BUXWV3, 15, 89 and 96).

(vi) Dialogues. Two works (BUXWV111 and 112) are designated 'Dialogus' in their sources, and two others (BUXWV36 and 61) likewise belong to this smaller dramatic form, with specific voice parts assigned to identified or implied characters, usually Jesus and the Soul. Like the *ciaccona*, this designation cuts across the other genres, including a concerto, two arias and a mixed cantata.

(vii) Miscellaneous vocal works. A few pieces by Buxtehude do not fit well into any of the above categories. The music for his father's funeral on 29 January 1674 (BUXWV76) might be called a chorale-aria cantata, but it is more likely that its two parts were performed separately. The chorale setting was in fact composed earlier (in 1671) for another funeral, and in its extremely learned contrapuntal style it is unlike any other of Buxtehude's chorale settings. It is modelled on a similar work by Chistoph Bernhard (see Snyder, 1980). The aria, to a text undoubtedly written by Buxtehude himself, is in simple strophic form with string accompaniment but is also more contrapuntal than any of his other arias. The *Missa alla brevis* (BUXWV114) is Buxtehude's only surviving work in the *stile antico*; its manuscript can be dated to *c*1675. These works in learned counterpoint, including the two canons (BUXWV123–4) entered in autograph books, reflect Buxtehude's friendship with Bernhard, Reincken and

2. Autograph MS of the beginning of Buxtehude's chorale setting 'Nimm von uns, Herr' (BUXWV78) in German organ tablature (S-Uu vok.mus.hs.82:38, f.1)

Theile in the early 1670s. Finally, *Benedicam Dominum* (BUXWV113), scored for six choirs – two vocal and four instrumental – is his one extant contribution to the genre of the 'colossal' Baroque style.

(viii) Abendmusik. From the oratorios that Buxtehude presented at his numerous Abendmusiken, three librettos are the only sure survivals: *Die Hochzeit des Lamms*, a two-part oratorio from 1678, and the two 'extraordinary' presentations of 1705, *Castrum doloris* and *Templum honoris*. The libretto for 1700, consisting of four programmes of shorter selections and a repeat of the music from the preceding New Year, is summarized in the literature but has been missing since World War II. The surviving librettos indicate that the oratorio-like Abendmusiken consisted of a mixture of choruses, recitatives, strophic arias and chorale settings, with considerable instrumental participation. The mixed programmes of 1700 were made up of arias, chorale settings and concertos; unfortunately, none of Buxtehude's extant music is set to those specific texts.

The titles or themes from some other years are also known: in 1688 the subject was the prodigal son, and the catalogues of the Frankfurt and Leipzig fairs for spring 1684 listed the future publication of two works by Buxtehude described as Abendmusiken, *Himmlische Seelenlust auf Erden über die Menschwerdung und Geburt unsers Heylandes Jesu Christi* and *Das Allerschröcklichste und Allererfreulichste, nemlich, Ende der Zeit und Anfang der Ewigkeit*. Whether these were to be librettos or music and whether they were in fact published is unclear. Willi Maxton claimed to have found *Das Allerschröcklichste* in Uppsala in a set of anonymous parts for an oratorio beginning 'Wacht! Euch zum Streit gefasset macht', and he published an abridged arrangement of it in 1939 under the title *Das jüngste Gericht* (BUXWVsuppl.3). Its authenticity as a work of Buxtehude became a subject of continued controversy, leading to Ruhle's dissertation (1982), which includes a summary of the discussion, a complete libretto and an edition of those movements omitted by Maxton. Snyder's hypothesis (1987, amplified in Walker, 1990) that *Wacht! Euch zum Streit* is the work that Buxtehude composed for the Abendmusiken of 1682 has thus far gone unchallenged.

3. INSTRUMENTAL WORKS.

(i) Keyboard music. Buxtehude's keyboard works fall into several distinct genres: praeludia, canzonas, ostinato works, chorale settings, suites, and secular variation sets. As was customary at the time, their sources do not name a particular keyboard instrument, but most of the praeludia and chorale settings and all three ostinato works require pedals (many of the praeludia are specifically designated *pedaliter*) and thus are presumably intended for the organ. The works in the remaining genres are all *manualiter* and could have been played on any keyboard instrument. If Buxtehude composed the canzonas primarily for instructional purposes, as apppears to be the case, he may have had the clavichord in mind, and keyboard suites and secular variation sets were often performed on quilled keyboard instruments. It is worth noting that the keyboard instrument specified for the continuo in Buxtehude's published sonatas is the cembalo, or harpsichord. None of his manualiter compositions requires more than one manual.

The 52-stop organ that Buxtehude played in Lübeck had 15 stops in the pedal, more than in any of its three manual divisions; this included two 32′ stops and a full complement of principals, mixtures and reeds. Thus it is not surprising to find that in his organ music the pedal goes far beyond what had been its traditional role – as slow harmonic support or bearer of the cantus firmus – to participate fully in the fabric of the music, including its share of virtuoso display, particularly in the *pedaliter* praeludia. Another characteristic of the north German organ was its *Brustwerk* and *Rückpositiv* divisions, featuring solo reeds and many upper partials which could be combined to produce a sharply differentiated melodic line. This type of sound is particularly well suited to a solo voice, such as highly ornamented cantus firmus, with the other voices played on another manual using a contrasting registration. If there are three accompanying voices, as in most of Buxtehude's chorale preludes, the pedal becomes almost mandatory for the bass line. This tonal contrast between divisions naturally lent itself also to echo effects and to works with strong sectional contrasts, both of which are especially prominent in Buxtehude's chorale fantasias.

(a) Praeludia. Buxtehude's praeludia (including a few works entitled 'toccata' or 'praeambulum', but none headed 'Praeludium and Fuga') form the heart of his repertory for organ, indeed of his works altogether. Their essence lies in the alternation of sections in a free, improvisatory and idiomatic keyboard style with sections in a structured, fugal style. They may contain one, two or three fugues, using a wide variety of styles and contrapuntal devices. The free sections, with which they invariably begin and which normally appear later in the piece, are composed in a dazzling array of textures and styles, from lengthy pedal points to fleeting semiquaver and even demisemiquaver scales and arpeggios, from pure chordal homophony through various stages of its decoration to imitative counterpoint and fugato subsections, from tonal stability to daring harmonic excursions. The subjects of the fugues are usually instrumental in character, with repeated notes, wide leaps and rests; some, indeed, are idiomatic to the pedal (e.g. BUXWV137). Within a praeludium they are often related to one another in the manner of the variation canzonas inherited from Frescobaldi and Froberger, perhaps through Matthias Weckmann. Each fugue consists of a series of expositions, usually confined to entries in the tonic and dominant, with tonal answers predominating. Although Buxtehude makes frequent use of double counterpoint and stretto, there is very little episodic material or real modulation, these functions being fulfilled by the free sections between the fugues and the frequent dissolution of fugal procedure as they end.

With their wide variety of forms and multiplicity of styles, Buxtehude's praeludia may appear improvisatory, and indeed the art of the north German organist lay chiefly in improvisation. Behind this appearance of freedom, however, careful planning can be detected, and their multiple sections are related to one another in often subtle ways. The Baroque concept of the *stylus fantasticus*, as discussed by Athanasius Kircher in 1650, can help to explain this seeming dichotomy:

> The fantastic style is suitable for instruments. It is the most free and unrestrained method of composing; it is bound to nothing, neither to words nor to a melodic subject; it was instituted to display genius and

to teach the hidden design of harmony and the ingenious composition of harmonic phrases and fugues.

By the time Mattheson discussed this style in 1739, the emphasis had shifted to include the improvising performer as well as the composer, and formal fugues no longer had a proper place within it. Mattheson's *stylus fantasticus* does not well describe Buxtehude's praeludia as complete compositions, but it contains important information concerning the style and performance of their free sections: 'now swift, now hesitating, now in one voice, now in many voices, now for a while behind the beat, without measure of sound, but not without the intent to please, to overtake and to astonish'.

(b) Canzonas. Buxtehude's canzonas, also entitled 'canzon', 'canzonet' and 'fuga', form the only genre among his keyboard works that is strictly contrapuntal. Marpurg used part of BUXWV168 as an illustration of a counter fugue in his treatise on fugue, but on the whole they do not rise to the heights of the fugues of the praeludia in their contrapuntal art. Half of them are variation canzonas, the others single fugues, and they all have lively subjects, mainly in quavers and semiquavers. All *manualiter* works, they were probably composed as teaching pieces. Indeed, they continued to be used as such; Heinrich Nikolaus Gerber copied a portion of BUXWV166 into his notebook at the age of 13.

(c) Ostinato works. The three ostinato pieces (BUXWV 159–61) are among Buxtehude's best-known works and exerted their influence on Brahms as well as on Bach. Here he took a form which was popular in Italy and south Germany but not in north Germany and made it into truly idiomatic *pedaliter* organ music. In all three pieces the pedal is used chiefly for the ostinato, thereby freeing both hands to execute more complex variations above it than can occur in a *manualiter* work. The formal design of the passacaglia (BUXWV161) is particularly noteworthy: four sections, each containing seven variations of a seven-note ostinato, in the keys of D minor, F, A minor and D minor. Buxtehude also used ostinato sections to good effect within the praeludia (e.g. BUXWV137 and 149).

(d) Chorale settings. A speciality of the north German organist lay in the imaginative presentation of Lutheran chorales, and Buxtehude's 47 chorale settings constitute the major part of his organ works. They fall into three groups – chorale variations, chorale fantasias and chorale preludes – each showing a distinctive approach to the chorale. Sets of chorale variations had been cultivated extensively by Sweelinck and Scheidt but do not figure very prominently in Buxtehude's output. Consisting of only three or four verses, they are often restricted to the manuals alone and sometimes to only two voices (as in the traditional bicinium) and the cantus firmus frequently appears unornamented (e.g. BUXWV213). In terms of variety and keyboard technique they do not match the variations of Pachelbel and Böhm. The variations on *Auf meinen lieben Gott* (BUXWV179) form an exception; as a dance suite on a chorale tune, however, they were more likely intended for performance on the harpsichord.

The chorale fantasia is perhaps the most distinctive genre cultivated by the north German organists on the large instruments of the Hanseatic cities during the 17th century, particularly Scheidemann, Weckmann and Reincken in Hamburg and Tunder and Buxtehude in Lübeck. These enormous and virtuoso settings of a single chorale strophe are analogous in compositional method to vocal concertos: each phrase of the chorale is developed separately and extensively to form a highly sectionalized piece full of dramatic contrast (e.g. BUXWV210 and 223). The four works based on chant (BUXWV203–5 and 218) belong to this group as well. The term 'chorale fantasia' is a modern one but these works indeed demonstrate the *stylus fantasticus*, albeit in a distinctly Lutheran way. Kircher might not have accepted them into his style category on account of their adherence not only to a cantus firmus but also to its associated text, as exemplified in Buxtehude's use in BUXWV210 of a gigue fugue to project the affect of joy at the words 'sweet wonderful deed', followed by a chromatic countermelody in an allusion to the Crucifixion in the last line of the chorale *Nun freut euch, lieben Christen gmein.* And yet these works are as filled with fantasy as the *pedaliter* praeludia. If they have not found as much favour with modern players and audiences, it is perhaps because a thorough familiarity with the underlying chorale is essential to their appreciation.

The majority of Buxtehude's surviving chorale settings, and among his most characteristic works, are chorale preludes, concise and expressive settings of one stanza of the chorale (e.g. BUXWV184) in a single voice. Most of them are very similar in outward appearance: clearly intended for two manuals and pedal, the cantus firmus is set apart in the upper voice in a richly ornamented version, accompanied by three parts which are contrapuntal but not necessarily imitative. Beneath the surface, however, each is unique, eloquently laying out the unspoken text of the chorale by means of the extensive vocabulary of rhetorical figures available to the Baroque composer (see Reichert, 1994). In this group of works the organ comes closest to imitating the human voice; as Christoph Bernhard wrote in his singing treatise, '*Cantar d'affetto* pertains only to singers, because only they have a text; nevertheless, instrumentalists can also make use of it to a degree, if they know how to use and moderate their instruments with joyful or doleful harmony appropriate to them'. Buxtehude probably composed them to introduce the congregational singing in Lübeck, and they are his only organ works whose use within the liturgy is completely unproblematic.

(e) Suites and secular variation sets. Both Walther and Mattheson bemoaned the fact that Buxtehude had never published any of his keyboard music. Mattheson (1739, p.130) specifically mentioned seven keyboard suites depicting the nature of the planets. These have never come to light, but there is one manuscript tablature (in *DK-Kk*) which contains 19 suites and six sets of secular variations ascribed to Buxtehude. The fact that two of the suites were actually composed by Nicolas-Antoine Lebègue (Paris, 1687) underlines the stylistic similarity of the German keyboard suite to French models, particularly in the use of *style brisé*. The suites are nearly all in the standard order allemande–courante–sarabande–gigue, with an occasional *double*. The courantes always begin as variations of the allemandes, as do some of the sarabandes; the gigues go their own way, often in a loose fugal style that is not nearly as structured as that of the numerous fugues in gigue rhythm found in the praeludia and canzonas. The suites are more conventional than most of Buxtehude's organ music and do not match the

individualized expression attained by Froberger. The secular variations, on the other hand, show a much greater interest in the variation process than can be seen in the organ music. *La capricciosa* (BUXWV250), a set of 32 variations on the bergamasca, presents a virtuoso showpiece, layering dance upon dance by including variations in gigue, saraband and minuet rhythm.

(ii) Ensemble music. Buxtehude's only major publications during his lifetime were two sets of ensemble sonatas. A collection of sonatas for two or three violins, viola da gamba and continuo, announced for publication in 1684, is either lost or never appeared; it is listed in the same catalogue as the two Abendmusiken that have never been found. The two extant prints, from ?1694 and 1696, each contain seven sonatas for violin, viola da gamba and harpsichord continuo, a scoring found in Germany, Austria and England but noticeably absent in Italy. These are sonatas *a due*, based on virtuoso and integrated writing for the violin and gamba. Although real trio texture sometimes occurs, the continuo line is more often a simplification of the gamba part. The structure of the sonatas is based on an alternation of tempo and texture, but this can take place either by means of tonally closed, independent movements or with sections that flow together; there is no standardization of their number, which ranges from three to 14. Half the sonatas have at least one ostinato movement, with the pattern remaining unvaried in the continuo bass. The gamba part consists sometimes of divisions on this bass, sometimes of an independent part above it. The contrapuntal movements are fugal in style but are usually in only two real parts; as a result there is much more episodic writing than in the organ fugues. The continuo bass is more likely to be independent in the slow, homophonic sections, many of which are transitional in nature; in their harmonic intensity these sections are often reminiscent of the transitions in his organ praeludia and of Rosenmüller's sonatas of 1682. Kircher included sonatas among the genres associated with the *stylus fantasticus*, and Buxtehude's sonatas embody it to an extent even greater than that seen in the organ praeludia, nowhere more so than in the 14 sections of BUXWV257. By the time of their publication in the mid-1690s most Italian sonatas were normally cast in four movements, but Buxtehude's are totally unpredictable. One can expect at least two orderly, structured sections within each sonata, but these might be a fugue, a variation set or a dance. Behind the improvisatory style of some sections and the seemingly haphazard overall arrangement, however, lie careful planning and organic unity.

The sonatas surviving in manuscript all appear to be earlier than those of opp.1 and 2. BUXWV266, 269 and 271, scored for two violins, viola da gamba and continuo, may have belonged to the 1684 collection. Buxtehude's reworking of BUXWV273 (from the 1680s) as op.1 no.4 shows that he had experimented with the sonata-suite combination cultivated by Reincken, Becker and Erlebach but abandoned it in favour of the sonata alone, perhaps because he wished to avoid the predictability of the arrangement of dances in the suite.

4. SOURCES, CHRONOLOGY AND LITERATURE. Since Buxtehude published no keyboard music and, besides the sonatas, only a few occasional vocal works, the survival of the bulk of his works has depended on manuscript transmission, and it must be assumed that a considerable amount has been lost. The two principal sources for his vocal music were both compiled during his lifetime and with his knowledge. Gustaf Düben's collection, which his son Anders von Düben (ii) gave to Uppsala University Library in 1732, contains 99 vocal works by Buxtehude in manuscript (fig.2). These include five autographs in German organ tablature (BUXWV75, 78–9, 85 and 88), one in score (BUXWV31), one in parts (BUXWV36) and numerous other manuscripts that appear to have been copied by Düben and his assistants from loaned autographs. The other important source is the Lübeck tablature A373 (*D-Bsb*) comprising 20 vocal works and one fragment. The first nine pieces contain autograph insertions, and the source appears to have been prepared under Buxtehude's direction, perhaps towards the end of his life. There is a remarkable absence of his vocal music from all the important central German manuscript collections and inventories of the period.

The situation is completely reversed with regard to the organ music. Here the sources are widespread, many of them being of central German provenance, yet there is not a single manuscript that can be closely identified with Buxtehude himself. He undoubtedly wrote his organ music in tablature, but most of these manuscripts are in staff notation; there is only one group of north German sources in tablature (in the Wenster Collection, *S-L*), copied by Gottfried Lindemann and dated 1713–14. Lindemann had studied in Stettin, perhaps with Gottlieb Klingenberg, who in turn had studied with Buxtehude until 1689. Owing to the scattered nature of the sources, the variants between concordances are much greater than is the case with the vocal music.

The most striking aspect in all the organ manuscripts is the selectivity with which they were compiled. Walther was interested only in Buxtehude's chorale settings, and most of these works owe their preservation to seven separate manuscripts in his hand. The rest of the larger manuscripts, however, together with Lindemann's collection, show a decided preference for free organ works, especially praeludia. The oldest of these is the 'codex E.B. 1688' at Yale University, which was copied in Dresden by Emanuel Benisch, probably in 1688. A different repertory of praeludia survives in a family of manuscripts circulated among pupils of Bach; one of these (in *B-Bc*) was copied by J.F. Agricola, another belonged to Kirnberger. These manuscripts contain only pieces with obbligato pedal and were largely extracted from an earlier collection which also contained preludes and canzonas for manuals alone (*D-Bsb* Mus 2681), which once belonged to J.N. Forkel. A final example of the selective manuscript compiler is seen in Johann Christoph Bach (1671–1721), J.S. Bach's elder brother. Among his unique copies of pieces by Buxtehude (in *D-LEm* and *D-Bsb*) are the three ostinato pieces and the famous Praeludium in C with its *ciaccona* (BUXWV137)

There is as yet no complete chronology of Buxtehude's works. Research on the manuscripts of the Düben collection by Grusnick, Rudén and Snyder has established dates for the copying of many of his vocal works, giving a *terminus ante quem* that may be quite close to the date of composition. Most of them came into the collection during the years 1680–87. Those copied before 1680 show a greater preference for concertos and arias with Latin texts, and for strict ostinato and contrapuntal procedures; most of the cantatas appear after 1680. Very

little vocal music survives from the 20 years of Buxtehude's life after Gustaf Düben ceased collecting in 1687. Although the Lübeck tablature A 373 was copied later, not all of its repertory is more recent, for there are a number of concordances with the Düben collection. This manuscript seems, moreover, to have been compiled with the intention of providing a representative selection of Buxtehude's music; there is a higher proportion of cantatas here, however, including three of the five mixed cantatas. Anders von Düben (ii) visited Buxtehude in Lübeck in 1692 and returned with copies of two sonatas. Linfield has demonstrated that Buxtehude's composition of chamber music extended from the early 1660s (BUXWV270) to his op.2 of 1696.

A chronology for the organ music is more difficult, since most of the existing manuscripts were copied after Buxtehude's death. Snyder's hypothesis (1987) that the Marienkirche organs were tuned in 1641 to modified mean-tone allowing E♭/D♯ equivalence, further in 1673 for G♯/A♭, and in 1683 to Werckmeister's 'first correct temperament' from his *Orgel-Probe* (1681) (no.III in his *Musicalische Temperatur*) has suggested a *terminus post quem* of 1683 for the composition of those works that require a circulating temperament. Working also from a thorough revaluation of the sources, a study of the keyboard compasses of the organs that Buxtehude played and a consideration of stylistic elements, Belotti (1995) proposed a chronology for the free organ works divided into three categories: those certainly composed before 1690 (BUXWV136, 139, 142, 144, 148–9, 152, 154–5, 158, 162, 166–7, 169–70, 173 and 175), those probably composed before 1690 (BUXWV140–41, 143, 145, 153, 156, 163–4, 168, 171 and 176), and those which may have been composed after 1690 (BUXWV137, 146–7, 150–51, 159–61, 165 and 174). Schneider (1997) proposed that all the chorale fantasias were composed relatively early with only BUXWV194 and 195 after 1673. Many of the chorale preludes can be played in mean-tone, but this does not necessarily mean that they were composed before 1683.

It is clear from the state of the sources that Buxtehude was regarded in the 18th century as a composer of keyboard music, and the scanty biographical notices from Walther and Mattheson reinforce this picture. Buxtehude scholarship began with Spitta's Bach biography in 1873, and he too was interested primarily in the organ music, with a decided preference for the free works over the chorale settings. He also published the first comprehensive edition of Buxtehude's organ music (1875–6), which Seiffert later revised and enlarged. Interest in Buxtehude's organ music began in France in 1879, when Alexandre Guilmant performed it on the new Cavaillé-Coll organ at the Trocadéro in Paris. The only vocal music known to Spitta was the Lübeck tablature, but following Stiehl's discovery in 1889 of the works by Buxtehude at Uppsala there was a definite shift of interest to the vocal music, which is evident in Pirro's monograph of 1913. Publication of a complete edition of Buxtehude's vocal works began in Germany in 1925 but reached only the eighth volume. A new international edition, begun in 1987, will complete the publication of the vocal works and include also the keyboard and ensemble music. Buxtehude's vocal music continued as the main focus of scholarly interest during the 1960s, but a revaluation of Buxtehude's historical importance by Krummacher (1966–7) concluded that it lay more in his organ music, and a concurrent reawakening of scholarly activity on Buxtehude's organ music has continued unabated. Stiehl published most of Buxtehude's chamber music in 1903, but only in the late 1970s did it begin to attract much attention from scholars and performers.

Interest in all genres of Buxtehude's music inceased considerably during the last two decades of the 20th century, and performances, recordings, scholarly activity, new editions and conferences were occasioned by the 350th anniversary of his birth. At the beginning of the century Buxtehude was regarded primarily as a precursor of Bach; at its close his reputation as an important composer of keyboard, vocal and instrumental ensemble music rested secure.

KERALA J. SNYDER

Buyanovsky, Vitaly (*b* Leningrad, 27 Aug 1928; *d* St Petersburg, 7 May 1993). Russian horn player. He studied at the Leningrad Conservatory with his father Mikhail Buyanovsky, who was first horn of the Kirov Opera, and in 1953 won the Reicha Competition in Prague. In 1955 he became principal horn in the Leningrad PO, and in 1959 won the gold medal at the international competition in Vienna, surprising Western audiences unaccustomed to the tonal characteristics of the isolated Russian wind school. Despite the unfamiliarity of his vibrato-laden style, Buyanovsky won admirers in the West for the technical control and musical conviction evident in his solo and orchestral recordings. As professor at the Leningrad Conservatory from 1959, he influenced an entire generation of Soviet hornists. He composed adventurously for his instrument, his most significant work being the unaccompanied solo sonata.

OLIVER BROCKWAY

Buyevsky, Borys (*b* Kryvy Rig, 7 June 1934). Ukrainian composer. He graduated from Kharkiv Conservatory where he studied composition with Klebanov (1959), after which he taught at the Donets'k music school (1959–61) and then settled in Kiev. Buyevsky first achieved acclaim with his variety songs (in which he was one of the first composers from the Ukrainian *levoberyozh'ye* [left bank] to use the folklore of the Carpathian region) and has also written a great deal of film music. Since the 1970s he has become more active as a composer of symphonies which introduce features new to Ukrainian music (such as the evocations of urban life in the second and sixth symphonies, and the elements of farce and the grotesque in the fourth and ninth).

WORKS
(*selective list*)

Ballets: Pisnya syn'ogo morya [Song of the Blue Sea], 1965; Ustym Karmalyuk (3), str, 1980 [in the form of 3 concs.]
10 syms.: 1965, 1975, 1976, 1979, 1981, 1984, 1985, 1986, 1987, 1988
Other orch: Suite no.1 'Ukrainian', 1959; Ov. [no.1], 1961; Suite no.2, 1968 [after ballet Pisnya syn'ogo morya]; Va Conc., 1980; Vc Conc., 1980; Vn Conc., 1980; Ov. [no.2], 1981
Vocal: Mandrivky sertsya [Wanderings of the Heart] (orat, L. Kostenko, T. Kolomyets), 1964; vocal cycles (W. Shakespeare, P. Verlaine, R. Burns)
Many film scores incl.: Kak kozaki olimpiytsami stali [How the Cossacks became Olympic Competitors]; Kak kozaki v futbol igrali [How the Cossacks Played Football]

Bužarovski, Dimitrije (*b* Skopje, 8 Aug 1952). Macedonian composer. He studied the piano and composition at the University of Skopje before attending the Belgrade Academy of Music (MA in composition, 1976); he defended his doctoral dissertation on the aesthetics of music at the university in 1984. He served as head of

music programmes at Skopje Television, and in 1991 was appointed professor at the university's school of music, where he subsequently became dean. He was a Fulbright research fellow at Boston University in 1985, and has since revisited the USA on several occasions to give lectures, performances and to engage in research. His early works are neo-classical. His style from the mid-1980s he defines as polystylistic: incorporating elements of folk, jazz and rock, his music employs electronics and computers both in performance and as an aid in composition.

WORKS

JANA ANDREEVSKA

Buzine. *See* BUISINE.

Buzzolla, Antonio (*b* Adria, nr Rovigo, 2 March 1815; *d* Venice, 20 March 1871). Italian composer and conductor. He learnt to play several instruments with his father, Angelo, who was *maestro di cappella* at Adria Cathedral and *primo violino* at the theatre. In 1832 he went to Venice to study at the school of Antonio Pizzolato, and joined the orchestra of La Fenice as flautist and violinist. Buzzolla was highly sought after as an accompanist and as a composer of barcarolles, ariettas and canzonettas in Venetian dialect, of which several were published by Lucca and Plet. Many of these works can still be considered small masterpieces of the genre because of their fresh melodic grace and refined craftsmanship. His first opera, *Il Ferramondo*, was performed successfully at the Teatro S Benedetto on 3 December 1836. He completed his studies at the Naples Conservatory from 1837 to 1839 under Donizetti and Mercadante. After his return to Venice in 1839 he had two more operas performed there (*Mastino della Scala* and *Gli avventurieri*), with only moderate success.

In 1843 Buzzolla travelled to Berlin, where he served as conductor of the Italian Opera and taught and conducted at the court of Friedrich Wilhelm IV of Prussia. He toured Poland and Russia and in 1847 went to Paris where he was conductor at the Théâtre Italien and became acquainted with Rossini. Returning to Venice, he took part in the Revolution of 1848 and had two more operas performed at La Fenice: *Amleto* and *Elisabetta di Valois*. In 1855 he was appointed *maestro primario effettivo* at S Marco and in 1867 he helped found the Società dei Concerti Benedetto Marcello, which later became the conservatory. Among Buzzolla's students there were Boito and Drigo.

Buzzolla also wrote some fine sacred music and was invited by Verdi to contribute to the collaborative Requiem for Rossini in 1869.

WORKS

OPERAS

first performed in Venice unless otherwise stated

Il Ferramondo (os, 2), S Benedetto, 3 Dec 1836
Mastino I della Scala (op, G. Fontebasso), S Benedetto, 31 May 1841
Gli avventurieri (ob, 2, F. Romani), Fenice, 14 May 1842
Amleto (os, G. Peruzzini, after W. Shakespeare), Fenice, 24 Feb 1848
Elisabetta di Valois (F.M. Piave), Fenice, 16 Feb 1850
La puta onorata (after C. Goldoni), inc.

OTHER WORKS

Vocal (many sacred works in *I-Vlevi*): Requiem (1846); Miserere; other masses; cants.; songs, incl. Serate a Rialto; ariette veneziane
Inst: syms., ovs., concs., pf pieces

GIOVANNI CARLI BALLOLA/ROBERTA MONTEMORRA MARVIN

Byalik, Mikhail Grigor'yevich (*b* Kiev, 13 March 1929). Russian musicologist. He graduated from the Kiev Conservatory as a musicologist (1951) and pianist (1953). He completed his education in Leningrad at the Institute of Theatre, Music and Cinematography, where he took the *Kandidat* degree with a dissertation on the works of Revuts'ky. In 1968 he became a professor in the departments of performance and music criticism at the Leningrad Conservatory; in 1988 he began simultaneously giving classes at the Theatrical Academy. Byalik's sphere of interests is broad, and includes the music of his Leningrad contemporaries, the art of conducting and other forms of performance, and music theatre production. He is among the leading music theatre critics in St Petersburg and works for a number of newspapers and journals.

ERA BARUTCHEVA

Bychkov, Semyon (*b* Leningrad [now St Petersburg], 30 Nov 1952). Russian conductor, active in the USA and Germany. He is the brother of Yakov Kreizberg. He began conducting lessons at the Glinka Choir School in Leningrad at the age of 13 and entered the Leningrad Conservatory in 1970, where he studied the piano and was a conducting student of Ilya Musin. In 1973 he won first prize in the Rachmaninoff Conducting Competition. He left the Soviet Union two years later, enrolling as a

conducting student at the Mannes College of Music in New York City, where he directed the student orchestra for the next four years. In 1980 he became chief conductor of the Grand Rapids SO in Michigan and principal guest conductor of the Buffalo PO. By the mid-1980s Bychkov was conducting important European orchestras, including the Concertgebouw and the Berlin PO. In 1985 he was appointed music director in Buffalo, and in 1989 he was made music director of the Orchestre de Paris, a position he held until 1998. With the orchestra he made numerous recordings, including *Yevgeny Onegin*, *Cavalleria rusticana* and works by Bizet, Ravel, Dutilleux and Berio. From 1990 to 1994 he was principal guest conductor of the St Petersburg PO, and from 1992 to 1998 principal guest conductor of the Maggio Musicale in Florence. During the 1990s Bychkov devoted much of his time to opera, garnering engagements at La Scala, the Lyric Opera of Chicago and the Aix-en-Provence Festival. He made his début at the Vienna Staatsoper, conducting *Elektra*, in 1999. In 1997 he became chief conductor of the WDR SO in Cologne and in 1999 chief conductor of the Semperoper in Dresden. Bychkov, who became a naturalized American citizen, is married to the pianist Marielle Labèque.

DAVID MERMELSTEIN

Bydgoszcz (Ger. Bromberg). Capital city of the Bydgoszcz province of Poland. The earliest information on musical life in the city's religious institutions (churches, monasteries and the Jesuit College) dates from the 16th century. By the 17th century the clerical schools had their own musical establishments, and the earliest information about the teaching of music, in the Carmelite convent school, dates from 1669. Other extant souces record the building of church organs by the Bernardines in 1618. In the 17th and 18th centuries, when the city suffered greatly from war and plague, theatrical works were performed at the Jesuit College. During the long period of Prussian rule (1772–1919) the city's Polish inhabitants struggled to sustain a sense of Polish cultural identity. In 1824 a new Stadttheater was built and regular guest appearances by the company from Poznań were organized. It was only in the second half of the century that Polish operatic troupes began to perform regularly in the city. From 1885 to 1902 summer seasons were given by the Polish Theatre from Poznań, presenting works such as Moniuszko's *Halka* and many Polish folk pieces; these were forbidden by the German authorities in 1902. In 1883 the 'Halka' male-voice choir was founded, and other choral groups were established from the turn of the century.

After Poland regained its independence in 1918 there was an upsurge in cultural activity. In 1922 the Bydgoskie Towarzystwo Muzyczne (Bydgoszcz Music Society) was established, under whose auspices various choirs were formed. In 1927 a conservatory was founded under the direction of Zdzisław Jahnke. Polish Radio opened a studio in Bydgoszcz in 1937, and in 1938–9 the city established a concert subscription series for its own 46-member symphony orchestra. Other musical institutions during this period included a salon orchestra, a broadcasting ensemble, the collegium musicum of the conservatory, comprising an orchestra and choir performing early music, and two private music schools.

After World War II institutions which had been destroyed during the German occupation were rebuilt. In 1945 the conservatory was reconstituted as the Pomorską Średnią i Niższą Szkołę Muzyczną (Pomeranian Middle and Lower Music Schools). In 1946 the city opened the Pomorski Dom Szłuki (Pomeranian House of Culture), with a concert hall in which daily concerts were given. Two symphony orchestras were established in parallel: the Bydgoszcz Radio Orchestra, under the direction of Arnold Rezler, and the Pomeranian SO, later known as the Pomeranian PO. In 1956 the Teatr Muzyczny Opery i Operetki (Musical Theatre of Opera and Operetta) was opened; it became state owned in 1960, and was renamed the Państwowa Opera (State Opera House) in 1980. In 1992 the company moved into its own 1000-seat theatre. The chamber ensemble, Capella Bydgostiensis, created in 1962, performs on period instruments. The Gmach Filharmonii (Philharmonic Hall) was built from 1951 to 1958. Many leading international soloists and conductors have appeared there, including Stokowski, Rubinstein, Richter and David and Igor Oistrakh.

The Akademia Muzyczna im. Feliksa Nowowiejskiego (Nowowiejski Academy of Music) grew out of two pre-war institutions: the Instytut Muzyczny (Music Institute) and the Konserwatorium Miejskiego (City Conservatory). In 1974 the Nowowiejski Music Academy was affiliated to the State High School of Music in Łódź, and in 1979 became an independent institution. The academy has reciprocal arrangements with the Staatliche Hochschule für Musik und Theater in Hamburg, and music schools in Osaka, Bratislava and Greifswald, as well as with other Polish musical institutions.

Bydgoszcz hosts, in alternation, two important music festivals. The Bydgoszcz Music Festival, founded in 1963, was initially devoted to Polish early music, but later broadened its scope to include Polish contemporary music, including works specially written for the festival by Górecki, Kilar and Twardowski. Since 1992 the theme of the festival has been 'The Integration of Europe in Music'. The International Music Festival for Central and Eastern Europe has been held every three years since 1966, in association with the musicological congress 'Musica Antiqua Europae Orientalis'. Music publishing in Bydgoszcz centres on the imprint Z dziejów muzyki polskiej (From the history of Polish music), a company which publishes series of materials from the history of early Polish music.

JOLANTA GUZY-PASIAKOWA

Byers, David (*b* Belfast, 26 Jan 1947). Northern Irish composer. He studied composition with Raymond Warren (1965–7) at Queen's University, Belfast, and in 1968 became the Manson Scholar at the RAM, where he studied with James Iliff. Funding from the Belgian and Irish governments enabled him to study with Pousseur in Liège from 1972 to 1973. In 1977 he became a producer for BBC Northern Ireland.

The impulse for many of Byers' compositions, whether instrumental or vocal, is poetry; his scores often begin with a poem or quotation. His use of poems by the Belfast-born poet Joseph Campbell in the song cycle *Moon-Shadows*, the orchestral work *The Moon is Our Breathing* and the preface to *Canto* for solo flute, clearly illustrates his keen interest in both English literature and Irish culture. Pre-existing musical sources are also common elements of his compositions. Whether plainsong (*The Journey of the Magi*), psalm (*Dunfermling Rune*), folk song (*The Harp that Once*) or French chanson (*Cerises d'amour*), borrowed material is transformed to the point where it is barely recognizable.

Byers' compositions combine strong linearity with intricate polyphony. Pitch material is structured through the use of note rows of varying lengths, devices the composer calls 'nets' and 'sieves' that generate intervallic structures, and magic squares. The resultant musical language is harmonically eclectic, covering the spectrum from diatonic to densely chromatic.

MICHAEL RUSS

Byfield. English family of organ builders.

(1) John Byfield (i) (*b* ?London, *c*1694; *d* Wolverhampton, 1751). He married Renatus Harris's daughter Catherine, and started in partnership with his brother-in-law John HARRIS in 1725. He built several important organs with Harris and, after the latter apparently retired in about 1740, he continued on his own, probably assisted by his son. He was highly reputed for his reed voicing (John Stanley said that his reeds in the 1740 Doncaster parish church organ were worth their weight in silver); in this, as in his specifications, he followed the Harris tradition. Together with Harris he built new organs for the City of London churches of St Alban Wood Street (1728–9) and St Bartholomew-by-the-Exchange (1732), and added Swell departments to many existing organs, for example at St Mary Abbots, Kensington (1730), Holy Sepulchre without Newgate, London (1739; payments were made to 'Mr. Byfield and Co.'), the Temple Church (1741) and St Andrew Undershaft, London (1749). He made considerable alterations to the Renatus Harris organ in St Botolph Aldgate (1744), London, almost certainly adding a new case. The case there, with gabled cornices over the pipe flats, is very similar to others from his workshop, including those at St Lawrence's, Reading (1741), and St Mary's, Truro (*c*1750; now part of the cathedral). His last work was a new organ for Christ Church Cathedral, Dublin (1751); he took the old Renatus Harris organ there in part exchange. Byfield died on the return journey to England and his widow sold the instrument to St John's, Wolverhampton, where it survives (though reconstructed).

(2) John Byfield (ii) (*d* London, 1767). Son of (1) John Byfield (i). He evidently succeeded to his father's business in 1751, and like him was a good reed voicer. He almost certainly built an organ for the Music Room of Curzon House, South Audley Street, in about 1760. The case of this organ is now in the parish church of Thorpe Morieux, Suffolk. An excellent example of his work survives at St Mary's, Rotherhithe, London (1764), where there is a relatively unaltered Great diapason chorus and Trumpet and a very handsome Rococo case. For Grant Castle, Scotland, he made a large chamber organ in 1766; the entire instrument survives, with remarkably little alteration, at Finchcocks, Goudhurst, Kent. It is an organ of exceptional importance as one of the very few from the 18th century in a trustworthy state.

(3) John Byfield (iii) (*d* ?London, *c*1799). Son of (2) John Byfield (ii). He was in partnership with SAMUEL GREEN, a builder of approximately the same age, in 1768–72, and was organ builder to the royal household in 1770–82. With Green he built at least ten organs; the case survives of their instrument of 1770 in St Margaret's, Barking, Essex. At St Mary, Islington, an elaborate four-towered case dating from 1771 by Byfield and Green survived until World War II. Between 1774 and 1780 he seems to have been in loose partnership with England and Russell, working with them at Christ's Hospital, London, in 1780. He is mentioned in a number of City of London parish records in connection with tuning and repairs to City organs as at St Katharine Cree, St Bride's, Fleet Street, St Andrew Undershaft and St Edmund the King. In these parish accounts there is mention of a salary for 'John Byfield and Son' in 1793. Possibly the last work carried out by John Byfield (iii) was at St Andrew Undershaft in 1799.

(4) John Byfield (iv) (*b* 1766; *d* ?1806). Son of (3) John Byfield (iii). He and his father provided an organ for St Bartholomew-the-Less, Smithfield (1794), on an annuity basis, and payments ceased after 1806; the agreement with the parish stated that the 28-year-old Byfield would be paid until his own decease and that of his sister, Mary Frances.

Bykanē [bukanē] (Gk.). Ancient Greek brass instrument, the Roman BUCCINA. *See also* IBYCUS.

Byland, Ambrose. *See* BEELAND, AMBROSE.

Bylsma, Anner (*b* The Hague, 17 Feb 1934). Dutch cellist. He studied with Carel van Leeuwen Boomkamp at the Royal Conservatory, The Hague (1950–55), and was awarded the Conservatory's prix d'excellence in 1957. The following year he was appointed principal cellist of the Netherlands Opera Orchestra and in 1959 won first prize in the Casals Competition in Mexico. From 1962 to 1968 he was principal cellist of the Concertgebouw Orchestra, Amsterdam (1962–8). During this time he began to tour the world as a soloist and chamber musician and made his British début at the Wigmore Hall in 1963. Bylsma is renowned for his versatility, and uses both period and modern instruments. In addition to his solo performances he has made many trio appearances with Frans Brüggen and Gustav Leonhardt, and is a co-founder of the chamber ensemble L'Archibudelli. He teaches at the Royal Conservatory, The Hague, and the Sweelinck Conservatorium, Amsterdam, and also gives master-classes throughout the world. He has made many recordings, ranging from Bach's solo suites and Vivaldi concertos to works by Schumann and Brahms. His playing is based on a faultless technique and a lyrical tone of uncommon sweetness and purity. He plays a Gofriller Baroque cello, dated 1695, on which he uses two gut and two silver-plated strings. His modern cello is a Pressenda dated 1865, on which he has an all-gut A string, an aluminium D and silver-wound gut for the lower strings. (*CampbellGC*)

MARGARET CAMPBELL

Byrd, William (*b* London, *c*1540; *d* Stondon Massey, Essex, 4 July 1623). English composer.

1. Early years. 2. Lincoln, 1563–70. 3. London, 1570–75. 4. London, 1575–93. 5. Anthologies of 1588–91. 6. Late years, 1593–1623: liturgical music. 7. Late songs and instrumental music. 8. Byrd in his time and ours.

1. EARLY YEARS. Byrd was born in London, the son of a Thomas Byrd of whom little is known (Harley; source of much new information on Byrd's life). Though a family genealogy has survived, record of William's birth has not, and his birth date is deduced from a deposition of October 1598 where he gave his age as '58 yeares or ther abouts'. The Byrds styled themselves 'gentlemen'; Symond, the oldest brother, took out a coat of arms in 1571. A family member had been an abbot, and the composer was able to arrange a marriage between his oldest son Christopher and a great-granddaughter of Sir Thomas More.

While Symond and another older brother, John, are listed as choristers at St Paul's Cathedral, William's name does not appear. It is assumed that he was brought up in the Chapel Royal (whose records do not name the choirboys), for he is said to have been a pupil of its organist and most eminent figure, Thomas Tallis. Byrd was later very close to Tallis, witnessing both his and his wife's wills, and it seems likely that after Byrd's voice broke he stayed on at the Chapel Royal as Tallis's assistant. This would have put him in an advantageous position when a post became available at Lincoln in 1563.

Several of Byrd's surviving compositions date from his teens. The three-part *Sermone blando* for consort and the second organ *Miserere* are typical student works, involving strict or free canons over a plainchant melody, and the two-part organ hymns and antiphons in the manner of John Redford and Thomas Preston inhabit a different world from Byrd's other music. One or two vocal works (motets) for the Sarum Use, the form of Catholic liturgy used in most of England, would appear to have been composed before the death of Queen Mary in 1558, that is, before Byrd was 18. *Similes illis fiant* is an unusual collaborative cantus firmus setting with John Sheppard and Thomas Mundy; although the musical style is of course more like theirs than his, features have been detected in it suggestive of the composer to come. The Easter antiphon *Christus resurgens* provided a favourite cantus firmus for competitive setting which he might have approached as a technical exercise after the liturgical conditions for it had lapsed. Again, though this work is more primitive than Byrd's later cantus firmus settings, there are touches in it to admire, and he thought well enough of the piece to publish it in 1605.

2. LINCOLN, 1563–70. Byrd was appointed to the position of Organist and Master of the Choristers at Lincoln Cathedral on 25 March 1563, taking on the educational duties that such a post implies. He was given a larger salary than usual and also received a long-term grant of a rectory at Hainton, Lincolnshire, presumably by way of extra emolument. In 1568 he married Julian Birley, who came from a Lincolnshire family, and their first children, Christopher and Elizabeth, were baptized in the cathedral close in 1569 and 1572. Born later were Thomas (1576–*c*1652; he became a musician and spent some time in the Jesuit college at Valladolid), Rachel and Mary.

A dispute between Byrd and the cathedral chapter in 1569 was serious enough to cause a suspension of his salary; though few of the documents have survived, it seems that an increasingly Puritan chapter resented Byrd's protracted organ playing in the services as too popish. This is the first indication of the stubborn Catholicism that was a defining feature of Byrd's life and works. The dispute was resolved, and in 1573, after he had left for London and his successor had been appointed (at a lower salary), the chapter heeded representations from certain 'noblemen and councillors of the Queen' and agreed to continue paying Byrd. On condition that he send it 'church songs and services' from time to time, he received a quarter of his former salary up to 1581. This is the first indication of the composer's proficiency in the great Elizabethan art of applying influence, and in the management of his financial affairs in general.

At Lincoln Byrd found his stride as a composer; the chapter knew what it was doing when it drew up its condition. Although the chronology of his music is naturally uncertain at many points, and it is only from later that we have a good number of dated sources, internal musical evidence allows us to draw up a reasonable list of works composed at Lincoln. A striking feature of this early music is the large number of styles, forms and genres that Byrd essayed and the rapid, sure moulding of them all into something individual. It is as though he had embarked on a deliberate programme of experimentation, both in the kinds of music he wrote and in the composers whose work he looked to. Tallis, Redford, Christopher Tye, Robert White, Robert Parsons, William Hunnis and (a little later) the émigré composers Philip Van Wilder and Alfonso Ferrabosco (i) served him

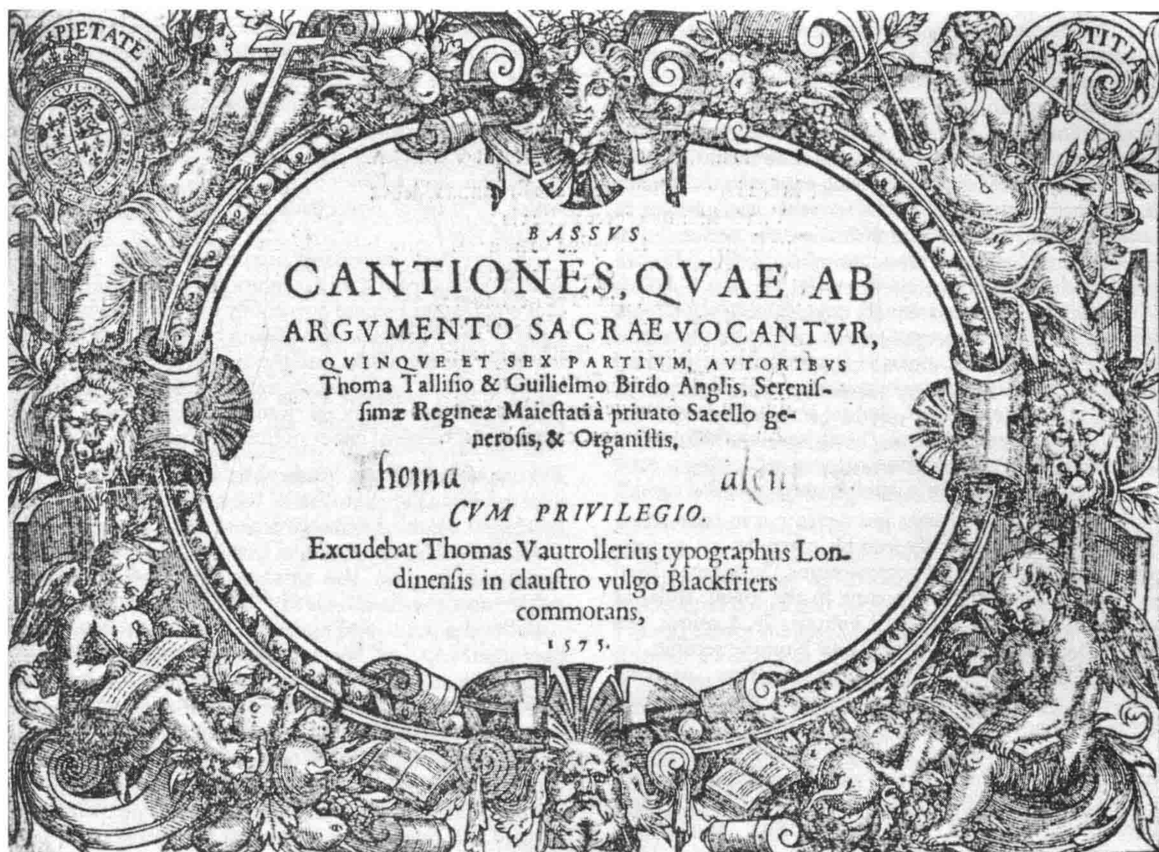
as models, sometimes suggesting general ideas, techniques, textures or groundplans, and sometimes providing material that he could quote directly.

Of his organ music, the three linked settings of *Clarifica me, Pater*, and perhaps other works, show signs of having been composed in the Lincoln years. The third *Clarifica*, in four parts, is Byrd's first exciting composition. And at Lincoln he laid the foundations for what was perhaps to be his greatest single accomplishment, the perfection of English virginal music from primitive beginnings. In works like those described by his pupil Thomas Tomkins as 'Byrd's old fancy' and 'Byrd's old ground' (MB 62 and 86), one can see his emerging control of 'open' expansive form on the one hand and of 'closed' periodic form on the other. In an ambitious but uneven variation work, *The Hunt's Up* (MB 40; not to be confused with the patently spurious work printed as no.41 in the MB edition of 1969 and 1976), Byrd wrestled with a longer bass pattern than those of his earlier grounds; he drew on this work for several later ones and rewrote it in later years. (This practice, incidentally, can be inferred for a surprisingly large number of his compositions.) In general, Byrd was more successful at this time in the 'open' style, as witness the brilliant keyboard Fantasia in A minor, the best of the early motets, and the In Nomine settings for consort. To judge from the few manuscripts surviving from this period, the In Nomines were the first of his works to circulate widely.

Byrd's earliest settings of English poems are consort songs for one voice and four viols. Similar songs were written in the 1560s by such composers as Parsons, Richard Farrant and Nicholas Strogers, and Byrd's *Triumph with pleasant melody* is a fair example of the style at its most elementary and drab. His consort settings of metrical psalms, however, show a characteristic advance in their more interesting vocal lines and consistent imitative counterpoint in the string parts. Certain of these psalms, in which the stanzas end with simple choruses, come close to verse anthems – another genre developed in the early 1560s by Farrant, Mundy and Hunnis. Byrd followed them closely. His verse anthem *Alack, when I look back* takes over both words and music of a similar composition by Hunnis (see Monson, 1982).

Most of Byrd's English liturgical music (except for the Great Service) seems to have been written at Lincoln, even though apparently little polyphonic music was required there. Was he writing this music already with an eye to London? A hard look at his output of Anglican music encourages the suspicion that he set out to establish his mastery in each of its genres – Preces, psalms, simple and festal services and so on – with one or two commanding works, and then cultivated them no further. This is rather different from Fellowes's picture of an unstoppable flow of sacred composition spilling ecumenically over Anglican and Catholic genres alike. In any case, Byrd's famous Short Service became a staple of the cathedral repertory and a fixture after it appeared in John Barnard's *First Book of Selected Church Musick* (1641). The melodic freshness and harmonic variety of this work mark an obvious advance over its model, the Short Service of Tallis.

Some of the Latin motets published in 1575 were evidently also written considerably earlier. These include the most subtle of Byrd's cantus firmus motets, *Libera me, Domine, de morte aeterna*, the brilliant if naive psalm motet *Attollite portas*, and the long tripartite collect *Tribue, Domine–Te deprecor–Gloria Patri* set in the form of the ancient votive antiphon and in a style (or rather, styles) best described as a dazzling concatenation of old and new. The astonishing eight- and nine-part settings in continuous imitative style of Psalms cxx and xv (*Ad Dominum cum tribularer* and *Domine, quis habitabit*), which Byrd never published, also seem to date from the Lincoln years.



Another very impressive unpublished early composition, a setting from the Lamentations, is the first of many that employ fluid, dense polyphony to achieve gravity and pathos. The work lacks the smooth consistency of White's five-part Lamentations and the simple intensity of those by Tallis. In its contrapuntal sweep, however, and in the powerful rough climax on 'Jerusalem convertere', it goes beyond the range of either of the older composers.

3. London, 1570–75. Byrd was sworn in as a Gentleman of the Chapel Royal in February 1572, after the accidental death of Robert Parsons. He is also described as joint organist of the chapel with Tallis, the description appearing first on the title-page of their first joint publication, the *Cantiones* of 1575 (see illustration).

In London, as Squire remarked, Byrd 'seems rapidly to have made his way'. From his first years in the chapel and on through the next two decades, he is found in association with important persons. Powerful Elizabethan lords figure among the dedicatees of his various publications; Thomas, Lord Paget, the Earl of Worcester and the Petre family were to become his special patrons. In about 1573 he obtained the lease of a property in Essex from the Earl of Oxford, the poet; this was the first of several leases that plunged Byrd into endless litigation. Among his song texts are poems by Oxford, Sidney, Thomas Watson and Sir Edward Dyer, including some that he could only have come by as a result of direct contact with the advanced poets of the 1570s and 1580s. The same is true of certain anonymous song texts with a decided 'literary' flavour.

The Earl of Oxford was a Catholic, as were all of Byrd's closest associates and patrons. His first major patron was Paget, a music enthusiast who later employed Peter Philips; Paget may have known Byrd as early as 1573, and by 1585 was providing him with an annuity. Indeed the composer seems to have acted as a sort of coach to a circle of noble amateurs who were sending each other their works. 'I understand that youe thinke there was a berd sange in my ere that made me alter my vayne', wrote the future Earl of Worcester to Paget. 'Yt is verye true the thing came not to youe wth owt the sight of m^{r} byrde, saving the last part wch he never sawe.' An undertone of respect in this correspondence confirms the impression that Byrd moved easily among the Elizabethan aristocracy; in 1579 the Earl of Northumberland called Byrd 'my friend' (Byrd was teaching his daughter). These men were Catholic activists; Northumberland was executed in the wake of the Throckmorton plot, and Paget fled the country. Worcester was also Catholic, but famously loyal to the throne. He remained a music enthusiast – a catalogue survives of his extensive library – and became another of Byrd's patrons: he was the dedicatee of the *Cantiones sacrae* of 1589. Byrd had a room in Worcester's house in London.

Queen Elizabeth I, too, must be counted among Byrd's benefactors. In 1575 she granted Byrd and Tallis a patent for the printing and marketing of part-music and lined

Title-page of the 'Cantiones' (London, 1575), published by Byrd and Tallis under their royal patent for music printing; it has the first continental-style music title-page used in England, adapted from Le Roy by the printer Vautrollier for his London edition of Lassus's chansons in 1570

music paper, a trade with only a very limited history in England up to that time. They issued the famous *Cantiones, quae ab argumento sacrae vocantur*, comprising Latin motets for five to eight voices by both composers, and dedicated it with much ceremony to the queen. The prefatory matter includes a poem in Latin elegiacs by Richard Mulcaster, a foremost Elizabethan scholar and educator, praising the art of music, the queen and the two composers in lavish terms, and even claiming that the publication would spread the fame of English music abroad. It has rather the air of a combination thank-offering to the queen and advertisement for the new business, furnished with patriotic rhetoric as insurance against the charge of promulgating music with texts taken in some cases from the Roman liturgy (though to be sure, never with any explicit sectarian reference). Even the laboured title may have been composed with this in mind – 'Songs which are [strictly speaking not sacred but only] called sacred on account of their texts'. In 1586 a suspect under interrogation allowed that 'songes of Mr byrdes and Mr Tallys' had been sung, but 'no other unlawfull song'.

Since Queen Elizabeth accepted the dedication of the *Cantiones*, it seems reasonable to suppose that the motets, or some of them, were sung in her Chapel Royal. They were surely written to be sung somewhere; and it is known that Elizabeth liked the Latin service. However this may be, the publication was a failure, and the chastened monopolists published nothing more for 13 years. In 1577 they complained to the queen that the patent was a source of little profit and petitioned for further benefits in terms which, said Fellowes, 'may be regarded as lacking a little in dignity'. Few Elizabethans would have regarded the matter in this light, and Byrd received the lease of the manor of Longney in Gloucestershire – the source of another litigation in his old age. The audacity of this entire episode suggests that the driving force behind it was Byrd rather than Tallis.

His motets published in 1575 are full of musical audacities, too. Their variety of experimentation, novelty and expressive range must have dazzled contemporary musicians. Next to some of the older pieces already mentioned, which draw imaginatively on native traditions of church music, there is a newer group of penitential motets which show a significant foreign influence by way of Alfonso Ferrabosco, the prolific Italian composer who was in England in Elizabeth's service intermittently between 1563 and 1578. (The two composers wrote canons on the *Miserere* plainchant in a 'vertuous contention'; a seemingly unauthorized edition of these canons, *Medulla: Musicke sucked out of the sappe of two of the most famous musitians that ever were in this land*, was announced in 1603 but never published.) As a motet composer, 'Master Alfonso' had absorbed, a little stiffly, the early style of Lassus. Through Ferrabosco, Byrd came to know – and became, it seems, the first English composer really to understand – classical imitative polyphony.

One technique he learnt and used extensively was 'double imitation' (Andrews, 1966) – imitation based on a subject which, being moulded distinctively to two text fragments, breaks down into two sub-themes which can be developed and combined freely. Byrd's *Domine, secundum actum meum* closely follows Ferrabosco's *Domine, secundum peccata mea* in this technique, though its artistic promise is realized fully only in motets of a slightly later period, such as *Domine, praestolamur* (ex.1; see Kerman, 1994). Notable here is the power Byrd achieved through the flexibility of the expositions of the first sub-theme, and the rhetorical plan whereby the heart of the text-fragment ('adventum tuum') dominates at the end as a result of free strettos on the second. Technical innovations such as double imitation set Byrd's motets in the 1575 *Cantiones* apart from their neighbours by Tallis, fine as they are, as also from Byrd's own earlier work such as the large-scale psalm settings or the Lamentations.

Equally new features in English composition were the use of highly expressive subjects in Byrd's penitential motets in the 1575 *Cantiones*, their long fluent paragraphs constructed in reference to melodic and harmonic goals, and the power with which these paragraphs are often balanced one with another. Ponderous though they may be, and sometimes rough in counterpoint, these motets always convey more urgency and weight than do their models in Ferrabosco, something that is even more true of *Emendemus in melius*, an unusually intense (and concise) essay in affective homophony. This motet Byrd placed at the head of his first group in the publication, and it is one that is often found in copies by contemporary scribes.

Another very popular piece, the variations for five-part consort on the ground *Browning my dear*, was already being copied into manuscripts around 1580. The fecundity of invention shown throughout the 20 variations is astonishing, though hardly more so than the sheer contrapuntal brilliance and the secure layout of the architectural design. Large-scale keyboard masterpieces that represent a comparable level of technique are the Passing Measures Pavan and Galliard (based on the *passamezzo antico* ground) and the variations on the melody *Walsingham*. The development that led from *The Hunt's Up* to these works can be traced through several other grounds and variations, presumably dating from the 1570s.

In the mid-1570s Byrd also started his marvellous series of pavans and galliards for keyboard. 'The first that ever

Ex.1 Byrd: *Domine, praestolamur*

hee made' (MB 29), according to the Fitzwilliam Virginal Book (also according to the numbering in My Ladye Nevells Booke), exists in a version for five-part consort, and other early examples may be suspected of having a similar origin (MB 17 and 23). The result of this is a clear, solid basis in polyphony which provides unique richness in almost all Byrd's pavans and galliards – and a striking contrast or counterpoise to the plastic figuration of the *repetenda*, or strain-variations. In addition, dance form offered him the opportunity for endless subtle manipulations of different rhythms and different phrase lengths, all within the prescribed limits of three times eight or (usually) three times 16 bars. It was a form that proved to be especially congenial to Byrd's genius.

4. LONDON, 1575–93. Between the publication of the *Cantiones* in 1575 and the *Cantiones sacrae* of 1591 lies Byrd's most fertile period as a composer, but also the most stormy in his personal life. Sectarian conflict in England escalated fatefully in the late 1570s with the arrival of seminary priests from abroad and the foundation of the English College at Rome. A turning-point was the brutal execution of Edmund Campion and two other Jesuits in 1581; this event shook all England, not only the Catholic community, and set off the grim chain of Elizabethan religious persecutions. A well-known inflammatory poem about their execution, *Why do I use my paper, ink and pen?*, found its composer; Byrd's song caught the attention of at least one contemporary witness, and in calmer times he actually published it (without, of course, any seditious stanzas).

Laws against recusancy (refusal to attend Church of England services) began to be enforced around 1577; in that year Julian Byrd was cited in Harlington, Middlesex, where the Byrds were now living (Harlington was near a Paget manor in West Drayton). Usually cited with her was a servant, John Reason, a former Lincoln singing man, who was once caught during a raid on a Catholic household delivering a letter from Byrd and some music; Reason ultimately died in gaol. Byrd himself was not cited for recusancy until 1584, probably because as a member of the Chapel Royal he could claim that his abode was London, not Harlington. In later years he and his family were repeatedly presented as recusants and once, in 1605, as long-time 'seducers' in the Catholic cause. At this time they were said to be excommunicated.

Byrd was closely associated with Jesuits; in 1586 he attended a clandestine week-long assembly at a country house to welcome two of the most prominent Jesuit missionaries, Robert Southwell, the poet and controversialist, and Henry Garnet, the future provincial or head of the mission. He played the organ at another gathering at which Garnet was present, in 1605. More seriously, around 1580 a list of 'reli[e]vers of papistes and conveyers of money and other thinges unto them' includes Byrd's name, and in a letter to Paget from a fellow Catholic he is described as no less than a 'Lean-to by whom we are Releved upon every casuale wreke'. It looks as though he were delivering something more to the Catholic underground than music for clandestine services. He may have harboured Jesuits or other fugitives, as the authorities that searched his home suspected; he may even have been in a position to provide financial support, for his brother John was a wealthy money-lender (although not a Catholic).

Less speculative is Byrd's remarkable covert musical contribution to the recusant cause. In the 1580s this appears to have kindled his main compositional energies. The genre he chose for this purpose was the Latin motet. Intimately identified with Roman Catholicism, the motet should by rights have died out in England after the Reformation; it is marvellously apt that it should enjoy a new lease of life at the hands of Byrd and emissaries of the Counter-Reformation. There were few opportunities in England for the public performance of Latin motets, especially with texts of the sort often chosen by Byrd; they must have been destined for domestic, not church, use, particularly in Catholic residencies. Some motets lament for Jerusalem at the time of the Babylonian captivity, some pray that the congregation may be liberated, others ring changes on the theme of the coming of God. Irreproachable texts from the Bible and elsewhere would be read for double meanings. Indeed many of the same metaphors and the same actual texts were familiar to Catholics (and others) from their use in the extensive Jesuit controversial literature of the time. Certain of Byrd's texts correspond to the last words of individual martyrs on the gallows, words that were always reported and dilated upon by hagiologists (Monson, 1997). Thus Byrd's Cantiones of 1589 and 1591 and a tract such as Southwell's *Epistle of Comfort* (1587) are parallel in metaphor and propagandistic intent. Poet and composer were joined in the same project.

About half of Byrd's motets of this period seem clearly to have been directed to Catholics (the others would appeal to Catholics and Protestants alike). A few motets can be linked to particular occasions: *Deus, venerunt gentes*, which laments the bodies of martyrs thrown to the birds and beasts, must refer to Campion, and *Circumspice, Jerusalem*, which celebrates sons returning from the East in the service of God, was very likely Byrd's offering at the welcome for Southwell and Garnet.

What Byrd was doing must have been an open secret, and is all but acknowledged in an exchange of motets between Byrd and Philippe de Monte, Kapellmeister to the Holy Roman Emperor. Monte (perhaps acting ex officio) sent Byrd an eight-part motet with words selected from Psalm cxxxvii: 'By the waters of Babylon, there we sat down, yea, we wept ... How shall we sing the Lord's song in a strange land?'. Using the same psalm, Byrd replied: 'How shall we sing the Lord's song in a strange land? If I forget thee, O Jerusalem, let my right hand forget her cunning' and to drive the point home he included in his motet a three-part canon by inversion.

Despite all this Catholic activism, however, Byrd was never seriously troubled by the authorities. For this his powerful patrons were responsible, including the queen herself. Over and above the printing patent, her major bounty to Byrd was a remittance of some sort for his recusancy (known only from a document in the next reign in which he petitioned for its continuance). Elizabeth's regard for Byrd was revealed most openly in the year of the Spanish Armada, when she had him compose an anthem on words of her own, *Look and bow down*, thanking God for its defeat. Byrd also wrote *Rejoice unto the Lord* for her 20th Accession Day in 1587, and the first known madrigal in her praise, *This sweet and merry month of May* (1590).

Byrd's sense of security in view of this backing helps explain the audacities in his publishing career. His

publication of the Campion song belongs to these; in the 1590s he actually brought out three masses, and while the printer left off the title pages, the composer's name is coolly entered on every page of the music. For the *Gradualia* he was able (no doubt through his connections) to obtain a licence for publication from the Bishop of London (Nasu). Thus emboldened, he spelt out the (Catholic) liturgical scheme in his preface, taking no more precaution than the omission of words from some of the more sensitive items.

5. Anthologies of 1588–91. In 1587 Byrd made a new effort to launch himself into the world of publishing. Both Tallis and Thomas Vautrollier, the printer of the 1575 *Cantiones*, had recently died, leaving Byrd in sole possession of the patent and perhaps also free to make more advantageous business arrangements. He must also have decided that he needed print to order, anthologize and preserve his music; this project occupied him for the next few years. With the printer Thomas East as his assignee, Byrd now presided over the first great years of English music printing – great years in spite of his evident determination not to flood the market (there is evidence that he exerted strict control or even censorship during his years as monopolist).

His great initial success was the *Psalmes, Sonets and Songs* of 1588. This is only the third book of English songs ever known to have been published. The prefatory matter includes (besides the well-known 'Reasons ... to perswade every one to learne to sing') a clear explanation that most of the songs had originally been for one voice and instrumental consort but had been adapted to words in all the five parts. Indeed, earlier consort-song versions of them survive in manuscript. By rescoring them, Byrd presumably meant to capitalize on the new vogue for madrigals, though he took care to designate the original sung line as 'the first singing part' in most cases.

The contents consist of grave 'Psalmes' and 'Songes of Sadnes and Pietie' and lighter 'Sonets and Pastorales', such as *Though Amaryllis dance in green* and *I thought that Love had been a boy*. Some were written in the 1580s (e.g. the fine Campion song and the two elegies for Sir Philip Sidney) but an earlier date is quite possible for others, such as the ten metrical psalms and the *Lullaby*. So famous was this piece that the whole publication came to be known as 'Byrd's Lullabys'. It was intabulated for keyboard (probably not by Byrd) and mentioned in a letter by Worcester, who wrote rather grumpily in 1602 that while Irish tunes were just then all the rage at court, 'in winter Lullaby an owld song of Mr Birde wylbee more in request as I thinke'.

The 1588 set sold out and East printed two further editions before 1593. For a second songbook in 1589, *Songs of Sundrie Natures*, Byrd chose and converted only a few consort songs from his remaining stock; he seems to have composed a good deal of new music and also cast around for material of 'sundrie natures'. There is music for three, four, five and six parts. The book includes a consort song in its original form for voices and instruments, two carols, and the large verse anthem *Christ rising*, which was rewritten for the publication.

Although Byrd produced two accomplished madrigals described as 'in the Italian vein' for the poet Thomas Watson's *First Sett of Italian Madrigalls Englished* (1590), in praise of 'Eliza ... beauteous Queen of Second Troy', the polyphonic songs published in 1589 are only slightly touched by the madrigal style which was fascinating England at that time, but which Byrd obviously found basically unsympathetic.

Also in 1589, Byrd put out the first of his two new collections of motets. The *Cantiones sacrae* (for five voices) assembled motets which with few exceptions had been circulating in manuscript over the previous ten years or so, though for publication Byrd touched them up slightly. The second book of *Cantiones sacrae* (for five and six voices) is more miscellaneous than the first, like the second of the English songbooks. It includes some rather old pieces such as *Cunctis diebus* and some rather new ones such as *Haec dies* and the popular *Laudibus in sanctis*. The unusual half-madrigalian style of the latter motet was adopted to match the text, a 'literary' paraphrase of Psalm cl in Latin elegiac verse.

The basic style of the new motets stems from the rich imitative polyphony of the earlier penitential motets. The counterpoint is now wonderfully supple and there is freer alternation between polyphony, semichoir work and homophony or half-homophony, notably in the frequent appeals 'Miserere', 'Domine, ne moreris', and so on – always an impressive and moving feature of the motets in which they occur. The pieces are smoother and less ponderous than before, though many are still of monumental proportions. The 'Babylon' motets, all of which are very long, depart from this stylistic norm. In *Tribulationes civitatum* and *Ne irascaris, Domine* we hear for perhaps the first time Byrd's characteristic mild major-mode sonorities, with warm 6ths and 3rds and drawn-out pedal or ostinato effects, while in *Vide, Domine, afflictionem nostram* Phrygian progressions agitate the largely homophonic texture: an extreme, almost manneristic composition. *Ne irascaris* is found in two manuscripts dated 1581 and in many others. Purcell's copy of it has been preserved, and its second part, *Civitas sancti tui*, is still often sung (sometimes with its English contrafactum text, *Bow thine ear*).

The motets of the 1580s no longer show the direct influence of Ferrabosco, but there is doubtless much still to be learnt about Byrd's relation to other composers, native and foreign, in the later as well as the earlier periods of his career. *Civitas sancti tui* has been shown to take something from *Aspice, Domine*, a widely circulated motet by Philip Van Wilder (D.Ll. Humphreys, *Soundings*, ix [*recte* viii], 1979–80, pp.13–36). The Sanctus of Byrd's four-part mass is derived from Taverner's 'Meane' Mass – surely a gesture of tribute rather than apprenticeship (Brett, 1981). Two late pavans (no.3 in C and no.2 in F) adopt ideas from younger composers, John Bull and Morley respectively (Neighbour).

Byrd's fifth collection was not a publication but a manuscript, My Ladye Nevells Booke, dated 1591. Here he preserved and, to a considerable extent, ordered the best of his virginal music then written. It opens with two grounds composed specially for Lady Nevell – brilliant, concise pieces which were evidently Byrd's last essays in this ancient form. There follow two illustrative pieces, *The Battle* and *The Barley Break*, one a sort of 16th-century *Wellingtons Sieg* and the other a spring shower of irresistible little dance phrases. A little later comes a carefully chosen series of nine pavans, mostly with galliards, including the impressive canonic Pavan (MB 74) and the Pavan and Galliard Kinborough Good (a lady's name; MB 32). Byrd included a number of quite

old pieces that he must have regarded highly, but he omitted the lengthy early fantasias in favour of new examples of a more deft and concise nature (MB 25 and 46). Again, these appear to be the last keyboard fantasias that he composed.

One of Byrd's most imaginative compositions, the Quadran Pavan and Galliard, was not included in My Ladye Nevells Booke, though as a companion piece to the Passing Measures Pavan and Galliard (the Quadran is based in a complex way on the *passamezzo moderno* ground) it is probably not much later. 'Excellent For matter', said Tomkins of this piece, in contradistinction to the Quadran Pavan by Bull, which he considered 'Excellent For the Hand'.

Another masterpiece that could not find a place in Byrd's anthologies was the Great Service. This work, for ten voices and in seven sections, cannot have been composed before the later 1580s; probably parts of it were written for some great state occasion and the rest filled in (as in the case of Bach's Mass in B minor) to make a statement about a major genre that was ideologically out of the composer's orbit. In style it shows occasional affinities with later anthems, and some of its structural divisions derive from earlier traditions of English service setting. But Byrd here worked on an incomparably grander scale, repeating the text with polyphonic elaboration at numerous points, and supporting the long narrative spans with every technical resource at his command.

6. Late years, 1593–1623: liturgical music. Laws against recusancy stiffened once again in 1593, and at about this time Byrd moved further away from London, to a rather large property including a farm and woodlands in Stondon Massey, Essex, between Chipping Ongar and Ingatestone. This was a homecoming in more than one sense: the Byrd family hailed from Ingatestone, and Ingatestone Hall was now a safe haven for Catholics, thanks to Sir John Petre, the most important of all Byrd's patrons.

Petre, whose manorial account books provide rich evidence of his musical proclivities, had known Byrd since the 1570s and played host to him in Essex many times in the 1580s (Mateer, 1996). Unlike Paget, Petre was a very cautious man who stayed out of politics, instead concentrating on his role as a country magnate, and he evidently enjoyed the confidence of the Crown. Though ostensibly a conformist, he is known to have harboured a priest, and it must be assumed that Byrd and his family now joined a community centred at the Petre manors that worshipped throughout the church year, on the whole without disturbance.

For only under such circumstances could Byrd's last great body of music have come into being: his extensive body of carefully ordered music for the Proper and Ordinary of the Mass. It is moving to read in the dedication of the second volume of *Gradualia* Byrd's acknowledgement to Petre that the contents 'mostly proceeded from your house' and, having been 'plucked as it were from your gardens' are 'most rightfully due to you as tithes'.

Records of his life in this period are scarce, save for the inevitable recusancy entries and the copious legal briefs. From the former it can be inferred that his wife died in about 1606. Byrd now spent less and less time in London. His name appears in none of the 20-odd lists of witnesses and petitioners recorded in the Cheque Book of the Chapel Royal from 1592 to 1623, only in two formal registers of all the members. He continued to compose, but his main efforts were directed away from London, where in any case new musical fashions reigned with which he was out of sympathy. Much time was consumed in litigation concerning the numerous leases he had acquired by grant or purchase. No fewer than six cases are known in which he was a principal, some of them very voluminous; the one concerning the Stondon property dragged on for 17 years. Extensive extracts from legal documents are given by Fellowes (1936) and Harley.

In these documents Byrd does not always appear in too favourable a light, even after the bias of his adversaries is discounted. As a litigant he was most tenacious, and indeed almost everything we know about his career suggests that he was an exceedingly tough-minded individual. It is like Byrd to have included the psalmist's vengeful verse 'Remember, O Lord, the children of Edom in the day of Jerusalem' in the 'Babylon' motet for Monte, one of his most personal. In his will there is pointed reference to a past quarrel with his daughter-in-law Catherine and to 'the undutifull obstinancie of one whome I am unwilling to name'. Obstinacy perhaps ran in the family – in personal affairs, in litigation and in religion.

After 1590 Byrd's attitude towards Latin sacred music underwent a significant change. The early motets were monumental and expressive; they were also personal in the sense that the texts represented the free choice of Byrd or his patrons – penitential meditations or outbursts in the first person singular as well as prayers, exhortations and protests on behalf of the Catholic community. He now started work on a grandiose scheme to provide music specifically for Catholic services. The texts were of course drawn from the appropriate sections of the liturgy, and the musical settings became much less monumental, in view of the liturgical context.

If this music was to serve a practical purpose it had to be published. The three famous masses were printed between *c*1593 and *c*1595 separately, that is, in very slim books. The two large books of *Gradualia* appeared in 1605 and 1607. The political climate may well have appeared favourable in early 1605, but things changed with the Gunpowder Plot and there is record of someone being arrested for possessing *Gradualia* partbooks. Byrd seems merely to have withdrawn the edition and stored the pages. He issued a second volume of *Gradualia* in 1607 and reissued both, with new title-pages, in 1610.

In musical style, the five-part mass is much simpler and more concise than any of Byrd's previous five-part music. The three- and four-part masses are simpler still. They have relatively little word repetition, even in the shorter mass movements, and there is no place for the extended polyphonic periods that had given such intensity and grandeur to the earlier music. Despite some very well-placed exceptions, such as the wonderful 'Dona nobis pacem' points in the four- and five-part masses, Byrd tended to avoid explicitly expressive setting, concentrating instead on more neutral, 'classic' musical material moulded with extreme care and beauty. In form, the masses are original, owing nothing to the imitation ('parody') technique that was universal on the Continent. Their head-motifs and frequent semichoir excursions recall English masses of a much earlier period; ideas taken from Taverner in the four-part mass are seamlessly modernized.

In the *Gradualia*, containing 109 items, Byrd's total programme involved the provision of complete mass Propers (introit, gradual, tract or alleluia, offertory, communion) for the major feasts of the church year, Marian feasts and Marian votive masses. Book 1 (with works in three, four and five parts) contains masses of particular importance to the Jesuits, whose input is strongly indicated: Corpus Christi, All Saints and the large Marian section. Book 1 also includes a number of non-liturgical items, some with texts taken from the Primer, the prayer book for private devotions. Book 2 (in four, five and six parts) fills in the rest of the church's year from Christmas to Whitsun. But the one six-part mass, for St Peter and St Paul, has both a political and a personal reference – to Byrd's patron Petre and to Peter the patron saint of Rome.

To understand the *Gradualia* one must understand that when Byrd encountered the same text in two different liturgical contexts he did not usually set the second. He directed that his first setting should be transferred – sometimes with omissions or additions – from earlier in the book. Hence the 'motets' as printed are not always what they seem. To mention an extreme case, *Diffusa est gratia* is never to be sung in its printed form, which is an artificial composite of several sections to be selected from in three different ways for three different Marian services. The required transfers, not understood at the time of earlier editions (TCM and F), are explained in *The Byrd Edition* (v, 1989).

To allow for such transfers, if for no other reason, the Propers and groups of related Propers hold to the same mode and vocal scoring. There are no other explicit unifying factors among the constituent pieces beyond a strong consistency of style, which incidentally suggests that they were composed within a relatively short period (this is not true of the non-liturgical pieces included in the publications, some of which are older). The sustained effort represented by the *Gradualia* goes far beyond anything Byrd had attempted in his youth or middle years. Impressive, too, is the intricacy of the scheme, the sheer extent of it (it is larger than that of any analogous continental project) and the quality of the execution. The music is fluid, concise and effortless; simple binary structures and light homophonic phrases abound. Byrd was entirely at home with texts of a new kind, ecstatic and devotional in place of the predominantly penitential and lamenting texts of the earlier *Cantiones sacrae*.

Ex.2, from the gradual for the Nativity of the BVM, shows a typically quiet but subtle binary opening. The text might conceivably have been treated in 'double imitation', but Byrd now had no time for this leisurely technique – new text fragments start to crowd in as early as bar 5 – and he used it only exceptionally in the late period. Even more sharply 'motivic' are the famous 'alleluia' phrases, of which the *Gradualia* provides over 80 examples and for which Byrd developed a great variety of symmetrical and sequential structures. The alleluias in *Sacerdotes Domini*, *Non vos relinquam orphanos*, *Constitues eos* and other *Gradualia* numbers are among Byrd's most haunting passages.

Ex.2

7. Late songs and instrumental music. One wonders in just how many Jacobean households Catholic Mass was celebrated in choir with music from the *Gradualia*. Appleton Hall in Norfolk was one, the home of Edward Paston. At court in the 1570s Paston had been known as something of a poet, but he had soon retired to the quiet life of a country squire, a life that allowed him to practise the old religion with less interference and to indulge his hobbies, poetry and especially music. An enormous number of the manuscripts that he had copied have survived, and a dozen anonymous consort songs in these manuscripts have been securely identified as being by Byrd. Several of them have topical poems which can be dated from 1596 to 1612, and the music shows that in his late years Byrd was constantly developing the consort-song style towards new flexibility and elaboration.

Perhaps on Paston's instructions, Byrd did not include any of these songs in his next and last published songbook, *Psalmes, Songs and Sonnets* (1611). The 70-year-old composer was engaging in a new flurry of publication; the years 1610–12 also yielded the third edition of the 1589 songbook, reissues of the *Gradualia*, and *Parthenia*. The 1611 songbook includes jubilant full anthems (really motets in English), mournful verse anthems, six-part consort songs and polyphonic songs for three to five voices which are appreciably more madrigalian than those of 1589 (but still not very italianate). A masterpiece in this set is the (unmadrigalian) five-part song *Retire, my soul*.

In this thoroughly miscellaneous collection Byrd also included two fantasias for consort, one in four parts and one in six, perhaps with the idea of preserving the best of a genre that had not been anthologized in the period around 1590. He missed out the five-part canonic Fantasia in C, a keyboard version of which had been copied into My Ladye Nevells Booke.

The published fantasias seem to date from the 1590s. In the six-part one, and in another similar work in manuscript, Byrd worked out a remarkable large-scale form consisting of what are in essence linked movements, contrasting with one another and culminating in a galliard followed by a coda. The manuscript fantasia also includes snatches of pre-existing melodies – *Greensleeves* and evidently others – as also happens in several other of the

consort and keyboard pieces. This phenomenon should be considered along with Byrd's celebration of popular songs such as *Walsingham* and *Fortune my foe* in his variation sets. He was closer to 'folksong', it would seem, than any of the other great composers of early times.

Byrd wrote less keyboard music in his later years, but what he did write is full of new fantasy and new subtlety. He turned to writing mostly pavans and galliards, though three of the most imaginative variations also appear to date from after 1590, *Go from my window*, *John come kiss me now* and *O mistress mine, I must*. When at last he found occasion to have some keyboard music published, in *Parthenia* (*c*1612/13), jointly with Bull and Orlando Gibbons, he included only pavans and galliards and some short matching preludes. The Pavan and Galliard Sir William Petre spans the entire late period. Presumably it was written in 1591, for it was included in My Ladye Nevells Booke as a last-minute addition outside the main series of pavans; 20 years later it was the one old composition to be printed in *Parthenia*. The cogent linear and contrapuntal articulation of this superb dance pair can be gathered from ex.3, the opening strain of the pavan, without the ornamented *repetendum*; only a much longer example could show how, beyond this, keyboard texture is used in a much more integral fashion than before.

Keyboard figuration, too, became more flexible in the works dating from Byrd's late years, no doubt under the impetus of younger members of the English virginal school that Byrd had founded. The intricate Galliard Mistress Mary Brownlow and the limpid Pavan and Galliards The Earl of Salisbury, which appeared for the first time in *Parthenia*, show new prospects opening up to Byrd's imagination in the very last of his keyboard compositions.

His last printed works were four quiet sacred songs contributed to Sir William Leighton's *Teares or Lamentacions of a Sorrowfull Soule* in 1614. Byrd died at Stondon Massey on 4 July 1623, a man of some means,

Ex.3

and was presumably buried in the parish churchyard according to the wish expressed in his will, though the grave has not been located.

8. Byrd in his time and ours. Byrd retained a fondness for the jog-trot 'plain style' or 'drab-age' verse poetry of the 1560s throughout his life, from the earliest consort songs to the pieces written for Leighton. This may serve as a reminder that, although he composed steadily throughout Elizabeth's reign and well into that of James, he was essentially an early Elizabethan figure. He belonged to the generation of Sidney, Hooker and Nicholas Hilliard, not that of Shakespeare, Dowland and Bacon. He was as impervious to late Elizabethan elegance, Euphuistic or italianate, as he was to the subsequent Jacobean 'disenchantment'. Decorum, solidity and a certain reticence of expression were qualities that were prized in his formative years, qualities that came to him naturally.

He belonged to the pioneer generation that built Elizabethan culture. In music Byrd did this alone, for, unlike Tallis before him and Morley after, he had no immediate contemporaries of any stature (except perhaps Ferrabosco). The essential work was completed by the time of the Armada, as he himself seems to have acknowledged by his retrospective anthologizing at about that time. He lived to write some of his greatest music later, but his younger contemporaries could not learn from this in the same way that they had from the earlier path-breaking compositions.

In recording his death, the ordinarily laconic Cheque Book of the Chapel Royal described him as 'a Father of Musick'; to another contemporary admirer he was 'Brittanicae Musicae Parens'. While Byrd's versatility as a composer is often mentioned, and quite rightly, it is less often pointed out how much he indeed fathered for English music. With his motets, first of all, he achieved nothing less than the naturalization of the high Renaissance church style. The true power and expressiveness of imitative counterpoint had never been channelled in native composition before his motets of the 1575 *Cantiones*. As has been remarked, he rather stood back from the madrigal; but he was the first English composer to employ word illustration extensively – in vivid motets of the 1580s such as *Deus, venerunt gentes* and *Vigilate*. He found the English song in the 1560s in a dishevelled state and pulled it together to produce an extensive repertory of consort songs, a form that was very personal to Byrd and found no serious imitators. Its influence on the lute air, however, was palpable, and a relative of the consort song, the verse anthem, might be said to constitute Byrd's most lasting legacy to English music, at least in one sense. Verse anthems, of which he had provided the most authoritative models – he even wrote a 'verse' service – were composed and sung widely during his lifetime and for long after it.

He kindled English virginal music from the driest of dry wood to a splendid blaze that crackled on under Bull and Gibbons and even lit some sparks on the Continent. Even his later music for consort, which was overshadowed at the turn of the century by the new fantasias of John Coprario and the younger Alfonso Ferrabosco, provided a seminal idea of considerable importance. The crystallization of dance movements out of the sections of Byrd's two six-part fantasias looks forward to the fantasy suites of the 1620s and beyond.

Byrd's earlier music for consort represents a culmination of an older tradition. Traditional elements live on in his music along with innovatory ones: the Redfordian flashes in even some of the later keyboard works, the echoes of Taverner and Tallis in some of the *Gradualia* motets, and especially certain technical features such as 'irregular' dissonance treatment, 6–5 harmonic progressions, and unison ostinatos or rotas. There are pieces in which these features have to a large extent been filtered out, such as *Siderum rector* from the 1575 *Cantiones* and the four-part mass, but Byrd deliberately returned to a more archaic, rougher technique as better suited to the grain of his musical personality. Sometimes he turned archaic features to exquisite effect. The point about the familiar beginning of *Ave verum corpus* from the *Gradualia* is not simply that it illustrates 'the vicious English taste for false relations', as Tovey was pleased to call it, but that this is used in such a fresh way.

Byrd's musical mind is as hard to characterize in a few words as that of any other of the great composers. Though he was 'naturally disposed to Gravitie and Pietie', in Henry Peacham's famous phrase, there is no music at the time that projects such exuberance and gaiety as the English motets that he published in 1611, his sparkling keyboard galliards and his blithe 'pastorals' in the old consort song tradition. He was always doing something unexpected. He is probably to be regarded as one of the more intellectual of composers, and yet he also had a magic touch with sonority, as witness such diverse works as the pellucid *Callino casturame*, the *Browning* for consort, *Iustorum animae* from the *Gradualia*, and *Domine, quis habitabit*, a motet (in manuscript) for nine voices including three basses.

One admires most, perhaps, his manifold ways of moulding a phrase, a period or a total piece. Line, motif, counterpoint, harmony, texture, figuration can all be brought into play, and they are brought not singly but in ever new combinations. Form was expression for Byrd, and the extraordinary variety of effect that he obtained in his pieces stemmed from his fertile instinct for shape and for musical construction.

Morley and Tomkins were his pupils. If, as seems likely, Philips, Bull and Thomas Weelkes were too, Byrd's direct impact on English composition can be seen to have assumed almost Schoenbergian proportions. Much of his teaching must surely be preserved in Morley's *Plaine and Easie Introduction to Practicall Musicke* (1597), which also contains some of the many tributes to Byrd known from the period. His contemporary reputation was comparable to that of Sidney in another artistic field or Josquin in another era; this was something new in English music, and there can be little doubt that it went along with a sense of artistic mission on Byrd's part that was also new. We can detect this in the way he went about anthologizing his best work, in his frequent rewriting of old pieces, and in his tendency to go back to a problem that he had not quite mastered in one piece and attack it in another: *Tribue, Domine* and *Infelix ego*, *The Hunt's Up* and *Hugh Aston's Ground*, the two six-part consort fantasias.

After Byrd's death it was his Anglican music that survived, and the Short Service and a few favourite anthems, printed by Barnard and Boyce, never dropped out of the cathedral repertory. Interest in his Latin church music was revived by the antiquarians who scored his motets in the 18th century. In the 1840s the Musical Antiquarian Society issued scores of the five-part mass and book 1 of the *Cantiones sacrae*, with bowdlerizations by Rimbault and editorial lectures by the insufferable Horsley. The modern revival of this music dates essentially from Sir Richard Terry's regime at Westminster Cathedral from 1901 to 1924, when it seems that the entire corpus was sung, and the subsequent publication of *Tudor Church Music*, including much of the Latin church music and all of the English. Thanks to the efforts of many conductors in the intervening generations, Byrd now has a special place in the hearts and ears of English and American choral singers. According to Squire (*Grove4*), it was the attention drawn to Byrd in the 1880s and 1890s that began the 'recent revival of interest in the music of Tudor and Jacobean composers'.

Burney printed *The Carman's Whistle*, and Ambros wrote luminously of Byrd's keyboard music. But the general appreciation of the keyboard music dates from the landmark edition of the Fitzwilliam Virginal Book by Fuller Maitland and Squire in 1899, reinforced by Hilda Andrews's edition of My Ladye Nevells Booke in 1926. Also in the 1920s the three English songbooks were published by Fellowes, the great pioneer of Byrd scholarship, in the English Madrigal School series. A complete edition was undertaken by Fellowes late in his life; at last all of Byrd's music was made available in one place, in a form designed to encourage performance. Fellowes's editorial work, however, lacked sophistication, and a revision by a new generation of scholars was begun after World War II.

Apart from some initiatives in the 1920s by Fellowes with his English Singers and by the harpsichordist Violet Gordon Woodhouse, next to no music by Byrd was recorded until the 1950s. However, between the 1960s and the late 1990s recordings were made of the entire *Cantiones* and *Cantiones sacrae*, and the entire corpus of keyboard music. By 1994 a complete Byrd discography could list nearly 700 titles, with ten or more versions of some 20 works (Greenhalgh, 1992–96). At the end of the 20th century a complete recorded Byrd edition was underway, under the direction of Andrew Carwood.

WORKS

The Collected Works of William Byrd, ed. E.H. Fellowes (London, 1937–50) [F]; rev. under general ed. T. Dart (London, 1962—70) [D]

William Byrd: English Church Music, Part I, ed. P.C. Buck and others, TCM, ii (1927) [TCM ii]

William Byrd: Gradualia, Books 1 and 2, ed. P.C. Buck and others, TCM, vii (1927) [TCM vii]

William Byrd: Masses, Cantiones and Motets, ed. P.C. Buck and others, TCM, ix (1928) [TCM ix]

William Byrd: Psalms, Sonnets and Songs of Sadness and Piety, ed. E.H. Fellowes, rev. P. Brett, EM, xiv (2/1963) [= D xii]

William Byrd: Songs of Sundry Natures, ed. E.H. Fellowes, rev. P. Brett, EM, xv (2/1962) [= D xiii]

William Byrd: Psalms, Songs and Sonnets, ed. E.H. Fellowes, rev. T. Dart, EM, xvi (2/1964) [= D xiv]

William Byrd: Keyboard Music I, ed. A. Brown, MB, xxvii (1969, rev. 2/1976)

William Byrd: Keyboard Music II, ed. A. Brown, MB, xxviii (1971, rev. 2/1976)

The Byrd Edition, general ed. P. Brett (London, 1970–) [B] [incl. D xv, xvii]

William Byrd: Music for the Lute, ed. N. North (London, 1976) [15 transcrs. for lute of kbd and vocal works, and doubtful works]

** – inc. but can be reconstructed*

† – known in earlier consort song version, pubd in B xvi

JOSEPH KERMAN

Byrds, the. American folk-rock group. Formed in 1964 and disbanded in 1973, it consisted of Roger McGuinn (forename changed from James in 1968; *b* Chicago, 13 July 1942; guitar and voice), David Crosby (*b* Los

Angeles, 14 Aug 1941; guitar and voice), Gene Clark (Harold Eugene Clark; *b* Tipton, MO, 17 Nov 1941, *d* 24 May 1991; voice and tambourine), Michael Clarke (*b* New York, 3 June 1944; *d* 19 Dec 1993; drums and percussion) and Chris Hillman (*b* Los Angeles, 4 Dec 1944; bass and mandolin). They are generally credited with having done more than anyone else to establish folk-rock, by mixing their coffee-house folk-musician skills with the impact of British-Invasion rock. They were often described as a fusion of Bob Dylan and the Beatles: they expanded the vocal harmonizing of the Beatles while absorbing other aspects of their sound and rhythm, and many of their biggest hits were cover versions of Dylan's songs. Their music also reflected the eclectic experimentation of the psychedelic era in its imitation of the timbres of Indian music and the modal influences of John Coltrane. Their personnel changed; at the time of their influential album *Sweetheart of the Rodeo* (Col., 1968), which was the first album to be widely identified as country-rock, it included Gram Parsons on guitar. The Byrds' vocal harmonies and the distinctive jangling sound of McGuinn's 12-string electric guitar were important aspects of their influence on later bands such as the Eagles and REM. (J. Rogan: *Timeless Flight: the Definitive Biography of the Byrds*, Essex, 1990)

ROBERT WALSER

Byron, Lord [6th Baron] [Byron, George Gordon (Noel)] (*b* London, 22 Jan 1788; *d* Missolonghi [now Mesolóngion], 19 April 1824). English poet. The success of the first two cantos of *Childe Harold's Pilgrimage* (1812) brought him immediate fame, and even greater success followed *The Giaour* (1813), *The Bride of Abydos* (1813) and *The Corsair* (1814). Their cultivation of wild emotions, of exotic settings and of a disdainful gloom won him a European reputation; and the irregularity of his private life (which included an affair with his half-sister Augusta Leigh) did nothing to diminish his appeal to his generation as a Romantic outsider, ruled by his passions and tinged with doom. That this is a very incomplete view of him as a poet mattered little to European artists, who, further excited by his death fighting for the liberation of Greece, hailed him as an essential Romantic. The Byronic hero was widely imitated – notably by Pushkin in *Yevgeny Onegin* – and stimulated composers to base works on his poems, however loosely. One of his greatest admirers was Berlioz, whose *Mémoires* have a Byronic tinge and who turned to Byron for the overture *Le corsaire* and for *Harold en Italie*. The latter work in turn influenced Tchaikovsky's *Manfred* symphony: Byron's reputation was particularly long-lasting in Russia. *Manfred* was a popular subject for Romantic composers, including Schumann and Nietzsche (*Manfred-Meditation*, for piano). Liszt based his *Tasso* on Byron. His poems were set as songs by many composers, including Loewe (24 settings), Mendelssohn (two), Schumann (six), Wolf (two), Musorgsky (one), Balakirev (one), Rimsky-Korsakov (two), Gounod (one) and Busoni (three); and Schoenberg's *Ode to Napoleon* uses his poem. Over 40 operas are based on works by him (see list). There are also three operas about Byron himself, including Virgil Thomson's *Lord Byron*.

WORKS SET TO MUSIC
only operas listed

The Bride of Abydos (1813): Poniatowski, 1845; A. Fell, 1853; F. Sand, 1858; Dubois, 1864; Barthe, 1865; Lebrun, 1897

JOHN WARRACK

Byron, William, 4th Baron (bap. Chaworth, Lancs., 4 Jan 1669; *d* Newstead, Notts., 8 Aug 1736). English amateur instrumentalist and composer. He was great-grandfather to the poet and was brought up on the family estates at Rochdale. He succeeded to the title in 1695, becoming a Gentleman of the Bedchamber to Prince George of Denmark. He settled at Newstead Abbey in Nottinghamshire in 1700, married three times and had ten children. He was a man of taste and learning, and received an honorary doctorate at Cambridge in 1705. He enlarged and improved Newstead, employed Peter Tillemans as his drawing master, collected paintings and formed a fine library. To judge from his publications, he was active as a composer during the decade 1695–1705. He was the dedicatee of Nicola Matteis's *Collection of New Songs . . . The 1st Book* (1696), and was probably the author of the rather poor recorder duets by 'a person of Quality' included with it; Matteis may have been his violin teacher. Byron was also the dedicatee of the op.1 trio sonatas (Amsterdam, 1700), by William Corbett, who praised him for 'excelling both in composition and performance'.

Byron's most significant compositions are the four suites he wrote for plays at Drury Lane. He may possibly be identified with the 'person of quality' who published songs and other music around the turn of the century; *An Overture and Aires for the Harpsichord or Spinett, Composed by a Person of Quality* (London, 1705) is certainly by him, for it was subsequently advertised as 'Ld Birons Lessons'. Byron wrote fairly competently in a post-Purcellian idiom, but his music is rather unimaginative and limited in scope.

WORKS

4 suites, str a 4, in the following plays: *The Lost Lover, or The Jealous Husband* (M. de la Riviere Manley), 1696, *GB-Lbl* (tr pt only), *Lcm* (inc.; facs. in MLE, A3, 1987); *Woman's Wit, or The Lady in Fashion* (C. Cibber), 1697, *Cmc* (inc.), *Lbl* (tr pt only); *The False Friend* (J. Vanbrugh), 1702, Harmonia Anglicana (London, 1702); *She Wou'd if She Cou'd* (G. Etherege), 1705, Harmonia Anglicana (London, 1705)
An Overture and Aires, hpd/spinett (London, 1705)

DOUBTFUL

2 duets, 2 rec, pubd with N. Matteis: Collection of New Songs . . . The 1st Book (London, 1696), by 'a person of Quality'
Aires, 2 fl (London, n.d.), lost, by 'a person of Quality', listed in Smith
It is not Celia, song, 1v, bc, in N. Matteis: Collection of New Songs . . . The 1st Book (London, 1696), by 'a person of Quality'
Mariana's charms wound my heart, song (London, *c*1710)
Various other songs, by 'a person of Quality', in anthologies pubd in London *c*1700

PETER HOLMAN

Byström, Oscar (Fredrik Bernadotte) (*b* Stockholm, 13 Oct 1821; *d* Stockholm, 22 July 1909). Swedish composer and scholar. He followed his father in a military career, rising to the rank of captain in 1857. During the 1840s he established a reputation in Stockholm as a pianist and song composer. In the following decade he developed his creative talent in a number of chamber works, the Piano Trio in E♭ (1850), a cello duo (1851) and, more particularly, in the first of his two quartets, the *Quartetto svedese* (1856, rev. 1895). He was active as a teacher in the late 1850s and early 1860s; in 1866 he succeeded August Berwald as inspector of the Swedish Royal Academy of Music, and in 1872 he was appointed professor. In 1871 he published a theory work for schools (*Allmän musiklära, till skolornas tjenst*). After a period as conductor of the Turku orchestral society (1872–6) he returned to Stockholm to devote his energies to church music, publishing *Sequenser, antifoner och hymnen* (1899) and working on the Swedish chorale book. In 1886 he studied the performance of liturgical music in London, Paris, Solesmes, Milan and Rome; on his return to Stockholm he presented 'motet evenings' of Lassus and Palestrina. At this time he was considered the leading church music specialist in Sweden. The best works of his small output are well wrought and show the influence of Franz Berwald, who befriended him in the 1850s or before and who supported one of his business ventures. Byström's finest work is in the Symphony in D minor (1870–72, rev. 1895), which, despite its obvious debts to Berwald, has an eloquent slow movement, and in the two quartets, of which the second, in D, was written during the 1860s. There is an orchestral Fantasia on Finnish Themes and an operetta, *Herman Vimpel*, both composed while he was in Turku.

ROBERT LAYTON/LENNART RABES

Byström, Thomas (*b* Helsinki, 28 Aug 1772; *d* Stockholm, 2 Oct 1839). Swedish music teacher, composer and military officer of Finnish birth. In the mid-1780s he studied in Tallinn, and in December 1787 he entered the Artillery and Engineering Military Academy in St Petersburg, where he probably also studied music. In 1792 he was a second lieutenant with the Swedish Artillery and a company officer at the Karlberg Military Academy in Stockholm. From 1793 to 1795 he gave piano lessons to cadets and he was elected to membership of the Swedish Royal Academy of Music in 1794. He held several high military posts, including chief adjutant to the King of Sweden; he was also a Russian translator on the king's staff, and in 1813 he was promoted to the rank of Lieutenant-Colonel. However in 1816 his position was suddenly terminated, and he did not resume his military career until 1825. Byström taught piano (1818–33) and organ (1818–24) at the Swedish Royal Academy of Music and also had private students, including Crown Prince Oscar. He was elected an honorary member of the Harmoniska Sällskapet in 1832.

Byström's compositions are from the period 1794 to 1805. Most interesting are three violin sonatas published by Breitkopf and Härtel in 1801, which imitate Mozart's and Beethoven's style. The variation suite *Air russe variée* for piano is also noteworthy. Other works include two polonaises for piano, and nine solo songs.

Byttering [Bytteryng, Biteryng, Bytering] (*fl c*1410–1420). English composer. He was one of the stylistically more advanced contributors to the first layer of the Old Hall Manuscript. No certain identification has been made, though a possible candidate is Thomas Byteryng, a canon at Hastings Castle (1405–8) and a rector in the London area from 1414. The Gloria no.17, with its striking use of imitation and proportional passages, survives anonymously (in *I-AO*), and *Nesciens mater* in a fragment at York (*GB-Ybi*). The latter setting, his only piece notated in score, camouflages the plainsong by migration and transposition. The Credo no.85 in the Old Hall Manuscript is marked 'Bittering', but in a late 16th-century hand with no demonstrable authority. If, as can now be assumed, the reason for the interruption of work on the Old Hall Manuscript was the death of Thomas, Duke of Clarence, in 1421, the revised chronology comfortably accommodates the composition of *En Katerine* as a wedding motet for Henry V and Catherine de Valois (2 June 1420). The text of the middle voice is also found in a 14th-century motet (in *GB-DRc*).

MARGARET BENT

Byzantine chant. Music of the liturgical rite of the Christian Roman Empire of the East from the time of the establishment of Constantinople (at the site of ancient Byzantium) in the early 4th century and persisting beyond the interruption of the Eastern imperial succession by the Ottoman conquest in 1453. The rite is still practised by tens of millions of Eastern Orthodox Christians whose native language, or liturgical language, is Greek. Through translation into Syriac, Coptic, Arabic, Armenian, Georgian, Church Slavonic and other languages, it has remained the dominant liturgy of the Christian East during the past 1500 years. Its influence at various times has spread as far west as Spain (in the 6th century), and to north-east and south Italy (where isolated pockets still exist). It has prevailed in north-east Africa (Patriarchate of Alexandria), throughout Greece and Palestine (Patriarchate of Jerusalem), through most of the Christian Near East (Patriarchate of Antioch), all Russia, other Slavonic nations and Romania. The main focus of the following discussion is the music of the Greek rite before the fall of Constantinople. The Byzantine chant continued, however, to flourish after this event, specifically in monasteries throughout the former empire and at the patriarchal see of Constantinople. Almost all the medieval chant repertory survives in manuscript sources with musical notation, and in this respect Byzantine chant is wholly comparable to the repertories of the Roman and Ambrosian (Milanese) Churches in the West.

1. MANUSCRIPT SOURCES AND THEIR NOTATION. Byzantine music manuscripts, whether from Alexandria or Jerusalem, Greece or Asia Minor, Mount Athos or southern Italy, Thessaloniki or Constantinople, in general show the same kind of unity of melodic tradition found among the widely diffused manuscripts of the Gregorian chant in Western Europe. In earlier times the controlling liturgical and musical centres seem to have been first Antioch and then Palestine (during the 6th and 7th centuries); in the 9th century at the latest, control of the melodic traditions shifted to the Constantinople region and eventually to Mount Athos and Thessaloniki, the importance of other centres being markedly reduced.

Of some 12,000 to 15,000 surviving Byzantine manuscripts dating from before the fall of the empire, an estimated 10% contain 'melodic' notation (see §3 below), used for the chanting of psalmody and hymns. In addition there are hundreds of manuscript lectionaries of the Old and New Testaments, noted throughout with the auxiliary musical signs of 'ekphonetic' or lectionary notation (see §2), indicating the musical tones for chanting the solemn readings of scripture. The earliest surviving sources with ekphonetic notation date from the 9th century, while melodic notation is documented with certainty from about the mid-10th.

There are good reasons, however, to assume that both systems developed earlier. Several of the names and shapes of the neumes are common to both notations (the terminology is known from a number of medieval lists and exercises), but as their application in both systems is, with one or two possible exceptions, essentially distinct, a direct dependence of one on the other seems unlikely. The common features, therefore, must derive from a secondary influence. Likewise, no single origin of the various Byzantine notations has yet come to light; their creation and development probably resulted from practical needs or other influences, of which the most significant appear to be the systems of accentuation and punctuation and the letter classification of ancient Greek grammar.

While ekphonetic notation cannot be interpreted precisely, the melodic notation in use from about the mid-12th century is fully diastematic, making transcriptions of the chants possible. Aspects of the melodic tradition can be traced from the mid-12th century back to the earliest surviving manuscripts with notation (and in some cases even beyond) owing to the musical-syntactical punctuation and the modal assignments found in early books containing liturgical texts. Important parts of the repertory, however, were not notated until the 14th and 15th centuries or, in a few cases, even later. Nevertheless, inferences can be drawn about earlier centuries partly because of the stability of the later tradition. Thus virtually the full music of the Byzantine Divine Liturgy (corresponding to the Western Mass) and Office during the last centuries of the empire can be reconstructed.

2. EKPHONETIC (LECTIONARY) NOTATION. Ekphonetic (from Gk. *ekphōnēsis*: 'reading aloud') notation served as a mnemonic aid in the solemn reading of the Prophets, other passages from the Old Testament, and the Epistle and Gospel texts. In this notation, every phrase (comma) of the text bears two notational signs, one at the beginning and one at the end (*see* EKPHONETIC NOTATION, §3). There are about 20 conventional pairings, each conveying information about the pitch and formula to be used (ex.1).

Ex.1 Ekphonetic (lectionary) notation
John iv.5

(1) Tō kairō ekeinō — (2) erchetai ho Iēsous
['In that time — came Jesus

(3) eis polin tēs Samarias — (4) legomenēn Sychar
to the city of Samaria — called Sichar']

Sign-pairs: (1) *kathistai* ... *kathistai*; (2) and (3) *apesō* ... *exō*; (4) *apostrophos* ... *apostrophos*

Høeg's study of ekphonetic notation (D.i 1935) remains authoritative and has been supplemented by Engberg (D.i 1987, 1992) and others. A critical edition of the Constantinopolitan Old Testament Lectionary (the Prophetologion) with notation has also been published (Høeg, Zuntz and Engberg, D.i 1939–81).

3. MELODIC NOTATION. This was employed from the 10th century for a wide variety of properly melodic chants. Five principal manuscript collections contain the majority of these melodies: the HEIRMOLOGION, consisting of hymns (*heirmoi*) used in the performance of the biblical canticles; the STICHĒRARION, a rough equivalent to the Western antiphoner and processional; the asmatikon, a Constantinopolitan choirbook containing florid chants of the Proper and 'semi-Ordinary'; the psaltikon, a Constantinopolitan soloist's book containing florid psalm and hymn settings, complementary to the asmatikon; the AKOLOUTHIAI manuscripts ('orders of service'), a group of anthologies originating in about 1300 and containing traditional and contemporary settings of the Ordinary chants as well as elements drawn from the earlier repertories, principally the psaltikon and the asmatikon.

Melodic notation may be divided into three main types: Palaeo-Byzantine, 10th–12th centuries; Middle Byzantine ('Round' notation), from the mid-12th century to about 1815; and the New Method ('Reformed' or 'Chrysanthine' notation), from the 1820s.

(i) Palaeo-Byzantine notation. In the earliest manuscripts containing examples of this stage of notation there are comparatively few signs and not every syllable of text is furnished with notation. It is noteworthy that some of the early chant books were originally text books to which notation was later added between the lines. In many cases the notation has been updated once or twice to a more developed stage or has even been converted into another type entirely. In the mid-11th century, signs began to appear above every syllable of text (Strunk, C1966; Floros, D.ii 1970), indicating the melodic features and style of performance though not the exact pitch. Precise transcription of Palaeo-Byzantine notation is impossible in isolation; approximate transcription of the melodies can be achieved only through careful and critical comparison with their diastematic counterparts in Middle Byzantine notation.

Three types of Palaeo-Byzantine notation can be distinguished: 'Theta', 'Chartres' and 'Coislin'. All were used, with very few exceptions, to notate the syllabic chants of the heirmologion and the stichērarion. Chartres and Coislin notation are named after the manuscript collections in France where they were first observed and studied. Certain basic signs appear in both these branches, suggesting a common 'parent notation' closest to archaic Coislin notation (Strunk, C1966). Notational systems with a mixture of signs from these two traditions are not uncommon. A unique notation with many 'big signs' (*megala sēmadia*) was discovered in 1965 in a 14th-century manuscript in the cathedral library of Kastoria, Greece (MS 8; Politēs, C1967) and probably represents a trace of the otherwise lost Byzantine ancestor of the Slavonic 'kondakarion' notation (*see* RUSSIAN AND SLAVONIC CHURCH MUSIC).

(a) Theta notation. This is a rudimentary type characterized by the use of a single sign (or very few signs), often like the Greek letter *theta* (probably an abbreviation for *thema*, in the sense of 'figure' or 'formula') or like an acute accent (*oxeia*) or double acute accent, over single syllables of the chant text (Raasted, D.ii 1962). Comparison with later, more developed notational types shows that the 'theta positions' correspond to short melismatic formulae. Theta notation indicated only the position of a melisma in an otherwise predominantly syllabic style; the whole melody, including the melisma itself, had to be supplied from memory or 'improvised' in the conventional style of the stichērarion or heirmologion repertories. Possibly the earliest document with traces of Theta notation is a palimpsest heirmologion (*US-PRu* Garrett 24; see ex.2*a*), whose script can be dated to about 800 (Raasted, D.ii 1992).

(E authentic)

(a) Theta notation (*US-PRu* Garret 24, f.68*v*), *c*800 CE
(b) Archaic Chartres notation (*GR-ATSgreat lavra* β 32, f.42*v*), 10th century
(c) Developed Coislin notation (*F-Pn* fonds Coislin 220, f.38), 12th century
(d) Middle Byzantine notation (*I-GR* ε.γ. II, f.36*r*, transcribed into staff notation), 1281 CE

(b) Chartres notation. Occurring in relatively few sources, the earliest of which originated in Constantinople and Mount Athos, this notation is characterized by the use of many complex signs, apparently indicating groups of notes or whole melismas (fig.1). It appears to have become obsolete during the mid-11th century, probably as a result of the reform of the stichērarion repertory, after which Coislin notation in its developed form became the standard Byzantine notation (Strunk, C1966). However, some of the earliest developments towards diastematy may be seen in Chartres notation, and in about 1300 a number of its complex neumes reappeared in Middle Byzantine notation as 'red' or 'big' signs.

(c) Coislin notation. This notation probably originated in Palestine, judging from the provenance of the earliest manuscripts in which it appears (Strunk, C1966). Its prevailing feature is the designation of each melodic step by a separate basic sign and the use of a relatively limited number of group signs. In its more developed stages, these signs are often combined in groups. In time, Coislin notation became refined and more precise in meaning. By at least 1106, as attested by *RUS-SPsc* gr.789, it had reached its most advanced stage and formed the basis for the transition to Middle Byzantine notation. The two earliest datable manuscripts transmitting Middle Byantine notation date from, respectively, 1177 (*ET-MSsc* gr.1218) and 1168–79 (*GR-Psj* 221).

(ii) Middle Byzantine notation. The principles of Middle Byzantine ('Round') notation prevailed from the mid-11th century to about 1815. Whereas Western staff notation, which developed from the heighted neumes of

1. List of modes, steps and signs of the Chartres type of Palaeo-Byzantine notation (GR-AOml γ.67, f.159r; from MMB, Principale, vii, 1966)

Gregorian chant, can be described as a 'heighted' or 'graphic' notation, relative pitch being represented by relative height on the staff, Middle Byzantine notation can be described as essentially a 'digital' notation: its conventional signs designate the number of steps up or down between each note and the note succeeding it. The

		(iii)		– *c'*	(iv)		– *e*

notation does not indicate explicitly the size of the intervals; the singers would have understood these from the mode (*see* ĒCHOS), the genre, and knowledge of the particular formulae indicated. During the Middle Ages the tonal system was basically diatonic, although some passages – even perhaps whole melodies – might have been performed chromatically, particularly in the second mode (authentic and plagal).

The starting note is indicated by a special sign, the *martyria* (modal signature), which defines the mode itself and gives the final note of the intonation formula (occasionally written out in full; Raasted, D.ii 1966). The first neume above the first syllable of the text of a hymn thus shows the first note to be sung in relation to the end of the intonation. The most frequently encountered forms of the *martyria* and the final notes of their intonations for each mode are given in Table 1. The signs consist of stylized forms of the first four letters of the Greek alphabet used as numerals, and of the neumes that indicate characteristic melodic movements of the particular mode.

Because the neumatic notation did not represent pitch precisely, it was not uncommon for Byzantine scribes to insert medial or reference signatures at cadence points in a melody; these generally served to confirm the pitch reached at such a point. However, a medial signature was

occasionally used to mark an unexpected feature, for example, the pitch E at a point where the melody apparently stands on D, or F where it ostensibly stands on G. This is generally taken to mean a temporary 'transposition' of the normal diatonic system. Thus the D signature on the pitch E would cause the tetrachord E–F♯–G–A (the D tetrachord transposed up a tone) to be used in the following passage in place of E–F–G–A; similarly, an F signature on pitch G would cause an F♯ to be used below the G (E–F transposed up a tone) in place of F.

The first lists of Middle Byzantine neumes did not appear until relatively late; the earliest known is in *F-Pn* gr.261, dating from 1289. On the basis of these lists the signs may be divided into three groups: the *sōmata* ('bodies') indicating conjunct movement only (Table 2*a*); the *pneumata* ('spirits') indicating leaps only (Table 2*b*); and signs that are neither *sōmata* nor *pneumata* (Table 2*d*), of which the majority are concerned with rhythmic features or tempo, whereas only a few are used for melodic movement. Of the last the most important is the *ison*, which indicates the repetition of a note at the same pitch as the preceding one.

The *sōmata* express the movement of an ascending or descending 2nd. For the latter there is one basic sign, the *apostrophos*, but there are no fewer than six signs for the upward movement, each of which conveys a special quality of enunciation and/or stress, the interpretation of which is partly conjectural (Table 2*a*). The *kouphisma* and *pelaston* occur less frequently than the other signs and are linked to special positions and genres.

The *pneumata* indicate only two intervallic steps, the 3rd and 5th, each having two forms, one for the upward movement, the other for the downward direction (Table 2*b*). In Middle Byzantine notation no *pneuma* could stand alone; for example, it could be preceded on its left-hand side by a *sōma*, which would reinforce the direction of the *pneuma* and also impart its quality to it. Thus the melodic movement of an ascending 3rd could be notated in two different ways, as in Table 2*c*: *oligon* and *kentēma* (neutral), and *oxeia* and *kentēma* (accented). The *duo apostrophoi* is an exception, for in this case the placing of signs side by side signifies a rhythmic lengthening; its melodic function is simply that of a descending 2nd.

Other steps such as the 4th or 6th could be obtained by the addition of two smaller intervals, indicated by special placing of the *pneumata* above the *sōmata* (see Table 2*c*): *elaphron* above *apostrophos* (descending 4th); *kentēma* above *oxeia* (accented ascending 4th).

(*usually transcribed by a dot)

The placing of the *ison* (neither a *sōma* nor a *pneuma*: Table 2*d*) above any of the *sōmata* cancels the melodic movement upwards; the note is therefore sounded at the same pitch as the preceding one but with the added quality. For example, when the *ison* appears above the *petastē* it cancels upward movement but acquires stress (Table 2*c*). Similarly, the placing of the *apostrophos* above any of the ascending *sōmata* indicates a downward 2nd with the appropriate quality. Occasionally, two *sōmata* may be placed one above another; for example, *oligon* above *petastē* implies the addition of two ascending 2nds resulting in an ascending 3rd with acquired stress (Table 2*c*). For an example of Middle Byzantine notation, with a transcription of various signs, see ex.3 (the transcription code used is that of MMB, *Transcripta*, 1936–59).

In addition to the signs for intervals, there are neumes that indicate lengthening of rhythmic values (Table 2*d*): *diplē*, interpreted as double length; *kratēma*, a considerable lengthening, involving some sort of special stress or grace notes; *tzakisma*, also called *klasma*, a moderate lengthening; *apoderma* occurs frequently at the ends of phrases, but its meaning is not clear.

Special signs indicate variations in tempo, for example, the *gorgon* for speeding up and the *argon* for slowing down (Table 2*d*); whether the individual signs are attached to a single neume or to a group of neumes (as seems to have been the case in later centuries), their precise effect is uncertain.

2. *Middle Byzantine neumes: heirmologion, 1281 (I-GR ε.γ.II, f.136v)*

In addition to rhythmical signs, other *megala sēmadia* (also called *megalai hypostaseis*: 'big signs' or 'group signs') appear in the melismatic repertories from the beginning of the period in which Middle Byzantine notation flourished; in the stichērarion and other collections the frequent use of these signs occurred later. Although the *megala sēmadia* are often linked to specific constellations of interval neumes, their exact significance is not entirely clear. It is thought that they generally indicate agogic refinements, in some cases reinforcing the melodic contour expressed by the individual neumes themselves; it is also possible that they helped singers obtain a quick 'synoptic' view of the formulae applied; additionally, they may have been connected with CHEIRONOMY (gestures performed by the choirmasters; see Moran, D.ii 1986). (For a fuller listing of Middle Byzantine neumes see Haas, D.ii 1973; for a manuscript illustration see fig.2.)

3. *Chrysanthine (Reformed) neumes, 19th century: from 'Mousikos pandektēs', iii: 'Heirmologion' (Athens, 1955), p.24*

The term 'Late Byzantine' refers to the notation in use between the 15th and 19th centuries and distinguishes those musical manuscripts copied mainly after the fall of Constantinople into Turkish hands (29 May 1453) from those written in preceding centuries. Although *megala sēmadia* were used more profusely in these later centuries, giving a visual impression of a somewhat different notational practice, all the basic neumes of Middle Byzantine notation remained in use throughout the period.

From the 16th century onwards there is evidence to suggest that musicians 'edited' or 'transcribed' parts of the traditional repertory. These 'transcriptions' or 'exegeses' (Gk. *exēgēseis*) have created the impression that no Byzantine notation before the 17th century represented melodic movement in all details, but rather that it served as a shorthand record of a performance. On the basis of

Ex.4 Syllabic psalm tones (14th century; *GR–AOml* I.185) set to lesser doxology (after Strunk, *JAMS*, xiii, 1960, p.54)

this assumption some Greek scholars have claimed that Western musicologists (particularly those associated with the series Monumenta Musicae Byzantinae) merely follow the *metrophōnia* (signs of duration and melodic steps) but ignore the real *melos*, which may be uncovered by interpreting the *megala sēmadia* while making allowance for oral tradition (see Stathēs, D.ii 1978).

As an argument against the shorthand interpretation of medieval Byzantine music, the specific nature of the neumatic notation itself and the adequacy of signs to express all kinds of melodic movement may be considered. No musical notation can record with absolute exactness the finer nuances of a composition and its interpretation, but 17th- and 18th-century exegesis appears to be concerned with a peculiar stylistic development that has more to do with a change in musical taste than with notational usage.

Non-tempered musical intervals of various sizes (e.g. the 'oriental' augmented 2nd) are known to have existed in 19th-century practice and are used in the current oral traditional of the Greek Orthodox Church; it is clear that during the period of Turkish domination some degree of interaction occurred between Byzantine and oriental music traditions (Zannos, F1994), but this does not exclude the possibility that such intervals may have been known in Byzantium before the 15th century.

Transcriptions of chants written in Middle Byzantine notation depend, as in all reconstructions of early music, partly on the notation itself and partly on a series of assumptions regarding its interpretation. The extant musical manuscripts indicate the intervallic steps between successive notes of a chant, but such elements as rhythm, dynamic nuance, non-tempered intervals and tempo cannot be determined exactly. When transcribing chants in medieval Byzantine notation for performance, it is necessary, therefore, to consider the living chant traditions of churches following the Byzantine rite and to compare them with other medieval chant traditions.

(iii) The New Method ('Reformed' or 'Chrysanthine' notation). The 1814–15 reform of neumatic notation is associated with CHRYSANTHOS OF MADYTOS, CHOURMOUZIOS THE ARCHIVIST and GREGORIOS THE PROTOPSALTES, collectively known as 'the three teachers' (Morgan, R1971). This reform involved a significant reduction in the number of signs, especially the phrasing signs (*megala sēmadia*). New, special signs were introduced for chromatically altered intervals, duration and rests; and solmization syllables, based on the first few letters of the Greek alphabet, were used to define scales, for example *pa*, *vou*, *ga*, *di*, *ke*, *zō* and *nē*, for the diatonic scale from *d* to *d′*. Most important was a theory recognizing the presence of more than one type of mode, based on the ancient division into diatonic, chromatic and enharmonic modes. At the same time, the graphic forms of the intonation signs in 18th-century manuscripts were codified. The basic neumes that were retained remained similar to the Middle Byzantine notational forms (fig.3). A vast project of transcribing the Byzantine repertories as practised in the 18th and 19th centuries, including ornamented versions of the late medieval repertory, was undertaken as part of the reform (e.g. the monumental series of autograph manuscripts by Chourmouzios the Archivist in *GR-An*).

The New Method spread rapidly, owing to the systematic pedagogical activities of the Patriarchal School at Constantinople from 1815 onwards and the introduction of music printing in 1820. While some aspects of Chrysanthine theory were subjected to another reform in

the 1880s (particularly with regard to the sizes of intervals), the New Method is still used in the official chant books of the Greek Orthodox Church and in other churches following the Byzantine rite (*see* GREECE, §§II–III).

4. LITURGICAL RECITATIVES. From a study of the history of liturgical chant, it may be seen that, in general, the best-known, the simplest, the most venerable chants are the last to be taken out of oral tradition and committed to musical notation. For some of the commonest Byzantine chants there is written witness only from the end of the empire or later. Thus for the 'amen' or *allēlouïa* that accompany the Trisagion and Cheroubikon, the simple authoritative versions are late. Only one medieval melody survives for the deacon's exclamation 'sophia' ('wisdom'), intoned during every celebration of the Divine Liturgy, and this tradition is from an isolated town in south Italy. Acclamations of emperors were copied time and again from the early 14th century, but the more commonly heard acclamation of the celebrant bishop appears only in a few Byzantine manuscripts. There is no written music at all for the litanies, and for some of the most celebrated

Ordinary chants, for example, the *Phōs hilaron* ('O gladsome light') of Hesperinos, no noted version survives from before the 17th century. The simple Ordinary chants are difficult to recapture, partly because they were congregational, and therefore too well known to be copied with notation, and partly because their origins often lay in modal recitatives or exclamations which lacked characteristic melodic profiles and thus made no call on notation.

5. SYSTEM OF EIGHT MODES ('OKTŌĒCHOS'). The chants discussed hitherto are mainly in recitative styles; in their simplicity they stand essentially outside the Byzantine canon of characteristic musical modes. Chants that were complex enough to be composed properly in Byzantium were systematically assigned to one or other of eight musical modes (*ēchoi*) which, since at least the 8th century, provided the organizational framework for Byzantine melodic practice. The origins of the OKTŌĒCHOS may be found in ancient music theory and various Near Eastern musical practices. The system was attached to the corpus of Byzantine chant and was closely connected with a liturgical cycle of eight weeks, each ascribed to one mode. The *oktōēchos* is traditionally attributed to John Damascene, whose theological and hymnographic writings date from the first half of the 8th century at the monastery of St Sabas in Jerusalem. It is likely that the attempts to regulate chant practice and/or the dissemination of new chant repertories originated in the area of Palestine at about this time; these attempts were connected with early redactions of chant collections such as the heirmologion and the oktōēchos (paraklētikē,

tropologion), both of which were conceived according to the eight-mode system.

During the latter part of the 8th century the Byzantine organization in turn left its imprint on the organization of chants in the West. The eight Byzantine modes (*ēchoi*) are, in external order and substance, related to the eight Western modes: both systems have the four finals on D, E, F and G, with an authentic (higher-range) form and a plagal (lower-range) form based on each final. Only the use of co-finals and the ordering of the modes differ somewhat in detail: in the Western system, authentic and plagal forms comprising modes 1 to 8 alternate (D authentic, D plagal, E authentic, E plagal etc.) whereas the Eastern numbering takes the four authentic modes in order and then the four plagal modes. More important, the relationship between Eastern and Western modes reaches beyond the systematic externals of organization to characteristic operating features of particular modes and specific details of melodic fabric. Idiomatic turns of corresponding modes may resemble each other on both sides of the liturgical and linguistic division.

6. Syllabic psalm tones. Each Byzantine mode, like each Western mode, has one or more varieties of simple psalm tone attached to it. One common set is shown in ex.4, as first written out in late 13th- and early 14th-century sources; through a remarkable chain of evidence developed by Strunk (G1960), its lineage has been traced to the late 8th century. As in the West, there are intonations, recitation tones and cadences. One characteristic of this psalmody may place it closer to the origins of psalmody than most Gregorian examples; this is the use of the four-element syllable-count cadence, where the last four syllables of a line are applied mechanically and without regard for word accent to four fixed, stylized musical elements constituting the cadence. The Gregorian procedure favours a variety of 'tonic' cadences that make accommodations for differences in text accent. The simpler, more rigid Byzantine procedure of the four-element cadence is, as Strunk suggested, probably the more archaic. (For further discussion of Byzantine psalmody, including a more detailed example of syllabic psalm tones, *see* Psalm, §III, 2 and ex.1.)

(E authentic)

['Having crossed dry over the untrod sea-path, Israel the chosen cry: Let us sing unto the Lord for he hath been glorified']

7. Formulaic chants. The process of assembling a chant as a selective patchwork (cento) of modally appropriate formulae – often termed 'centonization' – is a characteristic of many orally composed and transmitted repertories. In Gregorian chant it is a common feature of the structure of the tracts and the F-authentic graduals (among others), and its use is even more rigorous and widespread among composed Byzantine chants. Byzantium was also more explicit in its recognition in music theory of formulaic composition. The earliest Byzantine music treatise is a 10th-century catalogue containing elements of music theory, notational signs and names for melismatic groups or formulae. In about 1300 Joannes Glykys and Joannes Koukouzeles undertook the elaborate task of weaving together the music for a great many of these formulae into continuous didactic chants. Such chants, which found their way into elementary instruction manuals in Byzantine chant, present a broad selection of single neumes, groups and formulae from different genres. Some formulae from *To mega ison* by Koukouzeles are illustrated in ex.5.

The basic operations of Byzantine formulaic composition are familiar from their manifestations in the West. Melodic patterns and formulae may represent a single mode or several modes, though rarely all the modes. The relation of formulae to specific pitches in the tonal system seems often more decisive than allegiance to a particular mode or modes. Formulae and patterns also tend to function in specific positions – initial (phrase-starters), middle or cadential – within the natural contour of musical phrases, and they often underline the syntactic structure of texts. The accentuation of the text also seems to have a strong influence on the choice of formula, especially in the syllabic genres; thus a specific number of unaccented syllables before the first accent often results in the same melodic opening in several pieces of the same mode. The formulae are also made to serve larger formal designs: they may embellish a psalmodic framework or combine into some abstract compositional figuration with symmetries of its own; they may be attached to a specific category of liturgical chant, or to a specific performing medium, helping to define a particular style by their rejection of other categories. The characteristic florid choral style of the asmatikon and the florid soloist's style of the psaltikon have few formulae in common. The choral, syllabic hymn repertories of the heirmologion and stichērarion, however, share a good deal of stock material, some of which is common also to the psaltikon and the asmatikon.

8. Florid psalmody: 'prokeimena', 'allēlouïaria' and 'koinōnika'. As in the West the Psalter has elaborate settings that take the shape of formulaic embellishments on a psalmodic framework. Corresponding in function to the Roman graduals (Mass responsories) and Ambrosian *psalmelli* are the Byzantine *prokeimena* (*see* Prokeimenon), which are delivered by a soloist before the Epistle at the Divine Liturgy (some are also used at Hesperinos and Orthros). The *prokeimena* are

contained in the Constantinopolitan psaltikon; the refrains are given in a different version in the complementary choirbook, the asmatikon; and some parallel settings in syllabic, psalmodic style are found in the akolouthiai manuscripts. Ex.6 shows the refrain of the Easter *prokeimenon* in the psaltikon style. Like its Gregorian and Ambrosian counterparts, this chant is a setting of Psalm cxvii.24; it is in the plagal mode on G and perhaps has some melodic substance in common with the parallel Ambrosian chant.

The Byzantine *allēlouïa* refrain and florid psalm verse (*allēlouïarion*) precede the Gospel Lesson, as in the West (*see* ALLELUIA, §II). An old cycle of some five dozen Proper *allēlouïaria* survives in the psaltikon. A peculiar feature of this cycle is the complete avoidance of the authentic and plagal modes on F. This is also the case with the Ambrosian alleluia verses; in the Gregorian repertory the number of alleluias in F modes is smaller in comparison with those in the other six modes. Ex.7 gives the *allēlouïa* refrain and first verse, *Anastētō ho Theos* ('Let God arise', Psalm lxvii.1), for the Holy Saturday Divine Liturgy, in the version of the 13th-century south Italian psaltikon; this reading is somewhat more florid than the related version of the standard psaltikon considered by Thodberg (I1966). The chant is in the authentic mode on G.

The cycle of Byzantine Proper communions (*koinōnika*) was assigned to the select choirs (*psaltai*) of Hagia Sophia and is transmitted in the asmatikon (*see* KOINŌNIKON). A representative example is given in ex.8: the *koinōnikon* for Pentecost, *To pneuma sou, to agathon* ('Thy good spirit', Psalm cxlii.10), a chant in the plagal mode on G. Not only is this melody also found in 12th-century Slavonic sources, but it probably existed in the Greek tradition of the 11th century or perhaps even the 10th.

9. BYZANTINE HYMNS. Unlike the Western Church, where hymns have had a relatively restricted role (they are practically excluded from Mass, and at Rome they were accepted for the Office only in the 11th century), in the Eastern Church the growth of hymnody far exceeded that of the psalmodic chants. Over 60,000 incipits of Byzantine hymns are recorded in Follieri's six-volume *Initia hymnorum ecclesiae graecae* (J1960–66), which draws only on hymns in published sources. Other thousands lie unpublished in medieval manuscripts, and other tens of thousands must have disappeared as a result of the violent theological-political controversies that accompanied spiritual movements such as Iconoclasm.

Pitra's 19th-century study *Hymnographie de l'église grecque* (J1867) did much to illumine the poetic nature of Byzantine hymns, yet some details of the poetic process are still in dispute. The vast majority of hymns are strophic, and metrically the standard verse is governed by accent and not (as in ancient Greek poetry) by quantity. Line-symmetries are tailored, more or less flexibly, to the number of syllables and the position of accents within a line. A kind of formulaic poetic procedure – the artistic accommodation of a select vocabulary of poetic-theological units – is as obvious a factor in the formation of the literary style of some hymns as it is in their musical setting.

10. SYLLABIC HYMN SETTINGS.

(i) Troparion. Most Eastern hymns have simple music, generally based on the principle of one note to each syllable of text, to render them suitable for congregational singing. A miscellaneous class of early monostrophic hymns also known as *troparia* (*see* TROPARION) goes back in some instances to the 4th century. For these, no early written music survives since the tunes were familiar to everyone. The Ordinary hymn at Hesperinos, *Phōs hilaron*, had (as already observed) no written music before the 17th century. For the *Doxa en hypsistois Theō* (Gloria in excelsis Deo), dating from the 4th century or earlier and sung at the conclusion of Orthros, there are only partial settings from the 13th century; and the *troparion* melody sung at the beginning of every Divine Liturgy, *Ho monogenēs huios* ('O only-begotten Son'), attributed to Emperor Justinian I (*d* 565), was written down at a very late stage.

(ii) Kontakion. The first major form of Byzantine hymn writing was the KONTAKION, a kind of long metrical sermon that was cultivated in the 5th century or early 6th, drawing on the Syriac tradition of church poetry. *Kontakia* are poetic-narrative elaborations on biblical texts, often of 20 or 30 long stanzas or more. The metrically similar stanzas, called *oikoi* (from Gk. *oikos*: 'house'), have a short concluding refrain (*ephymnion*), and they are normally linked by their opening letters into an acrostic that incorporates the name of the poet-composer (*melōdos*), or the liturgical occasion of the poem, or the letters of the alphabet. The whole set of *oikoi* is prefaced by an introductory strophe called the *koukoulion* or *prooimion*, which is of differing structure and metre; it shares the common refrain and the musical mode of the *oikoi* but may be a later addition.

The foremost composer of *kontakia* was ROMANOS THE MELODIST, born in Syrian Emesa (Ḥimṣ) and active at Constantinople during the first half of the 6th century. Some 85 works are attributed to Romanos, including *kontakia* for most major feasts of the liturgical year. His rich poetic style touches extremes of grandiloquence and pathos. *Kontakia* must have been intended originally for a syllabic musical setting, whether recitative or properly 'composed', because the hundreds of lines comprising each of these metrical sermons would take too long to perform in any other way.

However, the earliest surviving melodies (?9th century or 10th) were florid (see §11 below), consisting of settings of the *prooimion* and the first *oikos* from the psaltikon collection. A cycle of *kontakia* in syllabic style is preserved in a small group of 13th- and 14th-century manuscripts, most notably *RUS-SPsc* 674 (ex.9*a*). The main purpose of these syllabic *kontakia* was to serve as model melodies for contrafact *troparia*; they are similar in style to the rest of the model melodies of the *troparia* as well as to the model melodies of the *stichēra automela* (*see* STICHĒRON). It is possible that the occasional citations from *kontakia* found in the syllabic *stichēra* preserve characteristics of earlier syllabic *kontakia* (Levy, K.ii 1961).

It would seem, therefore, that the syllabic and florid traditions co-existed for a considerable period. Although the earliest tradition of the *kontakion* was undoubtedly syllabic, it is difficult to identify with any certainty the archaic elements in the surviving examples written in syllabic style: during centuries of oral transmission the melodies were probably modified and reshaped; certainly, in the few extant sources, they display considerable variation.

(iii) Kanōn. The second large-scale strophic form of Byzantine hymnody is the KANŌN. Although *kontakia* of reduced length were still being produced in the 9th century, it seems that from the later 7th century the *kanōn* was favoured above the *kontakion*. The first master of the new form was Andrew of Crete (*c*660-*c*740), whose Great Kanōn, sung in mid-Lent, is of the exceptional length of 250 stanzas. A *kanōn* is in substance an elaborate nine-section poetic trope on the nine biblical canticles sung at Orthros, among whose verses it is interspersed. (For a list of the biblical canticles *see* CANTICLE, §2; for the musical recitation of the canticles *see* PSALM, §III.)

Each biblical canticle has corresponding to it an ode (*ōdē*) of the nine-ode *kanōn*; each ode consists normally of three or four similarly structured strophes sung to the same music. The first strophe of an ode is its *heirmos* or model-strophe; the succeeding strophes are called *troparia*. The eight or nine odes of a complete *kanōn* (ode 2 is often omitted) are united by references to the general theme of the liturgical occasion, by the same musical mode and, at times, by an acrostic; but in other respects they are independent. *Kanōn* composition reached its peak in the 8th and 9th centuries, first in Palestine with the works of John Damascene (*d c*749) and Kosmas of Jerusalem (*fl* 1st half of the 8th century), then in Constantinople with Abbot Theodore of Stoudios (*d* 826), his brother Joseph, and the two Sicilians Methodius (*d* 846) and Joseph the Hymnographer (*d* 883). Although *kanōn* texts continued to be produced into the 13th century and beyond, after the 8th century or the 9th new texts were simply adapted to the music of existing *heirmoi* (model stanzas). For the *heirmoi*, the classical chants in syllabic styles are collected in a book called the HEIRMOLOGION, which may contain as many as 2000 model stanzas. Like a Western tonary, the heirmologion is divided into one section per mode. Within each mode there are two systems of internal organization: in the first, the full series of eight *heirmoi* follow each other; in the second, all odes with the same number are grouped together. One of the earliest surviving heirmologia (*US-PRu* Garrett 24; 2nd half of the 8th century to the early 9th) is a palimpsest manuscript containing only works ascribed to the Palestine masters (Raasted, D.ii 1992). The manuscript is outstanding not only because of its age and its use of a primitive melodic notation but also because, like the Slavonic and old Georgian heirmologia, it follows the second system of organization. The oldest extant heirmologion with full melodic notation dates from the 10th century.

The simple melodic style of the classical *heirmos* is illustrated in ex.10; this is the first ode of a 'Resurrection' (Sunday) *kanōn* in the authentic mode on E, attributed to 'John the Monk' (?St John Damascene). The style is almost wholly syllabic. The use of formulae plays a decisive role in the development of the musical fabric. The hundreds of *heirmos* melodies in each mode are patched together from a limited repertory of melodic patterns and formulae characteristic of the mode. Extreme care was given to the syntactical structure and to the proper accentuation of the text.

(iv) Stichēron. The other major collection of classical Byzantine hymns whose full music survives is the STICHĒRARION. Unlike the few dozen extant medieval heirmologia (the tunes were probably too simple and familiar to warrant much copying), there are hundreds of surviving stichēraria which normally transmit a repertory of some 2000 longer hymns in a slightly more elaborate style than that of the heirmologion. The stichērarion resembles in style and content a collection of Latin antiphons. Much of its content dates from the 8th century, although some must go back as far as the 7th or earlier (as Strunk has demonstrated for certain Easter hymns); on the other hand, hymns such as the *heōthina*, or Morning Hymns, by the Emperor Leo VI (886–912), are later, even as late as the 12th century for saints recently entered in the Calendar. Most *stichēra*, as the individual hymns are called (*see* STICHĒRON), serve as choral interpolations among the concluding verses of the ordinary psalms at Hesperinos and Orthros. The musical style and procedures are like those of the *heirmoi* except that the *stichēra* are more lavishly punctuated with embellishing melismas, which in some cases may be quite lengthy. The opening of an elaborate *stichēron* for the Veneration of the Cross (sung in the fourth week of Lent) is given in ex.11.

11. FLORID HYMN SETTINGS IN CLASSICAL STYLES: 'KONTAKION' AND 'HYPAKOĒ'. Two related classes of Byzantine hymns are transmitted in the classical, florid, formulaic styles of the asmatikon and psaltikon rather than the syllabic formulaic style of the heirmologion and stichērarion. The *kontakia*, in the music manuscripts represented by the introductory strophe and first *oikos*, had complete cycles of settings in both the soloist's style of the psaltikon and the choral style of the asmatikon (the latter known mainly through derived 12th- and 13th-century Slavonic copies). Only for the most celebrated of all *kontakia*, the anonymous Akathistos Hymn, whose 24 strophes are still sung in full on the Saturday before Passion Sunday, is there a complete florid setting of all the strophes in psaltikon style; this hymn survives in a south Italian tradition of the late 13th century (transcr. E. Wellesz, MMB, *Transcripta*, ix, 1957).

The shorter monostrophic hymns called *hypakoai* (analogous to the Western responsories) also received florid settings in both psaltikon and asmatikon styles. The beginning of the *kontakion-hypakoē* for the Sunday of Orthodoxy (the 1st Sunday in Lent), a text of the mid-9th century, is given in ex.12 for both melodic traditions.

12. POST-CLASSICAL FLORID STYLES: THE KALOPHONIC STYLE AND THE EMERGENCE OF PERSONAL STYLES. The traditional syllabic stylizations of the heirmologion and stichērarion may be traced back with certainty to the 10th century; possibly they had already taken their definitive shape by the 8th century or even some centuries earlier. The classical florid stylizations of the psaltikon and asmatikon probably existed during the 11th century (by which time the Asmatic repertory was borrowed by the Slavs); and there are indications that they were formed by the 9th century. With the 12th century, however, the traditional formulaic styles had begun to give way to new styles. There were new techniques of embellishment that gave greater scope to the individual musician's taste. By the later 13th century an enormous outpouring of such freer creative effort had taken place, and a new, post-classical stylization had emerged for handling the traditional melodies. Described by the Byzantine term 'kalophonic' (i.e. beautiful-sounding or embellished), it is a style of extravagant embellishments, loosed from the restraints of the formulaic procedures of the psaltikon

and asmatikon. Much freedom is given to vocal display: there are many sequences, repeated articulations of a single pitch, and wide leaps. The expansive, kalophonic versions of traditional chants are recorded with great notational precision in new classes of manuscript: the kalophonic stichērarion, kalophonic heirmologion, kalophonic kontakarion (oikēmatarion) and similar florid collections. (*See also* KALOPHONIC CHANT.)

Parallel with this was a new attitude towards composition. Musical style was previously an anonymous fusion of prose or poetry with the traditional formulae of the musical vocabulary. Now, instead, the composer cultivated a personal style and attached his own name to the composition. A specific compositional technique was applied in the kalophonic stichērarion. Taking a traditional piece in syllabic style as their point of departure and frequently preserving the syntactical-musical division and the scheme of internal modulations, composers would repeat and/or embellish parts of words, single words and even short phrases, rearrange the text (*anagrammatismos*) and often add whole melismatic passages on meaningless syllables (*teretismata* or *kratēmata*) towards the end of each section. The kalophonic *stichēra* normally ended, however, with a melodic or textual quotation from the syllabic original, at which point the choir joined in (*apo chorou*). Many composers are known from the last century and a half of the empire but few from before. And these men were animated by an unprecedented sense of artistic competition.

The most celebrated composer of the period around 1300 was the Constantinopolitan *maïstōr* JOANNES KOUKOUZELES, the organizer of the big anthologies of the current musical repertory called AKOLOUTHIAI ('orders of service'). These were the first Byzantine collections to contain in a single volume almost all the Ordinary music needed for the celebration of the Divine Liturgy and Office. From the time before Koukouzeles there are works attributed to Michael Aneotes (or Ananeotes), Kampanes and others (see below); later the leading composers were JOANNES GLYKYS and NIKEPHOROS ETHIKOS (both slightly older contemporaries of Koukouzeles); then XENOS KORONES (perhaps a younger contemporary); the late 14th century had as its leading composer the *lampadarios* JOANNES KLADAS, and the mid-15th century, MANUEL CHRYSAPHES.

Competitive kalophonic elaborations of a single traditional chant are a common occurence. Three versions of the *stichēron Meta to techthēnai*, a hymn in the plagal mode on G for the feast of the Presentation of the Virgin in the Temple (21 November), are given in ex.13: ex.13*a* shows the first two lines in the classical syllabic style of the stichērarion; ex.13*b* is an elaboration attributed to the early kalophonic master Kampanes with further embellishments by Joannes Koukouzeles; ex.13*c* is what is supposed to be the same embellished version by Kampanes, but with more elaborate embellishments by Xenos Korones. All classical repertories, both syllabic and florid, were subsequently subjected to modernizations and individualizations of this nature. The most exuberant examples of the kalophonic style are the long, freely composed *kratēmata*, which were commonly interpolated among verses of the vesper psalms and elsewhere. Some of these last ten minutes or more in performance.

13. THE ORDINARY OF THE DIVINE LITURGY AND OFFICE. The most important applications of the kalophonic procedure, however, were to the chants of the Ordinary. The Byzantine Ordinary includes textual counterparts to the Western Gloria in excelsis (at Orthros) and Sanctus. The Credo may have been sung at Byzantium in early times but in the middle and late Byzantine periods it was not sung, and the only independent melodies are from the mid-15th century and later. There was no Agnus Dei at Byzantium, but the Eastern rite has Ordinary or semi-Ordinary chants for some functions that in the West are Proper chants. The Byzantine offertory chant, known as the Cherubic Hymn or CHEROUBIKON, is Ordinary (with three alternatives for special liturgical occasions during the year). There is an Ordinary chant for the communion during Lent, based on Psalm xxxiii.8. The TRISAGION, which is used at Rome principally on Good Friday, is Ordinary at Byzantium. Such chants never appear in earlier Byzantine musical manuscripts since they were intended for the congregation and their simple musical versions required no notation.

During the 13th century, the Ordinary chants began to appear in manuscript, though not in their syllabic, congregational forms but rather in florid kalophonic elaborations. At times these offer glimpses of a simpler underlying chant. Thus for the Cheroubikon, *Hoi ta chēroubim*, there were some two dozen settings by kalophonic composers, produced between the later 13th and mid-15th centuries. Nearly all these use the same underlying materials of the plagal E or related plagal G modes. The earliest surviving tradition for this chant is given in ex.14, according to an authoritative 13th-century manuscript.

Ex.14 Cherubic hymn in florid style (13th century) (*GR–AOml* 3, f.51*v*–52*v*)

(E plagal)

['We who mystically (represent) the Cherubim ...']

14. PARALITURGICAL AND INSTRUMENTAL MUSIC. Closely allied to the liturgical ceremonial of the Church is the public ceremonial of the Byzantine court. Practically no music survives from Byzantium that is not directly connected with the church service. But rich details concerning the genres of chant and the instruments used at receptions and imperial processions are contained in the *Book of Ceremonies*. In this book, transmitted under the name of Emperor Constantine VII Porphyrogennetus

(905–59), a large number of chants and their modal assignments are cited, and likewise also in the *De officiis* of Pseudo-Codinus, dating from the mid-14th century. Various wind and string instruments are represented in artistic monuments. Organs, which were excluded from church use, had an important part in imperial ceremonies. The chronicler Theophanes the Confessor (9th century) reported that the Emperor Constantine VI and Empress Irene had such instruments in their baggage when they visited the military frontier at Thrace in 784. It was the importation of Byzantine organs to the West that helped revive interest in the instrument, the most notable occasion being the organ sent to the Frankish King Pippin in 757. There is a 16th-century description of the reading of lessons at Hagia Sophia where bells were rung at the end of paragraphs. Each section of the reading was repeated three times in succession by different readers posted at different points in the church. The bellringing indicated to the distant reader when the previous reader had finished. At Patmos this was still the practice in recent times, although the triple reading was no longer needed.

To Western ears the most striking Byzantine performing practice is the use of an *ison* or drone to accompany liturgical singing. This is still heard in Orthodox churches. Rubrics in music manuscripts provide the earliest hints for the practice; this evidence can be traced back to about 1400, although the practice probably existed throughout the Middle Ages. It was described in 1584 by the German traveller Martin Crusius: 'more utriculariorum nostrorum, alius vocem eodem sono tenet, alius, *Dra Dra*, saltatorium in modum canit'. There is no independent Byzantine polyphony of the kind that developed in the West.

Liturgical musical drama at Byzantium is scarcely documented. Only for the *Akolouthia tēs kaminou* (the drama of the Three Children in the Furnace) is music extant, dating from the 15th century (for a full discussion, and details concerning the traditions in Byzantium and Russia, see Velimirović, O1962).

Popular, orally transmitted traditions for liturgical chants have been insufficiently studied, although there is some documentation of such traditions in Greek enclaves by the Black Sea (Azov Greeks), in Crete, the Eptanese Islands and Corsica, and among the Albanian- and Greek-speaking minorities following the Byzantine rite in south Italy (Apulia, Calabria and Sicily).

15. Byzantium and the Slavs. Byzantine liturgical influence began its decisive impact on the Slavs with the evangelizing mission of SS Cyril and Methodius to the south Slavs in the mid-9th century. It is possible that by this time the full complement of Byzantine liturgical books had already been translated into Old Church Slavonic; and there is also some possibility that the Byzantine liturgical melodies were transmitted with the translated texts. This was certainly the case by the 11th century and the heyday of Kievan Rus′. The vast corpus of Byzantine liturgical texts were translated, and there was wholesale appropriation of the liturgical melodies, apparently without significant alteration except for slight adaptations of the melodies to take into account the different number of syllables and the Slavonic accentuation. Through the early 13th century, the Slavic copies of the heirmologion, stichērarion and asmatikon (no full Slavic copy of the psaltikon survives) were essentially faithful to the melodic traditions of their Greek originals (*see* Russian and Slavonic church music, fig.1) and it would appear from the evidence of the extant Greek versions that Slavic liturgical conservatism even conspired on occasion to preserve a more authoritative version of a traditional melody. After the Mongol invasions during the mid-13th century, however, the musical traditions grew apart.

The oldest layers of Slavic neumes are based on prediastematic stages of Byzantine notations. They cast precious light on early melodies for which Greek sources are lost or incomplete, but they themselves cannot generally be transcribed without a counterpart Greek melody as a guide. (Such counterpart transcriptions have been published by Velimirović, Strunk, Levy, Floros, Schidlovsky, Konstantinova Ulff-Møller, Shkolnik and Shkolnik; see bibliography, §P). The great wealth of early Slavic musical manuscripts that exist in libraries in Russia are yet to be examined in detail.

The Byzantine-derived chant repertories of the early south Slavic rites and the Kievan rite were absorbed by stages into later branches of the Slavic rites, those of the Bulgarians, Romanians, Serbs, Ukranians and others. However, the synthesis between Byzantine and national idioms in these musical traditions has not yet been fully explored.

16. Byzantium and the West. The wholesale musical borrowings that took place between Slavic and Byzantine chants did not occur between Byzantium and the West. Yet there are two important interrelationships between the Greek and Latin chant repertories. The broad classification of Gregorian chants into eight modes (with all that it entails – the symmetrical system of four finals, the high and low forms with each final, the canon of intonation formulae and psalmodic *differentiae* etc.) owes its definitive shape to Byzantine influence probably exercised most intensively during the latter half of the 8th century. On the other hand, there are a number of possible melodic borrowings (again from East to West) that can be dated variously between the 6th and 9th centuries. Notker reported (*Gesta Karoli*, ii.7) that Charlemagne himself during the first years of the 9th century ordered the translation of the well-known series of antiphons beginning with *Veterem hominem*, for the octave of Epiphany. Carolingian musical liturgists also experimented with a full 'missa graeca' for Pentecost, elements of which made their way into a 'Greek' Mass in honour of St Denis. The Good Friday antiphon *O quando in cruce/Otin to stauron*, found in both Latin and Greek forms in the Beneventan rite and in Latin in the Ravenna rite, is likely to have been borrowed from the Greek *troparion Hote tō staurō* by the mid-8th century, for at that point the submission of Ravenna to Lombard and eventual papal rule detached the former exarchate from primary Byzantine influence. The Ambrosian rite contains a number of melodic borrowings, among them the Maundy Thursday *ingressa* or *post-evangelium Coenae tuae mirabili* (based on the Byzantine Cheroubikon alternative *Tou deipnou sou tou mystikou*); and the *ingressa Videns ne Elisabeth*, for the special Ambrosian Marian Mass on the 6th Sunday in Advent, which is based on a *stichēron idiomelon, Blepe tēn Elisabeth*, sung in high medieval times at the feast of St John the Baptist. The Mozarabic rite also includes chants in Greek, and possible traces of Byzantine chant can be seen in early Spanish psalmody.

Some traits common to both Eastern and Western repertories are old enough to be traced directly to the early Christian chant tradition. Thus the Gregorian communion *Omnes qui in Christo* for Saturday in Easter week (based on the baptismal *troparion Hosoi eis Christon*) and the Sanctus of the Pentecostal *missa graeca*, while they probably represent specific borrowings of the 6th and later 8th centuries respectively, embody earlier melodic traditions. The modal and structural concordances in some florid responsorial psalm settings (*prokeimena*/gradual responsories and *allelouïaria*/alleluia verses) might also reflect an early interrelationship between East and West.

17. BYZANTINE MUSIC THEORY. Byzantine music theory is less abundant and less concerned with specific cases than its Western counterpart. One conservative line simply continues late classical speculation and is minimally focussed on contemporary practice. The *Quadrivium* of Georgios Pachymeres (*c*1242–*c*1310) and the *Harmonics* transmitted under the name of Manuel Bryennius (?*c*1320) are both of this nature. The earliest Byzantine theoretical documents are simple catalogues of neumes and melodic formulae. The oldest, found in the 10th-century manuscript *GR-AOml* γ.67, lists rudiments of the tonal and modal systems together with names and signs for various formulae of the so-called 'Chartres' variety of early Byzantine melodic notation (see §3(i) (b) above). Similar catalogues of the 11th and 12th centuries detail the elements of ekphonetic (lectionary) notation; there are corresponding catalogues in the Georgian language.

A different type of theoretical document, again relatively early, appears within the classical stichērarion itself; this contains a handful of 'multimodal' *stichēra* that progress systematically through some or all of the eight modes. (Examples of such hymns, which illustrate the behaviour of the individual modes and the nature of the tonal and notational systems, were published by Strunk, R1942, and by Husmann, 'Modulation and Transposition', R1970.)

Perhaps the earliest discursive theoretical statement occurs in an anonymous fragment, the *Hagiopolitēs*, which ostensibly details the practice of the Holy City of Jerusalem (ed. Raasted, R1983). The most important source is *F-Pn* gr.360 which probably dates from the first half of the 14th century, and there are various later derivatives of this treatise, including *I-Rvat* gr.872 (see Tardo, R1938, pp.164ff). The *Hagiopolitēs* contains observations about the Byzantine modes (including modes supplementary to the standard eight) and intonation formulae. It also provides references to different layers of Palaeo-Byzantine and Middle Byzantine notations and quotes extensive passages from ancient theoretical works.

The main line of Byzantine theory is represented by the so-called PAPADIKĒ, a manual first compiled perhaps in the later 13th century at Constantinople or within the orbit comprising also Mount Athos and Thessaloniki. There are many elaborations of the basic materials of this handbook. From the early 14th century, a version of the papadikē often prefaced manuscript copies of the Koukouzelian AKOLOUTHIAI. The usual beginning of the treatise was *Archē, mesē, telos* … ('The begining, middle, end and system of all the signs of the psaltist's technique is the ison [the sign for tone-repetition]'). One of the simplest versions is that found in the 15th-century manuscript *I-Rvat* Barber. gr.300 (ed. Tardo, R1938, pp.151ff), which contains the names and signs of the rising and falling intervals, the modulation signs (*phthorai*), the nomenclature of the modes, the *megala sēmadia* (stenographic and dynamic indications), the intonation formulae of the eight modes, a discussion of the tonal system, and, finally, a recapitulatory dialogue. The papadikē presents an essentially different tradition of grouping Byzantine neumes from that of the *Hagiopolitēs*; mixed forms and divergent classifications are also found.

Related to the traditions of the papadikai are a number of mostly anonymous lists of signs and a few didactic chants whose theoretical doctrine is set to continuous music. The most influential of these is by Koukouzeles, beginning *Ison, oligon, oxeia, kai petasthē*. Based on earlier, partly anonymous lists, especially that of JOANNES GLYKYS, the melody illustrates each of the neumes and formulae as they are mentioned in the text (see ex.5; also ed. Alexandru, R1996; facs., after *I-Rvat* gr.791, in Tardo, R1938, pp.179–82). A number of other didactic chants (*methodoi*), some of them anonymous, are also found in the manuscripts; these concern intonations (mostly anonymous), hand signs (*cheironomiai*, by Joannes Glykys and Xenos Korones), solmization and modulation (anonymous), the eight modes, the stichērarion style (ascribed to Korones), and the kalophonic style (Korones and Koukouzeles).

A number of treatises from the later Middle Ages include full discussion of theoretical and stylistic questions. While containing invaluable evidence on the history of music instruction and chant practice in Byzantium, these texts must be interpreted with caution; most of them were intended for those already proficient in the performance of chant, and they are often imprecise with regard to basic questions of rhythm, ornamentation, the exact tuning of scales (including the question of diatonicism versus chromaticism), vocal techniques etc. A group of dialogues beginning *Egō mēn, ō paides*, the so-called Pseudo-Damaskenos (ed. Wolfram and Hannick, R1997) is perhaps the oldest of these. The treatise of Gabriel, hieromonk at the monastery of Xanthopoulos in Constantinople in the first half of the 15th century, gives important details on notation and technical nomenclature (ed. Hannick and Wolfram, R1985). An anonymous treatise on musical signs (ed. Schartau, R1997) provides some evidence concerning the relationship between chant theory and practice. An important treatise on the history of the kalophonic tradition and on the use of modulation signs (*phthorai*) was written by Manuel Chrysaphes in the mid-15th century (ed. Conomos, R1985). Somewhat outside the mainstream of Byzantine music theory is the 16th-century treatise by the Cypriot Hieronymos Tragodistes which advocates a reform of Byzantine notation by analogy with the contemporary harmonic system of the West (ed. Schartau, R1990).

Finally, Byzantine theorists designed various graphic schemes to assist the learner (see Alygizakēs, R1985). Two of these, a 'tree' and a 'wheel', both illustrating the tetrachordal relationships between the eight modes, are traditionally attributed to Koukouzeles and are probably the two oldest. Other schemes to assist solmization (*metrophōnia*) and modulation (*parallagē*) exercises are attributed to Gabriel Hieromonachos, Joannes Plousiadenos and Joannes Laskaris.

KENNETH LEVY/CHRISTIAN TROELSGÅRD

Byzantine secular music. From the founding of Constantinople in the 4th century CE until the fall of the empire in 1453, there was no greater patron of secular music than the imperial court. Secular music existed in great abundance and accompanied every aspect of life in the empire, including dramatic productions, pantomime, ballets, banquets, political and pagan festivals, Olympic games, and all ceremonies of the imperial court. It was, however, regarded with contempt, and was frequently denounced as profane and lascivious by the Church Fathers, among them John Chrysostom, Tertullian, Cyprian, Clement of Alexandria, Gregory Nazianzen, Basil the Great, Ambrose, Augustine of Hippo and, particularly, Jerome, who referred to those who performed it as prostitutes (*porni*).

1. Sources. 2. Instruments and performing practice. 3. Genres and composers.

1. SOURCES. Detailed descriptions of court music may be found in the 10th-century *Book of Ceremonies* of Constantine VII Porphyrogennetus (905–59) and in the *De officiis* of Pseudo-Codinus dating from the mid-14th century. Despite ecclesiastical opposition, most of the iconographical evidence for Byzantine instruments is to be found in monasteries and liturgical manuscripts; instruments prohibited in church are depicted in frescoes of the Great Lavra and Stavronikita (Mount Athos), Loukous (Astros), Philanthropinon (Ioannina) and Anapafsas and Varlaam (Meteora) monasteries. Contemporary chronicles, particularly the 9th-century *Chronographia* of Theophanes the Confessor, also document the existence of secular music as well as musical instruments.

Instances of secular music are comparatively rare in medieval Byzantine music manuscripts, probably indicating that the repertory was largely improvised. Where such music has been preserved, it is usually intermingled with liturgical music of the same period. There are secular pieces with notation in manuscripts of later date; representing an earlier tradition that survived through oral transmission, these pieces are notated in the same Middle Byzantine and Late Byzantine diastematic neumes (*see* BYZANTINE CHANT, §3(ii)) as contemporary liturgical chant.

2. INSTRUMENTS AND PERFORMING PRACTICE. Byzantine musical instruments, referred to collectively as 'organa', were in many cases similar to or adapted from ancient Greek models (for the latter see individual entries). However, the Byzantine nomenclature is often confusing in that several different names could be used to denote the same instrument. Performers were known as *paigniōtai*, and during the earlier part of the Byzantine empire, as in ancient Greece, a great number of them were women. The instruments were often used to accompany singers, especially in *polychronia* (see §3 below).

Among the *organa* of the imperial band were trumpets (SALPINX), horns (boukina, akin to the ancient Roman BUCCINA, kerata), reeds (AULOS), pipes (SYRINX, souroulis), rattles (SISTRUM, CROTALA), hand drums (tympana, *see* TYMPANUM (i)) and cymbals (CYMBALA, cheirokymbala, anakara); certain of these (salpinx, boukina, cymbala) were associated with battle. In addition to the band there was also a court ensemble consisting mostly of plucked and bowed strings: Byzantine lutes (PANDOURA, laouto, played with a plectrum); psaltery (also known as 'kanonaki'; similar to the ancient MAGADIS) and harp (*see* PSALTERY, §1), lyra (*see* LYRA (i) and/or KITHARA; four different sizes of tamboura (shaped much like the modern bouzouki); the three-string Byzantine phandouros (also called 'thamboura'); the Cappadocian kemane (a tall, slender, trapezoidal, bowed instrument); the large pear-shaped lyra (bowed); and Byzantine violas (bowed). Organs were also used to accompany singing or as part of ensembles. Replacing the ancient hydraulis, the pneumatic organ was employed for many Byzantine secular occasions, for example, in processions, at the Hippodrome (circus) and at receptions and banquets at the imperial palace (*see* ORGAN, §IV, 2). For ceremonies at the imperial court in honour of the emperor, two golden organs were often played simultaneously. Bells and the semantron (an elongated, cylindrical, bell-like instrument) were also found, but their use was mostly restricted to monasteries and the liturgy.

Although the notated examples of secular music are monophonic, the ancient Greek practice of heterophony

was known to, and probably practised by, the Byzantines. It is likely that the improvised *isokratēma* accompaniment (*ison* or drone singing) used in liturgical chant was also employed in secular music; functioning as a sustained final or dominant in relation to the notated melody, it produced an effect similar to melismatic organum. Players of the organ may also have used both hands, one hand providing the melody and the other playing octaves and/or parallel 5ths or 4ths.

3. GENRES AND COMPOSERS. *Polychronia* were chants of acclamation or salutation sung at the coronation of a new emperor or empress, when greeting the imperial family, and at almost all court ceremonies, anniversaries and entertainments. Acclamations for secular events were generally accompanied by wind instruments.

Symposia (or sympotika), whose origins lie in antiquity (*see* SYMPOSIUM), were banquets with musical entertainment consisting of singing accompanied by wind and string instruments. By the 13th century men had replaced women as performers at symposia.

Teretismata, again of ancient Greek origin, are meaningless syllables beginning with the consonants *tau* (τ) or *rho* (ρ) and followed by a vowel (*te*, *re*, *re*, *to*, *ro*, *ro*, *ti*, *ri*, *ri*). (Other such syllables and letters are also found in the repertory.) The related term *kratēmata* (a unit of *teretismata*) occurs particularly in 14th-century sources. In his *Harmonics*, Manuel Bryennius, the 14th-century Byzantine theorist, indicates that the *teretismata* could be performed vocally, instrumentally or as a combination of both. *Kratēmata* occur as part of the late 13th-century kalophonic tradition of liturgical chant, but in this case they were chanted because of the ban on instruments in church. The Church Fathers accepted these vocalizations as manifestations of the Christian practice of glossolalia, but the secular origin of *kratēmata* is nevertheless evident from the descriptive titles attached to them in the manuscripts, for example, 'Large Nightingale', 'Bell', 'Small Semantron'.

Akritika were vernacular folksongs, usually of a political nature, sung by the soldier-bodyguards of the frontier regions. The texts were often based on adventures recounted in the Byzantine epic poem *Digenēs akritas*. *Akritika* are important from both a textual and a musical standpoint, for they are the direct ancestors of modern Greek folk poetry and of demotic (folk) music. Examples of akritic songs may be found among the 13 folksongs preserved in *GR-AOi* 1203 dating from the 17th century, for example, *Etouto epoiēthe eis tēn halōsin tēs Mposnas* ('Threnody Composed for the Capture of Bosnia in 1463').

Dance music, ballets and pantomimes, which are documented in Byzantine chronicles, were staged during theatrical or other public performances and at the imperial palace. Pantomimes, in which the mimic dancer (*tragōdos*) performed to music, were a popular form of secular entertainment. Constantine VII Porphyrogennetus's *Book of Ceremonies* (i, 74) refers to the choreography of a ballet for the emperor in which the dancers, while chanting, circled the emperor's table three times in the manner of a round dance. A similar ritual is found in depictions on ancient Greek vases, and there is also a liturgical counterpart – the Dance of Isaiah performed during the marriage ceremony, in which the bride and groom encircle a vestment table three times, again in the manner of a round dance.

Composers of secular music are not documented until the late empire and even then attributions are scarce. Leading Byzantine composers such as Joannes Koukouzeles, Xenos Korones and Joannes Glykys contributed to the genre of *kratēmata*. An interesting example of secular music is found in *GR-An* 2604 (ff.136*v*–137*v*) dated 1463; the rubrics – 'another by the same maïstōr called ortikata and dance [music]' – clearly identify the music as dance music, and the attribution 'maïstōr' points to the great 14th-century master Joannes Koukouzeles. That a composer of his stature would write dance music suggests that by the end of the empire secular music had become acceptable and was no longer to be regarded as lascivious.

Caamaño, Roberto (*b* Buenos Aires, 7 July 1923; *d* Buenos Aires, 8 June 1993). Argentine pianist and composer. He studied the piano, harmony and composition at the Buenos Aires National Conservatory with Amelia Cocq de Weingand, Fritz Masbach and Athos Palma, and then embarked on a career as a pianist, appearing throughout Latin America, Europe and the USA. In 1952 he went to New York as the Argentine representative to the International Arts Program and played at a Pan American Union concert in Washington, DC. The Inter-American Music Council invited him back to Washington to give the first performance of his Piano Concerto no.1 with the National SO under Howard Mitchell as part of the first Festival of Latin American Music (April 1958). Also in 1958 he was named best Argentine instrumentalist of the year by the Association of Argentine Music Critics. He taught at the Litoral University (1949–52), the Buenos Aires Institute of Sacred Music (from 1955) and the Buenos Aires Conservatory, where he was director of advanced piano studies (from 1956). He was artistic director of the Teatro Colón (1960–63) and chief editor of *La historia del Teatro Colón, 1908–1968* (Buenos Aires, 1969). From 1966 until his death he was dean of the music faculty at the Catholic University of Argentina. A member of the National Academy of Fine Arts, he was appointed president of the Argentine Council of Music in 1969.

Caamaño's compositions are quite conventional and, without trace either of nationalism or of novel techniques, can be described as neo-classical. His numerous religious works aim at a certain sobriety, but on the other hand he has been much attracted by Spanish culture, an interest perhaps inherited from his Galician ancestors. He has received commissions from the Louisville Philharmonic Society (Magnificat), the Coolidge Foundation (Piano Quintet) and the Wagnerian Association of Buenos Aires (*Cantata para la paz*). He has won are four prizes from the National Commission for Culture and three from the city of Buenos Aires.

WORKS
(*selective list*)

Orch: Suite, str, 1949; Preludio, adagio y fuga, 1951; Variaciones americanas, 1953; Bandoneon Conc., 1954; Música para orquesta de cuerdas, 1957; Pf Conc., 1957; Tripartita, band, 1967; Pf Conc., 1971

Choral: Ps cxlix, solo vv, chorus, orch, 1948; Ps cxiv, 1950; Ps vi, 1951; Mag, chorus, orch, 1954; Ps xlvi, 1959; Cantata para la paz, solo vv, chorus, orch, 1966; Fábulas, 1970

Chbr: 2 str qts, 1945, 1946; 5 piezas breves, str qt, 1955; Pf Qnt, 1957

Songs for 1v, pf: Baladas amarillas (F. García Lorca), 1944; 2 cantos gallegos (R. de Castro), 1945; 3 cantos de Navidad (F. Lope de Vega), 1946; Poema (C. SUSANA SALGADO

Cabaca [*afoxê, afuxê, cabasa, cabaza, sekere, shekere*]. A natural or synthetic round or pear-shaped gourd covered with a network of beads and finishing in a single handle (see illustration); it is classified as a shaken idiophone: vessel rattle. In some instances there are rattling pieces inside the gourd (*see* RATTLE). The cabaca is an important instrument in the Latin American dance band and similar rhythmic ensembles, and in the late 20th century it was increasingly being used in contemporary orchestral music. The sound is usually produced by moving the network of beads rhythmically back and forth on the bowl. The cabaca originated in West Africa, where it is known by a variety of names, including *skere* or *shekere* in Nigeria (whence the Cuban *chéqueres*) and *axatse* in Ghana.

The 'LP' cabaca consists of metal beads strung around a metal-covered handle.

JAMES BLADES/JAMES HOLLAND

Cabaca

Cabaletta (It.). A term probably of Spanish derivation, first encountered during the second decade of the 19th century, and defined in Pietro Lichtenthal's *Dizionario* (1826): it denotes the second, usually fast movement of a double aria in an Italian opera, consisting of a melodic period of two stanzas which is repeated with decorations added by the singer after an orchestral ritornello, often accompanied by choral or solo *pertichini* and followed by a matching coda designed to stimulate applause (e.g. 'Non più mesta': *La Cenerentola*, Rossini, 1817). Only rarely does a cabaletta occur in isolation, without a preceding 'cantabile'. In early examples only the second half of the period is repeated, a procedure found as late as 'No, non udrai rimproveri' (*La traviata*, Verdi, 1853), and certain cases have a brilliant coda for the voice, as in 'Vien diletto, è in ciel la luna' (*I puritani*, Bellini, 1835). In Romantic opera, cabalettas in moderate time with no element of display become increasingly frequent, and the term thus came to designate the piece's form rather than its character. After 1860 the solo cabaletta rapidly declined, becoming virtually extinct about 1870. As the practice of embellishment died out, it became customary in revivals of repertory works to omit the cabaletta repeat, a habit that modern scholarship tends to deplore on structural grounds. Verdi, however, sanctioned it for a late revival of his own *I masnadieri* (1847).

The term is also used to describe the final movement of a duet. Here the same formula is elaborated, the melody being sung successively by each singer and a third time, after an orchestral ritornello, by both voices in unison, harmony or more rarely in dialogue; a classic instance is 'Verranno a te sull'aure' (*Lucia di Lammermoor*, Donizetti, 1835). Where the voice-types are unequal the singers may enter in different keys or even be assigned different melodies, as in 'Ah te bade, a te stesso pon mente' (*Lucrezia Borgia*, Donizetti, 1833), before joining in the initial one. The duet cabaletta outlived its solo counterpart for more than a decade. A late instance of the form is 'Si pel ciel marmoreo giuro!' (*Otello*, Verdi, 1887).

JULIAN BUDDEN

Caballé, Montserrat (*b* Barcelona, 12 April 1933). Spanish soprano. She studied for 12 years at the Barcelona Conservatory, with (among others) Eugenia Kemmeny and Napoleone Annovazzi, winning the 1954 Liceo gold medal. She joined the Basle Opera in 1956; in three years she built up an impressive repertory, including Pamina, Tosca, Aida, Marta in d'Albert's *Tiefland*, and Strauss's Arabella, Chrysothemis and Salome. In 1959 she sang her first Violetta and Tatyana, at Bremen, and the heroines of Dvořák's *Armida* and *Rusalka*. At La Scala the next year she first appeared as one of Klingsor's flowermaidens (*Parsifal*); a gradually widening international career took her to Vienna, back to Barcelona, to Lisbon and, in 1964, Mexico City (as Massenet's Manon). In 1965 she replaced Horne at short notice in a New York concert *Lucrezia Borgia*, and achieved overnight stardom. After that many Donizetti operas were mounted for her (notably *Roberto Devereux*, *Maria Stuarda*, *Parisina* and *Gemma di Vergy*). In 1965 she also made débuts at Glyndebourne (Marschallin and Mozart's Countess) and the Metropolitan (Marguerite). At La Scala she played Lucrezia Borgia, Mary Stuart, Norma and Amelia (*Ballo in maschera*) and at Covent Garden Violetta (début, 1972), Norma, Leonora (*Il trovatore*), Amelia and Aida. In 1987 she sang Saffo (Pacini) and, in 1989, Isolde, at the Liceo, Barcelona. Other roles include Spontini's Agnes, Rossini's Ermione and Madama Cortese (*Il viaggio a Reims*), which she sang at Covent Garden in 1992, the year of her final operatic appearances.

Montserrat Caballé as Elisabeth de Valois in Verdi's 'Don Carlos'

Regarded by many as Callas's successor, Caballé was for a time the leading Verdi and Donizetti soprano of the day, able to spin effortless long legato phrases and noted for her floated *pianissimo* high notes. She was an actress of refinement and dignity, but no great dramatic intensity. Her numerous recordings include Verdi's Requiem and Brahms's *German Requiem*, Strauss and Granados songs and many operatic roles, among them some (in Puccini and Strauss operas) which she sang more frequently in earlier years, and others, such as Lucia and Fiordiligi, which she never sang on stage. In the 1980s and early 90s she became a notable recitalist, especially successful in Spanish song. She married the tenor Bernabé Marti in 1964.

ALAN BLYTH

Caballero, Manuel Fernández [Fernández Caballero, Manuel] (*b* Murcia, 14 March 1835; *d* Madrid, 26 Feb 1906). Spanish composer and conductor. He received tuition in piano, violin and flute from the age of five, notably from his violinist brother-in-law Julian Gil. In addition he studied with the composer José Calvo and with Indalecio Soriano Fuertes. In 1850 he entered the Madrid Conservatory, where he was a pupil of Hilarión Eslava and others, and in 1856 he obtained first prize in composition. After playing the violin in the orchestra of the Teatro Real he became conductor at the Variedades,

Lope de Vega, Circo and Español theatres in succession, composing large numbers of songs, choruses and dances and, in 1854, his first zarzuelas, *La vergonzosa en palacio* (not performed until 1855) and (under the pseudonym of 'Florentino Burillo') *Tres madres para una hija*. In 1853 he had been prevented on account of his youth from taking up a position as conductor in Santiago, Cuba, which he had won in a competition, but in 1864 he went to Cuba as conductor of a zarzuela troupe, and he also organized and conducted concerts there. Returning to Madrid in 1871, he devoted himself successfully to the prolific composition of zarzuelas. A habanera from the now forgotten *La gallina ciega* (1873) was used by Pablo de Sarasate for the second of his *Spanische Tänze* (op.21 no.2), but it was *La Marsellesa* (1874), set in revolutionary Paris, that firmly established his melodic style, with the dance rhythms and lyric patterns of continental operetta intermingled with more specifically Spanish touches. In 1884 Caballero went to Lisbon and in 1885 to South America, conducting his works with great success. He was elected to the Real Academia de Bellas Artes de S Fernando in 1891, though pressure of work and failing eyesight delayed presentation of the necessary written discourse until 1902. After the composition of *El dúo de la africana* (1893) his eyesight forced him to use as amanuenses Mariano Hermoso and his own son Mario, until he was operated on for cataracts in 1899 and 1902. The scores written during these blind years include two of his greatest successes, *La viejecita* (1897) and *Gigantes y cabezudos* (1898). These and his other enduring successes display his rich gift of melody, rhythmic élan and good humour.

WORKS

Zars (in order of first production; pubd in Madrid in vs at about the time of production; for more detailed list see *GroveO*): Tres madres para una hija, 1854; La vergonzosa en palacio, 1855; Mentir á tiempo, 1856; Cuando ahorcaron á Quevedo, 1856; Juan Lanas, 1856; La jardinera, 1857; El vizconde de Letorière, 1858; Un cocinero, 1858; Frasquito, 1859; La guerra de los sombreros, 1859; Una emoción, 1859; Un zapatero, 1859; El gran bandido, 1860, collab. C. Oudrid; Los dos primos, 1860

La red de flores, 1861; El caballo blanco, 1861, collab. Oudrid; Llegar y besar el santo, 1861, collab. Oudrid; Un embargo, 1861; La reina Topacio, 1861; El loco de la guardilla, 1861; Roquelaure, 1862, collab. Oudrid and J. Rogel; Equilibrios del amor, 1862, collab. Oudrid; Juegos de azár, 1862; La campanilla del boticario, 1862, collab. Campos; Los dos mellizos, 1862; Las suicidas, 1862; Aventuras de un jóven honesto, 1862

Caballone, Gaspare. *See* GABELLONE, GASPARE.

Caballone [Cabalone, Gabbalone, Gabellone], **Michele** (*b* Naples, 1692; *d* Naples, 19 Jan 1740). Italian composer and teacher. He was the son of Vito Cesare and Antonia Ricca Caballone. He studied with Veneziano and Perugino at the Neapolitan Conservatorio di S Maria di Loreto. In 1716 he married Teresa Muscettola whose sister Antonia was married to the violinist Francesco Barbella and was the mother of the violin virtuoso Emanuele Barbella; according to Burney, the famous violinist first learnt counterpoint from Caballone. The only one of Caballone's sons to follow him as a musician was Gaspare, who later spelt his name 'Gabellone'. Michele's life and works are sometimes confused with those of his son; in addition some sources mistakenly claim that he was the teacher of

Faustina Bordoni Hasse, who in fact studied with Michelangelo Gasparini.

Caballone is not known to have held any regular teaching position, and he died in poverty. Towards the end of his life he became a novice in the confraternity of the Congregazione dei Musici in Naples, and at his death the brothers there voted to bear the expenses of his funeral and burial. These were on the scale due to a full member, presumably a mark of the professional regard in which he was held.

Between 1716 and 1717 Caballone was engaged for the Teatro dei Fiorentini, Naples, by the impresario Salvatore Toro, and during his late thirties Caballone wrote a number of comic operas for the theatre. The production of *Ammore vò speranza* there in 1729 gave rise to a notorious scandal: the two leading ladies, Rosa Albertini and Francesca Grieco, quarrelled so violently because of rivalry both on the stage and in love that Grieco had to retire with injuries, and the Viceroy of Naples felt obliged to intervene. Shortly afterwards Albertini was assassinated by a youth named Giulio Lerro. The lady had no relatives whereas those of Lerro were in high positions, and the court dismissed Lerro with only a fine. In addition to a quantity of church music Caballone wrote a manual of counterpoint that was much admired for its clarity of exposition; it achieved wide circulation in manuscript, as late as 1760 (copies in *D-Bsb*, *I-Bc*, *Fc*, *Nc*).

WORKS

OPERAS

opere buffe unless otherwise stated

La Cantarina [Act 1], Naples, Fiorentini, 1728; Acts 2 and 3 by C. Roberto

Cabaner, Ernest (*b* Perpignan, 12 Oct 1833; *d* Paris, 3 Aug 1881). French composer. He frequented the salon of Nina de Callias, where he met and became friends with Chabrier (in 1868), Charles de Sivry and, later, Cézanne. His tastes were eclectic – his favourite composers included Wagner and Hervé – and his interest in synaesthesia led him to the concept of 'painting' with notes well before Skryabin. A sonnet dedicated to Rimbaud in answer to the latter's famous sonnet *Voyelles* (and their colours) reflects this by incorporating coloured vowels to be sung. A genuine eccentric, he made a living as an accompanist in a *café-concert*, and discovered and trained the young tenor Henri Prévost, who found instant fame in *Il trovatore* (1881).

Cabaner set lyrics by his friends Théodore de Banville, Jean Richepin and Charles Cros, and also set a number of his own poems, the most popular being *La pâté*. His music is harmonically simple, and his melodies are influenced by folksong, an interest exemplified by his excellent setting of Cros' *L'archet*; rhythmically he showed more variety and humour, for example in *Le hareng saur*. A friend of the Impressionists, he figures with Pissarro in a group portrait by Renoir and appears, thinly disguised, as a character in several novels.

Cabanilles [Cavanilles, Cabanillas, Cavanillas], **Juan Bautista José** [Juan Bautista Josep; Joan] (*b* Algemesí, nr Valencia, bap. 6 Sept 1644; *d* Valencia, 29 April 1712). Spanish composer and organist. The 'José Cabanillas' formerly thought to be a different musician is now known to be identifiable with him. It may be assumed that he was a choirboy first at Algemesí and later at Valencia Cathedral. On 15 May 1665 he was unanimously appointed second organist, though he was not yet a priest as was required by the cathedral chapter. The following month, however, he received the clerical tonsure and he was ordained on 22 September 1668. Meanwhile in about April 1666 he had become first organist and he remained in that post until his death (after 1703 he was in poor health and frequently required a substitute); from 1675 to 1677 he was also in charge of the welfare and musical education of the choirboys. His pupil José Elías left a manuscript account, now missing, indicating that Cabanilles was often invited to play in various French churches on high feast days.

The high regard in which Cabanilles's music was held by his contemporaries is indicated by its wide distribution in manuscripts. The Iberian tradition of organ music from Cabezón through Aguilera de Heredia, Correa de Arauxo and Rodrigues Coelho culminates in him: in wealth of ideas, mastery of counterpoint, command of form and the nobility of his conceptions, he was the greatest 17th-century Spanish organ master. The fact that he lived in cosmopolitan Valencia enabled him to maintain contact with international musical currents, notably with southern Italy (Mayone, Trabaci, Salvatore) and perhaps also with the Netherlands and Germany. Nevertheless, his music is typically Spanish in that it represents a development of Renaissance style rather than the characteristically Baroque style found in other countries.

Most of Cabanilles's voluminous output consists of organ music, within which tientos form the largest category. Despite their similarity to those of earlier composers they are more substantial contrapuntally, more cohesive in broad design and less prone to routine

figurative writing. The majority of them consist of a series of imitative sections on different themes, though subtle derivation of material from the opening subject is common; toccata-like figurations and homophonic sections are also found. A common feature is the restatement of a phrase four or five times in succession, each modulating to the dominant, a procedure used by Aguilera de Heredia and Pablo Bruna among others, but more skilfully and effectively by Cabanilles. Many of the tientos employ the broken keyboard (*medio registro*, i.e. upper and lower parts of the organ manual registered independently) to give a solo character to one hand, which may be provided with virtuoso passage-work. Cabanilles excelled at tientos de falsas, relatively short monothematic works almost devoid of ornamental figuration and featuring sharp dissonances, unusual melodic intervals and affective and unexpected harmonic progressions. Three tientos use a plainsong hymn tune, each phrase serving as the subject of an imitative fugal section in the manner of the chorale motet. Several are called 'batalla' and represent the hubbub of a battle; a well-known one ascribed to Cabanilles (*Opera omnia*, ii, 102) is, however, actually by J.K. Kerll.

One group of works – passacalles, paseos, gallardas and xácara – are in the form of continuous variations over a bass pattern. Only the passacalles and two of the paseos are in the traditional triple metre – even the five gallardas are duple. Probably these works had nothing to do with dance music (as might in some cases be thought) but were intended for liturgical use. Eight recently discovered sacred choral works probably represent only a remnant of the repertory that once existed. In them Cabanilles was chiefly concerned with varied rhythmic and harmonic effects and massed choral sound resulting from the opposition, interplay and combination of two or three choirs; the elaborate counterpoint of the tientos is missing in most cases.

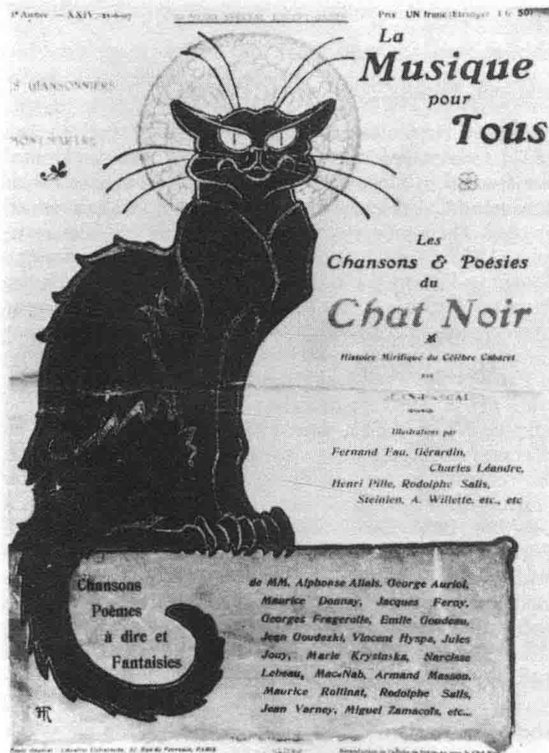
BARTON HUDSON



Cabaret. A term loosely applied to places of entertainment like night clubs that offer a wide variety of showmanship, food and drink, and often dancing both on stage and on the floor; naturally there is a great demand for music. In this context, cabaret has also become a descriptive term for a show designed to promote the talents of a single well-known performer, usually a singer. Renowned for this style of show are such diverse performers as Frank Sinatra and Noël Coward, while Las Vegas – in which both regularly appeared – is identified in particular with the form. Indeed, a solo cabaret act is considered an essential part of the personal repertory of many performers, particularly those from musical theatre. American singer-pianists such as Bobby Short and Blossom Dearie are primarily noted for their solo work in this format.

In the strictest sense, cabaret is a form of artistic and social activity of a kind that flourished for about half a century between the opening on 18 November 1881 of the famous 'Chat Noir' in Paris, and the political crises in Europe in the 1930s that put an end to the freedom of thought, experiment and expression that characterizes cabaret in its most vigorous form. The extensive account of the history of cabaret in *La grande encyclopédie* (1889) emphasizes, in unambiguous terms, the traditional association of the cabaret with vice and illegal activities of all kinds throughout the centuries. By the end of the 18th century there were several establishments, frequented by men of letters, that have a place in literary history. The cabaret of the 18th century was a musical affair in the sense that street musicians made the rounds of the establishments, with a repertory made up of songs in praise of wine and debauchery. There are parallels with

the coffee-house and catch-club traditions in England, particularly as regards the *café-chantant* and CAFÉ-CONCERT. Of the café, *La grande encyclopédie* says: 'it had something of a salon originally, in those days when one did not smoke in a café'; it reports that the beer-hall made its appearance during the Empire and that one of them, 'La Brasserie de Martyrs', merited mention in literary history side by side with the 'Chat Noir'. The modern cabaret of 1881 inherited the literary clientèle of its predecessors.

The founders of the 'Chat Noir' intended cabaret to be a place where painters, poets, composers and performing musicians could not only meet each other but confront the public, the bourgeoisie; an element of provocative artistic statement was the essence of cabaret during its heyday. In the 1880s the opportunity of meeting famous artists of the day in the relaxed, intimate atmosphere of cabaret was irresistible to contemporary society, and the artists themselves understood cabaret in those terms. The 'Chat Noir' was imitated by hundreds of other enterprises of a similar kind, catering for variations on the same theme: they toured the provinces and went beyond the borders of France, especially to French-speaking regions, including north Africa, but also visited other countries, and the German cabaret movement probably owed its birth to such visits.

When the famous diseuse Yvette Guilbert (1865–1944) undertook a concert tour through Germany in 1902 it was not so much French wit and humour that moved her German colleagues in the world of amusement but the realization that there was a desperate need for an entertainment form that pandered neither to the philistine taste in concert song nor to the inanities of tingel-tangel airs and music. German artists wanted to ennoble both. Julius Bierbaum, in his preface to *Deutsche Chansons* ('Brettllieder'; 1900), explained the serious purpose that inspired German cabaret. But he was also in earnest when he said: 'We want to write poetry that is not merely read between the four walls of a lonely room but can be sung by a public ready for lusty entertainment'. There always was an aspiration towards high standards as understood by the artists who supported the cabaret idea. There was also the element of laughter. The cabaret relied on the intimacy of the locale, the economy of a small, often ad hoc, musical ensemble, and the directness and warmth of contact between floor and platform. Artists read their own poetry and composers performed their own music; at least, that was the idea.

Cover of 'Chat Noir', xxiv (25 June 1907), using the poster designed by Théophile-Alexandre Steinlen for the Chat Noir cabaret, 1896

The leading German cabaret, the 'Überbrettl' (founded in Berlin by Ernst von Wolzogen in 1901), sparked off many other smaller ventures, in Berlin especially, that preserved the intimate atmosphere. Furthermore, cabaret in Germany developed satire of other literature. In Munich 'the coincidence of creative talent with the native experience of carnival produced one of the most fertile and interesting European cabarets' (Appignanesi). The style that evolved from such conditions was that of the diseuse. It relied equally on the word and the simple ballad-like tune, and on the significant movement of limb or body and facial expression. Yvette Guilbert developed this to a fine art. It involved Sprechgesang, but not in the sense that Schoenberg conceived of it in *Pierrot lunaire*; there the singer was never to derive the character of his rendering of the music from the mood of the words, but for Guilbert the exact opposite was true.

Guilbert was by common consent the greatest of diseuses; her consummate art, which combined oral and visual presentation, had a lasting influence over her many successors, including Marie Dubas, Marianne Oswald and Agnes Capri. Musically a genre emerged that was sentimental and at the same time satirical. It found perhaps its most successful and typical representative in Kurt Weill. Although he never composed any music specifically for cabaret, singers took the arias from his operas (especially *Die Dreigroschenoper* and *Happy End*) for their repertories. In Berlin in the 1920s, at such cabarets as 'Schall und Rauch' and the 'Wilderbühne', the composers Friedrich Hollaender, Mischa Spoliansky and Rudolf Nelson mixed political, sentimental and comic themes.

The literature on cabaret names many other active composers and performing musicians: Hannes Rauch (originally Hans Richard Weinhöppel); Elsa Laura Seemann, who accompanied herself on the lute (this was more characteristic of France than of Germany – Ewers, who was in the centre of the German cabaret movement, complained that at the 'Überbrettl' cabaret not a single composer could sing his own songs, unlike their French counterparts, Legay, Delmet, Fragerolles etc.); Adolphe Stanislas; Clement Georges, famous for his so-called Parisian Bluettes; Lehner; and Bogumil Zepler. The ideal remained the *componiste-chansonnier*, but the cabaret also produced famous conductors. There was Frau Käte Hyan, who accompanied her husband, composed the songs that he sang, and was herself known for her beautiful voice which she used in her own compositions, accompanying them on the lute. The repertory was not

only sentimental and satirical at the same time; it also included folksy elements – there were Spanish items performed with castanets, Italian music, the characteristic songs of Berlin and parodies of black American song.

Cabaret provided an atmosphere in which innovation could flourish and the opportunity for it to do so; it is not surprising that avant-garde experimentation often dominated the performances. Much that went on was improvised. The role of the *conférencier*, or master of ceremonies, especially demanded presence of mind. Many composers of considerable fame joined in. Debussy once conducted a chorus, and Milhaud, Satie, Jean Wiener and Schoenberg played active roles. Satie is credited with having composed more than 50 pieces when he was pianist at the 'Chat Noir' and at the 'Auberge du Clou'. Schoenberg conducted the orchestra at the 'Überbrettl' and composed seven *Brettllieder* (not published until 1975).

After World War I the Parisian cabaret reached a new peak, with many American jazz musicians arriving and influencing the local style as well as taking on a more European texture to their music. Clubs that featured the dance-orientated songs included 'Le grand duc', 'L'oasis', 'Chez Joséphine' (where Josephine Baker was the commère) and 'Le boeuf sur le toit', with resident pianists Jean Wiener and Clément Doucet, while such venues as 'Les deux anes', 'La lune rousse' and 'La pie qui chante' had a more literary repertory. The most influential French songwriter of the 1930s and 40s, Charles Trenet, began his career in partnership with the Swiss composer and pianist Johnny Hess at the Montparnasse cabaret, 'College Inn'. During the occupation, the most celebrated cabaret was 'La vie parisienne', run by the singer Suzy Solidor; the clientèle was dominated by German officers and high-ranking officials, but Solidor later claimed that the club had been a cover for the Résistance. In the late 1940s there was an explosion of activity in tiny clubs in Paris, the songs of Joseph Kosma, Leo Ferré, Jacques Brel, Barbara and many others giving France a new and distinctive popular song, with the chanteuse Juliette Greco as its leading interpreter.

There is no distinctive musical form that can be called 'cabaret': all the composers who have worked in cabaret have drawn on existing folksong, popular song or operatic parodies for their inspiration. Traditions have evolved, so that in particular the slow waltz as used by Satie (*Je te veux*, *Tendrement*) is recognized as a cabaret style, so is a dramatic tango such as the one composed by Lehár for the cabaret scene in his last stage work, *Giuditta* (1933). (Several operas of the mid-20th century have cabaret scenes in them, for instance in Korngold's *Die Kathrin*, 1937.)

Besides Paris and Berlin, always the two most important centres of cabaret, and Munich, Vienna had an active cabaret life during the 1920s and 30s. Cabaret found its way to English-speaking countries in a somewhat diluted form, not only in restaurants and night clubs but also in the theatrical 'intimate revue'. After World War II the influence of pre-war cabaret on American singers such as Tom Lehrer and composers such as Bart Howard and Alec Wilder is unmistakable.

The British wave of satire that occurred in the 1960s (at the Establishment Club and on television) led to the foundation of the strongest cabaret tradition in England – the wave of 'alternative' comedy. Although most of this was without music, groups such as Fascinating Aida, Kit and the Widow and the composer Richard Vranch, who was the regular accompanist for the Comedy Store Players, forged a new style, drawing on pop music and calypso. The composer Martyn Jacques and his trio the Tiger Lillies pursued a more anarchic style, using themes from central European folksong in the 'junk opera' *Shock-headed Peter*.

Appignanesi's masterly book pursues the story of the cabaret up to its final dissolution; her bibliography shows the dearth of information on this fascinating and crucial European institution, but for anyone in search of an eye-witness story from a person who was himself an actor in the cabaret in the early days, Ewers's book (1904) conveys the very feel of this exciting venture.

Cabel [née Dreulette], **Marie(-Josèphe)** (*b* Liège, 31 Jan 1827; *d* Maisons-Laffitte, 23 May 1885). Belgian soprano. She studied in Liège with Bouillon and in Brussels with Ferdinand Cabel and with L.J. Cabel, whom she married in 1847. She continued her studies at the Paris Conservatoire (1848–9) and made her début at the Opéra-Comique (1849) in Halévy's *Val d'Andorre*, but failing to stir the Parisian critics or public, she accepted a three-year engagement in Brussels (1850). In 1853, after great successes in Brussels, Lyons and Strasbourg, she appeared in Paris at the Théâtre-Lyrique as Toinon in Adam's *Le bijou perdu*. She repeated the role with the company the next year in London, where she was also acclaimed as Marie in *La fille du régiment*, among other roles. In 1856 she returned to the Opéra-Comique in Auber's *Manon Lescaut*; she also created there the title role in Meyerbeer's *Dinorah* (1859) and Philine in Thomas' *Mignon* (1866). With her supple, silvery voice she became one of the leading sopranos of her day, and the bravura parts written for her by Auber, Meyerbeer, and Thomas attest to the virtuosity which secured her international fame. She sang in London in 1871 and 1872 and in the French provinces until 1877.

Cabezón [Cabreçon]. Spanish family of musicians.

(1) **Antonio de Cabezón** (*b* Castrillo de Matajudíos, nr Burgos, *c*1510; *d* Madrid, 26 March 1566). Composer and organist. Blind from childhood, he was probably educated at Palencia Cathedral under the care of the organist García de Baeza. In 1526 he entered the service of Queen Isabella and on 12 February 1538 he was appointed *músico de la cámara* to Charles V. On Isabella's death in 1539 he was entrusted with the musical education of Prince Felipe and his sisters. Between 1548 and 1551 he accompanied Felipe on his travels to Milan, Naples, Germany and the Netherlands, and between July 1554 and August 1555 to London on the occasion of Felipe's marriage to Mary Tudor. Cabezón married Luisa Nuñez de Mocos of Avila and they had five children. In his will, dated 14 October 1564, Cabezón described himself as 'músico de cámara del rey don Felipe nuestro señor'.

Cabezón is ranked among the foremost keyboard performers and composers of his time. His music is rooted in the instrumental tradition of Spain and was composed for keyboard, plucked string instruments and ensembles (*curiosos minestriles*, 'skilful minstrels') that probably included string as well as wind players. Some of Cabezón's compositions appeared in Venegas de Henestrosa's *Libro de cifra nueva* (Alcalá de Henares, 1557). However, the greater part of his works were printed posthumously by his son (4) Hernando de Cabezón in *Obras de música para tecla, arpa y vihuela* (Madrid, 1578; ed. in MME, xxvii–xxix, 1966). Together, these two volumes transmit some 275 works (*migajas*, 'scraps' or 'crumbs') by Cabezón. (His collected works are edited by C. Jacobs, Brooklyn, NY, 1967–86.)

His compositions fall into four distinct groups and contribute to all the principal musical genres of the period. They include: (i) functional liturgical works including hymns, Kyrie verses, psalm settings, *Magnificat* settings and *fabordones*; (ii) free works (tientos); (iii) intabulations (*canciones glosadas y motetes*); and (iv) variations (*discantes*). In general the compositions display a variety of styles, influenced by variation techniques, by the glosa or diminution. In the hymns and Kyrie verses, the cantus firmus is the principal structural framework, sometimes abandoned in favour of imitative polyphony. The *fabordones* comprise variations, organized according to mode, following a homophonic exposition (*llano*). Cabezón's tientos form a significant contribution to the development of instrumental music between 1535 and 1540. In these works, the improvisatory style characteristic of the free works written at the beginning of the century is no longer seen; Cabezón used his knowledge of imitative counterpoint and an unusual sense of formal organization to create masterpieces with strong internal coherence. The tientos are linked thematically to plainchant formulas, in keeping with the form's liturgical function. The intabulations are ordered according to polyphonic density, progressing from works with four parts to works with six. They are based on sacred and secular models by composers such as Josquin and Lassus, and are exuberant witnesses to a practice recommended by theorists such as Bermudo, who demanded that all instrumentalists study Franco-Flemish musical models. Finally the variations, called *discantes, diferencias* or sometimes glosas, form a high point in the history of the genre. His models include popular Spanish songs, such as *El canto llano del caballero*, dance forms and melodic-harmonic frameworks (as in the melody *Guárdame las vacas*, paired with a romanesca bass pattern). A wide range of variation techniques are seen, including migrating cantus firmus themes altered beyond recognition, and profuse ornamentation. During his journeys with the royal chapel Cabezón must have influenced musicians throughout Europe, in particular in England where composers such as Tallis and Byrd took up the art of variation.

A vocal work by Cabezón, *Invocación a la letanía*, is transmitted in the Cancionero de la Casa de Medinaceli (*E-Mmc* 13230; ed. in MME, viii, 1949). It also appears, entitled *letanías*, in a 1611 music inventory from Cuenca Cathedral together with 'una misa de Cabeçon'.

(2) **Juan de Cabezón** (*b* Castrillo de Matajudíos, nr Burgos, 1510–19; *d* Madrid, 18 May 1566). Organist and composer, brother of (1) Antonio de Cabezón. On 12 July 1546 he was elected organist of Sigüenza Cathedral. However, he gave up this post on 19 July because on 15 July he was appointed *músico* in the royal chapel of Prince Felipe. Together with his brother he accompanied Felipe on his European travels. A composition by him, *Pues a mi desconsolado*, is included in the collected *Obras* published by his nephew (4) Hernando de Cabezón.

(3) **Agustín de Cabezón** (*d* before 1564). Chorister, son of (1) Antonio de Cabezón. He was a *cantor* in the royal chapel and accompanied Prince Felipe on his journeys abroad.

(4) **Hernando de Cabezón** (*b* Madrid, bap. 7 Sept 1541; *d* Valladolid, 1 Oct 1602). Organist and composer, son of (1) Antonio de Cabezón. From January to December 1559 he was substitute organist at the royal chapel. He was appointed organist at Sigüenza Cathedral on 15 November 1563, a position he held until 15 July 1566. In 1566 he succeeded his father as organist to the king. He accompanied the court on its numerous trips and stayed in Portugal in 1580–81. The *Obras*, published in 1578, contain five compositions by him. In his will, dated 1598, he indicated that he was leaving two books of music in tablature ('dos libros de música puestos en cifra'), containing music by his father and himself.

LOUIS JAMBOU

Cabilliau [Cabilau, Cabbilai, Cabeliau, Cabeliamo]. This South Netherlandish name appears in various 16th-century sources and refers to one of three or more musicians: Georges Cabillau (*b* Oudenaarde), Peter Cabeliamo, or Joachim de Tollenaere, called Cabillau (*b* *c*1518). Joachim de Tollenaere was a choirboy in the chapel of Charles V in 1528 and subsequently a chorister and adult singer in the chapel of Margaret of Austria, Regent of the Low Countries.

Printed works ascribed to 'Cabilliau' (or a variant of the name) include three chansons (RISM 1552^{11}, 1552^{15}, 1556^{19}) and a five-part motet (1554^{9}). A four-voice chanson, *En espérant de parvenir*, is in *F-CA* (ed. in Coussemaker).

LAVERN J. WAGNER

Cabinet organ (Fr. *cabinet d'orgue*). A term applied to various types of REED ORGAN, also a brand of self-playing reed organ (*see* ORGANETTE). *See also* CHAMBER ORGAN.

Cabo, Francisco Javier (*b* Náquera, Valencia, 24 May 1768; *d* Náquera, 21 Dec 1832). Spanish organist and composer. As a boy he was a chorister at Valencia Cathedral, and he later became organist in the parish of S Catalina in the same city. For three months in 1790 he was second organist at Valencia Cathedral before being appointed principal organist of the cathedral at Orihuela. In 1793 he unsuccessfully sought the position of *maestro de capilla* at Valencia Cathedral and in 1796 at Granada Cathedral. That year he was appointed assistant organist to Rafael Anglés at Valencia Cathedral, and soon became second organist. In 1816 he was made principal organist, a post he held until his death, and from 1830 also *maestro de capilla*.

Cabo enjoyed a high reputation, which lasted until Pedrell's time and even later. His works, of which nearly 100 survive, achieved considerable circulation (sources: *E-MA*, *ORI*, *PAL*, *SC*, *SEG*, *VAc*; some ed. J. Climent in *Versos, pasos y sonatas*, Madrid, 1990). Their reputation is not without foundation, although they suffer from a certain pomposity.

JOSÉ LÓPEZ-CALO

Cabus, Peter (*b* Mechelen, 27 July 1923). Belgian composer. He began his musical studies at the Mechelen Conservatory with Godfried Devreese (1933), studied the organ with Peeters and the piano and counterpoint with de Jong at the Lemmensinstitute in Mechelen. He completed his musical education at the Brussels Conservatory (1946), where he obtained first prize in the piano (with Charles Scharrès) and chamber music and fugue (both with Absil). Later he took composition classes with Absil and Léon Jongen. He started his musical career as a solo performer, chamber musician and conductor. Besides holding several teaching positions he taught the piano at the Mechelen Conservatory (1946–59), becoming its director from 1959 to 1988, when he retired. He taught harmony, counterpoint and composition at the Brussels Conservatory (1968–88) and harmony, counterpoint and fugue at the Chapelle Musicale Reine Elisabeth (1980–89). In 1983 he became a member of the Belgian Royal Academy of Science, Letters and Fine Arts.

His first important work was the *Orkestvariaties*, which was first performed in 1938 by the Mechelen Conservatory Orchestra conducted by Godfried Devreese. Since then he has produced an abundant output in which orchestral music predominates. He has cultivated an eclectic kind of neo-classicism with frequent use of 12-note and serial techniques and easily discernible structures and themes, without completely abandoning tonality.

Caccia. Poetic and musical genre, in use in Italy during the 14th and 15th centuries.

1. Form. 2. History.

1. FORM. The earliest reference to the caccia in theoretical writings is found in an early 14th-century Venetian treatise (see Debenedetti, 1906–7, 1922). In this a genre called *cacie sive incalci* is discussed, whose text consists entirely of five- or seven-syllable lines, and which can be performed by several (up to five) singers in the manner of a voice-exchange canon (*see* VOICE-EXCHANGE). Although there were indeed attempts to increase the number of canonic voices beyond the normal two in certain cacce (see Toguchi, 1970), there is no

Caccia 'Tosto che l'alba', with illuminated initial thought to portray Gherardello da Firenze, from the Squarcialupi Codex (I-Fl Med.Pal.87, f.25v); the discrepancies between this source and those cited for the text (given above) and the music (ex.1) are characteristic of the repertory

evidence of voice-exchange (whose structural principle is common in the rondellus) among Trecento cacce. It appears from this that the *cacie sive incalci* belonged to a type no longer used at the time when the caccia was fully developed.

Both literary and musical elements contribute to the definition of a caccia. Textually, Italian cacce are often descriptive pieces in dialogue, sometimes involving hunting scenes. They may be linked with the pastime of hunting cultivated by the nobility at that time, as literature and paintings also show. The hunting scenes are often replaced by allegorical amatory texts or by market or fishing scenes. 11 of the 25 surviving texts are in the form of a madrigal and one is in that of a ballata: their texts consist of eleven- or seven-syllable lines of verse. When not in the form of a madrigal the texts consist of a random number of syllables, as is also the case in the contemporary genres of the frottola and *motto confetto* (but see Brasolin, 1975). As in the madrigal, a ritornello may occur as the final section. A work by Gherardello da Firenze (see illustration) will serve as an example of a caccia text with a two-line ritornello (text from *F-Pn* it.568, ff. 25*v*-26):

> Tosto che l'alba del bel giorno appare
> isveglia gli cacciator: – Su su su su ch'egli è 'l tenpo.
> Alletta gli can: – Te te te te, Viola.
> – Te, primerante. –
> Sus'alto al monte con buon cani a mano
> e gli brachett' al piano.
> E nella piaggia ad ordine ciascuno. –
> – Io vegio sentir uno
> de' nostri miglior brachi: star avisato! –
> – Bussate d'ogni lato
> ciascun le machie, che Quaglina suona. –
> – Ayo, ayo, a tte le cerbia vene. –
> – Carbon la prese, in bocca la tene. –
> Del monte que' che v'era su gridava:
> – All'altra, all'altra! – suo corno sonava.

Among the authors renowned for their caccia texts were NICCOLÒ SOLDANIERI and FRANCO SACCHETTI (and also Giannozzo Sacchetti).

Musically the caccia, in the strict sense of the word, may be defined as a texted canon for upper voices to which is added an untexted tenor. Its development presumably ran parallel to that of the madrigal in that the canon between the upper voices provides the essential framework, while the untexted tenor part is an accessory. However, a small number of cacce were constructed around the relationship of each of the canonic voices to the tenor. Stylistic links with the madrigal are evident in the alternating melismatic and parlando phrases (*see* MADRIGAL, §I, ex.1), in the hocket-like passages and in the frequently encountered ritornello, itself usually canonic. Ex.1 shows two sections from the above-mentioned caccia by Gherardello.

18 of the 26 cacce have a canon between the upper voices with an untexted tenor part. Four of these should be designated as canonic madrigals because of their textual structure (one has a text which can be traced back to a trouvère song). Four further cacce are texted in all three parts. One of these is constructed as a three-voice canon in the manner of the French chace (Lorenzo da Firenze's *A poste messe*); two others of these three-voice pieces are canonic madrigals (one of them, Landini's *Dè, dimmi tu*, having its two lower voices in canon). Three more pieces are two-voice canonic madrigals. Andreas de Florentia's *Dal traditor* shows the ballata adopting the technique of the caccia. In addition, two madrigals by Ciconia survive which can be designated as cacce only because of their textual content (*Caçando un giorno* and *I cani sono fuora*).

Ex.1 Gherardello da Firenze: *Tosto che l'alba* (*I-Fn* Panciatichiano 26)

2. HISTORY. The earliest known caccia, *Or qua compagni*, perhaps by Magister Piero, is found in the northern Italian manuscript *I-Rvat* 215. As well as by Piero, the caccia was especially cultivated by Giovanni da Cascia and Jacopo da Bologna in Milan and Verona between 1340 and 1360. Cacce from the following composers are transmitted in Florentine manuscripts: Gherardello da Firenze, Donato da Cascia, Lorenzo da Firenze, Vincenzo da Rimini, Niccolò da Perugia, Landini and Zacharias (whose multi-textual caccia *Cacciando per gustar* shows linguistic traits suggesting a provenance in central-southern Italy). The canonic Trecento caccia seems to have disappeared shortly after 1400. Yet in non-canonic form it survived into the 15th and early 16th centuries in the shape of the strambotti and even the *canti carnasci-*

aleschi (see Ghisi, 1942). Until now the only evidence of the dissemination of the 14th-century caccia outside its country of origin is to be found in the *Salve mater Jesu Christi* contrafactum of *Cacciando per gustar* in the southern German manuscript *F-Sm* 222 and in mention of the *katschetum*, presumably referring to caccia, in the mensural manuscript *PL-WRu* I 4° 466 (ed. J. Wolf, *AMw*, i, 336).

KURT VON FISCHER/GIANLUCA D'AGOSTINO

Caccini. Italian family of musicians.

(1) Giulio Romolo Caccini [Giulio Romano] (*b* Rome, 8 Oct 1551; *d* Florence, bur. 10 Dec 1618). Italian composer, singer, singing teacher and instrumentalist. He is especially important for *Le nuove musiche*, an epoch-making volume of solo songs with basso continuo, and for his essay prefacing it.

1. LIFE. He was one of three sons of Michelangelo Caccini, a carpenter from Montopoli, near Pisa: his elder brother, Orazio, was a musician in Rome, and his younger brother, Giovanni, a sculptor in Florence. From mid-October 1564 Caccini was a treble singer in the Cappella Giulia in Rome, studying with its *maestro di cappella* Giovanni Animuccia. He was then recruited by the Florentine ambassador, Averardo Serristori, to perform in the festivities for the wedding of Prince Francesco de' Medici and Johanna of Austria in Florence in December 1565; he took the part of Psyche in the fifth *intermedio* of Francesco d'Ambra's *La cofanaria*, singing the lament 'Fuggi, speme mia' by Alessandro Striggio (i). By 29 April 1566 Caccini was lodging in Florence with a court musician, Simone Ponte, and he studied with the famed virtuoso Scipione delle Palle, from whom, he claimed, he learnt 'the noble manner of singing'. From June 1568 at the latest he was receiving a living allowance from the court, and also occasional payments for clothing; by 1 May 1573 he was renting a house on the Via Chiara in Florence. His unsavoury role as informer led to the murder of Eleonora di Garzia da Toledo in July 1576 by her husband, Pietro de' Medici, on the grounds of her infidelity with Bernardo Antinori. Caccini became a member of the Compagnia dell'Arcangelo Raffaello in 1575–6 and sang at its meetings on numerous occasions thereafter; by then he was also training younger singers for court service. In 1579 he performed on a 'carro della Notte' during the tournament celebrating the wedding of Duke Francesco I and Bianca Capello, and he had also entered the list of court musicians with a monthly salary of 13 scudi (soon raised to 16).

Caccini attracted the patronage of Giovanni de' Bardi, who addressed to him a 'Discourse . . . on ancient music and singing well' in 1578–9 and from whose Camerata Caccini later claimed to have learnt more than from 30 years of counterpoint. Bardi and his associates, Girolamo Mei and Vincenzo Galilei, inspired Caccini's development of new styles of solo song in Florence. With Bardi, Caccini visited Ferrara in February 1583, hearing the famous *concerto di donne* and impressing Duke Alfonso II d'Este with his singing; he learnt enough of Ferrarese practice for Alessandro Striggio (i) to be confident enough to send from Ferrara madrigals in the Ferrarese style for which Caccini, in Florence, could improvise an accompaniment for lute or harpsichord. In 1584 Caccini married the singer Lucia di Filippo Gagnolanti (*d* 1593), by whom he

had two daughters, (2) Francesca and (3) Settimia, who also became singer-composers: the story that Caccini's betrothed was thus rewarded for having been the unfortunate woman used by the Florentines to test the sexual potency of Duke Vincenzo Gonzaga of Mantua prior to his marriage to Eleonora de' Medici in the same year is almost certainly untrue. In 1586 Caccini sang in a machine in the church of Santo Spirito for the wedding of Virginia de' Medici and Cesare d'Este: he and his colleagues, playing angels, were to perform the motet *O benedetto giorno* as they descended from the cupola, but the others dried up out of terror and Caccini was left to sing alone, earning himself the nickname 'Benedetto giorno'. He also wrote a solo song, *Io che dal ciel farei cader la luna*, sung by his wife in the fourth *intermedio* for the festivities celebrating the marriage of Grand Duke Ferdinando I de' Medici and Christine of Lorraine in June 1589.

Grand Duke Ferdinando's succession created difficulties for those artists and other figures favoured by his elder brother, Grand Duke Francesco: Lucia was dismissed, and even in 1588 the suggestion was made that Caccini might be lured to Ferrara; the Ferrarese ambassador in Florence noted his skills as a singer and player of the harp and *lira da braccio* (he also played the theorbo and chitarrone), and also as a remarkable gardener. However, Caccini had other protectors in Florence, including Bardi's 'successor' as the city's leading music patron, Jacopo Corsi. In 1592 Caccini was acting as a secretary to Bardi in Rome, although towards the end of that year he was singing and teaching in Ferrara, returning then to Florence, where, in December 1592, he was involved in a brawl with Antonio Salviati, the lover of one of his pupils. This led to Caccini's being removed from the court payroll in July 1593; again the Ferrarese ambassador suggested that Ferrara might make him an offer (and Caccini attended the wedding of Carlo Gesualdo and Leonora d'Este in February 1594), although Caccini himself contemplated moving to Rome. Three Florentine noblemen offered him a salary of 300 scudi a year to stay in Florence, and in summer 1595 Caccini was considering a similar offer from a group of Genoese nobles (Piero Strozzi dissuaded him from accepting). However, he remained based in Florence, sending occasional compositions to patrons elsewhere (including Virginio Orsini in 1596) and attempting to earn a living from teaching private pupils (including Francesco Rasi) and nuns, as well as those sent to him from outside the city (e.g. by Cardinal Federico Borromeo of Milan in 1598–9).

Caccini took advantage of the festivities for the wedding of Maria de' Medici and Henri IV of France to re-enter the court payroll on 1 October 1600 with his former salary of 16 scudi a month. He provided the bulk of the music for the main entertainment, Gabriello Chiabrera's *Il rapimento di Cefalo* (some of which was later included in *Le nuove musiche*), and also forcibly inserted his own music into Ottavio Rinuccini's *Euridice* set by Jacopo Peri, on the grounds that singers dependent on him should not sing Peri's music. Caccini then rushed his complete setting of Rinuccini's libretto into print in December 1600, beating Peri by some two months (for illustration *see*MARESCOTTI, GIORGIO). The 1600 festivities were not a success, and Caccini seems to have alienated Emilio de' Cavalieri, whose fortunes at the Medici court were on the wane. Indeed, Caccini, Peri and Cavalieri (as well as Rinuccini) issued a barrage of claims and counter-claims concerning their precedence in the invention of new styles of lyrical and dramatic solo song.

Le nuove musiche was clearly part of this barrage. It was to have appeared early in 1602 (the dedication to Lorenzo Salviati, ghosted by Michelangelo Buonarroti *il giovane*, is dated 1 February 1601 *stile fiorentino*), but the death of the printer, Giorgio Marescotti, delayed publication until July, by which time Domenico Melli had brought out what became the first collection of monodies. In the important preface to *Le nuove musiche* Caccini noted that his songs had been composed at various times from the mid-1580s onwards, and had been circulating in manuscript at the hands of unscrupulous performers who knew nothing about graceful singing. He claimed the aesthetic high ground for a style of song in which 'one could almost speak in tones ['favellare in armonia'], employing in it a certain noble negligence of song ['una certa nobile sprezzatura di canto']' – the important term 'sprezzatura' derives from Castiglione – and he also referred to new styles of canzonetta writing inspired by the poetry of Chiabrera. He further commented on his use of the new style in 'the favolas which have been performed in song ['rappresentate cantando'] in Florence'. This is clearly misleading: his own *Euridice* was performed complete only on 5 December 1602, and, for all his claims in the preface to *Nuove musiche e nuova maniera di scriverle*, Caccini seems never to have set to music Rinuccini's *Dafne* (the 'first' opera, of 1598, with music by Jacopo Corsi and Peri).

In a report on the court musical establishment of 1603 the majordomo Enea Vaini noted that Caccini was 'most useful in the service of the music', in part because of his composing abilities but still more because of his *concerto*. This was made up of his second wife (by 1604), Margherita di Agostino Benevoli della Scala (probably a pupil of Vittoria Archilei), his daughters Francesca and Settimia and his illegitimate son Pompeo; the group was something of a counterpart to the earlier *concerto di donne* of Ferrara. In late 1604 the family (together with a pupil) were invited to Paris by Maria de' Medici; they travelled by way of Modena, Milan, Turin and Lyons and arrived early in 1605. The queen requested a staging of *Dafne* (it is not known with whose music) which never materialized, but Caccini's *concerto*, and especially Francesca Caccini, met with great success. Plans to extend the trip to England did not come to fruition, and the family returned to Florence in mid-1605.

Courtly service involved providing music for court entertainment (e.g. for a comedy to be performed on 10 May 1604) and sacred festivities (Easter music in Pisa in 1602, 1606, 1610 and 1614), composing songs (some were sent to the Duke of Mantua on 1 May 1606 and in October 1609), teaching both native and foreign pupils, dealing with other musicians, singing on command and other services. Caccini was extensively involved in the festivities for the wedding of Prince Cosimo de' Medici and Maria Magdalena of Austria, teaching the music to the singers and probably writing the music for at least the final *ballo* of the *intermedi* that accompanied the play *Il giudizio di Paride* by Buonarroti *il giovane*. He was also anxious to find husbands for both his daughters – at one point Frescobaldi was proposed for Settimia, but the negotiations fell through – and a position for his son. His house was a focus for great singers: Sigismondo d'India

(according to the preface of his *Musiche* of 1609) had his songs performed there during rehearsals for the 1608 festivities, and in June 1610 the Neapolitan singer Adriana Basile, *en route* to Mantua, stayed with him.

In 1614 Caccini published his second collection of songs, *Nuove musiche d nuova maniera di scriverle*; the 1613 *Fuggilotio musicale*, once thought to be by Caccini, is probably by GIULIO ROMANO (ii). The 1614 collection is dedicated to Piero Falconieri, son of Paolo Falconieri who seems to have supported Caccini in Rome (it is unclear when). Again there is a preface, which elaborates on the concept of sprezzatura, further discussed in a letter of 6 September 1614 to Virginio Orsini enclosing a copy of the print (see Boyer, 1934). His personal disputes continued in 1615 with a quarrel with Ottavio Archilei (son of the court singers Vittoria and Antonio Archilei) which led to Caccini's house arrest (in via Gino Capponi). A stroke also damaged his health: he was bedridden when he signed his will on 27 September 1617. By this time Caccini had increasingly turned to gardening (a new fashion in Florence) as a source of income, a subject of several letters from the last months of his life. He signed a codicil to his will on 6 December 1618 and died very soon after.

Caccini's widow, Margherita, lived until 1636, and his daughters Francesca and Settimia continued to have distinguished careers. His son Pompeo was a rake, a singer and a painter, who studied with Ludovico Cigoli: he combined both arts in his involvement in the Rome première of Filippo Vitali's *Aretusa* (1620), for which he painted the scenery and took the role of Alfeo. There were at least five other children by both marriages: Dianora (a cripple), Giovanni Battista, Giulio (who became a monk in 1615), Michelangelo and Scipione (who sang at court in the early 1620s).

Caccini seems to have been a difficult, proud man, which is perhaps not surprising given his efforts to climb through the social ranks by way of his art. Like most of his contemporaries, he used his connections with the upper classes to his advantage: Bardi and Corsi were genuinely supportive, and he seems to have made a friend of the Benedictine abbot and poet Angelo Grillo. Many supported Caccini's claims of having invented a 'new music', and of having made a significant contribution to the Florentine recitative, including Grillo (before 1602) and Caccini's likely pupils Severo Bonini (in the dedication of his *Madrigali, e canzonette spirituali* of 1607 and the much later *Prima parte de' Discorsi e regole sovra la musica*) and Antonio Brunelli (in the dedication of his *Canoni* (1612), which also contains important biographical details; see Hitchcock, 1973). Other musicians to mention him with praise include Ottavio Durante, Filippo Vitali, Alessandro Piccinini, Vincenzo Giustiniani, Pietro de' Bardi and G.B. Doni, and the poet Gabriello Chiabrera wrote a moving epitaph. Only Pietro della Valle adopted a more critical tone.

2. WORKS. Although Caccini's name is inextricably linked with that of Peri in the creation of the first Florentine operas and although his setting of *Euridice* was the first such opera ever to be published, Caccini should primarily be viewed as a composer of songs. His was above all a lyric gift, and it was through the medium of song that he developed his novel style and laid claim to being the inventor of *musica recitativa*. As such he occupies an important place in the history of music, for he was not only in the vanguard of the development of monody but preserved in it at the same time elements of improvisatory embellishment and vocal virtuosity, without which Baroque music is unthinkable.

Limiting himself for the most part to 'music for a solo voice, to a simple string instrument', Caccini shaped the vocal part so as to 'almost speak in tones', partly through a somewhat declamatory setting of the words, partly through a very sensitive reflection of the poem's structure, and partly through a very flexible approach to rhythm and tempo (one of the two aspects of his SPREZZATURA). The accompanying instrumental part he indicated as a bass line but one conceived more as an underpinning of the voice than as a melodic counterpart: in all three of his publications he explained this indirectly (as the other aspect of sprezzatura) in terms of allowing 'false' intervals (i.e. dissonances) between the voice part and the bass to go unresolved. The bass was to be harmonized in an improvisatory manner on 'the chitarrone or another string instrument'.

Caccini indicated the harmonies with the shorthand method of figures that organists had developed earlier as a means of doubling accurately the vocal parts of motets and other choral works (see illustration). But in Caccini's songs there is only one vocal part, and the bass is largely independent of it; thus he was one of the first to write a true basso continuo, and in his songs the 'pseudo-monody' of the much earlier frottolists and of composers nearer his own day (e.g. Luzzaschi) gave way to true monody, with the vocal line largely sprung from its contrapuntal framework.

One of Caccini's proudest boasts was that his new style had more power to 'move the affect of the soul' ('muovere l'affetto dell'animo') than others – to achieve, that is, the highest aim of music according to the thought of the Camerata (and thereafter of the whole Baroque era). Another aim, however, was to 'delight the senses', and in late 16th-century vocal music this was often sought through various kinds of improvised ornamentation. Caccini incorporated the most spectacular of these – *passaggi* (divisions, diminutions) – into his monody but limited them mostly to accented syllables of the verse and to cadences at the ends of lines of text. He thus brought the virtuoso's art of embellishment into line with the Camerata's ideals of a speech-dominated song, 'speech' in this case being equated with the accentual and structural integrity of the poem.

In his preface to *Le nuove musiche* Caccini complained that other singers had not followed his precepts for improvised ornamentation and that his songs had been 'tattered and torn' by them. Accordingly, although his essay is full of enlightening advice on how gracefully to elaborate a song, he actually wrote out in the music of *Le nuove musiche* most of the embellishments formerly improvised (*see* SINGING, fig.1), including not only *passaggi* but *ribattute di gola*, *cascate*, *gruppi*, *notes inégales* and short decorative graces (if not *trilli*, *esclamazioni* and decorated beginnings of phrases, which he left to the judgment of the singer). This incorporation of much vocal ornamentation into printed music was one of his great innovations, although he emphasized it only in his 1614 collection, the 'new way of writing it' of the title meaning 'exactly as it is sung'.

Caccini's two collections of monodic songs are based on two types of poetry, madrigals and 'arias' (strophic

'Aria di romanesca', monody from the preface to Giulio Caccini's 'Le nuove musiche' (Florence: Marescotti, 1601/2)

canzonettas). *Le nuove musiche* contains 12 madrigals and ten arias, *Nuove musiche e nuova maniera di scriverle* 16 madrigals (one in four *partes*) and 13 arias (one in four and another in two *partes*). Caccini cited specifically the madrigals *Perfidissimo volto*, *Vedrò 'l mio sol* and *Dovrò dunque morire* as being among the first songs composed in his new style (?mid-1580s). He remarked that later, after his return from Rome (?1592), he applied the same style to settings of lighter canzonettas, especially by Chiabrera (and he might have mentioned Rinuccini, many of whose poems are found in the two collections). Not surprisingly, his poetic preferences reflect the humanistic bent of the Camerata; more 'modern' poets (such as Tasso and Marino) are represented hardly at all in his songs.

Caccini's madrigals are through-composed, with very little repetition of words or phrases, although, as earlier madrigal composers had done, he often offers a varied reprise of the final couplet. Not many are as free of passage-work as the universally known *Amarilli, mia bella*; nor is its chromaticism (modest as it is) specially typical of Caccini's style, which tends to be sweetly diatonic throughout. Ironically but logically, so-called 'madrigalisms' are virtually non-existent: Caccini was concerned with 'il concetto, & il verso' (the basic affect and the poetic structure), not with imitative or symbolic devices. Naked recitative – a declamatory vocal style, narrow in compass, over a static bass – is limited to the beginnings of phrases and is not often found even there.

The majority of the arias differ very little stylistically from the madrigals. Only three or four in the first collection, double that number in the second, are truly 'airy' – light, tuneful and rooted in dance rhythms. A few are among the earliest examples of strophic variations, with different vocal music for the several stanzas appearing over a repeated bass. The title-page of the 1614 collection singles out two 'arie particolari' for tenor voice with an extended range going far down into the bass (*g*′-*C*), a technique not uncommon for the period, and one which may be associated with the music 'of unusual notes' ('di corde non ordinarie') which Caccini sent to Mantua in 1606.

Caccini's mastery of intimate chamber monody was not matched by gifts as a dramatic composer. Had his music for *Il rapimento di Cefalo* been more successful it would surely have been printed (as was the drama itself, which in fact was also published in French, the first 'libretto' to be issued in translation). The only portion not lost is Chiabrera's final chorus, which Caccini set as three florid solos flanked by two brief choruses; an assessment of the entire work is impossible from this excerpt. On the other hand, Caccini's *Euridice* can easily be compared with Peri's: though graceful enough it lacks the variety, urgency and range of dramatic expression of Peri's.

It is unclear to what extent Caccini composed for multiple voices. One of his contemporaries mentioned songs by him 'for one and more voices', and *Amarilli* was first published (in Antwerp) in a six-voice version (three-voice arrangements also survive); other songs survive in three-voice *contrafacta*. But Caccini himself, though claiming in 1602 more than 30 years of contrapuntal study, nowhere mentioned having composed polyphonic music apart from opera choruses. One unusual source for ten songs by Caccini (four of them *unica*) is P.M. Marsolo's *Secondo libro de' madrigali a quattro voci* (Venice, 1614; ed. in MRS, iv, 1973); besides polyphonic reworkings of the songs, a monodic version of each is in the continuo *partitura*.

Thanks partly to his own self-serving propaganda from a position of influence at the Medici court, but thanks also to his inventiveness as a singer and his gifts as a teacher, Caccini was celebrated in his own day and well into the 17th century. His songs circulated widely even before they were published: early manuscript versions (mostly without the ornamentation written out in the published collections) are found today in several libraries; a manuscript in Belgium (*B-Bc* 704), of Florentine provenance, includes many realizations of the bass in lute tablature.

As early as 1603 *Amarilli* was transcribed for virginals by Peter Philips (after the six-voice version, not the 1602 print), and in 1610 Robert Dowland included the same song, along with *Dovrò dunque morire*, in his *Musicall Banquet*, with realizations of the bass for lute. An abridged English translation of the preface to *Le nuove musiche* was regularly included in Playford's *Introduction to the Skill of Music* from 1664 to 1694. *Le nuove musiche* was followed by a large number of similar collections of monodic songs by other composers, and to this day few historical anthologies of music are without at least one piece by Caccini.

WORKS

STAGE

Title	*Librettist*	*First Performance*	*Remarks*
Io che dal ciel cader farei la luna	G.B. Strozzi	(i) Florence, Palazzo Vecchio, 2 May 1589	4th intermedio for La pellegrina, for the marriage of Ferdinando I and Christine of Lorraine, *B-Bc* 704, *I-Fn* Magl.XIX.66; ed. D.P. Walker, *Les fêtes du mariage de Ferdinand de Médicis et de Christine de Lorraine, Florence 1589*, i (Paris, 1963/*R*)
Serenissima donna, il cui gran nome	O. Rinuccini	Florence, 1590	in Maschere di bergiere, sung by L. Caccini, *B-Bc* 704 (anon.), *I-Fn* Magl.XIX.66 (anon.); doubtful, ed. in Ghisi (1956)
Euridice	Rinuccini	Florence, Palazzo Pitti, 6 Oct 1600	opera, music mainly by J. Peri; Euridice's arias, some of the shepherd's and the nymph's, 3 choruses (Al canto, al ballo, Poi che gli eterni imperi and Sospirate, aure celesti) by Caccini
Il rapimento di Cefalo	G. Chiabrera	Florence, Gran sala delle commedie, Uffizi, 9 Oct 1600	opera, in collaboration with S. Venturi del Nibbio, L. Bati and P. Strozzi; Caccini composed most of the musicè Chi mi confort'ahime and the chorus Ineffable ardore pubd in Le nuove musiche (Florence, 1601/2/*R*)
Euridice	Rinuccini	Florence, Palazzo Pitti, 5 Dec 1602	opera: pubd (Florence, 1600/*R*); ed. A. Coán (Florence, 1980)
Ballo	M. Buonarroti	Florence, Uffizi, 25 Oct 1608	6th intermedio for Il giudizio di Paride, for the marriage of Prince Cosimo and Maria Magdalena of Austria; lost

(2) **Francesca Caccini** [Francesca Signorini; Francesca Signorini-Malaspina; Francesca Raffaelli; 'La Cecchina'] (*b* Florence, 18 Sept 1587; *d* after June 1641). Italian composer and singer, elder daughter of (1) Giulio Caccini. She was the first woman known to have composed opera and probably the most prolific woman composer of her time.

As the daughter, sister, wife and mother of singers, Francesca Caccini was immersed in the musical culture of her time from earliest childhood. In addition to training in singing, guitar, harp and keyboard playing, and composition, she must have received a literary education, for she is known to have written poetry in Italian and Latin. Along with her sister (3) Settimia and her step-mother Margherita della Scala, she is assumed to have been one of the 'donne di Giulio Romano' (Giulio Caccini) who performed in Jacopo Peri's *L'Euridice* and her father's *Il rapimento di Cefalo* in 1600 and who dominated the official chamber music of the Medici court in the first decade of the 17th century. After 1611 this ensemble was replaced by a group described in court diaries as 'la sig.a Francesca e le sue figliuole' (Francesca and her pupils), who regularly performed chamber music for women's voices until the late 1620s.

Francesca received her first independent job offer from Queen Maria de Medici of France during her family's sojourn at the French court in 1604–5. Letters from her father Giulio Caccini suggest that Grand Duke Ferdinando I of Tuscany refused him permission to accept on her behalf the offer of a salaried position and a dowry of 1000 scudi. By late 1606 Giulio had negotiated a position for Francesca with Princess Margherita della Somaglia-Peretti, sister-in-law of Cardinal Montalto; this position, too, would have included a salary, a dowry and the promise that a suitable husband would be found. But in March 1607, after Francesca's music for the carnival entertainment *La stiava* had been described as 'una musica stupenda', Giulio broke the contract. In November, at the order of Grand Duchess Christine of Lorraine, Francesca entered the Medici's service and married an impoverished court singer, Giovanni Battista Signorini (on 15 November 1607 in S Maria Maggiore, Florence). With her dowry of 1000 scudi Signorini bought in 1610 two adjoining houses in the via Valfonda near S Maria Novella, where they lived until his death; their only child, Margherita (*b* 9 Feb 1622), became a singer and a nun.

From 1607 to 1627 Francesca served the Medici as a singer, teacher and composer, becoming in the 1620s the highest-paid musician on the Medici payroll. After her compositional dêbut with *La stiava*, she contributed some or all of the music to at least 13 more court entertainments. The most substantial of these were Rinuccini's *La mascherata delle ninfe di Senna* (1611), Buonarroti's comedies *La Tancia* (1611), *Il passatempo* (1614) and *La fiera* (1619), Ferdinando Saracinelli's *Il ballo delle Zingane* (1615) and Jacopo Cicognini's *Il martiro di S Agata* (1622). Her one surviving opera, *La liberazione di Ruggiero dall'isola d'Alcina*, was performed on 3 February 1625 at the Villa Poggio Imperiale in honour of the Polish Prince Władisław's visit for carnival. In addition to her work as a composer, her court duties included singing the Office for Holy Week services; singing at receptions given by the grand duchess and archduchess; instructing the princesses, ladies-in-waiting and at least one nun in singing; and teaching younger serving women singing, instrumental performance and composition. In spring 1616 she travelled to Rome in the retinue of Cardinal Carlo de' Medici; in 1617 she and Signorini toured Genoa, Savona and Milan, her virtuosity winning the praise of Gabriello Chiabrera. During the 1623–4 winter season Francesca again travelled to Rome in the entourage of Carlo de' Medici, where he and the poet G.B. Marino involved her in an improvising contest with singer-composer Andreana Basile. Marino declared Caccini to have the deeper musical knowledge, Basile to have the better voice and agility with *passaggi*.

In August 1618 Caccini published 32 solo songs and four soprano and bass duets as *Il primo libro delle musiche*. One of the largest and most varied collections of early monody, it seems to have been intended as a pedagogical collection, as the table of contents reflects a common order for introducing student singers to the genres of their art: sonnets, madrigals, arias, romanescas, motets, hymns and canzonettas. A typically, 19 of the 36 works set sacred texts, seven of them in Latin. Virtually all the songs are constructed as strophic variations, even the sonnets and madrigals. Like her father, Caccini had a gift for creating tuneful melodies; hers scrupulously reflect both the underlying conceits and the surface technical details of the poems. She rarely used such second-practice devices as unprepared dissonances, chromaticism or

difficult melodic leaps for expressive effect. Instead, she relied on subtleties of phrasing and ornamentation and on remarkably careful tonal planning to create highly nuanced close readings in song. Her romanescas are especially noteworthy for their internal transpositions of the familiar theme for expressive purposes. Her meticulous notation renders the variety of Italian speech rhythms with rare precision and grace, as well as representing fleeting shifts in intensity.

Caccini's score for *La liberazione di Ruggiero* was published in 1625 under the protection of Florence's Regent Archduchess Maria Magdalena of Austria, who had commissioned the work. *La liberazione* allegorically explores women's relationship to the wielding of power through a plot that pits a good, androgynous sorceress in competition with an evil, sexually alluring sorceress for control over a young knight, Ruggiero. Caccini's music uses both style and tonal organization to distinguish between the women. Through-composed *stile recitativo* sung in the 'natural' hexachord (though notated in the 'mollis') characterizes the good sorceress, while ever looser variations on her opening recitative and astonishing tonal excursions to the farthest points of both 'mollis' and 'durus' systems characterize the evil one. Further, the score shows Caccini's mastery of genre reference: canzonettas for three sopranos (evoking the sound of the *concerto delle donne* tradition in which Francesca had long worked) and elaborately ornamented strophic arias frame the lovers' original happiness; unornamented *stile recitativo* marks serious exchanges among principal characters, especially after the 'liberation'; and five-part madrigal style is used for the choruses of enchanted plants. The work has been revived in Cologne (1983), Ferrara (1987), Stockholm (1990) and Minneapolis (1991).

Soon after Signorini's death, in December 1626, Francesca arranged to remarry and leave Florence. On 4 October 1627 she married a Lucchese aristocrat and patron, Tomaso Raffaelli; according to Banchieri she simultaneously entered the service of a Lucchese banking heir, Vincenzo Buonvisi. During the three years of her marriage Francesca may have composed *intermedii* sponsored by Raffaelli's Accademia degli Oscuri. His death in April 1630 left Francesca a wealthy landowner and the mother of a son, Tomaso, born in autumn 1628. After nearly three years of quarantine in Lucca during the plague, Caccini returned to Medici service in spring 1633; her name appears regularly in the records of the grand duchess's court until late 1637. Contemporary letters indicate that she and her daughter Margherita performed as chamber singers, that she taught singing to nuns and that she composed and directed entertainments for the young Grand Duchess Vittoria della Rovere. In January 1637 she refused to allow Margherita to sing on stage in a *commedia*, arguing that such an appearance might compromise the 15-year-old's chances of an honourable convent placement or marriage, and that by tarnishing the social position of her son it would break the terms of Raffaelli's will. On 8 May 1641 Francesca left the Medici's service for the second time, armed with letters patent promising her the lifelong protection of the Medici in reward for her long service and her 'remarkable and fruitful virtuosity'. She may have died (or remarried) by February 1645, when guardianship of her son passed to his uncle Girolamo Raffaelli.

In her own time Francesca Caccini evoked mixed reactions. One contemporary remembered her as 'fiera e irrequeta' (fierce and restless), involved in a years-long feud with court poet Andrea Salvadori over his alleged seduction of young singers. Yet correspondents of Michelangelo Buonarroti described her as 'always gracious and generous' and as a woman of rare wit. Her abilities as a singer, teacher and composer are universally remembered as remarkable.

WORKS

DRAMATIC

music lost unless otherwise stated

La stiava (torneo, M. Buonarroti *il giovane*), Pisa, 26 Feb 1607

La mascherata delle ninfe di Senna (balletto, O. Rinuccini), Florence, Palazzo Pitti, 14 Feb 1611, collab. J. Peri, M. da Gagliano, V. Archilei and S. Caccini; revived 1613 [1 recit. and trio for women's vv by F. Caccini]

La Tancia (incid music to commedia rusticale, Buonarroti), Florence, Palazzo Pitti, 25 May 1611, revived, Monasterio di S Miniato, May 1619; La pastorella mia from Act 2.v in Il primo libro delle musiche, p.58

Il passatempo (incid music to balletto, Buonarroti), Florence, Palazzo Pitti, 11 Feb 1614, part revived, Rome, Casa Barberini, 1624; Chi desia di saper che cos'è Amore from Act 1 in Il primo libro, p.90; Egloga pastorale Tirsi e Filli from Act 2.i in *I-Ru* 279 ff.61–9; Io veggio i campi verdeggiar fecondi, balletto from Act 3, in Il primo libro, p.56

Il ballo delle Zingane (balletto, F. Saracinelli), Florence, Palazzo Pitti, 24 Feb 1615

La fiera (intermedi and incid music, Buonarroti), Florence, Palazzo Pitti, 11 Feb 1619; choruses of Romei and Malfranzesi revived, Pesaro, carn. 1622

Canzonette in lode della Befana (A. Salvadori and Buonarotti), Florence, residence of Cosimo II, 6 Jan 1620

La serpe (G.M. Cecchi), Florence, residence of C. Picchena, 26 Feb 1620

Pastoralina, Florence, 22 July 1620

Il martirio di S Agata (J. Cicognini), Florence, Compagnia di S Giorgio in Costa, 23 Jan 1622, collab. G.B. da Gagliano [roles of S Agata and Eternità and ensembles for 'women' (male vv) by Caccini]

Festina (Salvadori or Tadei), Florence, loggia of Lorenzo de' Medici, 14 Sept 1623

Allegoria della nascita di Maria Maddalena d'Austria (Salvadori or Tadei), Florence, residence of Archduchess Maria Maddalena, 7 Oct 1623

La liberazione di Ruggiero dall'isola d'Alcina (commedia in musica, prol, 4 scenes, Saracinelli), Florence, Villa Poggio Imperiale, 3 Feb 1625, revived, Warsaw, 1628 (Florence, 1625), ed. in SCMA, vii (1945)

Rinaldo innamorato, ? commissioned 1626, MS, formerly owned by G. Baini, lost

Il martirio di S Caterina (Cicognini), Florence, Compagnia di S Antonio, carn. 1627

OTHER VOCAL

Il primo libro delle musiche, 1–2vv, bc (Florence, 1618/*R*; 7 songs transcr. in Raney (1971)

(3) **Settimia Caccini** (*b* Florence, 6 Oct 1591; *d* Florence, *c*1660). Soprano and composer, younger daughter of (1) Giulio Caccini. According to Severo Bonini, she established 'an immortal reputation', having 'mastered to perfection the art of singing'. She was taught to sing and compose by her father, and by 1600 was performing at the Florentine court. Although not mentioned by name, she and her elder sister (2) Francesca are undoubtedly the 'figliuole' of Giulio Caccini who sang in *Il rapimento di Cefalo* in October 1600 for the marriage of Maria de' Medici and Henri IV of France. Four years later, at the invitation of Maria de' Medici, the Caccini family spent six months in Paris, performing at the courts of Modena and Turin *en route*. It was once thought that Settimia went to Mantua in 1608 to sing in Monteverdi's *L'Arianna* but it is now known that the singer was another Florentine woman. In 1609 she married Alessandro Ghivizzani; both remained in Medici service until the following year. In October 1611 they left Florence without permission for Lucca, where in 1613 they were recruited by Duke Ferdinando Gonzaga, and Settimia soon became one of the highest-paid musicians at the Mantuan court. The couple returned to Lucca in 1620 after her dismissal from Mantua, and in 1622 they settled in Parma, where Settimia sang Dido in an *intermedio* and Aurora in *Mercurio e Marte* (1628), both by Monteverdi. After the death of her husband she returned to Florence. She is listed on the Medici payroll in December 1636, and a few months later sang in Giovanni Carlo Coppola's *Le nozze degli dei*. Of her own compositions only eight songs are extant (in *I-Bc* Q49 and *CZ-Pnm* II-La.3) of which three appear also anonymously, or attributed to 'Parma' or 'Ghivizzani'.

Caccini, Orazio (*b* 1548; *fl* 1577–85). Italian composer. The brother of Giulio Caccini, he seems to have spent his career as a musician in Rome. According to Fétis he was *maestro di cappella* of S Maria Maggiore, Rome, from 1577 to 1581 as successor to G.M. Nanino; according to Kirkendale he served in the post for just over a year. Alfieri named him as a member of the Roman Congregazione dei Musici. He published *Madrigali et canzonette* (Venice, 1585), for five voices, which, as is clear from the dedication, was his first publication.

IAIN FENLON

Cáceres, Germán (*b* San Salvador, 9 July 1954). Salvadorian composer, conductor and oboist. He studied with Ion Cubicec and Esteban Servellón in El Salvador. He received undergraduate (1973) and graduate (1978) degrees at the Juilliard School of Music, where he studied oboe with Ronald Roseman and composition with Stanley Wolfe. He also studied in New York with Julián Orbón (composition) and José Serebrier (conducting). He received the degree of Doctor of Musical Arts in composition from the University of Cincinnatti (1989). He was principal conductor of the San Salvador Chamber Orchestra (1979–84) and of the El Salvador SO (from 1985). Since his New York début as oboist and composer at Carnegie Hall (1978) his works have been performed in Ecuador, El Salvador, France, Germany, Guatemala, the Netherlands, Honduras, Switzerland, the US and Venezuela. He received fellowships and grants from the Guggenheim Foundation (1981), 'Meet the Composer, Inc.' (1986, 1987 and 1990) and the Rockefeller Foundation (1991). He has been commissioned to compose for the North and South Consonance Ensemble (New York), the Cleveland Museum of Art, the Organization of American States, the Guanajuato SO (Mexico) and the Foundation of Contemporary Music (Puerto Rico).

LEONARDO MANZINO

Cachemaille, Gilles (*b* Orbe, 25 Nov 1951). Swiss bass-baritone. He studied at the Lausanne Conservatoire and in 1982 won three awards, including first prize in the international competition held in Paris for the performance of French song. That was also the year of his stage début in Rameau's *Les Boréades* at Aix-en-Provence, where over the following years he became a favourite.

Among his roles there have been Mozart's Figaro and Leporello, which he sang on the opening night of the festival's 50th anniversary in 1998. He was a member of the Lyons Opéra from 1982 to 1985, the year of his début at Salzburg. He has subsequently sung in Vienna, Prague, Berlin and Frankfurt, as well as most of the important centres in France and Switzerland. He sang in the world première of Rolf Liebermann's *La forêt* in Geneva in 1987. In 1993 he made his début with the Glyndebourne company in Berlioz's *Béatrice et Bénédict*, enjoying a more marked success as Leporello the following year. His other roles include Papageno, Don Alfonso and Golaud, all of which he has recorded. Throughout his career Cachemaille has maintained and developed an active concert repertory, ranging from Bach's Passions to Martin's *Golgotha* and *Jedermann* settings. He was also the bass soloist in the first performance of Berlioz's rediscovered *Messe solennelle* under Gardiner in 1993. A large number of recordings testify to his artistry as well as to the pleasing quality of his voice.

J.B. STEANE

Cachino, Giulio. *See* ZACCHINO, GIULIO.

Cachua [kashwa, kjaswa, kaswa, kachura, kashua, quoshwa]. A courtship circle-dance of the Bolivian and Peruvian Aymara Indians in which fur- and feather-clad dancers imitate movements of animals (a totemic vestige probably of Inca origin). Danced exclusively by adolescents, either male or female may pursue a prospective object of his or her affections. Men often sing amorous verses to which women may respond in kind, while the *bombo* (bass drum), *sicuri* ensemble, guitar, *charango* and harp provide instrumental accompaniment.

WILLIAM GRADANTE

Cadéac, Pierre (*b* ?Cadéac; *fl* 1538–56). French composer and choirmaster. He was master of the choirboys in Auch, Gascony, according to the title-page of his *Missa 'Alma Redemptoris'* printed by Du Chemin in 1556. He must have been in Auch before this, however, for Bernard du Poey (Toulouse, 1551) mentioned him in a poem about the collegium there. In fact Cadéac may have spent his entire early life in Gascony, for he was probably born in the little seaport whose name he bears. The publication of his masses and motets may be viewed as part of a major attempt by the Parisian printer Du Chemin to disseminate the sacred music of provincial masters, in competition, no doubt, with the rival firm of Le Roy & Ballard, who in 1555 had brought out the most important surviving source of Cadéac's music, *Petri Cadeac musici excellentissima moteta*, a book of 18 motets for four to six voices.

Cadéac's secular music was already known in Paris and Lyons, where most of his 11 surviving chansons were printed by Attaingnant and Moderne between 1538 and 1541. The most famous composition attributed to him is the celebrated chanson *Je suis deshéritée*, which served as the model for a large corpus of parody pieces, including masses by Maillard, Lassus and Palestrina, and chansons by Certon and Jacotin as well as a number of anonymous chanson duos and trios. The chanson also appears as a contrafactum *Oure Father God Celestiall* in an English manuscript (in *GB-Cfm*). (It should be noted, however, that *Je suis deshéritée* is ascribed to 'Lupus' in its two earliest printed sources, but the numerous later books are unanimous in assigning the piece to Cadéac.) His most widely disseminated motet is the five-voice *In trinitatis*.

Cadéac's fame seems to have travelled far. Several of his motets were printed in Nuremberg, Strasbourg and Venice. Near the end of 1591, his *Missa ad placitum* was copied in Madrid, where the *Missa 'Les hault bois'* was also known. The inventory of the music sung in the Capella Rorantistarum in Kraków, compiled in 1572, shows that his music was sung there as well. The considerable number of his masses and motets surviving in manuscript scores in Fortunato Santini's collection (in *D-MÜs*) shows that interest in Cadéac was revived during the 18th century.

In Neuber's *Cantiones selectissimae* (RISM 1568[7]), the 12-voice motet *Regi seculorum invisibili* is attributed to Paulus Cadeac; it is impossible to determine whether the ascription is a mistake or a careful reference to another composer who is otherwise unknown.

Cadéac's surviving music consists of 11 chansons, eight masses, one Credo, four *Magnificat* settings and about 24 motets. The secular pieces (all for four voices) reflect the conciseness, melodic stereotypes and chordal texture associated with the Parisian chanson. Most are of a gentle character owing to their slow, even rhythm, uncomplicated harmony, abundance of parallel 3rds and 6ths, short phrases and unsophisticated contrapuntal gestures. The masses and motets, in their use of imitation, short phrases, homorhythmic groupings and concise harmonic bass lines, bespeak Cadéac's predilection for French rather than Flemish counterpoint.

Cadence (Fr. *cadence*; Ger. *Kadenz*, *Schluss*; It. *cadenza*). The conclusion to a phrase, movement or piece based on a recognizable melodic formula, harmonic progression or dissonance resolution; the formula on which such a conclusion is based. The cadence is the most effective way of establishing or affirming the tonality – or, in its broadest sense, modality – of an entire work or the smallest section thereof; it may be said to contain the essence of the melodic (including rhythmic) and harmonic movement, hence of the musical language, that characterizes the style to which it belongs. The term was also used in France to denote various types of trill (also known as *tremblement*) or turn (*double cadence*); *see* ORNAMENTS, §7.

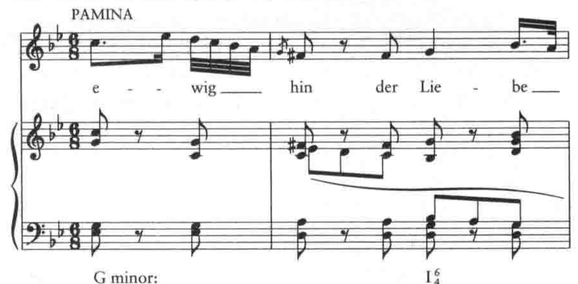
1. Types. 2. History

1. TYPES. In music of the tonal periods (Baroque, Classical and Romantic), it is useful to distinguish between cadences on the basis of their varying degrees of 'finality', for example between those whose final chord is on the tonic and those whose final chord is on some other degree of the scale, between those whose chords are all in root position and those which contain at least one inverted chord, and so on. A number of terms have been borrowed from medieval modal theory (authentic, plagal, Phrygian), not always on a strictly logical basis; there are also some cadences to which a number of names have been applied as a result of the persistence of terms introduced by theorists from the 18th century or earlier, and the translation of foreign-language equivalents. The following discussion is intended to clarify the meaning of the most important of these names as they are now used.

A cadence is said to be 'perfect' if it consists of a tonic chord preceded by a dominant chord (V–I, normally both in root position); it is occasionally stipulated that the final chord must have the tonic in the highest part. This is also called an 'authentic', 'final' or 'full' cadence, or a 'full close' (Fr. *cadence parfaite*, *cadence authentique*; Ger. *Ganzschluss*, *vollkommene Kadenz*; It. *cadenza perfetta*, *cadenza intera*). The term 'perfect cadence' is extended in some theoretical writings (chiefly American) to include what is more commonly called a 'plagal cadence', one in which the tonic is preceded by the subdominant (IV–I) or

Ex.1 Beethoven: Sonata in E♭ op.81*a*, 1st movt

a subdominant with added sixth (Fr. *cadence plagale*; Ger. *plagale Kadenz*, sometimes *unvollkommene Kadenz*; It. *cadenza plagale*). A cadence whose final chord is prepared by subdominant and dominant harmonies, as in ex.1, is sometimes called a 'mixed' cadence.



Ex.2 Bach: Chorale no.59 'Herzliebster Jesu'

An 'imperfect' or 'half' cadence, 'semi-cadence' or 'half close' (Fr. *cadence suspendue*; Ger. *Halbschluss*; It. *cadenza sospesa*) ends on the dominant and may be preceded by any chord. The simple succession I–V (ex.2) is common; so are II*b*–V and IV–V. The expressive qualities of the imperfect cadence are illustrated in ex.3; within the space of seven bars of an aria there are three imperfect cadences, each of which is approached by a different chord. In American usage, 'imperfect' is sometimes applied to cadences ending on the tonic whose chords are not in root position (also known as 'medial' or 'inverted' cadences), or whose upper parts do not end on the tonic; only the terms 'half cadence' and 'semi-cadence' have the restricted meaning of an ending on the dominant.

Related to the imperfect cadence is the Phrygian cadence, which is characterized by a diatonic approach to

Ex.3 Mozart: *Die Zauberflöte*, 'Ach, ich fühl's'

Ex.4 Palestrina: *Jubilate Deo omnis terra* (last four bars)

(a)

7 – 6

(b)

the final chord from an 'upper leading note' (i.e. the second degree of the scale when it lies only a semitone above the tonic). The more complicated – and more customary – use of this cadence in 16th-century polyphony is illustrated by the ending of Palestrina's *Jubilate Deo omnis terra* (no.13 of the *Offertoria* of 1593). Ex.4*a* shows the cadential parts alone, with the 'upper leading note' in the tenor and the required suspension in the highest part. Inex.4*b* the other parts are also shown; as the two cadential voices approach the octave *e–e′* the bass must move down to *A* (or *c*) to avoid consecutive octaves with the highest part. In the final resolution on *e*, the motion of the bass, if described in tonal terms, resembles that of the plagal cadence (see above). In its simpler, more direct form, the Phrygian cadence has the upper leading note and its resolution in the lowest part. The chord progression shown in ex.5, which takes the place of a

Ex.5 Bach: Brandenburg Concerto no.3 in G, 'slow movement'

in E minor: IV*b* V

slow movement in Bach's Brandenburg Concerto no.3 in G, is one of the many features of Renaissance compositional technique that survived in the Baroque era; but in this context it is better to interpret it as an imperfect cadence in E minor (the relative key of G major).

In an 'interrupted' cadence, also known as a 'deceptive' cadence or 'false close' (Fr. *cadence rompue*, *cadence évitée*, *cadence trompeuse*; Ger. *Trugschluss*; It. *inganno*), the penultimate chord, a dominant or dominant 7th, resolves irregularly, to some other chord than the tonic. This is most often the submediant, but sometimes the flattened submediant, the subdominant (usually in first inversion), the mediant (often with raised 3rd) or occasionally the tonic with an added flat 7th (i.e. a dominant 7th of the subdominant key). In Handel's Fugue in B minor for organ, the final cadence, shown inex.6, is

Ex.6 Handel: Fugue in B minor for organ (last seven bars)

Adagio

'interrupted' by a subdominant chord with an added 6th. In later music, particularly Wagner's, the most common interrupting chord is the first inversion of sharp subdominant (which may imply the dominant of the dominant); this also occurs in Haydn.

American usage distinguishes a medial cadence, whose penultimate chord is inverted, from a radical cadence, whose chords are in root position. In the medial cadences given inex.7, (*a*) and (*b*) are derived from the perfect

Ex.7 Medial cadences

(a) (b) (c) (d)

(authentic) cadence in C major, (*c*) and (*d*) from the plagal cadence. The term 'medial cadence' is also sometimes applied to endings in plainchant and modal polyphony that are not on the final of the mode.

2. History. Whereas the notion of cadence in tonal music almost invariably implies harmonic resolution (either from the dominant or towards the tonic or dominant), until the 16th century cadences in polyphony were governed entirely by linear considerations, primarily the descent by step to the final of the prevailing mode, and secondarily the ascent by step to the final or the octave above the final; often motion by step was replaced by the leap of a 3rd. In Gregorian chant the ending most frequently used is descent by step to the final; the downward leap of a 3rd and ascent by a whole tone are also common. Ascent by a semitone, although possible in F-mode chants, is almost never found (the 13th-century *Kyrie firmator sancte* is exceptional in this respect), though ascent by a 3rd (*d–f*) occurs in rare instances (e.g. in the antiphon *Vobis datum est*). In the earliest forms of organum (11th–12th centuries) the primary cadences consisted of direct or indirect resolution of one perfect interval into another, namely a 4th or 5th into a unison or octave (ex.8). The secondary cadences consisted of the

Ex.8 Common endings in note-against-note organum

resolution of an imperfect interval into a perfect interval (i.e. the 3rd into a unison and the 6th into an octave); these became the principal endings in two-part polyphony in the 13th century. From about 1300 practically all cadences were based on the descent by step of the tenor, with the resolution of the other parts dependent on the interval each made with the tenor: the minor 3rd below normally resolved to the unison, the major 3rd above to the 5th, and the major 6th above to the octave (at cadence points, any major 3rds below or minor 3rds and 6ths above would be sharpened in performance; *see* Musica ficta). This produced a number of possible cadences in three parts, including the Phrygian cadence (ex.9*a*), the

Ex.9 Common three-part endings in 14th-century polyphony

(a) (b) (c) (d) (e)

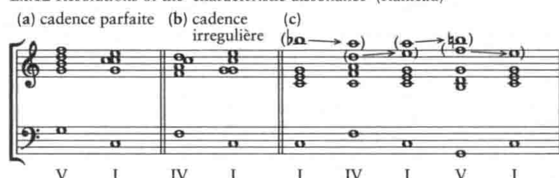
so-called 'double leading note cadence' (exx.*9b–c*) and a cadence that contained consecutive 5ths (ex.*9d*); from the mid-14th century the LANDINI CADENCE (ex.*9e*), whose upper part characteristically falls to the sixth degree before rising to the octave, became the most important variant of the 'double leading note cadence'.

The earliest apparent precedents for triadic harmony occur in certain types of cadential formulation prevalent in the 15th century. The movement of the principal parts, the cantus and tenor, was still governed by the linear resolution of intervals (now usually preceded by a dissonant suspension), but the contratenor moved by leap more often than before.

Ex.10 Cadences with a leap in the contratenor part (15th century)

The configurations in ex.10, all commonly found in music from Du Fay to Josquin, seem to anticipate the perfect candence when viewed 'vertically', that is, as successions of chords (see Randel). However, in linear terms (see Bent) they are essentially no different from the progressions in ex.9, since from a theoretical point of view they were still based on the tenor part; as late as 1529 the progression inex.11 was described by Aaron in

Ex.11 Cadence on E (16th century)



Thoscanello de la musica as a cadence on E. An important contribution to cadence formation in the Renaissance was the addition of the 3rd in the final chord; until about 1750 it was normally sharpened in minor-mode compositions, so that almost all pieces ended on a major triad (*see* TIERCE DE PICARDIE).

Even in late Renaissance theory, cadences were still viewed as contrapuntal or melodic occurrences; for Zarlino (*Le istitutioni harmoniche*, 1558) the *cadenza perfetta* was the resolution of two parts to the octave, and the *cadenza imperfetta* (*sfuggita*) the resolution to the 3rd (10th) or 5th (12th). Early in the 18th century the distinction between cadences on the tonic and on other degrees, as well as between perfect and plagal, was made on the basis of harmonic progression; the notion of an interrupted cadence was also introduced at this time. In France the perfect cadence was called a *cadence parfaite*, the plagal a *cadence imparfaite* (Rameau used the term *cadence irregulière*); in Germany *vollkommene Cadenz* and *Ganzschluss* were used for the perfect cadence, *unvollkommene Cadenz*, *Halbschluss* (or *halbe Cadenz*) and *Trugschluss* for plagal, imperfect and interrupted cadences.

Rameau postulated that a cadence consisted in the resolution of a 'characteristic dissonance' present or implied in the penultimate chord. If the characteristic dissonance lay a 7th above the real bass, its resolution was called a *cadence parfaite* (ex.*12a*); if it lay a 6th above ('sixte ajoutée'; *see* ADDED SIXTH CHORD), its resolution was called a *cadence irregulière* (ex.*12b*). Thus the

Ex.12 Resolutions of the 'characteristic dissonance' (Rameau)

progression I–IV–I–V–I, according to Rameau, would be analysed as a series of *cadences parfaites* (I–IV and V–I) and *cadences irregulières* (IV–I and I–V), that is, independently of a larger tonal function (the bracketed pairs of notes in ex.*12c* are the imagined characteristic dissonances together with their respective resolutions).

In Classical music, which is built to a great extent on the principle of antecedent and consequent phrases, cadences took on a structural significance on all levels of composition. Moreover, cadence formations became so standardized that they could be used, for rhetorical effect, even in positions other than endings. In some of Haydn's quartets, for instance, a homophonic cadential progression is stated at the very beginning of the first movement (ex.13). The trio section from the minuet of Mozart's

Ex.13 Haydn: String Quartet in C op.74 no.1, 1st movt

'Jupiter' Symphony (ex.14) begins with a perfect cadence answered by a contrapuntal passage, thus reversing the

Ex.14 Mozart: Symphony in C K551, 3rd movt, Trio

normal roles of 'activity' and 'repose' within a phrase. In the opening of Beethoven's Symphony no.1 (ex.15) the

Ex.15 Beethoven: Symphony no.1, 1st movt

first two chords could be heard initially as a perfect cadence in F, until the next two chords are played; these, in turn, can be analysed as an interrupted cadence whose 'resolution' takes the form of an imperfect cadence in the third pair of chords.

The expansion of the sonata in 19th-century instrumental music, and especially the development of musical continuity in German Romantic opera (Wagner's 'unendliche Melodie'), brought to the interrupted cadence a structural significance that had hitherto been the exclusive property of the perfect and imperfect cadences (ex.16).

Ex.16 Wagner: *Tristan und Isolde*, Act 1

By contrast Richard Strauss, whose opera acts and tone poems were through-composed but were nevertheless subdivided by cadence-points, developed a kind of counterpart to the interrupted cadence, in which the penultimate dominant 7th was replaced, or separated from the tonic, by some other chord (ex.17). Resistence

Ex.17 Strauss: *Don Quixote*

to the clear V–I is common in this period, in the works of composers as diverse as Elgar and Debussy. In a composition foreshadowing atonality, the final movement of his String Quartet no.2, op.10, Schoenberg prolonged a dominant (C♯) harmony (bars 128–133) but resolved it obliquely on to C major; the approach to the final tonic, 20 bars on, is similarly indirect (ex.18).

Ex.18 Schoenberg: String Quartet no.2 op.10, final movt, ending (texture a little simplified)

The development of cadences in the 20th century was a matter of embellishment rather than of inherent structural change; in the cadences of post-tonal composers such as Stravinsky and Hindemith there was a return to the principle of linear progression in all parts (ex.19). Stravinsky's chorale-endings similarly depend on a linear approach to the final resting-place, with the last chord a clearly-voiced dissonance (Symphonies of Wind Instruments). Music based on repetitive patterns may end by

Ex.19 Hindemith: Flute Sonata, 2nd movt, ending

breaking the pattern, a favourite device of Stravinsky (as in *The Rite of Spring*).

In rigorously non-tonal music the principles of suspension, resolution, functional harmonic progression and even melodic formula may no longer apply and the sense of an ending is instead achieved through rhythm, dynamics and other variables such as instrumentation. Some 12-note compositions nevertheless contrive to end on a triad (Schoenberg's *Ode to Napoleon*) or a clearly voiced harmony (Schoenberg's Piano Concerto). Each of these endings is an emphatic tutti, with ritardando; similar rhetorical means are employed in Schoenberg's Variations for Orchestra, op.31, whose last chord contains eleven pitches (lacking only C♮, which is sounded alone as a penultimate). Quiet endings also provided ways of avoiding cadential formulae. In Mahler's Ninth Symphony the etiolated plagal cadence contributes less to finality than do harmonic immobility, texture and the incursion of silence; with less orthodox harmony, the celebrated ending of 'Neptune' in Holst's *The Planets* employs an alternation of unconventionally related chords fading into inaudibility (ex.20). An atonal example of similar rhetorical character is Boulez's *Le marteau sans maître*.

Cadence féminine (Fr.). *See* FEMININE ENDING.

Cadener, Johann. *See* CADNER, JOHANN.

Cadent. *See* ORNAMENTS, §6.

Cadenza (from It.: 'cadence'). A virtuoso passage inserted near the end of a concerto movement or aria, usually indicated by the appearance of a fermata over an inconclusive chord such as the tonic 6-4. Cadenzas may either be improvised by a performer or written out by the composer; in the latter case the cadenza is often an important structural part of the movement. In a broad sense the term can refer to simple ornaments on the penultimate note of a cadence, or to any accumulation of elaborate embellishments inserted near the end of a section or at fermata points. (*See also* IMPROVISATION, §IV.)

1. Introduction and early history. 2. The Baroque period. 3. The Classical period. 4. Beethoven and the 19th century.

1. INTRODUCTION AND EARLY HISTORY. The term 'cadenza' first appeared shortly before 1500 as a synonym for the Latin 'clausula', meaning conclusion (the Latin word 'cadentia' came into use later). Both terms are derived from *cadere* ('to fall') and originally referred to a descending melodic line before the final note of a section (ex.1). Unlike modern English, none of the Romance

Ex.1 *Entlaubt ist uns der Walde*, Volkslied (Forster, 1539)

languages or German offers a phonetic distinction between the word for cadence and that for cadenza. As early as the 16th century some Italian treatises tried to distinguish between those *cadenze* that corresponded to incisions in language and therefore belonged to the *Ars Libera* Grammar (cadences), and those *cadenze* that corresponded to the ornaments of speech and thus belonged to the *Ars Libera* Rhetoric (cadenzas). Nonetheless, attempts to clarify the term's meaning are difficult on the basis of Renaissance and Baroque theoretical writings. It was probably J.-J. Rousseau (*Dictionnaire de musique*, 1768) and his English translator William Waring who first used the Italian word *cadenza* for fermata embellishments and the French *cadence* for harmonic progressions at the ends of phrases or sections. Although in France Rousseau's terminology was only rarely followed, 19th-century English writers adopted the convenient distinction, and it has since become generally accepted in English-speaking countries.

Among the first theorists to use the term 'cadenza' for embellished endings was Pietro Aaron (*Thoscanello de la musica*, 1523); 12 years later Sylvestro di Ganassi included examples of such cadenzas in his *Opera intitulata Fontegara* (1535; ex.2). Non-Italian authors of treatises

Ex.2 Ganassi: *Fontegara*

on diminution and ornamentation, such as Bermudo, Tomás de Santa María, Ortiz and Fink, knew similar ornamented endings, but did not use the term 'cadenza' to describe them. The tendency to elaborate or 'colorate' the penultimate note of endings is apparently as old as the art of discant itself. As early as the 13th century clear references may be found to a 'point of organum' (*punctus organicus*) on the penultimate, which provides a florid, cadenza-like passage at the end of a piece of discant. In his *Ars cantus mensurabilis* Franco of Cologne wrote that 'the equivalence in the perfections of longs, breves, and semibreves ought always to be borne in mind, . . . counting both actual sounds and their omissions as far as the penultimate, where such measure is not present, there being rather a point of organum here' (*CoussemakerS*, i, 133; trans. in *StrunkSR1*, 156). Jacques de Liège also referred to 'uncertain measures', such as those 'in the floreation on the penultimate, where over a single note in the tenor many are sounded in the discant' (*CoussemakerS*, ii, 385). In fact, an early designation for the fermata, that of Tinctoris, was *punctus organi* or 'point of organum' (see Warren, 1974).

The 'ornamented cadence' (*cadenza fiorita*) brought a certain brilliance to the ending of a piece; further, the concentration of embellishments at the end enabled composers to relieve the melodic line of excessive *fioriture*. Later these reasons became more important, when, for example, composers had to meet the increasing demands of famous singers eager to show their technical prowess. The inclusion of specific opportunities for virtuoso display permitted composers to avoid having the rest of their compositions spoilt by the liberties taken by performers of questionable compositional talents. Many composers, unsure of performers' good taste and improvisational skill, wrote out their own cadenzas. Caccini, as early as 1589, supplied an alternative version of the cadenza on the penultimate note in *Io che dal ciel cader* (the fourth *intermedio* for *La pellegrina*). He also wrote embellished endings for his own melodies in his *Euridice* (ex.3); the penultimate note of this example may have been sung with the addition of a *trillo*, *gruppo*, or some other ornament chosen by the performer. Peri praised the singer Vittoria Archilei in the preface to his *Euridice* because she embellished his music 'with those attractive and gracious ornaments which cannot be written down'. Until the 19th century embellishments were expected to be improvised

Ex.3 Caccini: *Euridice*

by most performers, and if not they were written out; Italian composers of the 17th and 18th centuries rarely ventured to specify all the embellishments they considered appropriate. But they sometimes felt the need to demonstrate how such ornamentation should sound. Monteverdi, for example, wrote both an unembellished and an embellished version of 'Possente spirto', the famous preghiera in Act 3 of *L'Orfeo*. The melisma with which the end of the first stanza is approached has an improvisatory character (ex.4).

Ex.4 Monteverdi: *L'Orfeo*

As early as 1585 Giovanni Bassano's treatise *Ricercate, passaggi et cadentie per potersi essercitar nel diminuir* discussed how to invent cadenzas and provided examples. Cadenzas in 16th-century instrumental music, outside treatises, resembled those used in vocal music; for example, the cadenzas on penultimate notes in the lutebook of Hans Neusidler (1536) often resemble contemporary vocal endings in which melismatic embellishments were inserted between two full closes, repeating the last word or words. In vocal music diminutions or *fioriture* were often used to emphasize certain words, sometimes the final ones of the text; although inserted at points other than at cadences, they came to be called 'cadenzas'.

2. The Baroque period. Praetorius's discussion (*Syntagma musicum*, iii, 1618) of 'Cadentien und Passaggien' often refers to what are now called word-painting embellishments. Another use of the term is found in the preface to Frescobaldi's *Toccate e partite d'intavolatura di cimbalo et organo . . . libro primo* (1615); he wrote: '[As for] cadenzas, even though they may be written in fast notes, it is best to play them quite slowly; and in the approach to the end of [an embellished] passage or cadenza, the tempo should be slower still'. It seems that Frescobaldi understood by 'cadenze' accumulations of embellishments near any cadence rather than merely at ornamented endings of sections or whole pieces.

In the course of the development of opera in the late 17th and early 18th centuries the popularity of virtuoso singing increased considerably, and with it the importance of improvised embellishment. Final cadenzas became common towards the end of the century, when they were indicated by the words 'solo', 'tenuto', 'ad arbitrio', by a rest (sometimes as little as one beat), or by a fermata. In Alessandro Scarlatti's early operas places for cadenzas can be found, but they are clearer in operas written after about 1715; even then not every aria allowed the insertion of a cadenza. In da capo arias the usual place for the insertion of a cadenza was just before the final cadence of the first section. Probably it was intended that a cadenza be performed only in the da capo of that section, but often a place for a cadenza is also found at the end of the middle section (and sometimes there only). P.F. Tosi, himself a virtuoso singer, condemned the excessive ornamentation in which some singers indulged. Referring specifically to the cadenza, he wrote in his *Opinioni de' cantori antichi e moderni*, 1723 (Galliard's translation, 1742):

> Every *Air* has (at least) three *Cadences*, that are all three final. Generally speaking, the Study of the Singers of the present Times consists in terminating the *Cadence* of the first Part with an overflowing of *Passages* and *Divisions* at Pleasure, and the *Orchestre* waits; in that of the second the Dose is encreased, and the *Orchestre* grows tired; but on the last *Cadence*, the Throat is set a going, like a Weather-cock in a Whirlwind, and the *Orchestre* yawns.

No doubt Tosi's opinions would have sounded old-fashioned in 1723, and regrettably he gave no guidance in the execution of what he considered an acceptable cadenza. A few samples of actual cadenzas have survived as insertions in manuscript scores. The cadenzas sung by Farinelli in 'Quell'usignolo' from Giacomelli's *Merope* (1734; see Brown, 1984) would surely have met with Tosi's disapproval. More to his taste, possibly, would have been the cadenzas added to a manuscript score of Handel's opera *Poro* (1731). They appear at the final cadence of the first section of Alessandro's aria 'Vil trofeo d'un alma imbelle', and are written on blank instrumental staves above the voice part; presumably the first was sung at the first statement, and the second at the da capo (ex.5).

Ex.5 Handel: *Poro*

Cadences at which such embellishment was expected are often marked 'adagio'; reduced scoring at this point not only highlights the display of vocal virtuosity but also helps to avoid problems of ensemble.

The terminological confusion surrounding cadenza-like passages in instrumental music of the late Baroque is caused in part by a lack of consistency in the sources

themselves, in part by a 20th-century desire to identify the antecedents of the classical concerto cadenza, and in part by a tendency to use the term 'cadenza' loosely to describe any passage of virtuoso figuration that occurs in the vicinity of a cadence.

Torelli used the term PERFIDIA to describe three passages (nos.65–7 in Giegling's catalogue) in which two violins engage in brilliant figurations above a sustained pedal in the bass. (The authenticity of the first has been questioned, and the second and third are part of the same composition.) The term has been used to describe similar passages in the music of Corelli and Vivaldi, such as the conclusion of the second movement of Corelli's Sonata op.5 no.3 (ex.6).

Locatelli applied the term CAPRICCIO to the virtuoso passages for solo violin that conclude the outer movements of each of his 12 concertos op.3. (In 18 of the 24 capriccios he used the word 'cadenza' to indicate an improvised embellishment of the final cadence in the capriccio.) Similar passages are found in the concertos of Vivaldi, who often preceded them with the instruction 'Qui si ferma a piacimento', thus confirming their optional status (see illustration from RV212*a*). J.S. Bach made his transcription for organ BWV594 not from the printed version of Vivaldi's op.7/ii no.5 (RV208*a*) but from the version found in *D-SWl* Mus.ms.5565 (RV208), whose first and last movements each contain additional cadenza-like passages that are not present in the printed edition. The passage in the last movement is clearly of the capriccio type: a 'final' ritornello in the tonic is followed by a virtuoso solo section of 104 bars, which is rounded off by a seven-bar tutti. Bach's most famous 'cadenza', in the first movement of the fifth Brandenburg Concerto, should probably be seen as part of this capriccio tradition, rather than as an antecedent of the classical cadenza.

The 'true' cadenza was characterized not only by its placing (within a structural cadence), but also by its clear articulation (often by means of a fermata), and by its rhapsodic, improvisatory character. (The common rule, often cited with reference to cadenzas for voices or wind instruments, that the length of a cadenza should not exceed what can be sung or played in one breath, cannot have been applied rigidly.) In Bach's concertos, cadenzas of this kind appear in the Violin Concerto in E (BWV1042; first movement), and in the Concerto for Flute, Violin and Harpsichord (BWV1044; finale).

In French music of the 16th and 17th centuries the practice of diminution developed mainly in the *couplets* of the *air de cour*, by such composers as Antoine Boësset and Etienne Moulinié, and in lute music; but no special accumulation of embellishments towards the end of a piece can be observed. Mersenne (*Harmonie universelle*, 1636–7) described the vocal counterparts to instrumental 'tremblements' (trills) as 'cadences', and the terms 'tremblement' and 'cadence' became interchangeable. French methods of vocal embellishment seem to have been little influenced by Italian ones. After Lully the realization of melodic ornaments and their written indication by French composers apparently permitted neither the alteration of pitches nor that accumulation of embellishments towards the end of a section from which the typical fermata embellishment of the Italian high Baroque aria evolved.

French theorists continued to be vexed by the double meaning of the word 'cadence', which was used for harmonic closes as well as for trills on the penultimate note. Brossard (*Dictionaire de musique*, 1703), for example, argued against the latter: 'Cadence, in Latin *clausula*, means to close a melody and its harmony in a proper way [i.e. cadence]. This is what we should call *cadence*, and not what we French do who call a trill *cadence*'. The misuse of the term 'cadence' was also noted by M.P. de Montéclair (*Principes de musique*, 1736), who spoke of the 'tremblement . . . que les Français appellent par corruption cadence'. Later, Quantz could observe in Paris that in pieces in the French style, by contrast with those in the Italian, 'hardly anything can be added to what the composer has written'. The insertion of cadenzas in French 18th-century music was evidently restricted to works in the Italian manner.

3. THE CLASSICAL PERIOD. The art of improvised embellishments flourished in Italian and Italian-influenced music in the second half of the 18th century even more than in the first half. The cadenza was considered an embellishment, and the ability to invent one was reckoned an indispensable part of the equipment of any virtuoso who hoped to satisfy the listener's expectations. Under normal circumstances no soloist could afford to leave out a cadenza when a fermata appeared in a recognized context.

Cadenzas in the 18th century occupy the penultimate position in the musical structure. They precede the final tutti of a concerto movement or aria, and are almost always indicated by a fermata above the 6-4 chord over the dominant scale degree immediately preceding a perfect cadence. Some concertos specify a cadenza in each movement, though the trend in the later 18th century was towards one or at most two per work. Mozart's Clarinet Concerto, exceptionally, calls for no such elaboration of a 6-4 chord.

Cadenzas are sometimes indicated in movements of solo or chamber works. Nine of Haydn's string quartets require the first violinist to improvise a cadenza for the slow movements (more than half of these occur in the set op.9, composed in 1768–9), and cadenzas are also required in the slow movement of three of his earlier keyboard sonatas. Mozart asked for a cadenza in the slow

Vivaldi's cadenza for the third movement of his Violin Concerto in Drv212 (*I-Tn* Giordano 29, ff.243v–244r)

movement of his Duo in B♭ for violin and viola (K424), but more often he wrote them into his solo and chamber music: there is a 'cadenza' written into the finale of the Violin Sonata in D K306 (1778), and a 'cadenza in tempo' for the finales of the Piano Sonata in B♭ K333 (1783) and the Piano Quintet K452 (1784). Related to the 'cadenza in tempo' and also dating from the early 1780s is the written-out elaboration of the 6-4 chord not specifically identified by the composer as a 'cadenza' but nevertheless fulfilling its function: examples are found in the slow movements of Haydn's Keyboard Sonata HXVI:39 (1780) and Quartet op.33 no.5 (1781), and the first movement of Mozart's Quintet in C K515 (1787). Originally, the first number of *Die Zauberflöte* was to have ended with a cadenza for the Three Ladies.

An improvised embellishment of a different order consists of a brief elaboration, usually of a dominant chord, to connect the end of one section with the beginning of the next; the sign for it is a fermata over that chord. J.A. Hiller called this an 'Übergang' in his *Anweisung zur Singekunst in der deutschen und italienischen Sprache* (1773), but the word Eingang ('introduction' or 'lead-in'), used by Mozart in a letter of 15 February 1783, has become the standard term. Where composers wrote out a series of *Eingänge*in the course of the movement, rather than leave their execution to the soloist, they would vary them, usually by making them increasingly elaborate (see, for instance, the finales of Beethoven's third and fourth piano concertos). *Eingänge* are commonly found before the reprise of the main theme in rondo movements in

concertos, but can also occur in chamber and solo contexts, for example in the slow movements of Haydn's quartets op.17 no.3 and op.20 no.6 (both marked by a fermata), and the finale of Mozart's Sonata in D K311 (fully written out).

The rules for the construction of cadenzas given in Tartini's *Traité des agréments* (1771) seem to have been widely followed and resemble in principle those given for singers: cadenzas may start with a swelling note (for singers, a *messa di voce*), *passaggi* or a trill, succeeded by metrically free notes of smaller value and then a high note that may be identical with or followed by the highest note in the piece; the melodic peak is usually soon followed by the soloist's final trill. This basic form stood throughout the 18th century in Italy, and for much of it elsewhere; but the freedom given to performers, when abused, sometimes led to monstrosities.

P.F. Tosi was one of the more outspoken opponents of the presumption of singers. His *Opinioni de' cantori antichi e moderni* (1723; see §2) allows for the insertion of at most one cadenza into an aria, and then only towards the end of the da capo section, so that the audience would know when the aria was coming to an end; otherwise only modest embellishments might be included. A cadenza should, moreover, not break the metre. J.F. Agricola's *Anleitung zur Singekunst* (1757), an edited German translation of Tosi's *Opinioni*, expressed a different opinion in a footnote, commenting that this excessively narrow restriction was usually ignored, but he agreed that many a singer spoilt an otherwise well-performed aria by the inclusion of excessively long or absurdly designed cadenzas. From the numerous complaints registered by 18th-century writers, one may infer that not only singers but also instrumentalists often extended their final cadenzas to excessive lengths; Tosi's near-contemporary Benedetto Marcello (in *Il teatro alla moda*, 1720) mocked the 'cadenze lunghissime' of the 'virtuoso di violino primo'.

Cadenzas were also discussed in detail by German theorists and singing masters working in German-speaking countries. Quantz described them in his *Versuch einer Anweisung die Flöte traversière zu spielen* (1752, chap.15, 'Hauptstück'), while C.P.E. Bach's *Versuch über die wahre Art das Clavier zu spielen* (1753) discussed them under the rubrics 'Aufgehaltene Schlusscadenzen' and 'Fermaten-Auszierungen'. (75 of Bach's cadenzas survive in a single fascicle identified as item 264 in Helm's thematic catalogue; three-quarters of these are for his own keyboard concertos.) Both Quantz and Bach were more cautious in their recommendations than Hiller, who seems to have been the only well-known German theorist to abandon the principle that a singer's cadenza should be capable of being executed in a single breath. G.B. Mancini, a singing teacher at the imperial court in Vienna and one of the most important authorities on the Italian singing tradition, recognized that the one-breath rule was often broken, as he demanded in his *Pensieri, e riflessioni pratiche sopra il canto figurato* (1774) that a singer have the 'correct judgment' to 'escape the embarrassment occasioned by shortness of breath . . . for he might find himself . . . unable to perfect the cadenza with a trill'.

Mancini touched on another important question concerning cadenzas, namely the relationship of improvised passages to the thematic material. 'This same judgment', he wrote, 'should lead the singer to choose a motif from the cantilena of the . . . aria.' On this matter there was no uniformity of opinion during the 18th century. Quantz suggested that a singer who could not think of something new with which to begin a cadenza should choose instead one of the most attractive motifs from the aria and build a cadenza from it. If the record of the century's greatest composers is anything to go by, J.S. Bach, his sons, Haydn and Mozart all composed non-thematic cadenzas (exx.7 and 8 show alternative non-thematic vocal cadenzas by Haydn and Mozart), and only from about 1779 onwards do Mozart's cadenzas begin to quote or develop thematic material from the concerto to which they belong.

The most comprehensive theory of the cadenza in the 18th century is found in D.G. Türk's *Clavierschule* (1789). Türk also lamented the practice of making inordinately lengthy cadences that often had little to do with the piece they were meant to embellish, with the result that the piece became 'cadenza-ed away' (*wegkadenziert*). To remedy this he drew up a list of ten rules governing cadenzas, which may be summarized as follows:

1. The cadenza should reinforce the impression made by the composition by providing a brief summary of it; this may be achieved by weaving some of the important ideas from the piece into the cadenza.
2. The cadenza should not be difficult for its own sake, but rather contain thoughts that are suited to the main character of the composition.
3. The cadenza should not be too long, especially in sad compositions.
4. Modulations should be avoided or used only in passing, and should never stray beyond the main keys established in the piece.
5. The cadenza, in addition to expressing a unified sentiment, must have some musical variety to maintain the listener's interest.

6. Ideas should not be repeated, either in the same key or in different keys.
7. Dissonances, even in single-voiced cadenzas, must be properly resolved.
8. A cadenza need not be learnt, but should show 'novelty, wit and an abundance of ideas'.
9. In a cadenza the performer should not stay in one tempo or metre too long, but should give the impression of 'ordered disorder'. A cadenza may be usefully compared to a dream, in which events that have been compressed into the space of a few minutes make an impression, yet lack coherence and clear consciousness.
10. A cadenza should be performed as though it had just occurred to the performer. Nevertheless, it is risky to improvise a cadenza on the spot, and much safer to write it down or at least sketch it in advance.

The absence of 'authentic' cadenzas to six of Mozart's most frequently performed concertos is probably the main reason for our historical and theoretical concern with the cadenza. Türk's rules concur remarkably well with Mozart's surviving cadenzas, but they are not sufficiently detailed to lead the performer in the direction of a 'Mozartian' cadenza. The best models for the missing cadenzas are, of course, Mozart's surviving cadenzas, and these have been analysed in a number of ways: thematically, formally and in terms of part-writing structure. Recent scholarship suggests that the Schenkerian concept of 'composing out' by various techniques of 'prolongation' is a useful modelling tool (Swain, 1988; Drabkin, 1996); the notion of cadenza as prolongation, already part of its definition, gains in credibility when one considers that Mozart often expanded an early cadenza when reviving the work in concert (see especially the surviving cadenzas to the first two movements of K271).

In defiance of the spirit of the 18th-century concerto, performers today almost always play Mozart's cadenzas (if these survive), rather than invent their own at the end of a concerto movement; where more than one cadenza exists for a particular movement, they prefer the later (or latest) one. In these respects they are generally supported by musicologists, who hold Mozart's cadenzas to be canonical; as a result, the cadenza is already familiar to the audience before they hear a single note of it, rendering Türk's rule no.10 irrelevant. Given the demise of the composer-performer in the 20th century, this situation is likely to prevail for some time.

4. Beethoven and the 19th century. Beethoven's concerto cadenzas comprise two classes: early essays, from *c*1795 to 1800, for which only sketches or rudimentary drafts exist, and a canonical set of some dozen cadenzas written out *c*1809 for his pupil Archduke Rudolph. The sketch papers include a cadenza for an unknown keyboard work in G major, and substantial drafts of three cadenzas for the B♭ piano concerto (no.2) and two for the C major (no.1). These early examples show that Beethoven, like Mozart, liked to quote an important idea – usually the principal second-group theme – in the middle of the cadenza; unlike Mozart, though, he set this theme on a scale-step that was harmonically remote from the tonic, such as the flattened 3rd, 6th or 7th. Of the canonical set, that for the Piano Concerto no.2 and two of those for no.1 far exceed Mozart's stylistic, registral, temporal and technical limits, but even the early cadenzas already show Beethoven as a patron of the 'cadenze lunghissime' school. The cadenza for the Piano Concerto no.3 is stylistically more compatible with its concerto, in many respects a transitional work. Sketches from late 1808 suggest that the longest, and currently most often played, of the cadenzas for the Fourth Piano Concerto is similar to what Beethoven improvised at its first public performance on 22 December 1808.

Beethoven also wrote out a cadenza for the first movement of the Violin Concerto as arranged for piano and orchestra; this cadenza, which contains a substantial part for the timpani, is thus contemporary with the Fifth Piano Concerto, whose finale similarly contains a duet for piano and timpani towards the end. Perhaps the most successful of all his cadenza enterprises, viewed from a Beethovenian perspective, are the pair (WoO58) written for Mozart's D minor Piano Concerto K466. The first-movement cadenza contains rapid shifts in register, quotes the main second-group theme in a remote key and the pianist's opening cantabile in the home key, and generally sums up the mood of Mozart's work in what, for Beethoven, is a modest space of 61 bars. The paradox of Beethoven's mastery of the spirit of the cadenza via a concerto from an earlier age is symptomatic of the central problem of the genre: in being written down – or, indeed, in any other way recorded – it 'intrudes into the workings of the concerto, attributing to itself a textual presence that the conventions of the genre seem to disallow' (Kramer, 1991–2).

It is sometimes suggested that Beethoven's rapid writing down of his collected cadenzas was motivated by his reluctance to allow others to supply their own cadenzas for his concertos. (When Ferdinand Ries performed the Third Piano Concerto in 1804, the composer at first insisted that his pupil compose his own cadenza, but later expressed his unease about one passage and attempted to make Ries change it.) Or Beethoven may have recognized the increasing incompatibility of composition and impro-

visation in the middle period: the Fifth Piano Concerto, a work contemporary with the canonical cadenzas and the last he was to complete, bears the famous remark at the relevant 6-4 chord in the first movement: 'Non si fa una cadenza, ma s'attacca subito il seguente'. What follows in the score, ironically, reverts to the 18th-century cadenza aesthetic: it is of modest length, uses a combination of fixed and free rhythms, and remains throughout in the home key of E♭ (the mixture of major and minor is a typical feature of Mozart's cadenzas). Only the role of the orchestra has changed: it now participates in the elaboration of the 6-4 chord.

Beethoven also wrote cadenzas into a few solo and chamber works. The first movement of his brilliant Piano Sonata in C op.2 no.3 contains a short working out in free rhythm of the main motif. The first movement of the Cello Sonata in F op.5 no.1 includes a more complex example of almost 40 bars. Of special interest is the harmonic progression to and from the central Adagio (ex.9), in which modal mixture (bars 359–61) and the prolongation of IV with flattened 7th (bars 362–7) combine to give the illusion of a modulation to a remote key. Being complete and fully written out, the cadenza in op.5 no.1 is one of the best models we have from Beethoven's early period.

Ex.9 Beethoven: Cello Sonata op.5 no.1

Following Beethoven's lead in the Fifth Piano Concerto, 19th-century pianist-composers usually wrote their own cadenzas into the score, or they dispensed with them altogether. Significantly, Liszt rarely left a fermata sign indicating that the performer should insert a cadenza; he supplied all such material himself. Even in his transcriptions of operatic arias by Rossini, Bellini and others, Liszt wrote out cadenzas at those points where, in the original works, fermatas indicate their insertion. But the tradition of writing cadenzas to earlier concertos was maintained by piano virtuosos: for Beethoven's Fourth Piano Concerto, for instance, there are substantial cadenzas by Clara Schumann, Brahms, Moscheles, Rubinstein and Bülow. Because they violate the 'authenticity' principle, they are hardly ever performed now, and writers have traditionally viewed them as examples of the excesses for which 18th-century performers were censured. It is perhaps more fruitful, though, to respect them for what they are, namely, the 19th century's artistic response to the masterpieces of an earlier age and an insight into the way virtuosos understood and appreciated the classics (Kwan, 1994).

Violinists and singers, on the other hand, consistently demanded the right to shape cadenzas according to their specific technical abilities. Operas by Italian composers of the first half of the 19th century still contained many fermata signs indicating places for improvised embellishment. In Germany and France, however, such opportunities for singers' display became increasingly rare. In Meyerbeer's operas places for cadenzas are found mainly in those arias written in an Italian style, rather than in those in a German or French style. In Italy it was Verdi who finally broke with tradition. Only in his earliest operas did he allow the singers to improvise their own cadenzas; his mature ones contain cadenzas he composed himself, or none at all. Other Italian opera composers were the last to curtail the performer's traditional rights in this way, and the art of improvising cadenzas gradually died out around the turn of the century. Cadenzas in concertos or arias written after 1880 are virtually always written out: exceptions are the violin concertos of Brahms, Szymanowski and Khachaturian.

EVA BADURA-SKODA/ANDREW V. JONES (1–2), EVA BADURA-SKODA/WILLIAM DRABKIN (3–4)

Cadman, Charles Wakefield (*b* Johnstown, PA, 24 Dec 1881; *d* Los Angeles, 30 Dec 1946). American composer. His maternal great-grandfather, Samuel Wakefield (1799–1895), was a composer of hymns and built the first pipe organ west of the Allegheny Mountains. Cadman received formal instruction in the organ from William Steiner, the piano from Edwin L. Walker, and theory from Lee Oehmler. He pursued advanced studies in theory and conducting with Luigi von Kunitz and Emil Pauer, the leader and conductor of the Pittsburgh SO. In 1908 Cadman became accompanist of the Pittsburgh Male Chorus and from 1907 to 1910 served as the organist at the East Liberty Presbyterian Church, Pittsburgh; he was music editor and critic of the Pittsburgh Dispatch from 1908 to 1910.

His song *At Dawning* (1906), widely performed by John McCormack, brought him to public attention. Indeed, his aim from the beginning was to communicate with the general musical public while preserving his artistic integrity. Nelle Eberhart, whom he met in 1902, wrote many of his song and musical-stage texts. Cadman became interested in the music of the American Indians after reading articles by Alice C. Fletcher, a Washington ethnologist, and Francis La Flesche, son of a chief of the Omaha tribe. In January 1909 he arranged and published Four American Indian Songs op.45, of which *From the Land of the Sky-Blue Water* became enormously popular. During the summer of that year Cadman and La Flesche visited the Omaha and Winnebago reservations and made recordings of tribal songs. In February Cadman organized a series of lecture-performances entitled 'American Indian Music Talk', which after 24 April 1913 were given with the aid of Princess Tsianina Redfeather, a Cherokee-Creek Indian. After a successful tour of Europe with the series, Cadman moved to Denver, and in 1916 to Los Angeles, where he devoted himself to composing and teaching. In 1918 the Metropolitan Opera produced *Shanewis or The Robin Woman*, the first of his three stage works centred on Amerindian themes and based professedly on events in the life of Princess Redfeather. It included fascinating Amerindic scenes, contagious Amerindian-derived melodies, and attractive orchestration. *Shanewis* was highly successful, and in the following year was given an unprecedented second staging at the Metropolitan. During 1919–33 Cadman composed more operas, and in 1926 received an honorary doctorate from the University of Southern California. He also composed several film scores and in 1929 worked under contract for Fox Studios. He was a founder of the Hollywood Bowl and a member of the National Institute of Arts and Letters.

Cadman's music is marked by well-made melodies, if conventional harmony. He belongs to that group of American composers – which also included Farwell, Gilbert, Nevin, and Skilton – who 'idealized' (i.e. set into a conservative 19th-century harmonic idiom) the music of the American Indians. Although his early works were mostly emotionally appealing household songs, the Trio in D major (1914) revealed in the composer a keen instrumental flair, also evident in later orchestral works. His once popular *Dark Dancers of the Mardi Gras* (1933) is one of his most stylistically advanced pieces and is marked by ragtime syncopations in its livelier sections, supple Gershwinesque melodies in its slower portions and vivid orchestral colouring throughout. Cadman also wrote articles on American music (*MQ*, i (1915), 387; *The Etude*, lxi (1943), 705).

WORKS

STAGE

several published in other arrangements.

Daoma [The Land of the Misty Water] (op, R. La Flesche and N.R. Eberhart), 1909–12, unperf., rev. as Ramala, 1939, unperf.

Cadent. *See* ORNAMENTS, §6.

Cadner [Cadener, Kadner], **Johann** (*d* Pirna, 1639). German composer and organist. From 1582 until his death he was organist of St Marien, Pirna, and for a time also a town councillor there. Of his compositions the following are found in the collection of Pirna manuscripts (now in *D-Dl*): eight three-part instrumental symphonies, 13 five-part chorale motets similar in style to Scandello's *Newe schöne ausserlesene geistliche deudsche Lieder* (1575), other motets, and sacred concertos. His manuscripts and those of his son-in-law Johann Heinrich Richter (Pirna town Kantor from 1630 to 1665) include early versions and fragmentary, unique copies of works by Schütz. These probably came into their possession from Anton Colander (1590–1621), a cousin and pupil of Schütz who was court organist at Dresden.

Caelius Sedulius. *See* SEDULIUS.

Caen [Kein], **Arnold** (*fl* early 16th century). Composer. He was probably at the Burgundian court, for the court poet Mathias de Casteleyn included Caen in his list of poets and musicians who had recently died. The speculation that he visited Italy seems to depend on the printing of three motets by Petrucci and references to one of them by Aaron and Cerone. Since Petrucci, however, referred to him as 'Acaen', an error repeated by the other two, there is no evidence that any of them knew him. One of his motets was ascribed to Josquin in later German anthologies, although Helmuth Osthoff has argued against the attribution. However, all his motets show an awareness of style at the end of the 15th century, and of later developments in Paris. The imitation of short phrases with repeated notes, tossed from voice to voice, is in a lively manner. The widely disseminated motet *Jerusalem luge* (surviving in well over 20 sources, and also intabulated for lute), is probably not by Caen, despite a number of attributions to him.

STANLEY BOORMAN

Caesar, Johann Martin. *See* CESARE, GIOVANNI MARTINO.

Caesar [Kayser], **Johann Melchior** (*b* Zabern [now Saverne], Alsace, *c*1648; *d* Augsburg, 18 Oct 1692). German composer. He probably had his first musical training from Urban Ludwig Murschhauser (the father of Franz Xaver Murschhauser), a schoolmaster in Zabern. In 1663 he matriculated at the University of Würzburg; his musical talent was undoubtedly encouraged in that city by the notable musicians Philipp Friedrich Buchner and Tobias Richter, cathedral and court Kapellmeisters in the prince-bishopric of Würzburg and in Mainz. On 2 July 1677 he was appointed to Breslau Cathedral as Kapellmeister to Cardinal Prince-Bishop Friedrich, Landgrave of Hesse. He returned to Würzburg in 1679 as court and cathedral Kapellmeister to the Prince-Bishop of Würzburg and Bamberg, Peter Philipp von Dernbach. In January 1685

he succeeded J.M. Gletle as Kapellmeister in Augsburg Cathedral, where he was encouraged by Prince-Bishop Johann Christoph, Baron von Freyberg-Eisenberg, and in particular by Johann Rudolf, Count Fugger von Kirchberg und Weissenhorn, for whom he wrote and performed a great deal of *Tafelmusik* until his early death.

Caesar, who is classed by Printz in 1690 among the 'more recent and famous composers', was a respected musician who published both sacred and secular music. His printed works, preserved in only a few complete copies, comprise a collection of 22 offertories, 8 masses, 12 pieces of *Tafelmusik* (solo quodlibets, duet scenes, terzettos and a series of various ballets with the humorous title of *Musicalischer Wendunmuth*, 26 vesper psalms with 2 Magnificat settings and 40 hymns. Presumably lost is a collection of *Lustiger Balleten erster Theil*, and the music for a school drama entitled *Mathias Corvinus* (performed at the Jesuit Gymnasium in Augsburg in 1687). Although it was announced in the catalogues of the Leipzig and Frankfurt fairs of 1682, the *Lustige Tafel-Musik, in 6 Stücken . . . mit beygefügten 60 Balleten* was probably never published.

Like the church music of his predecessors at Augsburg Cathedral, Baudrexel and Gletle, Caesar's sacred works are influenced by the Italian concertante instrumental style. However, some of the individual ballets show French influence. The variety of ensembles he used (1 to 6 parts, with and without ripieno) could meet both favourable and more restricted conditions of performance in practice. The use of concise string ritornellos to provide a formal conclusion, and his pleasing, unaffected melodies, helped to keep Caesar's church music in print with the Augsburg music publishing firm of Lotter until far on into the 18th century. His humorous *Wendunmuth*, partly in dialect, places Caesar in the typically South German quodlibet tradition that had its centre in Augsburg, and ran from Matthias Kelz (ii) by way of J.V. Rathgeber to Mozart.

ADOLF LAYER/HERMANN ULLRICH

Caesar [Smegergill], **William** (*fl* 1615–67). English lutenist and composer. Songs by him in Playford's publications are often signed 'William Caesar, alias Smegergill', and the explanation of this alias could be that as a chorister at Ely Cathedral in 1615 Smegergill was patronized or perhaps even adopted by the then dean, Henry Caesar (or Cesar). According to Anthony Wood he was 'a rare Lutenist' and a Roman Catholic. He sang tenor and played the lute in Shirley's *Triumph of Peace* (1634). Between 1664 and 1667 Caesar makes several appearances in Pepys's *Diary*, for example on 14 December 1664, he is described as 'my boy's lute master, who plays indeed mighty finely'. He was living in Westminster in 1666 and was apparently a keen angler.

A number of songs and catches by Caesar were published in John Playford's *Select [Musicall] Ayres and Dialogues* (RISM 1652^{8}, 1659^{5}) *Catch that Catch Can* (1652^{10}, 1667^{6}) and *A Musicall Banquet* (1651^{6}) and some were published in catch books by Dr Julius Caesar (1657–1712) of Rochester; others remain in manuscript (*GB-Gu* R.d.58–61, *Ob* Don.c.57). Three of his songs are printed in a modern edition (MB, xxxiii, 1971).

IAN SPINK

Caesura. (1) A term signifying a momentary interruption of the musical metre by silence, often indicated by a comma or 'V' above the staff. *See* LUFTPAUSE.

(2) In modern prosody, a pause or interruption within a line of poetry, usually at the end of a word.

Caetani, Roffredo (*b* Rome, 13 Oct 1871; *d* 11 April 1961). Italian composer. Of noble origins, Caetani – Prince of Bassiano and Duke of Sermoneta – was a godson of Liszt and studied the piano with Sgambati. He also studied in Berlin and Vienna, and in the course of his travels came to know Brahms and Cosima Wagner. In 1911 he married Marguerite Chapin in London; the couple then settled in the Villa Romaine in Versailles near Paris. Writers and artists such as Carlo Carrà, Jean Cocteau, Hugo von Hofmannsthal, Rainer Maria Rilke and Igor Stravinsky were visitors to their villa. It was at the artistic and literary

salon which formed there that Chapin later established the literary review *Commerce*. Having grown up in an atmosphere which encouraged instrumental music, it is no surprise that Caetani's first compositions were the Quartet, op.1 of 1887, *Intermezzo sinfonico*, op.2 and the Piano Sonata, op.3. His small but attractive body of work tends towards 19th-century instrumental forms, particularly German ones, along the lines of his teacher Sgambati. Although this tendency dominates his work, and rightly places him within the current of late 19th-century Italian instrumental music, he also wrote two operas, *Hypathia* (1926) and *L'isola del sole* (1943). For all their differences of subject and musical style, both works seem to share a rejection of 19th-century Italian operatic convention, and tend towards a Wagnerian dramatic model.

Cafaro [Caffaro], **Pasquale** (*b* S Pietro in Galatina, nr Lecce, 8 Feb 1715/1716; *d* Naples, 25 Oct 1787). Italian composer. According to some sources he was born in 1706; however, when he entered the Naples Conservatorio di S Maria della Pietà dei Turchini on 23 December 1735, he declared himself to be 20 (or in his 20th year), which places his birthdate in 1715 or 1716. He was admitted to the conservatory under a five-year contract, studying under *primo maestro* Nicola Fago, *secondo maestro* Leonardo Leo and, after 1737, with Leo's successor Lorenzo Fago. He remained in Naples all his life, and between 1745 and 1771 established himself as a respected composer of oratorios, operas, cantatas and church music. On 11 July 1759 he succeeded Girolamo Abos as *secondo maestro* of his former conservatory and, contrary to some accounts, did not resign from this post in 1785, but retained it until his death. His most notable student was Giacomo Tritto.

Between 1763 and 1766 Cafaro conducted operas by Hasse and Traetta, among others, at the Teatro S Carlo. Public recognition, and especially his compositions for court events (including cantatas for the king's birthday), led to his appointment on 25 August 1768 as a *maestro di cappella soprannumerario* of the royal chapel; he was also music master to Queen Maria Carolina. After the death of Giuseppe de Majo, *primo maestro* of the royal chapel, the incumbent vice-*maestro* Giuseppe Marchitti was denied succession and, without the customary public competition, the position given to Cafaro on 21 December 1771; he also continued as *maestro di musica della regina*, later becoming *maestro di musica della real camera*. After assuming the leadership of the royal chapel he stopped writing operas and produced primarily sacred music. A *Stabat mater*, dedicated to the king and queen and printed in Naples in 1785, became his best-known work outside Italy.

Although Cafaro never composed an *opera buffa*, certain stylistic tendencies associated with this genre (simplicity of harmonic structure, texture and orchestration) are reflected in his serious works. In them the dramatic pathos of earlier composers gave way to Classicist abstraction, expert use of Neapolitan formulae and accepted modes of expression. As a result his music was praised by his contemporaries for 'grace and purity of style' and later criticized for 'poverty of invention'. In the Neapolitan tradition Cafaro was one of the essential links between the generation of Leo and Durante and that of Cimarosa and Paisiello.

HANNS-BERTOLD DIETZ

Café-concert. A place of entertainment, serving food and drink, where songs were performed by professional musicians. The term came to encompass a whole style of French popular song, especially during the second half of the 19th century and the early part of the 20th. The history of such amusements is bound up with the laws of censorship. Popular song was often perceived to be subversive, not only because of the content of the lyrics, but also because it served as a cloak to disguise gatherings of radical or revolutionary political groups.

In the late 18th century the fashion for singing gained strength through the Caveau, in the basement of the Café Italien near the Palais Royal. Successive regimes banned public singing houses, or reinstated them. Napoleon is said to have frequented the Café des Aveugles, but it was not until the construction of the Champs-Elysées that the *café-concert* came into its own. With tables set out under the trees, lit by lanterns in the evening, the tradition gradually developed whereby a group of female singers, sitting in a semicircle, would take turns to deliver their songs, accompanied by an orchestra.

As the practice grew in popularity, so many of the cafés acquired winter quarters elsewhere; thus there were different venues with the same proprietors (Alcazar d'Hiver, Alcazar d'Eté, etc.). Different types of singers became categorized by their styles, with such names as gommeur, diseur, gambillard, chanteur-réaliste and fantaisiste. After 1867 a change in the law allowed café singers to appear in costume rather than evening dress; this led to further distinctions and characterizations. Among the most famous 19th-century performers were Darcier (Joseph Lemaire), who was admired by Berlioz, Paulus (Paul Habans) and Thérésa (Emma Vallandon). The fashion for using a single name continued into the 20th century with such singers as Fréhel (Marguerite Boulc'h), Damia (Maryse Damien), Mayol and Polin.

The music typical of the *café-concert* included sentimental ballads, for instance those by Paul Delmet, patriotic songs such as those of Théodore Botrel, songs of passion and crime (one of the most famous being *La veuve* by Jules Jouy, which depicts a public execution) and many different styles of comic song. With the rise of CABARET in the late 1880s, and the construction of large-scale music halls with elaborate stagings, the influence of the *café-concert* spread well beyond its early small-scale format.

Although the cafés themselves largely ceased to exist after World War I, the musical form, with its typical orchestration employing cornet, accordion, piano and guitar, continued to be used by later composers, among them Marguerite Monnot, Barbara, Leo Ferré and Charles Trenet.

PATRICK O'CONNOR

Café piano. *See* BARREL PIANO.

Caffarelli [Cafariello, Cafarellino, Gaffarello] [Majorano, Gaetano] (*b* Bitonto, 12 April 1710; *d* Naples, 31 Jan 1783). Italian mezzo-soprano castrato. After studying under Porpora at Naples, he made his début at Rome in 1726, in a female part in Sarro's *Valdemaro*. His success was rapid: he sang in Venice, Turin, Milan and Florence before returning to Rome in 1730 as chamber virtuoso to the Grand Duke of Tuscany. He enjoyed a triumph in Hasse's *Cajo Fabricio* and Porpora's *Germanico in Germania* in 1732. After singing in Pistoia, Genoa, Venice, Milan and Bologna (1730–33), he made his Naples début in Leo's *Il castello d'Atlante* (1734), and settled there in a post in the royal chapel. Over the next 20 years he appeared at Naples in operas by Pergolesi, Porpora, Hasse, Perez, Leo, Latilla, Sarro, Vinci, Cocchi, Abos and others, and latterly (1751–3) in Traetta's *Farnace*, Giuseppe Conti's *Attalo rè di Bitinia*, Gluck's *La clemenza di Tito* and Lampugnani's *Didone*.

He appeared frequently elsewhere, in Rome again in 1735, Milan in 1736 and London in 1737–8, when he made his début at the King's Theatre in the pasticcio *Arsace* and created the title roles in Handel's *Faramondo* and *Serse*. He also appeared in Madrid by royal invitation in 1739, and in the late 1740s and early 1750s in Florence (where Horace Mann thought he sang 'most divinely well' in an anonymous *Caio Mario*), Genoa, Rome, Vienna (where his performance in Jommelli's *Achille in Sciro* was the subject of barbed criticism from Metastasio in letters to Farinelli), Turin, Venice, Lucca and Modena. In 1753 Louis XV invited him to Versailles and he remained in France until 1754, singing in several works by Hasse, but left under a cloud after seriously wounding a poet in a duel.

Caffarelli made his last Italian operatic appearances at Rome and Naples in 1754. In 1755 he was engaged for Lisbon, where he sang in four operas, three of them by Perez. He visited Madrid in 1756 and spent some time with Farinelli, before returning to Naples and retiring from the stage (though he continued to sing in cantatas and serenatas). In 1763 he refused an invitation to manage the S Carlo theatre. He was a favourite with royal families everywhere and amassed a substantial fortune, with which he bought himself a dukedom, an estate in Calabria and a palace in Naples. In 1770 Burney recognized signs 'of his having been an amazing fine singer'.

Caffarelli's voice was a high mezzo-soprano. The compass in the two parts Handel wrote for him is *b* to *a″*. By many judges he was ranked second only to Farinelli, and by some above him. According to Burney, 'Porpora, who hated him for his insolence, used to say, that he was the greatest singer Italy had ever produced'.

Grimm reported from Paris:

It would be difficult to give any idea of the degree of perfection to which this singer has brought his art. All the charms and love that can make up the idea of an angelic voice, and which form the character of his, added to the finest execution, and to surprising facility and precision, exercise an enchantment over the senses and the heart, which even those least sensible to music would find it hard to resist.

Caffarelli's principal enemy was his own temperament; he was notorious for overbearing arrogance both to fellow artists and to the public. He had spells under house arrest and in prison, for assault, misconduct at a performance (of Latilla's *Olimpia nell'isola d'Ebuda*, 1741), when he indulged in indecent gestures and mimicry of other singers, and for humiliating a prima donna in Hasse's *Antigono* (1745). He was constantly late for concerts and rehearsals, and sometimes failed to turn up. He is said to have mellowed in old age and given large sums to charity; Burney was charmed by his politeness.

WINTON DEAN

Caffi, Francesco (*b* Venice, 14 June 1778; *d* Padua, 24 Jan 1874). Italian musicologist. A magistrate by profession, he lived in Venice until 1827, taking an active part in the city's musical life and helping to found the Istituto Filarmonico, a concert centre and music school (1811–16). From 1827 to 1840 he was a judge of the Milan Court of Appeal and then presiding judge of the Rovigo court. Marginally compromised in the eyes of the Austrians by his part in the Revolution of 1848, he withdrew from public life in 1850.

Caffi studied music from his early youth: counterpoint under Matteo Rauzzini, Mayr and Giuseppe Scatena (a pupil of Lotti), and singing and the harpsichord under Francesco Gardi. Among his compositions, all in the Marciana library, Venice, are cantatas, an oratorio, a farce and an oboe concerto. He is mainly important, however, for his historical and scholarly research. His *Storia della musica sacra* (1854–5) was to have been the first part of a five-part history of music in Venice, but this was never completed. He left unpublished (in *I-Vnm*) a wealth of material collected for the second part, a history of Venetian theatre music from 1637 to 1797. His published writings include several biographies of musicians, some of which were reprinted in the *Storia*, as well as works in many other literary and scholarly genres.

Caffi was one of the first 19th-century Italian scholars who devoted themselves to wide-ranging researches in the history of music with a relatively modern method and outlook, collecting and arranging a vast amount of authentic and often neglected material. His decision to limit his work to Venice and to the period before 1797 resulted from his rejection of the musical experience of his time and from a nostalgia for the old Venetian republic, of which he always felt himself to be a relic. This attitude conditioned his judgment and gave his work a parochial character, which is its main limitation.

Caffi, Tommaso Bernardo. *See* GAFFI, TOMMASO BERNARDO.

Caffiaux, Dom **Philippe-Joseph** (*b* Valenciennes, 1712; *d* Paris, 26 Dec 1777). French music historian. Caffiaux entered the Maurist congregation in 1731 and devoted his whole life to scholarship and teaching. In about 1745 he taught humanities at St Nicaise in Reims, where he trained a generation of scholars. He left Corbie Abbey for the mother house at St Germain-des-Prés, and was then employed by the king on the collection of historical monuments. As a specialist in genealogy and provincial history, he contributed to the great enterprises undertaken by the Maurists from the 17th century onwards. Some of his research was on music, and he wrote a voluminous *Histoire de la musique depuis l'antiquité jusqu'en 1754* (*F-Pn* f.fr.22536–22538), but although its appearance was announced in 1756 it was never published. In it, Caffiaux tries to fill the gaps left by the work of Bonnet-Bourdelot. He does not show much interest in musical sources, but concentrates his attention on more than '1200' works on music. He arranges his history in eight periods (the creation of the world, the sack of Troy, Pythagoras, the coming of Christianity, Guido d'Arezzo, Lully, Rameau and 1754). His historical survey gives him an opportunity for digressions and reflections on subjects as diverse as the *querelles du goût* in France and the sensitivity of animals to music. Caffiaux was also interested in music teaching, and while preparing his *Histoire* he wrote a *Nouvelle méthode de solfier la musique* (1756, *Pn* f.fr.22538).

PHILIPPE VENDRIX

Cage, John (*b* Los Angeles, 5 Sept 1912; *d* New York, 12 Aug 1992). American composer. One of the leading figures of the postwar avant garde. The influence of his compositions, writings and personality has been felt by a wide range of composers around the world. He has had a greater impact on music in the 20th century than any other American composer.

1. Beginnings. 2. Dance, percussion, prepared piano. 3. New aesthetics, silence. 4. Chance. 5. Fame. 6. Later work.

1. Beginnings. His initial education was at Los Angeles High School and then, for two years, at Pomona College, Claremont, which he left in 1930. After a year in Europe dabbling in various arts, Cage came back to Los Angeles in 1931 and began to study composition. His first instruction came from Richard Buhling, who subsequently introduced him to Cowell, with whom he studied non-Western, folk and contemporary music at the New School for Social Research. Cage's compositional interests tended towards chromatic counterpoint and Cowell suggested that he study with Adolph Weiss in New York with an aim towards working with Schoenberg who had recently arrived in the USA. Cage followed Schoenberg to Los Angeles in 1934 and was awestruck by the elder composer and his fierce devotion to music. Cage vowed to devote his life to composition as a result of his encounters with Schoenberg, and he recounted the story of this vow countless times during his life.

1. *John Cage, 1971*

Cage's early compositions were modest pieces in which he tried to extend Schoenberg's dodecaphonic serial method first by using a 25-note series in works such as *Solo with Obbligato Accompaniment of Two Voices in Canon, ... and Six Short Inventions on the Subjects of the Solo* (1934) and *Composition for Three Voices* (1934), and then by fragmenting the row into cells that could be permutated and repeated (*Metamorphosis, Music for wind instruments*). Neither of these methods captured his interest for long.

2. Dance, percussion, prepared piano. In 1937 he began working as a dance accompanist at UCLA and the following year he took on a position at the Cornish School of the Arts in Seattle, Washington, again as accompanist for dance and teacher. This was the site for a number of important discoveries in Cage's life. It was here that he first met the dancer Merce Cunningham, with whom he would have a lifelong working relationship. Through dance Cage was also introduced to the idea of writing music for percussion ensemble, using dancers as musicians. It was a medium conducive to his talents as a sonic innovator and he saw his work as extending the reach of music to include noises that had previously been considered 'unmusical'. Cage included all manner of exotic and mundane objects in the ensemble: standard drums, blocks and gongs; Balinese, Japanese and Indian instruments; tin cans and car brake drums. Alongside this development Cage was among the first composers to envisage the expansion of sonic possibilities implied by electronic technologies. In the radio station of the Cornish School, he composed *Imaginary Landscape no.1* in 1939 for a broadcast that used piano, cymbals and turntables playing test tone recordings at different and changing speeds.

The same year Cage composed the *First Construction (in Metal)* for percussion sextet, his first work to employ a structure based on relating lengths of time at different levels. The piece consists of units of 16 measures, each divided into 5 phrases with lengths of 4, 3, 2, 3 and 4 bars; there are 16 of these units, grouped into 5 sections in the same proportions. Thus the division of the whole into parts parallels the division of the individual parts into phrases. The structure used here, with minor variations, was the basis of all Cage's major concert works until 1956. That he ultimately relied on time as the basis of musical structure was the result of the combination of his use of unpitched materials and his work with dancers, whose choreography used similar structures.

It was also at the Cornish School that Cage began to employ the prepared piano. In 1938 a dancer had need of a percussion ensemble score, but the hall in which the performance was to take place did not have sufficient space to accommodate the players. Cage, mindful of Cowell's earlier experiments, responded by using a piano with screws, bolts and pieces of felt weatherstripping inserted between the strings. The added objects cause the sound of the instrument to be completely transformed, such that it produced timbres reminiscent of various percussion instruments. The resulting piece, *Bacchanale* (1940), is musically similar to the simple percussion works of the time, but requires only a single performer.

Cage's percussion ensemble, joined at times by players working in San Francisco under the direction of Lou Harrison, played concerts up and down the west coast until 1941, at which time Cage travelled to Chicago. The ensemble had generated some interest in the general

media, and he was asked by the Columbia Broadcasting System to compose the soundtrack for a radio play by the poet Kenneth Patchen: *The City Wears a Slouch Hat* (1942). After composing an elaborate work for radio sound effects that proved far too difficult, Cage composed a second, more modest percussion score. Thinking that the radio commission would lead to greater opportunities, Cage moved to New York in 1942 and staged a percussion concert at the Museum of Modern Art. After this concert, however, his hopes did not materialize, his fortunes turned, and he found himself residing in a spacious but shabby commercial building on the lower east side of the city.

With his percussion instruments lost in Chicago, Cage again took up the prepared piano, an instrument barely touched since his first use four years earlier. He began a series of dance accompaniments, primarily for choreography by Cunningham (e.g. *Totem Ancestor*, 1942; *In the Name of the Holocaust*, 1942), that featured the spare and delicate sounds of the instrument, extending its range by inserting different objects – pieces of wood, bamboo, plastic, rubber and coins. Encouraged by these smaller pieces, Cage embarked on a series of larger projects, including *The Perilous Night* (1944) and two works for prepared piano duo: *A Book of Music* (1944) and *Three Dances* (1945). His expansion of piano techniques again led to notoriety and the confirmed view of him as an 'experimentalist' and the heir to Cowell. However, he later received awards from both the Guggenheim Foundation (1949) and the National Academy of Arts and Letters (1949) for his work with the prepared piano, cited as having 'extended the boundaries of musical art'.

3. New aesthetics, silence. In 1946 Cage met an Indian musician, Gita Sarabhai, who introduced him to Indian philosophy and music. Cage felt an immediate and strong affinity for Asian aesthetics and spirituality. Of critical importance was his study of the writings of art historian Ananda K. Coomaraswamy; these in turn introduced him to the sermons of the medieval mystic Meister Eckhart. Ideas from Indian aesthetics begin to be evident in Cage's work in the 1947 ballet *The Seasons* and also in the hour-long series of short pieces for prepared piano, the *Sonatas and Interludes* (1946–8), in which his aim was to portray the eight 'permanent emotions' of Indian aesthetics – the erotic, the heroic, the odious, anger, mirth, fear, sorrow and the wondrous – and their common tendency towards tranquility. The combination of the sonic inventiveness of the prepared piano and the quiet immobility of the Asian imagery brought together the strongest aspects of Cage's character; the *Sonatas and Interludes* is a truly exceptional work and may be said to mark the real start of Cage's mature compositional life.

After travelling in Europe in 1949 (where he befriended the young Boulez, with whom he was to have a significant correspondence), Cage returned to New York where another critical period in his life began. At a performance given by the New York PO, Webern's Concerto op.24 made such an impression on him that he felt unable to stay and hear the rest of the concert; as he walked out, he met Morton Feldman doing exactly the same. Aesthetically sympathetic to one another, Cage and Feldman intensively shared ideas and music for the next four years. Feldman introduced Cage to the pianist David Tudor and the composer Christian Wolff. Feldman was also close to many of the abstract Expressionist painters in New York, and Cage began to move in these circles as well.

It was in these last years of the 1940s that Cage also started to develop an aesthetic of silence. His interests in Asian aesthetics moved from India to Japan, from Hindu theories to the culture of Zen Buddhism, as exemplified by the haiku master Bashō or the Ryoanji stone garden in Kyoto. Cage began to cultivate an aesthetic and spiritual silence in both his life and work. He took to heart the purpose of music as expressed by his friend Gita Sarabhai: 'to quiet and sober the mind, thus making it susceptible to divine influences'. His goal became not just to evoke stillness, but to practise it, allowing his work to be as empty and flat as the raked sand of Ryoanji. In 1950 this line of thought resulted in the seminal 'Lecture on Nothing' (published in *Silence: Lectures and Writings*), delivered to The Artists' Club in New York. 'I have nothing to say and I am saying it and that is poetry as I need it' was Cage's succinct formulation of his new aesthetic. In the lecture, Cage associates this silence with the use of time-based structures; the division of the whole duration into parts exists and has integrity whether or not the composer 'says anything' inside the structure. Completely static or uneventful music could fill up the duration structures – or even no music at all. Cage realized this at least as early as 1948, when he outlined his plan for a piece consisting of four-and-a-half minutes of silence, to be called 'Silent Prayer'.

This new approach to silence, his exposure to Zen texts and Japanese culture, the stimulation of his new associates and the musical vision of the *Sonatas and Interludes* propelled Cage into a period of tremendous creativity and production. In 1950 he completed his *String Quartet in Four Parts* begun while in Europe, which translated the sonic imagery of the prepared piano to the medium of string quartet. Just as each key of the prepared piano triggered a fixed, complex sonority, so in the quartet Cage worked with a limited set of sonorities (which he called a 'gamut') that were scored for each player in an unchanging way. These fixed sonorities also produce a succession of harmonies that neutralize any sense of progression, resulting in a static, aimless, 'silent' harmony.

4. Chance. In the latter part of 1950 Cage extended his 'gamut technique' to orchestra, beginning a three-movement Concerto for prepared piano and chamber orchestra. He tried to systematize the orchestra gamut by arranging the sonorities into rectangular charts, making continuities by tracing geometric patterns on these charts. The solo prepared piano in the first movement, meanwhile, was composed in a more subjective fashion, establishing a kind of dramatic tension between soloist and ensemble. In the second movement the solo part partakes more of the systematic aspect, following the orchestra around the charts in concentric circles, the way 'a disciple follows the master' as the composer put it. But it is in the third – composed following a break in which Cage wrote *Sixteen Dances* (1950–51) for an evening of Cunningham choreography – in which the distancing of compositional subjectivity from material objectivity took a decisive new turn. In this movement the drama of the previous two is resolved by the introduction into the compositional process of what Cage called 'chance operations'.

This breakthrough was prepared by Feldman's creation of *Extensions 1*, the first of his compositions in which sounds are notated as numbers on graph paper, indicating

only the quantity of notes to be played and the register in which they are to appear. Cage found what he described as Feldman's embrace of 'whatever sound comes along' to be heroic and inspirational, Feldman having achieved a completely different level of compositional silence than Cage had yet approached. In Cage's *Lecture on Something* of early 1951, he praised Feldman's graph pieces as having 'changed the responsibility of the composer from making to accepting'.

As Feldman's example emboldened Cage, the other event that led him to chance operations was a purely practical and technical one. In late 1950, Cage was given a copy of the *I Ching*, the ancient Chinese oracle text in which images are selected at random from a set of 64 by means of tossing yarrow sticks or coins. The *I Ching* chart arrangement of the 64 images gave Cage the idea of using a coin-tossing oracle as a way of selecting the sonorities from his own charts. In the last movement of the Concerto, the piano and orchestra share the same array of sonorities; the movement from sound to silence to sound results from the operations of the oracle. Thus although Cage had carefully composed each sonic event in the chart, the order of events in the composition itself is completely random and outside the control of the composer's conscious mind.

Chance operations forever altered Cage's aesthetic of silence. Where before he had seen silence as impassiveness, flatness or aimlessness, he now saw it as a complete negation of the composer's will, tastes and desires. Silence had nothing to do with the acoustic surface of events, but instead was a function of the inner forces that prompted the sounds. Acoustic silence changed from being an absence of sound to being an absence of intended sound. Cage turned deliberately towards the world of unintended sound, announcing that his goal was to be 'free of individual taste and memory'. But such sweeping statements were somewhat misleading. Cage employed chance operations only in the ordering and coordination of musical events. The selection of materials, the planning of structure and the overall musical stance were still shaped by his stylistic predilections. What he had learned by using chance operations in a work like the Concerto was that, given a set of sounds and a structure built on lengths of time, any arrangement of the sounds and silences would be valid and interesting. Chance, by helping to avoid habitual modes of thinking, could in fact produce something fresher and more vital than that which the composer might have invented alone.

Following this breakthrough Cage immediately set to work on *Music of Changes* (1951), a lengthy work for piano solo that applies chance to charts of sounds, rhythms, tempos and dynamics. *Imaginary Landscape no.4* for 12 radios (1951) was written using an identical system, again demonstrating that it was quite irrelevant what specific sounds happened within the constraints of a rhythmic structure. In 1952 he stated this premise in its most provocative form in *4′ 33″*, the final realization of his long-planned 'Silent Prayer'. The piece consists of three movements, each completely silent. Although Cage had conceived the piece in 1948 (while still working on the *Sonatas and Interludes*), it was only after he began working with chance operations that he felt confident enough to see the project to fruition. *4′ 33″* has become Cage's most famous and controversial creation.

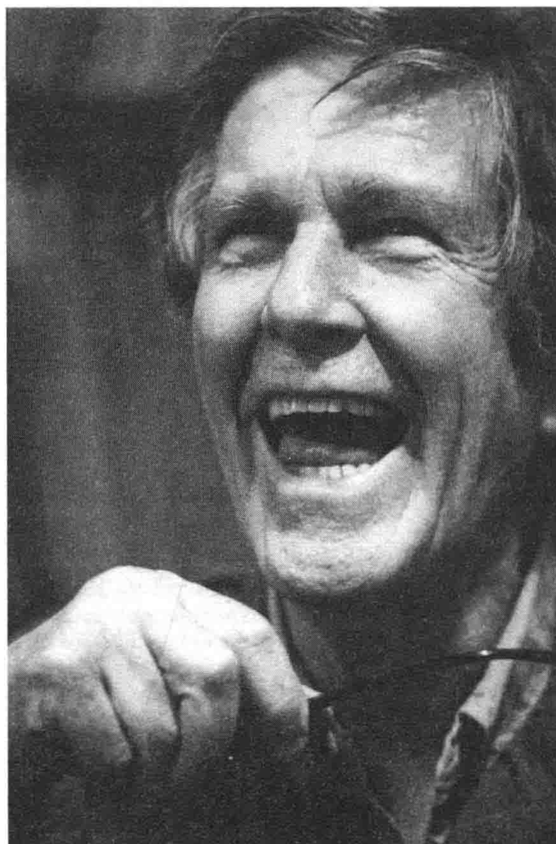
Apprehending the limitless musical universe that chance operations made available, Cage devoted himself to opening up his individual works, always seeking to use the widest range of sounds for whatever medium was at hand. The 1950s were a period of intense creativity, in which he experimented with ways of composing and notating his works so that they could encompass more and more varied possibilities. Always excited about technological innovations, in 1952 he acquired some tape recording equipment and produced the elaborate *Williams Mix* for magnetic tape (1952), one of the first such pieces created in the USA. He designed several different chance-controlled compositional systems, eventually ceasing to use charts which had the tendency to produce repetitions of events. In the *Music for Piano* series (1952–6) imperfections on the paper became notes by the application of staff lines and clefs. In another ambitious series of compositions whose titles were taken from their minutely-defined durations, e.g. *26′ 1.1499″ for a String Player* (1953–5), this same technique was coupled with more complex structures to make a music of diverse shapes, contours and continuities that is never predictable.

In these 'time-length' works, Cage investigated ways of opening up his compositions by making their notation ambiguous, a situation he referred to as 'indeterminacy'. This meant that the results of his compositional systems were no longer fixed objects but took on more the character of processes. The performer's role was to animate the process Cage had set forth, producing results that, while having certain similarities, would differ in details at each performance or 'realization'. The exploration of indeterminacy was the moving force behind the extraordinary piano solo of the *Concert* for piano and orchestra (1957–8). This composition consists of 63 pages which are covered with dozens of different ways of notating music, some that are variants of notations he had already developed, others completely new and always highly imaginative. The discoveries of the *Concert* sparked a number of further notational developments. Most notable of these was the use of transparent plastic: a performance could be created by superimposing notations on the transparencies in different orientations and then reading the result. This was first done in *Music Walk* for multiple pianists (1958) and was taken to its purest and most extreme form in *Variations II* (1961), in which the score consists of 11 small transparent sheets, six with lines, five with dots. The 11 sheets are arranged haphazardly and then measurements of the distances from points to lines are interpreted as the values of fundamental sonic variables (e.g. pitch, duration, timbre and dynamics). The flexibility of the piece is such that it could theoretically describe any imaginable combination of sounds.

5. FAME. Cage's work had been known in contemporary music circles for some good while, but in the late 1950s and early 1960s, he rose to a much higher prominence through performances abroad (both on his own and with the Cunningham Dance Company; fig.2) and recordings (including the famous recording of his 1958 lecture 'Indeterminacy: New Aspect of Form in Instrumental and Electronic Music'). In 1961 his music began to be published by C.F. Peters, and consequently to be performed worldwide. Most importantly, the same year saw the publication of *Silence: Lectures and Writings*. This collection, probably more than any other single production, turned him into a composer of international renown.

2. *'Variations V' (1965) with choreography by Merce Cunningham, music by John Cage, film sequences by Stan VanderBee and distortion of images by Nam June Paik. Onstage: Merce Cunningham and Barbara Dilley among movement-sensitive antennae; offstage: John Cage, David Tudor and Gordon Mumma operating the 'Orchestra' of tape recorders, record players and radio receivers which contain the sound materials composed by Cage*

Yet it was often the case that many of Cage's critics knew the book, but had never heard a composition, and few had heard enough of the music to appreciate the range of musical expressions included. This has led to many misunderstandings, myths and hostilities, and it is probably the reason for the dubious judgement that Cage was more a philosopher than a composer.



Silence, whatever the misunderstandings to which it gave rise, gave Cage the notoriety necessary to find more performances, commissions, appointments and speaking engagements. By the mid-1960s he was self-sufficient as a composer, and received more requests for appearances and compositions than he could fulfil. The combination of a demanding touring schedule and misgivings about his new status triggered a pause in Cage's compositional output. Over the decade of the 1960s he wrote very few works, and many of these were quite informal. A number are instructions for electronically-altered personal performance: *0′ 00″* (1962) consists simply of the direction to perform a single action while amplified to the maximum degree possible. These sorts of open-ended events suited the needs of his 'performance tours'. The few works that Cage had time to compose were similarly informal 'events': *Rozart mix* (1965) simply directs performers to mount, play and change 88 tape loops on a number of tape recorders, while *Musicircus* (1967) is nothing more than an invitation to a group of musicians to play in the same space.

6. LATER WORK. In the foreword to his second collection of writings, *A Year from Monday* (1967), Cage indicated that 'I am less and less interested in music'. His writings, lectures and even his music began to be filled with references to other subjects. Indeed, it seemed as if he was more interested in the 1960s in Marshall McLuhan, Maoism, Buckminster Fuller and other political and cultural figures than he was in music. However, with the composition of *Cheap Imitation* for piano (1969), a tribute to Erik Satie, Cage reaffirmed his commitment to music, and the final 25 years of his life were spent as a very active composer, writing pieces for the most diverse of media.

Some of the directions Cage's output took over these later years were largely the results of commissions from performers. Several sets of études, for example, came in response to requests from virtuoso players, the most extravagant of these the *Freeman Etudes*, written for Paul Zukofsky. A large-scale multimedia piece for orchestra, *Renga*, to be performed together with another 'musicircus' called *Apartment House 1776* was a commission in honour of the bicentennial of the American Revolution. Of five operas, each called *Europera*, the first two were written at the request of the Frankfurt opera company; they comprise excerpts of the Western operatic tradition combined with chance-derived sets, lighting, costumes and stage directions.

If Cage's compositional structures remained in the 1970s as chance-based and non-personal as ever, this did not prevent him from engaging with different personal themes and subjects in his work. His move from New York City to the countryside in the mid-1950s had sparked an interest in nature (most famously, his passion for mushroom-hunting), and subsequently a love of the writings of Henry David Thoreau. Nature imagery and Thoreau's writings and drawings begin appearing in Cage's musical works in 1970 with the *Song Books* and continued off and on for the rest of his life. James Joyce was another important source, most notably represented in *Roaratorio: an Irish Circus on Finnegans Wake* (1979). This work for electronic tape and performers is Cage's attempt to translate Joyce's mammoth final novel into music by combining a collage of sounds mentioned in the book with his own reading of a Joyce-derived text and live performances by Irish folk musicians. In 1983, the Ryoanji rock garden, a site that had long resonated strongly for Cage, inspired the first of a series of compositions, in which he traced the contours of stones to discover the pitch contours of the solo parts. In many similar situations, when asked to compose a new work, Cage would as often as not turn to one of these favourite subjects and invent a new, untried way of applying them to his own music.

Over the course of his career, Cage also worked increasingly in non-musical media, especially graphics

3. John Cage, 1980

and, employing his natural gift for writing, poetry. *A Year from Monday* contains fewer essays of a critical nature than *Silence* and more poetry and social commentary, including the first instalments of his *Diary: How to Improve the World (You'll Only Make Matters Worse)*. In 1978 a residency at Crown Point Press to create prints so took him that he went annually until his death, later also working in watercolours. Cage also made one film, *One*[11], and, at the end of his life, was involved in curating exhibitions, notably the posthumous *Rolywholyover: a Circus*. In all of these areas he brought his use of chance operations and the *I Ching* to bear on the materials at hand. The result was an ongoing series of wondrous adventures into new areas of expression, both for Cage personally and for his audience.

In 1987 Cage wrote a piece for flute and piano entitled *Two*, the first of a series of 43 compositions over his last five years of output that together form the major final phase of work. Their common ground is twofold: first, they all consist of mostly short fragments of music (often single notes) which have a flexible placement in time through a system of 'brackets' – a range of times (given in minutes and seconds) indicate the period during which the musical fragment may begin and another range the period during which the music must be completed. Secondly, each piece is named by the number of performers involved; superscripts distinguish compositions for the same number of players (e.g. *Two*, *Two*^{2}, *Two*^{3}, etc.). These two features have led to these works being referred to as the 'time bracket' or 'number' pieces. Austere and spiritually powerful, they represent a return to pure music for Cage, without thematic associations. At the same time, the compositional techniques employed are not the focus of the work, as was the case in the 1950s, the last period in which Cage was concerned with exclusively musical issues. Indeed, by the later numbers in the series, the composition process was simply a matter of randomly selecting a range of pitches and a handful of pitches within that range, and of chance determination, within broad limits, where the bracket timings would fall. The technique of these pieces is no more than the brush with which Cage applied his sonic paint. And yet they exhibit a tremendous spectrum of sonorities, effects and moods. If proof were needed they demonstrate once and for all the depth of Cage's musical imagination and vision.

WORKS

Works listed in order of completion and are published unless otherwise stated. Of the many once-only performance events, the most prominent are listed. Incomplete or lost works are not given.

Greek Ode (Aeschylus: *The Persians*), 1v, pf, 1932, unpubd
3 Songs (G. Stein), 1933
3 Easy Pieces, pf, 1933, unpubd
Sonata, cl, 1933
Sonata for 2 Voices, 2 or more insts, 1933
Composition for 3 Voices, 3 or more insts, 1934
Solo with Obbligato Accompaniment of 2 Voices in Canon, and 6 Short Inventions on the Subjects of the Solo, 3 or more insts, 1934, arr. 7 insts, 1958
2 Pieces, pf, 1935, rev. 1974
Quartet, 4 perc, 1935

JAMES PRITCHETT (text, work-list), LAURA KUHN (bibliography)

Cagli, Bruno (*b* Narni, 2 June 1937). Italian administrator, writer on music and librettist. He studied at Rome University and worked as a writer for theatre, radio and television, also writing criticism in journals and newspapers. He also wrote librettos for two operas by Renosto (*L'ombra di Banquo*, 1976; *Le campanule*, 1981) and one by Mannino (*Le notti bianche*, 1989). In 1971 he became director of the Fondazione Rossini in Pesaro, where he helped to initiate the new critical edition of Rossini. The posts he has held include the artistic directorship of the Accademia Filarmonica Romana (1978–81, 1985–7) and the Teatro dell'Opera in Rome (1987–90), where he did much to broaden the repertory. Cagli has also taught at universities in Urbino and Naples and at conservatories in Rome and Pesaro. A prolific writer in many different areas, he has published a number of musicological works including studies of aspects of Donizetti and Verdi as well as several of Rossini (among them essays on the literary sources of his librettos as well as iconographical and editorial work). In 1990 he was elected president of the Accademia Nazionale di S Cecilia.

EDITIONS

Centone di sonate per violino e chitarra di Nicolò Paganini (Rome, 1983)

TERESA M. GIALDRONI

Cagliari. City in Italy, the capital of Sardinia. It was founded by the Phoenicians around the 9th century BC. There is evidence of musical activity since the Nuragic Age (2000–1000 BC). A building of the late Punic period (300–200 BC) was probably used as a theatre; the Roman amphitheatre (AD 100–200) had a capacity of 10,000. The Codici Corali of Oristano (1300) belonged to the conventual Friars Minor who came to Sardinia at the beginning of the 13th century. Other liturgical codices in square neumes survive in the convent of Bonaria, the church of S Francesco, the cathedral (1254) and the university library.

Theatrical activity flourished during the last centuries of Aragonese-Catalan rule (1326–1713), in palaces, churches and public squares. The same period saw the rise of the confraternities (still active) of the Sacro Monte (1531), the Gonfalone (1564), the Solitudine (1608) and the Crocifisso (1616). During the feast of St Ephisius and Holy Week (*Misterius*) they sing hymns in the Sard language and in Catalan, carrying banners and statues in processions.

From the beginnings of the 17th century until 1860 there were performances of *sacre rappresentazioni* (*autos*), *loas* and *cantate*. The earliest examples of religious drama are in the *Alabanças de los Santos de Sardeña*, including *La passion de Christo nuestro Señore, en verso*, which was performed in the ancient basilica of S Saturnino (*c*500) in 1629. The *Passione e morte di nostro Senori Gesù Cristu*, performed in 1860, was received with fanatical enthusiasm in remote country areas. The stage directions of these and other plays indicate that they were accompanied by instrumental music, of which no trace survives; their strophes bear rhythmic similarities to those of the *goccius* (*laude* in Sard and Catalan sung in honour of saints). The *loas* and *cantate* (similar in form) were elaborate celebratory performances, both sacred and secular, combined with dancing. There was also *tornei*, *mascherate* and *luminarie* with splendid scenery and music.

The oldest *cappella musicale* was that of the Santuario di Bonaria, active in the 14th century. The Cappella Civica Primaziale of the cathedral was probably founded at the beginning of the 16th century; its singers and instrumentalists attended court ceremonies and provided public entertainments and musical tuition. Among the *maestri di cappella* were two natives of Cagliari, the Franciscan T. Polla (1615–63), who held the same post in Florence, Naples and Rome (the Papal *cappella*), and the philosopher C. Buragna (1634–79). In 1824 the *cappella* was replaced by the Accademia Filarmonica, which also performed at the Teatro Lirico; it was reformed in 1835 and ceased to exist in 1909. Savoy rule (1720–1860) saw

the flourishing of *bande musicali*, regimental and civic bands which enlivened court ceremonies and religious and secular festivities. Some were conspicuous for their brilliant uniforms and valuable instruments donated by patrons. In 1858 the municipal authority founded the Banda Civica, which gave open-air concerts; it was suppressed in 1917.

The Savoy government intensified contacts with cities on the mainland, and this led to a passionate interest in opera. The first public theatre, the Teatro di Piazza S Pancrazio, was built in the second half of the 18th century. The Teatro Regio (built 1766; also called Teatro Las Passas), a mostly wooden construction, was acquired by the municipality in 1831 and renamed Teatro Civico. It was rebuilt in masonry and reopened in 1836, but was destroyed in an air raid in 1943. The Nuovo Teatro Diurno (1859) was originally an open-air theatre but in 1869 was given a movable wooden roof and renamed Teatro Cerruti. It was rebuilt to seat 2000 and reopened as the Politeama Regina Margherita in 1897. It was seriously damaged by fire in 1942 and destroyed in 1943. The two theatres staged many operas, some soon after their premières, often with well-known artists and always with a lively audience.

Until the end of the 19th century music teaching in Cagliari was undertaken mostly by amateurs. The Scuola Municipale di Musica was instituted in 1880 but at first bore little fruit; the composer and conductor Giulio Buzenac (1859–1925) introduced more systematic methods of study. He also founded the Società Musicale di Cagliari (active 1895–9). During World War I, all forms of musical activity in the city were suppressed. In 1921 the Istituto Civico Musicale Mario de Candia was founded, the first director being the young Renato Fasano. His dynamism resulted in a vigorous expansion of music education and musical activity at a high level, not only in Cagliari but thoughout Sardinia. It became the Liceo Musicale in 1926; its Sala A. Scarlatti was a small but active concert hall inaugurated in the same year. The school was raised to the status of state conservatory (1931) and then became the Regio Conservatorio di Musica Giovanni Pierluigi da Palestrina (1939). It was associated successively with the Istituzione dell'Accademia dei Concerti (1924), the Fondazione dei Concerti di Musica da Camera (1926), the Istituzione dei Concerti del Regio Conservatorio (1940) and finally the Istituzione dei Concerti e del Teatro Lirico Giovanni Pierluigi da Palestrina (1946), still active, with a permanent orchestra and chorus.

After World War II musical life in Cagliari, which had suffered heavily, soon recovered, using cinemas and the Roman amphitheatre. The auditorium of the conservatory, adapted from the former Jesuit church of S Teresa (1691), was inaugurated in 1953 with a concert given by the Collegium Musicum Italicum (founded 1948) under Fasano. Concerts are now given in the auditorium (1977) of the conservatory, and for opera in the large Teatro Comunale (inaugurated 1993). The activities of the Istituzione dei Concerti include concerts in other parts of the island, festivals, seminars, lectures and publications. The conservatory, which since 1922 had been housed in the historic but cramped Palazzo Comunale (formerly Palazzo della Città, 1331), moved in 1970 to commodious purpose-built premises. The library of the conservatory, founded in 1926, was reorganized in 1940 and now comprises over 30,000 works, including collections of manuscripts from the old cathedral *cappella* and of autograph manuscripts of modern composers.

ERNESTO PAOLONE

Cagnazzi, Maffeo (*b* Lodi, nr Milan; *fl* 1608). Italian composer. His only known work, *Passatempi a due voci* (Venice, 1608), is dedicated to a decurion of Lodi whose family he served for two generations. It comprises about 20 duets for soprano and bass; there is no separate continuo part, but the bass, which is texted but not figured, may be played on the chitarrone 'or other instruments'. The duets appear mostly to consist of the outer parts of originally polyphonic compositions, but they also include strophic dialogues in which each character is represented by two voices. (J. Whenham: *Duet and Dialogue in the Age of Monteverdi*, Ann Arbor, 1982)

COLIN TIMMS

Cagnoni, Antonio (*b* Godiasco, nr Voghera, 8 Feb 1828; *d* Bergamo, 30 April 1896). Italian composer. He began his musical studies in Voghera under Felice Moretti, then from March 1842 to September 1847 he was at the Milan Conservatory. While there, he composed three operas, of which *Don Bucefalo*, given at the conservatory in 1847, proved a lasting success. Written to the same plot as Valentino Fioravanti's *Le cantatrici villane* and owing much to Donizetti, it shows melodic inventiveness and a gift for elegant foolery (including an unmistakable dig at Verdi's early manner). For years it remained the favourite warhorse of the famous *basso buffo* Alessandro Bottero, who performed it in Italy and abroad.

In the early 1850s Cagnoni continued to write for north Italian theatres works that never roused the public to enthusiasm, but earned him respectful notices. In 1856 he was appointed *maestro di cappella* at Vigevano and in 1863 succeeded Coccia as director of the Istituto Musicale of Novara. In 1886 he was made a commander of the Order of the Corona and in the same year became *maestro di cappella* of S Maria Maggiore, Bergamo, on the death of Ponchielli. Although increasingly occupied with religious composition, he was slow to abandon the stage entirely. His *Michele Perrin* (1864, Milan), produced when Wagner's ideas were beginning to be known in Italy, was hailed by Alberto Mazzucato as 'music of the future'. However, *Claudia* (1866, Milan), a blend of early *verismo* and sentimental Romantic melodrama, was judged to be laboured and unoriginal. Cagnoni's last four operas, in which he collaborated with Ghislanzoni, the

librettist of *Aida*, were better received. *Papà Martin* (1871, Genoa) was given by Carl Rosa in 1875 at the Lyceum, London, in an English version entitled *The Porter of Havre*. The young Bernard Shaw likened it to Flotow's *Martha* ('Not great, but never disagreeable ... it contains some beautiful numbers'). *Francesca da Rimini* (1878, Turin), which enjoyed a genuine *succès d'estime*, was Cagnoni's farewell to the theatre, though until his death he cherished a project of producing *Re Lear*. Of his religious works the most important is a Requiem Mass (1888); an earlier tribute to his skill in that field was the commission to contribute a movement to the Rossini Requiem of 1869. He also wrote a *Romanza* for the album of songs published at Verdi's suggestion for the benefit of the librettist Piave, then paralysed by a stroke (Cagnoni had been one of Piave's last collaborators).

Writing at a time when the post-Rossinian tradition was breaking down, Cagnoni, like most of his generation, was forced to experiment with results that are often both ugly and unsure. But if he rarely recaptured the ease and fluency of *Don Bucefalo*, in his later serious operas he evolved a characteristic slow-paced melody of wide intervals and mildly dissonant harmonies that pointed forward to Leoncavallo. *Claudia* and, more particularly, *Francesca da Rimini* show a use of leitmotifs far beyond anything attempted by Verdi, while Alberigo, the villain of *Francesca*, with his credo of evil and his jaunty 6/8 rondo of *fausse bonhomie*, intimates Verdi's Iago.

WORKS

OPERAS

JULIAN BUDDEN

Cahen, Albert [Cahen d'Anvers] (*b* Paris, 8 Jan 1846; *d* Cap d'Ail, nr Monte Carlo, 23 Feb 1903). French composer. Of aristocratic blood, he studied the piano with Mme Szarvady and in the mid-1860s became one of the first pupils of Franck, for composition and harmony. Songs on poems by Musset date from this period though his first important work, the *drame biblique Jean le précurseur* did not appear until 1874 at the Concert National. After the poor reception of his *poème mythologique Endymion* (1875) he turned his attention to the stage, making his début at the Opéra-Comique in 1880 with *Le bois*. His *féerie*, *La belle au bois dormant*, was given at the Grand Théâtre, Geneva, in 1886 and the ballet *Fleur des neiges* at the same theatre two years later. His best-known work, the opera *Le vénitien*, was first performed at Rouen in 1890 (where it was seen by Franck just before his death), and was produced in Paris later that year. After Franck died Cahen's relationship with Franck's circle – and with d'Indy in particular – became cooler and he grew disillusioned when his last stage work, *La femme de Claude*, achieved little success.

Cahen is best remembered for *Marines*, a distinctive collection of seven *mélodies* on poems of Paul Bourget and Maurice Bouchor. His works reflect the influence of Franck; de Romain, writing about *Endymion*, commented that Cahen's music is melodically rich but suffers from dull orchestral writing. His writings include *Littérature et musique française* (Cahors, 1902).

JOHN TREVITT

Cahier, Mme **Charles** [née Layton Walker, Sarah (Jane); Charles-Cahier, Sarah; Black, Mrs Morris] (*b* Nashville, TN, 8 Jan 1870; *d* Manhattan Beach, CA, 15 April 1951). American contralto. Her teachers included Jean de Reszke in Paris, Gustav Walter in Vienna and Amalie Joachim in Berlin. Two years after her operatic début in Nice (1904), she was engaged by Mahler at the Vienna Hofoper, where for six seasons she sang roles that included Carmen and several in Wagner operas. She made her Metropolitan début in 1912 as Azucena and during the next two years sang Amneris and Fricka with the company; elsewhere her most famous role was Carmen. Her concert work, however, was more significant, and in 1911 Bruno Walter chose her for the première of *Das Lied von der Erde* in Munich. The few recordings that she made document an imposing voice, if somewhat uncentred in tone, and a stately style.

RICHARD DYER

Cahill, Marie (*b* Brooklyn, NY, 7 Feb 1870; *d* New York, 23 Aug 1933). American actress and singer. She made her début in 1888 and appeared in small roles in several Broadway plays before spending some time performing in Paris and London. She returned to the USA in 1895 to accept a small part in the musical *Excelsior, Jr.*, then assumed the title role in the show's national tour. She subsequently appeared in such musicals as Victor Herbert's *The Gold Bug* (1896), in which she stopped the show with 'When I First Began to Marry, Years Ago', and *The Wild Rose* (1902), in which she introduced 'Nancy Brown'; she achieved stardom in *Sally in our Alley* (1902) with her most famous song, 'Under the bamboo tree'. Cahill continued to play leading roles in *Nancy Brown* (1903), *It Happened in Nordland* (1904), *Moonshine* (1905), *Marrying Mary* (1906), *The Boys and Betty* (1908), *Judy Forgot* (1910), *The Opera Ball* (1912) and *Ninety in the Shade* (1915), many of which were produced by her husband, Daniel V. Arthur. When her popularity began to wane she appeared increasingly in vaudeville, and her last Broadway assignment was in *The New Yorkers* (1930). A short, thickset, belligerent actress, she was notorious for her quarrels with producers over her insistence on choosing her own interpolations; on a number of occasions these battles cost her important parts. Many of her songs were written in a ragtime idiom by black composers, and Cahill earned a reputation as a 'coon shouter'.

GERALD BORDMAN

Cahman. Swedish family of organ builders of German origin.

(1) **Hans Heinrich** [Henrik] **Cahman** (*b* ?Schleswig, *c*1640; *d* Uppsala, 1699). He was the pupil and son-in-law of the Hamburg master organ builder Hans Christoph Fritzsche and was probably the first member of the family active in Sweden. He received a royal charter in Copenhagen in 1676, but the following year was apparently living in Flensburg. During the mid-1680s he moved to Landskrona, and between 1688 and 1691 he provided Växsjö Cathedral with a new organ. From 1692 to 1698 he had his headquarters at Uppsala, where he built for the cathedral what was then the largest organ in Sweden (49 stops, three manuals and 1 pedal); he undertook a reconstruction in Gävle, built a new organ for the chapel of Stockholm Castle (1696, destroyed by fire the next year) and was consultant for an organ that was planned for Skara Cathedral. He also produced many positives, regals and other keyboard instruments in his workshop; a positive made in 1680 for Virestad Church, Kronoberg province, is at Växsjö Museum.

(2) **Johan Herman Cahman** (*d* 1702). Brother of (1) Hans Heinrich Cahman. He apparently went to Uppsala to act as his brother's assistant. After 1698 he worked independently, with many commissions in Västmanland and Dalarna. His son Hans Henrik Cahman the younger (*c*1680–1736) and grandson Johan Cahman (1707–67) worked as organists and organ repairers at Borås.

(3) **Johan Niclas Cahman** (*b c*1675; *d* Stockholm, 1737). Son of (1) Hans Heinrich Cahman. On his father's death, he succeeded to both his workshop and his reputation as the leading Swedish organ builder. With his uncle, he completed the organs commissioned from his father for the Jakobskyrka and Riddarholmskyrka in Stockholm. The Cahman school of organ building was founded by Johan Niclas, who trained several pupils at his workshop in Södermalm. His first important commission was for Västerås Cathedral in 1702, and in 1731 he completed a 40-stop organ for Uppsala Cathedral to replace his father's masterpiece, destroyed by fire in 1702. His other organs include those at Karlshamn (1702); Mariestad (1705; two manuals, 22 stops; partly surviving at Kölingared, Älvsborg province); Uddevalla (1721); the Kristine kyrka, Falun (1724); the castle church, Drottningholm (1730); Härnösand (1731); Linköping (1733); and Göteborg Cathedral (1734). An impressive memorial to his craftsmanship is the two-manual organ in the church at Lövsta, Uppsala province (1728), which still has its 28 original stops intact.

Contrary to the usual north German practice, the Cahmans included a rank of Tierces in their mixtures and, probably for reasons of expediency, considerably reduced the number of reeds, normally very high in north German instruments. In the latter part of his career, Johan Niclas often replaced the *Rückpositiv* with an *Oberwerk*.

BENGT KYHLBERG

Cahn [Cohen, Kahn], **Sammy** [Samuel] (*b* New York, 18 June 1913; *d* Los Angeles, 15 Jan 1993). American lyricist. His first assignments as a lyricist were for speciality material for dance bands. In 1937 he and Saul Chaplin, with whom he had earlier led a dance band, adapted a Yiddish theatre song into a very successful song for the Andrews Sisters, *Bei mir bist du schön*. With Chaplin, Jimmy Van Heusen, Nicholas Brodszky and Jule Styne, he wrote many successful songs for Hollywood films, notably for Frank Sinatra, and won many Academy nominations and awards. His talent for adapting lyrics for special occasions and personalities brought him many commissions for song parodies for industrial shows, benefits and television. *High Button Shoes* (1947), written with Jule Styne, was a successful Broadway stage show,

as was an autobiographical revue, *Words and Music* (1974).

WORKS
(*selective list*)

STAGE
dates are those of first New York performance

High Button Shoes (J. Styne), 9 Oct 1947 [incl. I still get jealous; Papa, won't you dance with me?]
Skyscraper (J. Van Heusen), 13 Nov 1965 [incl. Everybody has a right to be wrong]
Walking Happy (Van Heusen), 26 Nov 1966
Words and Music (revue), various composers, 16 April 1974

FILMS

Youth on Parade (Styne), 1942 [incl. I've heard that song before]; Carolina Blues (Styne), 1944 [incl. There goes that song again]; Anchors Aweigh (Styne), 1945 [incl. I fall in love too easily, The Charm of You]; It Happened in Brooklyn (Styne), 1947 [incl. Time after Time]; Romance on the High Seas (Styne), 1948 [incl. It's magic]; The Toast of New Orleans (N. Brodszky), 1950 [incl. Be my love]; Our Town (television) (Van Heusen), 1955 [incl. Love and Marriage]; High Time (Van Heusen), 1960 [incl. The Second Time Around]; Robin and the Seven Hoods (Van Heusen), 1964 [incl. My Kind of Town]

SONGS
most associated with films

Bei mir bist du schön (S. Chaplin), 1937; I'll walk alone (Styne), in Follow the Boys, 1944; I should care (P. Weston, A. Stordahl), in Thrill of a Romance, 1945; Because you're mine (Brodszky), in Because you're Mine, 1952; Three Coins in the Fountain (Styne), in Three Coins in the Fountain, 1954; I'll never stop loving you (Brodszky), in Love me or Leave me, 1955; The Tender Trap (Van Heusen), in The Tender Trap, 1955; All the way (Van Heusen), in The Joker is Wild, 1957; High Hopes (Van Heusen), in A Hole in the Head, 1959; Pocketful of Miracles (Van Heusen), in Pocketful of Miracles, 1961; Call me irresponsible (Van Heusen), in Papa's Delicate Condition, 1963

SAMUEL S. BRYLAWSKI

Cahusac. English family of music publishers and instrument makers.

(1) **Thomas Cahusac (i)** (*b* London, 30 April 1714; *d* London, 18 May 1798). He may have been apprenticed to Schuchart. He was established in Stationer's Alley by 1738 and gave his occupation as 'flute maker' in 1749. Benjamin Hallet, another instrument maker, lived in the same house in Stationer's Alley until 1748. He moved to the sign of the Two Flutes and Violin opposite St Clement Danes (later 196 Strand) in 1753 (see illustration); he carried on an extensive business there until 1798, taking his two sons, probably both already working for him, into partnership about 1794, when the firm became Cahusac & Sons. He published *Twenty-four Country Dances for 1758*, and there is evidence that there was an issue for 1757. An obituary notice in the *Gentleman's Magazine* describes him as the oldest musical instrument maker in and near London. He also published music and sold violins (according to Stainer, he worked in association with the sons of Banks, the violin maker, about 1788).

(2) **Thomas Cahusac (ii)** (*b* London, May 1756; *d* after 1813). Son of (1) Thomas Cahusac (i). He established himself at 4 Great Newport Street in 1780, and from 1786 to 1789 had a workshop in Reading. He joined his father and brother at 196 Strand in 1789. After his father's death in 1798 the business was continued as T. & W.M. Cahusac until August 1800, when the partnership was dissolved; Thomas carried on alone at 41

Advertisement for Thomas Cahusac, 'flute maker', at the sign of the Two Flutes and Violin, Strand, London, after 1753

Haymarket until about 1805, at 114 New Bond Street (*c*1805–8) and at 42 Wigmore Street (*c*1808–14).

(3) **William Maurice Cahusac** (*b* London, April 1770; *d* after 1828). Son of (1) Thomas Cahusac (i). From about 1794 to 1798 he was in partnership with his father and brother, and from about 1798 to 1800 with his brother only. After separating from his brother he retained the premises at 196 Strand until about 1811, when he moved to 79 High Holborn. He retired about 1816; in 1824 he lived at Maida Hill and in 1829 at Bexley, Kent.

The Cahusac firm made flutes, violins and other instruments, and issued interesting pocket volumes of airs and much sheet music. Instruments of theirs which survive are all of the highest quality. They include a considerable number of one-, four- and six-key flutes, two-key oboes and a few other instruments – piccolos, *flûtes d'amour*, bass flutes, five-key clarinets, a four-key tenor bassoon, four- and six-key bassoons, tenor oboes, a tabor pipe and a voice flute in D. All are stamped Cahusac, London; the later instruments also bear the address 196 Strand. A few bear dates between 1769 and 1797. Apart from one exceptional two-key flute stamped 41 Haymarket (Thomas Cahusac (ii), 1800–05), precise attributions are impossible on account of the common mark.

FRANK KIDSON/ WILLIAM C. SMITH/ GUY OLDHAM/R

Cahusac, (Jean-)Louis de (*b* Montauban, Tarn-et-Garonne, 6 April 1706; *d* Paris, 22 June 1759). French librettist and

playwright. After embarking on a legal career, he moved to Paris in 1736 to oversee the staging of his tragedy *Pharamond*. In about 1742 he was appointed secretary to the Count of Clermont, grand master of the French grand masonic lodge, by which time he himself was almost certainly a freemason. Although he enjoyed some success at the Comédie-Française, notably with *Zenéaïde* (1743), Cahusac soon turned exclusively to opera, and was Rameau's principal collaborator from 1745 until his death.

Though mercilessly criticized, Cahusac possessed certain strengths as a librettist. He was among the first to exploit 'la féerie' – the enchanted world of Middle Eastern myth, with its genies and other fantastical aerial beings. This is most fully developed in *Zaïs* (1748) and elements of it are present in *Zoroastre* (1749). The latter is derived from ancient Persian religious sources, which provided Cahusac with the pretext to introduce masonic symbols (also found in some of his other librettos). The religion of ancient Egypt furnishes the subject matter of *Les fêtes de l'Hymen et de l'Amour, ou Les dieux d'Egypte* (1747) and *La naissance d'Osiris* (1754). Even where he derived his material from conventional classical Greek sources, Cahusac showed the same interest in spectacle that lent itself to elaborate musical treatment (as in *Naïs*, 1749). Cahusac's skill in introducing such spectacle was conceded even by his critics. Of all Rameau's librettists, he was the most consistently successful in making the obligatory *divertissement* seem not only appropriate to the action but essential to it. Keen that ballet should be more effectively integrated with the drama than it had formerly been, he devised numerous opportunities for pantomime, in which the degree of detail in his stage directions for the ballets was unprecedented.

Cahusac is often criticized for his overuse of the supernatural – *le merveilleux*. From his writings, it becomes clear that for him *le merveilleux* was not a weakness, in opera at least, but a source of strength: through its use all the arts could more easily combine to astonish and bewitch the spectator, which for Cahusac was among the principal functions of opera.

Taken together, Cahusac's writings, which include an important treatise, *La danse ancienne et moderne* (1754), and numerous articles on music and dance for Diderot and D'Alembert's *Encyclopédie* (1751–65), constitute one of the earliest coherent theories of French lyric theatre.

GRAHAM SADLER

Cahuzac, (Jean) Louis (Baptiste) (*b* Quarante, 12 July 1880; *d* Luchon, 9 Aug 1960). French clarinettist. He studied with Cyrille Rose at the Paris Conservatoire, winning a *premier prix* in 1899. His playing was sensitive and vigorous, with a fuller tone than is usually associated with the French school. He helped to make Brahms's clarinet works known in France, and in 1921 was sent by the Ministry of Fine Arts on tour with Vincent d'Indy to the Rhineland, where they played Brahms's and d'Indy's trios. He also played Mozart at Salzburg (1934) and Rome (1935) under the ministry's patronage. Cahuzac performed Debussy's *Rhapsodie* with the composer, and worked with Stravinsky over *Trois pièces*. He gave the first performance of Honegger's Sonatine, and Milhaud's Sonatine is dedicated to him. At the age of 78 he recorded Hindemith's Concerto with the composer conducting. He was first clarinettist for the Concerts Colonne and Concerts Symphoniques Fouche. He conducted radio orchestras in southern France, as well as the Luchon Casino concerts, and composed for the clarinet.

PAMELA WESTON

Căianu [Kajoni, Kájoni, Kaioni, Cajoni], **Ioan** [Joan, Joannes, Johannes] (*b* Jegenye [now Leghea, nr Cluj-Napoca], 8 March 1629; *d* Szárhegy [now Lăzarea, nr Gheorgheni], 25 April 1687). Transylvanian compiler of music anthologies, organist, organ builder, teacher and administrator. He studied music at the Jesuit school at Mănăştur, near Cluj-Napoca, which he left in 1641. In 1648 he was converted to Catholicism from the Orthodox faith into which he was born, and he entered the Franciscan school of the monastery at Csíksomlyó (now Şumuleu, near Miercurea-Ciuc), where on 17 November 1650 he was appointed organist and teacher. He continued his philosophical and theological studies at the Franciscan college at Trnava, near Bratislava, and he was ordained priest there on 5 September 1655. He then took up several appointments at Csíksomlyó. He had studied the organ from an early age, and worked as an organ builder and restorer in Transylvania and Moldavia. He was abbot of the monasteries at Mikháza (now Călugăreni) from 6 July 1663, and Szárhegy (Lăzarea) from 17 March 1669, before returning to Csíksomlyó as legal adviser to the monastery. He was also permitted by the Holy See to set up a printing house, and from 1675 he published textbooks and theological and musical works. His many-sided activities attracted the attention of Pope Innocent XI, who in 1678 appointed him vicar-general of Transylvania, but because of religious intrigue he held the position for only four months. He spent his last years as custodian of the Catholic diocese of Bacău (1682–6) and of the monastery at Szárhegy (1686–7).

Căianu was the first Transylvanian musician to gain a European reputation. His *Cantionale Catholicum*, a collection of hymn texts, was widely used and went into several editions until as late as 1805, but his fame rests mainly on two manuscript anthologies that he compiled in German organ tablature. One of these is the *Organo-Missale*, which contains 39 masses and 53 litanies. The other is the so-called Codex Caioni, of which he compiled the second part. The manuscript attests to the breadth and catholicity of his musical knowledge and represents a bridge between Eastern and Western traditions. On the

one hand it includes numerous dances and songs, both sacred and secular, which in melody, harmony and rhythm are all strongly national in feeling and are indeed the earliest known arrangements of Hungarian and Romanian folk melodies; they consist simply of melody and bass. On the other hand the manuscript contains copies of works by many prominent western European composers of the later 16th and earlier 17th centuries, including Banchieri, Alessandro Grandi (i), Marco da Gagliano, Melchior Franck, Jacob Handl, H.L. Hassler, Hieronymus Praetorius, Schütz and Lodovico Viadana.

VIOREL COSMA

Caietain [Cajetan, Gaietanus, Gaiettane], **Fabrice** [Fabricio, Fabriciault] **Marin** (*b* ?Gaëta; *fl* 1570–78). Italian composer, active in France. In a discourse on musicians in Naples in the late 16th century, Nicolo Tagliaferro refers to a Fabritio Gaetano as one of the famous organists in the city of his youth (*L'escercitio*, *I-Nf* SM 38, f.81). He held various posts in Lorraine during the 1570s. A collection of four-voice motets published in Paris in 1571 was dedicated to the canons of Toul Cathedral by the master of the choirboys Fabritius Marinus Gaietanus, while a set of six-voice chansons of the same year was addressed to Charles III (II), Duke of Lorraine, by Fabrice Marin Gaietain 'son perpetuel serviteur'. The dedication of a later collection of *airs*, issued in 1576 by the same publisher, Le Roy & Ballard, indicates that after enjoying the patronage of Cardinal Charles de Guise until his death at Avignon in December 1574, the composer Fabrice Marin Caietain entered the service of his nephew, Henri, 3rd Duke of Guise.

The motets of 1571, mostly psalms divided into three or four sections and set in an unusually syllabic polyphonic manner, were intended for the churches of Toul and Nancy, which traditionally favoured performance with instruments: they are described as 'ab usum ecclesie ac instrumentorum organicorum maxime accomodatorum'. Stylistically they are similar to the motets composed by Boni for Toulouse and by Lassus for Munich.

While supervising the publication of the two collections of 1571 at Paris, Caietain must have made the acquaintance of Baïf and his collaborators in the new Académie de Poésie et de Musique; although his first set of six-voice chansons include only one old strophic text from Baïf's *Amours de Francine* (1555), a translation of Petrarch's sestina *Alla dolc'ombra* (set in six separate sections), an ode and *odelette* by Ronsard and a chanson by Du Bellay in elaborate madrigalian style, the four-voice *Airs* (1576) show a marked influence of the new experiments in *musique mesurée*. This collection includes three pieces by Courville and three by Beaulieu, whom Caietain acknowledged as masters of the 'récits de la lyre' and as his mentors in declamation. The opening piece, with two other sonnets by Ronsard and one by Henri d'Angoulême, displays lightly imitative polyphony, but the remaining pieces, including the final *Air pour chanter tous sonnets*, have the essentially syllabic and homophonic style and the flexible metre and rhythm shown by Nicolas de la Grotte and the new treble-dominated *air*. Only three of the texts are in Baïf's *vers mesurés* (the rest being rhymed verses: three by Baïf, two by Bertaut, three by Desportes, one – a 'vilanelle' – by Jamin and 15 by Ronsard). Caietain achieved great variety and vitality through the rapid alternation of compound and simple metres; the three *chansonettes mesurées* faithfully follow Baïf's suggested metres and therefore have the same rhythmic patterns as the subsequent settings by Le Jeune and Mauduit. The tonal language of the pieces is similarly modern: one beginning in F major has its final phrase in F minor; there is a consequent change of key signature, in the superius, where E♭ and A♭ are added to the original B♭, but in the remaining voices affected notes are simply indicated by accidentals as usual. Another piece, *Je veux chanter*, introduces the 'Neapolitan' inflection B♭–A–G♯ in the tenor at the words 'la peine que j'endure'. The melodic importance of the superius is underlined by the fact that the top voice of *Ceux qui peignent amour* is identical with that of Le Blanc's four-voice setting (1579).

The 1576 *Airs* were reprinted in 1578 and followed by another collection in a similar style, including 20 French texts, eight *villanelle napolitane* and two Spanish pieces. The opening *air C'est mourir mille fois* had won for Caietain the silver cornett prize for the best *air* at the 1576 St Cecilia competition at Evreux. This collection, like its predecessor, was dedicated to Henri de Lorraine, Duke of Guise, who had been the composer's patron since the death of cardinal Charles de Lorraine at Avignon in December 1574. In the second book's address, which reiterates the neo-Pythagorean and neo-Platonic ideas so dear to the Académie, Caietain wrote that the *airs*, chansons and villanellas were sung daily in Henri's apartments at his chateau in Joinville (Haute-Marne) in the Hôtel de Guise in Paris and that some of the texts (presumably the two unascribed French ones), were written by the duke himself. One of the villanellas, *Non vi mando*, is a setting of the 34th of Bembo's *Stanze* (1507), while the others are in the more popular Neapolitan idiom, as in contemporary three-voice settings of the same text by Dattari (1568), Fiorino (1574), Gasparo Costa (1584), Bonardo (1588) and Paratico

(1588). One of them, *Nò, nò giamai*, is virtually identical to an anonymous four-voice setting copied in the Winchester Partbooks (*GB-WCc* 153) around 1565.

FRANK DOBBINS

Caifabri, Giovanni Battista (*b* Orciano, Pesaro, *c*1632; *d* Rome, 14 Oct 1700). Italian music publisher. He maintained a shop in the Roman suburb of Parione 'at the sign of the emperor and the Genoese cross', his own trademark. He owned no printing press, but made use of several Roman printers during his period of activity. The first was Carlo Ricarii, who supplied for him Michelangelo Rossi's *Toccate e correnti*. The first, undated edition of this work does not indicate the name of the printer; this appears in the 1657 reprint, with the typographer's name engraved on the border of the title-page. Ricarii died shortly after (2 August 1660) and his widow, Benedetta Della Valle, married Caifabri on 6 February 1663. Shortly after Ricarii's death, Caifabri published compositions by Francesco Foggia, Bonifatio Gratiani and others, and several anthologies of motets and psalms drawn from composers of the Roman school (e.g. RISM 1663[1]), including Benevoli, Ercole Bernabei, Berardi, Carissimi, Giuseppe Corsi, Savioni and Stamegna. Giacomo Fei, better known as Giacomo di Andrea, also worked for Caifabri; he printed Pompeo Natali's *Madrigali e canzoni spirituali e morali* (1662), a series of masses and *sacrae cantiones* by Foggia (from 1663), and in 1665 an important group of compositions, including the first part of *Scelta di mottetti a due e tre voci* (RISM 1665[1]) and a new edition of Metallo's ricercares. In 1667 Amedeo Belmonti printed the second part of Caifabri's *Scelta di mottetti* (RISM 1667[1]), and in 1669 Caifabri entrusted Paolo Moneta with the reprinting of Galeazzo Sabbatini's *Regola facile e breve per sonare*. He also financed the reprinting by G.A. Muti of the *Primo libro a due voci* by Bernardino Lupacchino and G.M. Tasso, and G.A. Muti's printing of Foggia's *Letanie* op.16 (1672), a volume to which was appended an index of sacred and secular music published by Caifabri; this lists five works by Foggia, three by Savioni and one each by Diruta, Bernabei and Tonnani, as well as five anthologies of motets, psalms and *sacre canzoni* for one or more voices. After 1673 Caifabri entered into partnership with the successors of Vitale Mascardi, a member of a noted family of printers then active in Rome; they published together new editions of music by Berardi, Foggia, Metallo, Graziani and others (RISM 1675[3] and 1683[1]), as well as masses by Palestrina and G.F. Anerio (RISM 1689[1]) and the *Sonate a tre* op.3 by Corelli (1695).

STEFANO AJANI/PATRIZIO BARBIERI

Caignet, Denis (*b* ?Picardy, *d* Paris, Nov 1625). French composer and instrumentalist. When he was very young (according to the preface of his 1597 book of *Airs*) he entered the service of Nicolas Le Gendre, the seigneur de Villeroy, later becoming master of the music in the household chapel. Caignet won a prize at the Evreux music festival in 1587 with a song entitled *Las je ne voyrrai plus* (see E.C. Teviotdale, *CMc*, lii, 1993, pp.7–26). Contact with printers led to a wider distribution of his music (which was probably otherwise circulated privately in the Villeroy household and allied establishments during the 1580s and early 1590s). Four of his polyphonic chansons were included in Phalèse's *Le rossignol musical* (RISM 1597[10]), while in the same year Le Roy & Ballard published a book of *Airs de court* (for four to six voices) devoted exclusively to his music. The harmonic idiom of the *airs*, it has been suggested, shows close alignment with the often striking juxtapositions found in the monodic *airs* of the 17th century. Caignet's other principal interest was the Psalter: his *Cinquante pseaumes de David* (for four, five, six and eight voices; based on Desportes' translations of those texts) was issued by the Ballard firm in 1607, and bears a dedication to the son of Nicolas de Villeroy, his long-standing patron. Here, in addition to touches of chromaticism, is a rhythmic profile that emulates Baïf's metrical principles of the *vers mesurés*. Neither of these stylistic traits is heard in the Huguenot Psalter.

By 1614 Caignet was listed as 'joueur de violle' in the royal household of King Louis XIII, a position he seems to have kept until his death. He also maintained close relations with Ballard, who reprinted his psalm settings up until his death in 1625; the last of these editions (printed in the final year of Caignet's life) included arrangements of these works for lute. He had two sons (each named Gabriel) who were also employed as musicians in the royal household during the 1630s.

PAUL-ANDRÉ GAILLARD/RICHARD FREEDMAN

Cailliet, Lucien (*b* Châlons-sur-Marne, France, 22 May 1891; *d* Woodland Hills, CA, 3 Jan 1985). American composer, arranger and conductor of French birth. While stationed in Dijon for military service he attended the conservatoire there; he then studied in Paris with Gabriel Parès and Vincent D'Indy. He served successively as a drum major, solo clarinettist and bandmaster in the French Army before emigrating to the USA in 1915 while on tour with a French band. He became an American citizen in 1923. In 1919 he joined the Philadelphia

Orchestra as a clarinettist and arranger under Stokowski; he made a number of orchestral arrangements, some of which were performed and recorded under Stokowski's name. He remained with the Philadelphia Orchestra until 1938. During this period he taught the clarinet at the Curtis Institute and took the doctorate at the Philadelphia Musical Academy (1937). From 1938 to 1945 he taught orchestration, counterpoint and conducting at the University of Southern California. Between 1945 and 1957 he appeared as a guest conductor with many orchestras, composed 25 film scores and made numerous orchestrations, including that of Elmer Bernstein's score for Cecil B. DeMille's *The Ten Commandments*. In 1957 he was appointed educational and musical director for the G. Leblanc Corporation, a position he held until 1976. He wrote many arrangements for band, orchestra and clarinet choir, including 'Elsa's Procession to the Cathedral' from Wagner's *Lohengrin*, and a number of original compositions, of which *Variations on 'Pop Goes the Weasel'* is perhaps the best known. The orchestral sound of his symphonic band works, some of which feature as many as 31 individual parts, is an important characteristic of his compositional style.

RAOUL F. CAMUS

Cailò [Chailò, Chaiolò, Chilò], **Gian Carlo** (*b* Rome, ?1659; *d* Naples, 2 May 1722). Italian violinist and composer. He is first heard of as a member of Carlo Mannelli's circle in Rome: in 1682 he was one of the musicians used occasionally in the chapels of S Giacomo degli Spagnoli and S Girolamo della Carità; and in November 1683 he appears in a list of members of the Congregazione dei musici sotto l'invocazione di S Cecilia. That year he followed Alessandro Scarlatti to Naples, making his début at the Teatro S Bartolomeo. From then on he remained in Naples, marrying there in 1688. From 20 April 1684 until his death he was a musician at the royal chapel, and in 1690 he also served at the Cappella del Tesoro di S Gennaro. He was elected Governor of the Congregazione dei Musici di Palazzo Reale in 1707.

Cailò's brilliant performing career was matched by his activities as a teacher. In 1686 he became professor of string instruments at the Conservatorio di S Maria di Loreto, and eight years later he succeeded Nicola Vinciprova as professor of violin at the Conservatorio di S Maria della Pietà dei Turchini. Some of the most popular virtuosos of the period were trained in his school, including Francesco Barbella, Ragazzi, G.A. Piani and the cellists F.P. Supriani and Alborea. Only two compositions by Cailò are known. Both sonatas, they are mainly contrapuntal in style.

GUIDO OLIVIERI

Caimo, Gioseppe (*b* Milan, *c*1545; *d* Milan, probably before 31 Oct 1584). Italian composer and organist. The preface of his *Primo libro de madrigali a quattro voci* (1564) refers to its contents as 'frutti veramente immaturi'. The title-page describes him as organist of S Ambrogio Maggiore, Milan, a post he presumably retained until he became organist at Milan Cathedral in 1580. One piece, *Ecclesa e generola prole*, is dedicated to the sons of Emperor Maximilian and was probably performed when they passed through the city on 29 December 1563. Caimo may have been related to Paolo Caimo, a canon of Milan Cathedral from 1580 to 1582. There is no known documentary evidence to support Einstein's contention that Caimo was taught by Pietro Taglia, though the latter may have been an influence; Caimo also presumably knew Ruffo, who was *maestro di cappella* at the cathedral from 1563 to 1573. Another possible influence was that of Pietro Pontio. But Vicentino seems most to have influenced Caimo's music (as both Kroyer and Einstein recognized); this impression is reinforced by Prospero Visconti's opinions of both composers as expressed in letters to Duke Ferdinand of Bavaria (see Simonsfeld). One of them, dated 1 October 1575, speaks of Caimo as 'musica, organista, et valent' huomo' and recommends him for the duke's service, but he evidently remained at Milan until his death. Nevertheless, both Caimo and Vicentino were connected with Duke Wilhelm's court as early as December 1570, when both are recorded in a list of ducal expenditure; the close contact between Milanese musicians and the Bavarian court, a general feature of the period, may have been because of Wilhelm's enthusiasm for Carlo Borromeo. A letter from Hans Fugger to the duke, mentioning the presence of two Italian musicians in Augsburg, was interpreted by Baader as referring to Caimo and Vicentino, and Simonsfeld suggested that Caimo's principal difficulty in obtaining a post lay in his determination to take his wife and two of his four sons.

The date of Caimo's death can be fixed with some precision. He was still alive on 6 September 1584, when a proposal to hire Paolo Bellasio as organist at the cathedral was rejected by Cardinal Borromeo on the grounds that the existing holder of the post was a 'man of quality', almost certainly a reference to Caimo. The preface to *Il secondo libro di canzonette*, dated the last day of October 1584, refers to his 'bitter and unexpected death', though the preface to the fourth book of five-voice *Madrigali* was ostensibly signed by Caimo on 20 November 1584 (clearly the book had gone to press before the composer's death and the printer had subsequently dated the preface). Moreover, G.B. Portio's preface to *Fiamma ardente*, dated 1 December 1585, implies that Caimo was then dead. Einstein, through misreading Muoni's list of organists, claimed that he was still listed as cathedral organist in 1588; according to the published cathedral records, Caimo is mentioned only twice, in May and

October 1580. There are no further references to the post of organist until Gaspare Costa is mentioned, in 1588.

Consideration of Caimo's musical development is confounded by the large number of lost works and by the consequent gap in his serious writing. His first book (1564), in its reliance on metrically free homophony, is obviously heavily indebted to established native traditions and, besides the opening encomium, several pieces are entirely dependent on that style. Elsewhere homophony remains the predominant texture, though often mitigated by skilful application of the traditional rhetoric of the early madrigal, particularly fauxbourdon effects, representational melismas and the brief initial imitative points characteristic of the French chanson. The use of unconventional dissonance and linear chromaticism, often unprompted by the text, suggests not only an appreciation of contemporary experiments in composition, but also a taste for the intellectual musical wit that is vital and endemic to the aristocratic madrigal. Interestingly, the publication is dedicated to Ludovico Galerato, the dedicatee of Vicentino's *Motecta liber quartus* (Venice, 1571). The most concentrated chromaticism occurs in settings of three gloomy texts in *terza rima* from Sannazaro's *Arcadia* (1512) – *Piangi colle sacrato*, *E se tu, riva, udisti* and *Piangete valli abbandonate* – entirely appropriate texts for a city suffering from exorbitant taxation, economic depression and violence caused by Spanish oppression. In these terms these three are undoubtedly the most adventurous pieces in the collection. The book concludes with an eight-voice dialogue madrigal, *Donna l'ardente fiamma*.

Nevertheless, the chromaticism of the first book has perhaps been over-emphasized at the expense of conservative, even archaic aspects in Caimo's music. The most consistent feature of the fourth book is a traditionalism characteristic of much Milanese music of the second half of the century. While some north Italian composers were using simpler textures and attending more to verbal rhythms, Caimo, in his fourth book, even in comparison with his first of 20 years earlier, seems more concerned with textual detail and with polyphony though often motivic rather than fully developed. It is not so much the presence of certain representational devices (e.g. extensive coloration, solmization syllables at the beginning of *O sola o senza*), but rather their frequency and manner of application that suggest a reliance on established techniques rather than their integration with more adventurous procedures. But the greater harmonic and melodic chromaticism and aggressive dissonances of the fourth book make it an exception, even though (as Dahlhaus has demonstrated in Gesualdo's late madrigals), these can be explained logically in terms of linear arrangement and the intervallic relationship between voices. Moreover, procedures such as the juxtaposition of chords with roots a 3rd apart, a commonplace of Vicentino's fifth book (1572), or movement through the circle of 5ths, were conventional enough by this date. Nevertheless, in *E ben raggion* the remarkable passage that moves as far as G♭ surpasses Vicentino and equals Marenzio in its audacity (see Kroyer).

Caimo's 14 compositions in *Fiamma ardente* (RISM 1586[19]) are a rather unhappy fusion of popular and academic styles, using texts of epigrammatic brevity and triviality. Although their harmonic language often recalls the fourth book, the influence of lighter forms, particularly the villanella, is evident in their repetition schemes. Unfortunately, Caimo's earliest true exercises in the lighter style, the *Canzoni napolitane* of 1566, cannot fully be assessed since only the cantus part has survived; but this shows a certain originality in the handling of traditional rhyme schemes, and a seriousness unusual in contemporary villanellas. *Tornate christiana*, the only non-strophic piece in the book, is a textual mixture of Spanish and Italian and thus reflects the Spanish occupation. *Il secondo libro di canzonette* is even more receptive to the rhetoric of the serious madrigal, while preserving the structures of the villanella tradition, particularly in its sensitive handling of sophisticated harmonies and genuine polyphony. The volume is dedicated to Marc'Antonio dal Verme, a member of a family with which Caimo evidently had good connections (another of his pieces, *Ardir, senno, virtù*, punningly refers to 'del vernio l'Idea' and includes the name 'Ippolita', possibly Marc'Antonio's grandmother). It was the fine craftsmanship and seriousness involved in this transition from the three-voice villanella to these four-voice canzonettas that prompted Einstein to suggest their influence on later canzoni particularly Orazio Vecchi's; Caimo's music does not appear to have been particularly admired by his contemporaries; Lomazzo's two enthusiastic references are distinctly provincial in character and only one of his works, *Bene mio, tu m'hai lasciato*, from *Fiamma ardente*, was reprinted (in RISM 1596[10] and 1605[9]).

No list of Caimo's lost publications can be considered definitive. Of the six volumes mentioned by Quadrio, of which no copies have survived, his 'Canzonette a 4 II' (Brescia, 1584) has been assumed identical with the known *Canzonette* of the same year, printed in Venice. Similarly, Quadrio's reference to a first book of four-voice madrigals (Brescia, 1584) is presumably a later edition of the surviving four-voice book (Milan, 1564). Although Kast has identified the four-part *Bizzarie del Caimo* as another of Caimo's lost works, the reference is probably to settings by an unspecified composer of Andrea Calmo's poetic anthology *Le bizzarre rime pescatorie* (Venice, 1553). The volume of *canzonette spirituali*, repeatedly advertised by vincenti beginning in 1635, may well be an adaption of the *Canzoni napoletane* with an added part for *basso continuo*.

IAIN FENLON

Caioni, Ioan [Joan, Joannes, Johannes]. *See* CĂIANU, IOAN.

Cairns, David (Adam) (*b* Loughton, Essex, 8 June 1926). English writer on music. He was educated at Winchester and Oxford (where he read history, 1945–8) and had a year's study (1950–51) at Princeton. In 1950, with Stephen Gray, he founded the Chelsea Opera Group and in 1983 he established an orchestra, the Thorington Players. He has held various appointments as music critic, notably for the *Spectator* (1958–62), the *Financial Times* (1962–7), the *New Statesman* (1967–70) and later the *Sunday Times*. A collection of his critical writings was published under the title *Responses* (London, 1973).

During the years 1967–72 Cairns worked for Philips Records, taking part in the planning of several substantial recordings, among them works by Mozart, Berlioz and Tippett. These composers, above all Berlioz, are at the centre of his interests; he contributed an introduction and notes to a translation of Berlioz's *Les soirées de l'orchestre* in 1963 as well as translating and editing his memoirs (London, 1969, 2/1977). In 1972 he was awarded a Leverhulme Fellowship for further research on Berlioz towards a substantial biography. This appears in two volumes, *Berlioz*, i: *The Making of an Artist, 1803–1832* (London, 1989) and *Berlioz*, ii: *Servitude and Greatness, 1832–1869* (London, 1999), and was much praised for its musical and biographical insights as well as the warm, vivid and elegant expression characteristic of his critical writing; it has been described as 'one of the masterpieces of modern biography – a magnificent piece of synthesising scholarship, fluently readable yet maturely balanced' (*The Sunday Telegraph*). A collection of his critical writings was published under the title *Responses* (London, 1973). He was appointed CBE in 1997.

Caix, de. French family of viol players. They flourished in the 18th century and are often confused because of their common instrument and the absence of first names in reminiscences and official records. They may be related to LOUIS DE CAIX D'HERVELOIS.

(1) **François-Joseph de Caix** [*le père*] (*b* Lyons, late 17th century; *d* Lyons, after 1751). With his wife, Jeanne-Ursule Drot (or Drotte), he played in the orchestra at Lyons until 1730, when they went to Paris (with their five children who also played viols) to enter the service of Louis XV. In 1738 four members of the family (François-Joseph, possibly (2) Marie-Anne, (3) Barthélemy and (4) Paul) presented a series of five concerts at Versailles. The father and sons served in both the chapel and chamber, the three daughters only in the chamber. In his memoirs the Duke of Luynes identified François-Joseph as the bass viol teacher of the king's daughters and noted the esteem in which he was held. After many years of service, he retired to Lyons.

(2) **Marie-Anne Ursule de Caix** [*l'aînée*] (*b* Lyons, 9 Feb 1715; *d* Lyons, ?21 Sept 1751). Daughter of (1) François-Joseph de Caix. She is the only daughter of François-Joseph known by name; probably she was the eldest, and the only one to play in the family concerts of 1738 (the others were known as *la cadette* and *la troisième*). According to the Duke of Luynes, she was an accomplished performer. Louis de Caix d'Hervelois included a work entitled *La Marie-Anne de Caix* in his fifth book (1748) of pieces for bass viol.

(3) **Barthélemy de Caix** [*le fils, l'aîné*] (*b* Lyons, 20 April 1716). Viol player and composer, son of (1) François-Joseph de Caix. After eight years (1730–38) in Paris, Barthélemy returned to Lyons, but he was back in Paris by 1746, when the *Mercure de France* reported a concert on 16 September in which he played. He was recalled to the king's service at Versailles to instruct Princess Sophie on the pardessus de viole. Barthélemy published *VI sonates pour deux pardessus de violes* op.1 in Paris and Lyons (*c*1745). He may have been the Caix listed in the *Almanach musical* as a teacher of pardessus and violoncello from 1775 to 1789, and named among the cellists of the Concert Spirituel in 1775, but it may be that Timoléon Louis d'Hervelois de Caix (*d* Paris, 1 Jan 1792, according to the Archives de la Seine) is a likelier candidate.

(4) **Paul de Caix** [*le cadet*] (*b* Lyons, bap. 15 Sept 1717; *d* Lyons). Son of (1) François-Joseph de Caix. He too preferred Lyons to Versailles and settled there. The *Almanach de Lyon* published a list of local musicians that included a Caix as professor of cello, pardessus and bass viol between 1745 and 1763 and teacher at the Académie du Roi in Lyons, 1745–9. The 1761–2 municipal archives of Lyons list a Caix, probably Paul, as one of 20 instrumentalists in the theatre orchestra.

According to court records, a bassoonist of the chapel named Caix died on 16 January 1760; a Mlle de Caix engraved music by Guignon, Guillemain and others.

JULIE ANNE SADIE

Caix d'Hervelois, Louis de (*b c*1680; *d c*1755). French composer and viol player. There is no firm evidence that he was a member of the DE CAIX family, but the fact that he playedthe same instrument, published works in Lyons and named a piece *La Marie-Anne de Caix* indicates that he might have been. He was probably the nephew of Louis de Kaix, a chaplain at the Ste Chapelle in Paris originally from Amiens; in 1697 Louis de Kaix was looking for a room where his nephew could practise the viol. Caix d'Hervelois does not appear to have received a court appointment although he dedicated his final volume of *pièces de viole* to Louis XV's daughter. By 1731 he was living opposite St Eustache, in a clock maker's house in the rue de Jour.

Caix d'Hervelois' musical language strongly suggests that he was a pupil of Marin Marais. His five books of *pièces de viole* are of great importance in the repertory of French viol music. His first book (1708) reveals his elegant French sense of melody, his polished understanding of harmony and his advanced, idiomatic use of left-hand upper positions. His sensitivity to contemporary Italian developments is shown in his liking for mixing major and minor pieces with a common tonic within a suite and also, from 1731, in his increasing use of da capo movements and his penchant for writing three related pieces, such as the three *airs Les trois cousines* ('La prude', 'L'enjoüée' and 'La folichonne') of 1748. However, he never attempted to rival the technical advances of the violin in the manner of Forqueray. Caix d'Hervelois has been claimed to be the first composer to publish sonatas for the viol, in 1740; but the movements within these sonatas are indistinguishable from those of his suites. Furthermore, in the 1748 book the 'sonates' are part of a suite.

From about 1720 there was a vogue for duets for two equal instruments; Le Blanc declared that it was 'the definitive ruling of the ladies that nothing in the world touches two bass viols for a perfect rendering of the upper and lower lines'. One piece each in Caix d'Hervelois's collections of 1719 and 1731 is 'pour jouer a deux violles'; these were evidently a success, and his *IVe livre* (1740) is devoted entirely to viol duets. Pieces with keyboard continuo reappear in the 1748 book, but the two sonatas in this volume are duets; in addition there are a number of movements among the suites that possess basses highly idiomatic to the viol (including chords), which are unfigured and at times fingered. Ex.1 illustrates the exchange of parts and characteristic use of parallel intervals in *La Joly*. In general the top line is given the dominant role.

Most of the pieces in Caix d'Hervelois's collections for *pardessus de viole* and his volumes for flute are, as the composer freely admits, arrangements of his bass viol compositions. It is interesting that he draws on individual pieces and rearranges them, along with some fresh movements, into new suites with a common tonic. His transcriptions for the *pardessus* were undertaken with care; the excellent fingerings imply that he was an accomplished player of the instrument.

LUCY ROBINSON

Caja. Frame drum, sometimes with a snare, of Spain and Latin America. The *caja* of central Spain is often a shallow, military-style side drum, slung from the waist and played with two sticks to accompany the *dulzaina* (oboe), whilst those of Palma tend to be deeper.

The word *caja* is applied to a wide range of Latin American drums. In Columbia it is sometimes a shallow, single-headed instrument, whilst in Central America it tends to be double-headed, with the body deeper than the diameter of the head. The Cuban *caja*, which resembles the conga, is a large, deep single-headed drum of African origin, hollowed-out from a tree trunk and played with the hands. In the Andes, where the *caja* is widespread, it is typically shallow and double-headed, and may include an internal or external string snare. A single hard- (or soft-) headed beater is usually used, and the instrument is held vertically. The skins of the two heads are tied together around the frame with a leather thong or string, in the manner of the indigenous *tinya* (Quechua), with which it is often synonymous. It accompanies singing, wind ensembles or the player's own performance on (for example) a tabor pipe or *erkencho* (clarinet).

Cakewalk. A 19th-century dance of black American origin, popularized and diffused through imitations of it in blackface minstrel shows (especially their walk-around finales) and, later, vaudeville and burlesque. It seems to have originated in slaves parodying their white owners' high manners and fancy dances. The name supposedly derives from the prize (presumably a cake) given to the best dancers among a group of slaves, but it may go back little further than the 1890s, when 'cakewalk contests' among dancing couples were organized as public entertainments in northern American cities. Although no specific step patterns were associated with the dance, it was performed as a grand march in a parade-like fashion by couples prancing and strutting arm in arm, bowing and kicking backwards and forwards (sometimes with arched backs and pointed toes), and saluting to the spectators (see illustration). The cakewalk was popularized and refined through the all-black musicals of the late 1890s (notably Will Marion Cook's *Clorindy, or The Origin of the Cakewalk*, 1898) and the dancing of Charles Johnson and the vaudeville team of Bert Williams and George Walker, who gave it international fame in the early 1900s through their performances in *In Dahomey* (1902) and *In Abyssinia* (1905). The novelty of the dance in Europe was such that the London production of *In*

The Cakewalk: lithograph after George Scott from 'The Graphic' (1906)

Dahomey (1903), at first without a cakewalk, later had to include it through popular demand, and Debussy included it as the 'Golliwog's Cakewalk' in his *Children's Corner* (1906–8). It was associated with a syncopated music akin to ragtime, of which the most phenomenally successful example was the march/two-step by Kerry Mills, *At a Georgia Camp Meeting*, recorded many times, beginning in 1898, by Sousa's band. The popularity it achieved led to its acceptance in the white social milieu and eventually, to the incorporation of some of the cakewalk steps into white American dance forms. Elements of it have also remained in musical theatre, as in the rousing title choruses of Jerry Herman's *Hello, Dolly!* (1964) and particularly *Mame* (1966), with its southern setting and ragtime-derived rhythm.

H. WILEY HITCHCOCK, PAULINE NORTON

Calado [Callado], **Joaquim Antônio da Silva** (*b* Rio de Janeiro, 11 July 1848; *d* Rio de Janeiro, 20 March 1880). Brazilian flautist and composer of popular music. His father, a bandmaster and music teacher, taught him at first, then for a short time (1856) he took lessons from Henrique Alves de Mesquita. Within a few years he became such an outstanding virtuoso that in 1870 he was appointed flute instructor at the Imperial Conservatory of Music.

Calado began to compose early and was quite prolific. He cultivated all the fashionable dance genres of the time, but was at his best in polkas; he wrote mostly for the flute. He incorporated into the European polka all the local elements that eventually transformed it into the authentic Brazilian popular species known as the *maxixe*. His most typically Brazilian polkas include *Querida por todos* (1869), *Cruzes, minha prima!* (1875) and *A flor amorosa* (1880), in which he systematized rhythmic, melodic and harmonic features subsequently identified with the Brazilian musical vernacular. Calado also organized in Rio the first authentic *choros*, the instrumental ensembles that developed into a truly urban tradition at the beginning of the 20th century and were so influential on the first nationalist composers.

GERARD BÉHAGUE

Calame, Geneviève (*b* Geneva, 30 Dec 1946; *d* Geneva, 8 Oct 1993). Swiss composer. She studied the piano in Geneva, then with Agosti in Rome. In 1971 she began to study composition with Guyonnet and later attended courses by Boulez and Pousseur. In 1975 she was appointed to teach audio-visual studies at the Ecole Supérieure d'Art Visuel in Geneva. Her works, both instrumental and audio-visual, have been performed throughout Europe and the Americas. Her fascination for instrumental timbres, often explored over a slow-moving harmonic background (as in *Sur la margelle du monde*), led her to incorporate non-European instruments in otherwise conventional ensembles, as in *Vent solaire*, for shakuhachi (Japanese flute) and orchestra. Although her harmony and instrumentation betray the influence of the post-war avant garde, Calame's interest in mysticism imparted a strong meditative quality to her music that makes it more accessible to a broader public. Her aim was, she said, 'to harmonize the energies of the listener while at the same time offering him a field of enlarged consciousness'.

CHRIS WALTON

Calamus (Lat.; Gk. *kalamos*). A term used in antiquity for various wind instruments, including the AULOS. For the use of the plural *calami* to describe the syrinx or its separate pipes *see* THEOCRITUS, and VIRGIL; *see also* ISIS.

Calando (It.: 'becoming quieter'; gerund of *calare*: 'to lower', 'drop', but current only in musical contexts). An instruction to make the music die away in volume and sometimes also in tempo. It is found in scores from the middle of the 18th century. Mozart used it in his A minor Piano Sonata K310/300*d* and his string quartets K387 and (particularly) K464. Concerning this last use, Finscher (NMA, VIII: 20/1/ii, p.xi) cites P. and E. Badura-Skoda, *Mozart-Interpretation* (Vienna, 1957, pp.35, 53), in evidence that in Mozart it is to be read simply as a *decrescendo*.

See also DIMINUENDO; MORENDO; TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Calandra [Calandria, Calandro], **Nicola** (*b* ?Frasso Tebesino, Benevento; *fl* 1747–59). Italian composer. Lack of biographical information makes him appear an obscure minor figure, but the distribution of his manuscripts north of the Alps suggests a certain popularity of his music outside Italy. His birthplace is inferred from his nickname, 'Frascia'; he may have been a son of Giacomo Calandra of Frasso. The later date of his operatic works casts doubt on Schmidl's account that he studied in Naples at the conservatories of the Poveri di Gesù Cristo in 1721 and of the Pietà dei Turchini in 1725, an account supported by neither Florimo nor Di Giacomo. According to Eitner, he was *maestro di cappella* of S Padre in Rome. He appears to have worked in Naples at the small Teatro della Pace from about 1747 to 1749, continuing the

tradition of dialect *opera buffa*; to judge from performance records, he had moved by 1756 to north Italy, where he styled himself 'virtuoso della Casa Orsini d'Aragona'. A letter of 5 February 1757 from Rome (*I-Bc*) attests to acquaintance with Padre Martini.

JAMES L. JACKMAN/R

Calata. A 16th-century dance. The derivation of the term is obscure, but could be from a region in Transylvanian Romania; from the Italian *calare* ('descend', to 'lower', to 'fall'); from the Spanish *calado*, referring to figures of the Spanish church dances, in which rows of dancers interweave or intersect each other; from the Italian *callota* (*calotta*) ('skull cap'); or from the Italian *calle* ('path', 'way' or 'narrow street' in Venice; cf the German *Gassenhauer* and Spanish *passacalle*). In a poem of about 1420 Prudenzani cited the playing of 'calate de maritima et compagnia', interpreted by Debenedetti as referring to dance-songs of these regions. Solerti mentioned that the calata was danced at the court of Florence as late as 1615. Few musical examples are still extant. They extend in time from the manuscript *F-Pn* Rés.Vm 27 (*c*1505; facs. (Geneva, 1981) with introduction by F. Lesure) and Dalza's lutebook of 1508 (see *BrownI*) to Montesardo's guitar tablature of 1606 and the manuscript guitar tablature *D-HR* III 4½ 2° 1046 (*c*1700). Dalza closed his book with 13 examples, the first for two lutes. Most are in duple metre and have regular phrases. Of the six that he qualified 'spagnola', three are in triple metre. Other qualifying words in the titles include 'de stramboti' (no.3) and 'ditto terzetti' (no.13), hinting at an association with strophic texts.

DANIEL HEARTZ (with PATRICIA RADER, PATRICK O'BRIEN)

Calcaño, José Antonio (*b* Caracas, 23 March 1900; *d* Caracas, 11 Sept 1980). Venezuelan musicologist and composer. He was first taught music by his father, and later studied the piano, theory, composition and music history at the Caracas Escuela Superior de Música (1911–19) and, during his tenure of various positions in the Venezuelan diplomatic corps (1929–46), at the Berne Conservatory (1936). After working as a professor of piano at the Escuela Superior (1932–5), conductor of choral groups such as the Orfeón Lamas and the Coral Polifónica de Venezuela (1930s) and founder (1951) and director (1951–9) of the Teresa Carreño Conservatory, Caracas, he became the director of and a professor at the Academia de Música Padre Sojo, Caracas (1959). While also teaching music appreciation at the Universidad Central de Venezuela, Caracas (1954–64), he appeared as guest conductor of the Venezuela SO, which he helped to found. Calcaño's most valuable contributions to Venezuelan music history were his books *La ciudad y su música*, a detailed music chronicle of Caracas drawn extensively from primary sources, and *400 años de música caraqueña*, a substantial account of the city's art and popular music. His compositions included a symphony, a ballet, two string quartets, choral works and songs.

GERARD BÉHAGUE

Calchedon (Ger.). *See* MANDORA.

Calcidius (*fl* 4th or early 5th century CE). Translator and commentator. His commentary on Plato's *Timaeus* (only to 53c) is dedicated to Hosius, long thought to be the bishop of Corduba (*d* 358). More recently, it has been proposed that the dedication is to a Milanese official of about 395 and that Calcidius was a Christian Neoplatonist active in Milan whose writings were known to St Ambrose. The earliest surviving manuscripts, *F-Pn* lat.2164 and *VAL* 293 (formerly 283), date from the early 9th century. Within the tradition of Christian Neoplatonism, Calcidius's commentary made the *Timaeus* generally (but imperfectly) available to the Middle Ages, although it does not seem to have been known to Macrobius or Isidore of Seville.

Calcidius departs from tradition (in his commentary on *Timaeus*, 35b) when he asserts that geometry rather than harmonics holds the fundamental position and is a substructure for the others ('geometrica vicem obtinet fundamentorum ceterae vero substructionis'), but otherwise his commentary is derivative. Several short chapters

(40–55; pertaining to *Timaeus*, 36a–37a) are devoted to Platonic music theory and the World-Soul; at least part of this material is derived either from THEON OF SMYRNA or directly from Theon's source, Adrastus. The chapters explain the Pythagorean *harmonia* (6:8:9:12) as it emerges from the duple and triple proportions described by Plato; the story of Pythagoras's discovery of the consonant numbers by suspending weights from strings (paralleling the version in CENSORINUS, *On the Day of Birth*, §10), rather than through the more familiar myth of the hammers; the harmonic, arithmetic and geometric means; and the typical numerical characterizations of the 4th, 5th, octave, 11th, 12th, 15th, the tone and the limma. Calcidius, like GAUDENTIUS and Theon, considers the 11th a consonance; this is unusual in a treatise within the Neoplatonic tradition. Having reviewed some of the technicalities of Pythagorean mathematics, Calcidius then comments on Plato's famous image of the two revolving circles of the cosmos and the duality of essence, the Same and the Other (the subject is also related to music by Aristides Quintilianus: *On Music*, iii.24). By interpreting Plato's creation of the World-Soul in Christian terms, Calcidius attempts to show points of agreement between the Platonic and Christian views of the compound nature of the human being. In chapter 267 (in the section on the use of sight and hearing, with reference to *Timaeus*, 47d), Calcidius makes explicit the importance of music: 'Without doubt music rationally adorns the soul, recalling it to its old nature, eventually making it as God the creator made it in the beginning' *(Procul dubio musica exornat animam rationabiliter ad antiquam naturam revocans et efficiens talem demum, qualem initio deus opifex eam fecerat)*.

Calcidius's commentary is cited in glosses to the *De nuptiis Philologiae et Mercurii* of MARTIANUS CAPELLA attributed to Johannes Scottus Eriugena and Remigius of Auxerre, and both the *Musica* and *Scholica enchiriadis* borrow from it. He is also cited occasionally by later musical writers such as Bernelinus, Engelbert of Admont, Jacobus of Liège and Franchinus Gaffurius. The treatise was first published in 1520.

THOMAS J. MATHIESEN

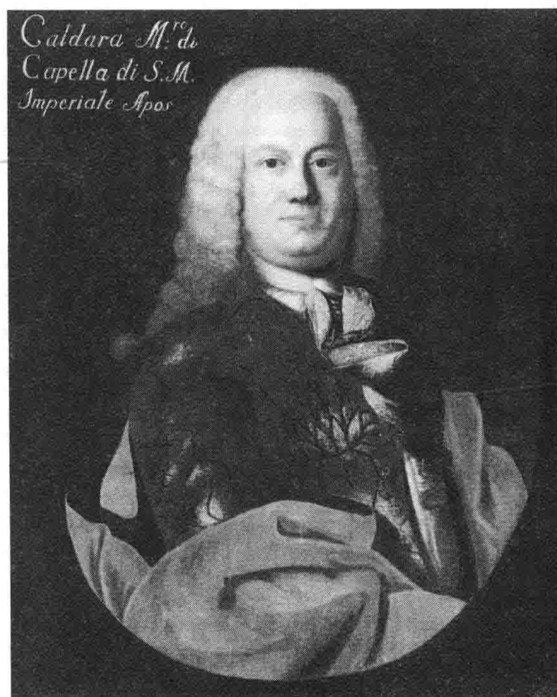
Caldara, Antonio (*b* Venice, ?1671; *d* Vienna, 28 Dec 1736). Italian composer. He was one of the most prolific among an unusually productive generation of composers and contributed to the rapid evolution of Italian vocal music, carrying its late stage to Vienna and there effecting an amalgam of Italian and German styles.

1. LIFE. The absence of birth and baptismal records leaves the year of Caldara's birth open to debate but his death certificate, which suggests he died 'in his 66th year', points to 1671. He was the son of Giuseppe Caldara (*d* ?Rome, ?1711) a rank-and-file violinist from whom he may have received his earliest instruction in music. It is assumed that he studied with Giovanni Legrenzi, *maestro di cappella* at S Marco from 1681, and possibly with the cello virtuoso Domenico Gabrielli. In 1693 Caldara styled himself 'musico di violoncello', perhaps an indication of an already established reputation or of his position as cellist at S Marco, where, after several years' employment on a casual basis, he was made a permanent member of the *cappella* in 1695. He is also listed among the alto singers at the basilica and in 1698 his salary was raised substantially, from 80 to 100 ducati.

Caldara's membership of the guild of the Signori musici di S Cecilia in 1687 suggests an early resolve to embark on a professional career. Within two years his opera *L'Argene* was staged at the Accademia ai Saloni and at least two other operas, as well as two *collaborazioni*, were produced during the next decade. A set of trio sonatas (*da chiesa*) op.1 was printed by Giuseppe Sala in 1693; a second set (*da camera*) op.2 and 12 cantatas for solo voice op.3 were published, again by Sala, in 1699. A Kyrie–Christe dates from 1696, and with at least two oratorios performed at the Fava between 1697 and 1699, Caldara had established himself in all the principal genres of the late Baroque before the century closed.

On 31 May 1699 Caldara was made *maestro di cappella da chiesa e del teatro* to Ferdinando Carlo, the last Gonzaga Duke of Mantua, an appointment that clinched an association apparently begun several years earlier. Unfortunately this opportunity for sustained creativity was soon blighted by the War of the Spanish Succession, and in 1702 the duke, a supporter of the Bourbon cause, fled from Mantua together with his *maestro* and musical establishment before advancing Habsburg forces. Sojourns in Casale, Genoa and Venice allowed Caldara to indulge Ferdinando Carlo in his love of opera; for the duke's return home in December 1705 he provided celebratory sacred music – a large-scale Kyrie and Gloria for double choir, soloists and five-part strings.

Caldara left the duke's service in autumn 1707, probably remaining in Venice (except possibly for a brief stay in Milan) until early 1708, when he moved to Rome. There he worked among a remarkable gathering of composers (including Corelli, Pasquini, Cesarini, Alessandro and Domenico Scarlatti and Handel) until they scattered as Habsburg troops besieged Rome in summer 1708. In a move ironical yet politically astute, Caldara moved to Barcelona, where on 2 August his allegorical *Il più bel nome* was included in the festivities celebrating



the marriage of Charles III, the Habsburg claimant to the Spanish throne, and Elisabeth Christine of Brunswick-Lüneburg. Performances in Barcelona the following year of *Il nome più glorioso* and *L'Atenaide* (a collaboration with A.S. Fiorè and Francesco Gasparini) furthered Caldara's connection with the Habsburg dynasty, although by then the composer himself had returned to Italy; his opera *Sofonisba* was staged in Venice in late 1708. By March 1709 he was again in Rome and on 1 July followed in Handel's footsteps as *maestro di cappella* to Prince Ruspoli, perhaps the most lavish of many notable Roman patrons of the arts.

From the spectacular open-air performance of the serenata *Chi s'arma di virtù* (27 August 1709) until his departure for Vienna seven years later, Caldara's career flourished as never before. About 100 cantatas for solo voice and strings, some 50 for voice and continuo and another 30 for two voices and strings (occasionally augmented by oboes and horns) were written for the Sunday morning *conversazioni* held in Ruspoli's Palazzo Bonelli throughout much of each year. However, Caldara's most substantial work lay in the sequence of oratorios Ruspoli had performed each Lent. In 1710 the calculatedly lavish *S Francesca Romana*, the first oratorio that can definitely be assigned to Caldara's years as *maestro*, was paired with the earlier *La castità al cimento*. Four older oratorios of about 1698–1700 were revived in 1711. All six were repeated in 1712 and, together with *S Stefano*, again in 1713 but were displaced in 1715 by a remarkable series of six new oratorios with which Ruspoli commemorated the first Lent in his renovated Palazzo Gaetani on the Corso. Compositions for other Roman patrons include a set of 12 cantatas dedicated to Cardinal Colonna. The 12 motets op.4, dedicated to Cardinal Ottoboni and published in Bologna in 1715, crown an association dating back at least to the Ottoboni-sponsored performance of Caldara's *Il martirio di S Caterina* in 1708.

On 7 May 1711 Caldara married the contralto Caterina Petrolli (*b* Rome, 1682) who had joined Ruspoli's musical establishment in October 1709. The couple left Rome almost immediately, hopeful that the services already rendered in Barcelona to Charles III, the heir presumptive to the recently deceased Joseph I, would secure Caldara the position in Vienna of court Kapellmeister, vacant since Antonio Pancotti's death in 1709. By August Caldara was in Habsburg Milan awaiting Charles's arrival from Spain *en route* to his coronation (as Charles VI) in Frankfurt. While it seems likely that Caldara petitioned Charles directly for the court position, it is far from certain that he accompanied him to Germany. Caldara was in Vienna early in 1712 but by then M.A. Ziani had been promoted to Kapellmeister and J.J. Fux promised the post of vice-Kapellmeister. Caldara remained until June, returning to Rome via Salzburg, where he must have established contact with Franz Anton Graf von Harrach, the prince-archbishop, and perhaps sought a position at the archepiscopal court. Throughout this period of hope and frustration Caldara kept Ruspoli well supplied with new compositions. Cantatas came from Milan and Vienna and there was, too, the oratorio *S Stefano, prima rè dell'Ungheria*, first heard in the 1713 oratorio sequence in the Palazzo Bonelli.

News of Ziani's death in January 1715 revived Caldara's aspirations for a post at the imperial court. But this time he remained in Rome and by June, when his petition appeared in the court records, Fux was already Kapellmeister. Since his return to Ruspoli, however, Caldara had maintained contact with Vienna. He had sent the scores of *Maddalena ai piedi di Cristo* and *La castità* in 1713; *S Flavia Domitilla* was given in the imperial chapel in Lent 1714, and later that same year *L'Atenaide* (this time a collaboration with Ziani and A. Negri) commemorated the empress's nameday. Now such perseverance bore fruit. On the emperor's decision, overriding Fux's recommendation of either Giuseppe Porsile or Francesco Scarlatti, Caldara was made vice-Kapellmeister (see illustration). Although his appointment dates officially from the beginning of 1717 he must have known of it much earlier (his salary was eventually backdated from 1 April 1716) for in mid-May 1716 he departed from Ruspoli and Rome.

Caldara's duties at the imperial court further changed the direction of his compositional activities. His responsibility for at least one of the operas required each year for the four principal feast days (the nameday and birthday celebrations of the emperor and empress), for the court's annual carnival opera (between 1727 and 1731) and for celebratory operas and serenatas for weddings of members of the Habsburg clan, brought renewed contact with that genre. He produced one, sometimes two oratorios for the court's annual Lenten observance. For the many and varied Sunday and weekday services attended by the court in the Hofkapelle and the city's principal churches, he created a repertory of several hundred compositions which ranged from sumptuous settings of the mass to intimate motets. Always he had access to lavish instrumental and vocal resources and the abilities of famed performers, as well as the constant

Antonio Caldara: portrait by an unknown artist, after 1716 (Civico Museo Bibliografico Musicale, Bologna)

admiration of a monarch who prized him above all other composers.

Beyond the court Caldara was a founding member and deacon of the Cäcilien-Bündnis, established in Vienna in 1725 for the promotion of sacred music; from further afield members of the Austro-Hungarian nobility commissioned operas and oratorios. Caldara supplied his most notable patron, Prince-Archbishop von Harrach of Salzburg, with a string of operas between 1717 and 1727, cementing a brief acquaintance made *en route* to Vienna in 1716. His more irregular association with Johann Adam von Questenberg at Jaroměřice is not without importance in the history of Moravian music.

Caldara's Viennese output eclipsed that of his contemporaries at court, including the longer-serving Fux. This workload may be reflected in Caldara's abnormally high salary (1600 florins, rising to 2500 within a year and to 3900 in 1729) but it also took its toll artistically and physically. Almost invariably operas and oratorios seem created under intense pressure. The five-act *Enone* was written between 11 and 30 July 1729; four years later Caldara set the first two acts of *Demofoonte* between 16 and 26 September, and the third between 3 and 8 October. Oratorios and operas were usually ready within three to four weeks of performance, but *Ornospade* (1727) was finished only on 13 October for staging on 4 November, and *Don Chisciotte*, completed on 24 January 1727, ran dangerously close to its première on 6 February. Formulaic writing and an absence of revisions in the autograph scores hint at methods of self-preservation; however, Caldara eschewed self-borrowings and made no recourse to the music of other composers.

Caldara died on 28 December 1736 of 'der Gelbsucht und Inner Brand', suggesting physical, if not mental, exhaustion. Within the previous six months he had completed a *solennis* setting of five psalms and a *Magnificat* for the feast of St Peter and St Paul (30 June) and two *opere serie*, *Ciro riconosciuto* (finished on 14 July and staged on 28 August) and *Il Temistocle* (written between mid-September and 5 October and performed on 4 November, the emperor's nameday).

Curiously for such an esteemed composer, Caldara had few acknowledged pupils. G.J. Donberger, Georg Reutter (ii) and V.M. Gurecký are usually so named; C.F. Ritter and possibly F.X. Richter are assumed to have received some instruction from him, as also perhaps did J.D. Zelenka during his time in Vienna in 1717–19.

The deaths of Charles VI (1740) and Fux (1741), soon after Caldara's demise, ended an epoch in the artistic life of the Viennese court. Caldara's operas did not survive their principal patron; his oratorios fared little better. But in the Hofkapelle a considerable portion of his liturgical music, particularly the smaller pieces, was retained until the 1780s. Five masses appeared in a collection printed in Bamberg in 1748 under the title *Chorus musarum divino Apollini accinentium*; monasteries and larger churches in Austria, Bohemia, Moravia and southern Germany still acquired and performed his church music into the next century. For the Romantics, however, Caldara was a 'historical' figure. Some *stile antico* compositions appeared in collections of sacred music devoted to the aesthetics of the Cecilian movement, but on the whole his works circulated only as curiosities among collectors of 'ancient music' and no longer as part of a living repertory. Caldara's gradual rehabilitation during the 20th century may be attributed to a growing number of analytical and biographical studies which, bolstered by several critical editions, have allowed a more accurate assessment of his immense output.

2. Works. Caldara's Venetian and Roman operas stand in a tradition characterized by large numbers of arias variously placed within the scenes. His arias are particularly diverse in length and formal design and, although da capo structures predominate, strophic and through-composed arias are not uncommon. Ritornello construction, the foundation of all Caldara arias, is imaginatively and extensively explored. This, allied with a wealth of instrumental textures (continuo alone, unison strings, strings in three to five parts and in concertino–ripieno groupings, and voice and upper strings in unison), obvious dance influences and a fascination with the instrumental style of the concerto, produces a kaleidoscope of stylistic resource.

In Vienna Caldara set librettos quite different in character and less lavishly endowed with aria texts. Their almost invariable *ABA* verse structure and end-of-scene placings curbed variety in the design as well as in the scope and scale of his aria settings. Nonetheless, every opportunity for a formal musical number was deliberately exploited, whatever the dramatic situation. Charles VI's penchant for 'long and serious' operas was accommodated in streams of predictable da capo structures; the voice was often elaborately accompanied by three- and four-part strings busy in contrapuntal endeavour, while bravura vocal writing, more frequently based on rigid rhythmic patterns than inspired by word or affect, demonstrated the prowess of the court's soloists and confirmed the ceremonial and propagandist roles of imperial opera. Caldara's handling of instruments and voice, and of tonality, harmony and melody is always polished. But despite such emotional highlights as the slow, 'pathetic' arias in which chromatic harmonies and pungent suspensions enrich accompaniments while the voice proceeds in broken affective phrases (e.g. 'Se tutti i mali miei' in *Demofoonte*, 2.vi) or spins effortless bel cantos in the favoured 12/8 sicilianas (e.g. 'Numi, se giuste siete' in *Adriano in Siria*, 1.ii) the ceremonial operas tend to depict characters and moods through stereotyped gestures (especially of heroic and bellicose sentiments) and motifs too often sharing common devices.

Whether in mood, thematic material or instrumental resources, Caldara's overtures are independent of their succeeding operas; the half-dozen *introduzioni* whose third movement becomes the opening aria or chorus of the first act are exceptional. Likewise exceptional among Caldara's usual palette of strings with doubling or independent woodwind is the sumptuous scoring, with two trumpet choirs, of the overtures to seven of the emperor's nameday operas. The majority of overtures to both pre- and post-1716 operas follow a fast–slow–fast plan. There is a marked emphasis on the first allegro, widely varied in formal structure (fugal, ritornello or embryonic sonata form). Brief slow movements serve as links to lightweight binary finales, usually Neapolitan minuets but sometimes vigorous march-like 'arias'. Many operas conclude with perfunctory choruses, suitably moralistic, congratulatory or celebratory. Syllabic homophonic settings for SATB predominate; the structure may be binary (as in the early *L'ingratitudine gastigata*) or, as in most of the Viennese finales, either through-composed

or da capo, and the accompaniment either *colla parte* or independent, sometimes with minute instrumental preludes and/or postludes (as in *Demofoonte*). The dramatic choruses for soldiers, servants, rustics etc. that occur within an act have greater musical status and, when placed in sequence and varied by metre and tonality or juxtaposed with arias or ensembles for the principals, considerable impact.

Caldara's carnival operas and those for Salzburg seem livelier than his court works, possibly because he found the librettos (especially those by G.C. Pasquini) more congenial. Aria scorings are relaxed, textures lightened and structures more varied, while the melodies themselves are fresh and less burdened with extended bravura. The pastorale *Dafne* (1719, Salzburg), *I disingannati* (1729, Vienna) and *Sancio Pansa* (1730, Vienna) continue the early *galant* style of *L'Anagilda* (1711, Rome).

In the oratorios he wrote before 1716 Caldara moved from the relatively impersonal, opera-influenced idiom apparent in those of Venetian (or possibly Mantuan) origin to a more individualistic style in his Roman works rooted in his intensive bout of cantata writing between 1709 and 1716. The change is most obvious in the vocal and instrumental scorings: five-part strings give way to the three-part string band (first and second violins and bass) characteristic of his instrumentally accompanied cantatas; the customary five soloists (usually SSATB) are reduced to SSAA in his last four Roman oratorios. No less noticeable is the shift to a more lyrical style. Melodies, smooth in outline and regularly phrased, are coloured with chromaticisms and teased with suspensions and retardations. Bass lines too are refined, though now perhaps less vigorous, as Caldara moves from the angular dotted-rhythm figures prominent in the earliest works. Aria structures are almost entirely da capo; through-composed arias built on an ostinato figure all but disappear. Ritornellos are integrated rather than closed semi-detached preludes and postludes. The emerging *galant* traits do not weaken the dramatic impact of these oratorios. The economically scored *La rebellione d'Assalonne* (1715) is as compelling as the more luxuriant *Maddalena ai piedi di Cristo* (?1698); Caldara's portrayal of inner conflict and anguish, already acute in his characterization of Maddalena, is no less powerful in his rendering of David or of Absolom.

In the Viennese oratorios the demands of the weightier court style led Caldara to return to four-part strings and a cast of five or six soloists covering the full vocal range. Instrumental scorings become more sonorous; the textures – whether of the almost invariable slow-fast *introduzioni* or of aria accompaniments – are more contrapuntal. Vocal writing, wide in compass and often incorporating convoluted rhythmic figuration and *fioritura* as demanding as any found in the opera arias, is exposed in large-scale structures. All this suggests a composer preoccupied with the individual movement rather than the overall dramatic flow. Even so, the dramatic incidents found in several of the librettos (such as the fall of the city walls in *La caduta di Gerico*, 1719) are vividly set, and brief turba choruses increase the tension of such moments. Caldara's most sustained choral writing, however, occurs in the madrigalesque, moralizing choruses that conclude each of the two parts of every Viennese oratorio. Homophonic and diverse imitative textures are juxtaposed in these multi-sectional choruses, which culminate in extended fugal writing.

Caldara's wide range of obligato instruments lends colour to the court oratorios and further distinguishes them from his pre-1716 repertory. At times the choice is quite literal since the trumpet is mandatory for such texts as 'Dolce suono di trombe' in *Gioseffo* (1726) and 'Risvegliate metalli sonori' in *La caduta* (1719); his more frequent use of the *scialmo*, trombone, bassoon, violin and cello, either singly or in combination – such as the two trombones and bassoon in 'Deh sciogliete' from *Morte e sepoltura di Cristo* (1724) – is usually inspired by the *Affekt* of the text.

Given the relative unimportance of church music in Caldara's output prior to his appointment to the imperial court, his productivity between 1716 and 1736 is remarkable. No less surprising is his immediate fluency in both the concertante style and the unaccompanied, Palestrina-inspired *stile antico* and his competent adoption of the thorough-going contrapuntal textures favoured in Viennese church music. Style and setting in the liturgical repertory were determined by the way that court protocol ranked the feast days of the Church calendar. Consequently Caldara's masses range from the compact, almost *brevis*-like every-day settings epitomized by the Mass in D (a favourite in numerous church and monastic collections), through the extended cantata settings (*Missa dolorosa*, 1732) for feast days of middle rank, to the monumental *solennis* settings usually reserved for the most important feasts of the liturgical calendar. These last settings were enriched with clarinos, trumpets and timpani. The text (especially of the Gloria) was converted into a succession of choruses and arias, the former elaborately contrapuntal, expressively homophonic or pitting concertante soloists against choral responses, the latter often bravura da capo pieces for voice and an obbligato instrument (usually clarino, trombone or violin). The *Missa Laetare* (1729) and *Missa in spei Resurrectionis* (1732) display the general and the specific. Less spectacular but still independent accompaniments for first and second violins and continuo (with cornetto, alto and tenor trombones and bassoon doubling the voices) characterize many of the *missae mediocre*, while *colla parte* scoring of the violins (together with ripieno instrumental doublings) is common in the compact settings.

Caldara's grand manner flows into other liturgical music, notably the *Dixit Dominus* (1726) and *Magnificat* for solo voices, double choir, strings and double trumpet choir. *Te Deum* settings are invariably of the *solennis* variety and employ either single or double choirs of voices and brass instruments. However, most of the offertory and psalm settings (the latter numbering over 100, few of them in cycles) are less lavish. Several psalms are for just two soloists, two violins and continuo, though Caldara can still demand virtuosity from vocalists and instrumentalists alike in these cantata settings. The 33 offertories (most of them written between 1718 and 1720 and representing an early specific assignment for Caldara at Vienna) are noteworthy for their concluding allegro 'Alleluia' sections. These provide a remarkably diverse contrapuntal display whether in metre, subject and counter-subject design, devices or mood. Skills honed here recur time and again in the *de rigeur* fugues of the mass settings (second 'Kyrie', 'Cum sancto Spiritu', 'Et

vitam venturi') as well as in the 'Et in saecula saeculorum' of the Gloria conclusion of the psalms.

Caldara employed the *stile antico* throughout his half-dozen *a capella* masses and other works required for the Advent and Lent seasons. Elsewhere in his liturgical music it is widely used for stylistic contrast in multi-movement compositions. Surface similarities with the Renaissance tradition belie 18th-century flexibility and modernization. Extremes range from the chromatically- enhanced motifs and gripping intensity of *De profundis* (1729) to the simplest of diatonic materials and genteel innocence of the hymn *Ave maris stella* (1728). Caldara was ever aware of his texts. Individual words and phrases may be singled out for musical illustration; areas of text less endowed with verbal images are enveloped in moods created through scoring, tempo, mode and especially dissonance and chromaticism. In the multi-movement mass settings his division of the text is orthodox. His treatment, however, although based on established expectations, is invariably fresh in detail and, in the most solemn movements, of considerable power. The wide variety of means through which he explores the basic affections of 'Qui tollis', 'Et incarnatus est', 'Crucifixus', Benedictus and Agnus Dei constitute a particularly notable contribution to 18th-century settings of the mass.

Although the 12 cantatas op.3 (1699) may hint at a more substantial early involvement with the cantata, the bulk of Caldara's contributions to this genre come from his Roman years. He usually adopted a recitative–aria–recitative–aria (R–A–R–A) plan, sometimes reduced to A–R–A or expanded (in the instrumentally accompanied solo cantatas) to up to ten movements. The two-voice cantatas, always ending in a duet, grow to 16 movements. Small sinfonias, stylistically and structurally influenced by the concerto, preface many of the instrumentally accompanied works. The bass regularly anticipates the vocal line in the continuo cantatas; in the instrumentally accompanied works violins often foreshadow the vocal opening, while the subsidiary ideas which extend the opening ritornello can return as counterpoints to the voice, lending weight, interest and independence to the accompaniments. Caldara's melodic writing is attractive and unpretentious. Regular phrase structures predominate in the allegro arias, often influenced by the gavotte and the Neapolitan minuet; the more flexible phrases of arias in slower tempos allow for affective chromaticisms and, in the continuo cantatas, sympathetic motivic interplay with the bass. The 40 or so Viennese cantatas, which include two sets for bass and continuo and a handful for either soprano or alto and strings, reflect the recitative and aria styles of Caldara's court operas. But the extended da capo structures and vocal gymnastics sit uneasily in this more slender genre. Only the occasional work, such as *Vicino a un rivoletto* (1729) with its obbligato violin in the first aria and cello in the second, recalls the freshness of Caldara's Roman cantatas.

The 13 continuo-accompanied madrigals (or *morali*) for four or five voices are unique in Caldara's output. Written between November 1731 and January 1732, perhaps to a commission, they resemble closely the multi-sectional choruses of the Viennese oratorios. The affections of A.M. Lucchini's sententious texts are keenly observed, and the settings include numerous pictorialisms.

Independent instrumental music diminished in importance during the course of Caldara's career. With his early trio sonata publications, dedicated to eminent north Italians, he followed the accepted route whereby a reputation might be established and a position secured. These works, assuredly crafted on Corellian lines, adopt the usual sequence of tempo-contrasted movements in op.1 and dance movements in op.2; the *da camera* set also has the customary chaconne as the concluding 'sonata'. The four-movement Sinfonia concertata (a concerto grosso for two solo violins) and six of the violin and continuo sonatas (possibly written for his father) may also date from before 1700. Caldara's instrumental swan-song, the 16 cello sonatas which appear unheralded in the summer of 1735, are virtuoso works perhaps reflecting his own performing abilities. They take the cello to the then extremes of its range, explore its cantabile qualities in many of the slow movements and exploit string-crossing techniques, vigorous semiquaver runs and varied articulation patterns in the allegros. Arrangements of oratorio and opera overtures masquerading as sonatas for strings (some with trumpets), quartets and septets (without reference to their origins), together with 22 organ sonatas derived from various mass settings and 12 'sinfonias' which are oratorio *introduzioni* expanded with one or two additional movements of doubtful authenticity, falsely inflate Caldara's instrumental output.

BRIAN W. PRITCHARD

Caldenbach, Christoph. *See* KALDENBACH, CHRISTOPH.

Calderarpa. A HARP-PIANO made by Caldara and Racca.

Calderón de la Barca, Pedro (*b* Viveda, nr Santander, 17 Jan 1600; *d* Madrid, 25 May 1681). Spanish dramatist, poet and librettist. He studied at the Jesuit Colegio Imperial in Madrid (1609–14), at the University of Alcalá de Henares (1614) and at the University of Salamanca (1615–19/20). He was knighted by King Philip IV in 1637 and between 1640 and 1642 fought in two campaigns in the military Order of Santiago during the Catalonian Revolt. In the years between his university studies and his ordination as a Franciscan priest in 1651, Calderón's *comedias* (tragi-comedies in polymetric verse) were performed in the public theatres in Madrid and at court in private performances known as *particulares*. From 1635 Calderón also provided spectacle plays for the court. His early spectacle plays, *El mayor encanto amor* (1635), *Los tres mayores prodigios* (1636) and *Auristela y Lisidante* (1637), included the performance of well-known songs and did not depart from the musical practice already conventional for the Spanish *comedia*. These plays were staged by the Florentine Cosimo Lotti for the king and his court. Calderón's texts, and an important autograph letter in which the dramatist rejected much of Lotti's plan for *El mayor encanto amor*, make clear that from the start Calderón did not follow the Italian artist in thinking of a spectacle play as a static, non-dramatic entertainment after the manner of an *intermedio*.

By the middle of the 17th century Calderón was recognized as the leading and official court dramatist. In 1651, when he became a priest, he ceased writing *comedias* for the public stage in order to devote himself fully to court dramas and *autos sacramentales*; both genres included music in performance. The elaborate dramatic mythological plays he wrote for the court, including *La fiera, el rayo y la piedra* (1652), *Fortunas de Andrómeda y Perseo* (1653), *La estatua de Prometeo* (*c*1670) and *Fieras afemina amor* (1670 or 1672), can be classified as semi-operas, in that they include fully-sung scenes with sung dialogue (and recitative) for the gods and goddesses of antiquity. Other plays, such as the pastoral *Eco y Narciso* (1661), the chivalric *El jardín de Falerina* (often cited as 1648, but probably much later) and *Ni amor se libra de amor* (1662), on the story of Cupid and Psyche, do not contain operatic scenes but employ many songs and instrumental music integral to the plot.

Although a few other dramatists were also writing court plays with extensive musical scenes, Calderón was responsible for the invention of the zarzuela. His first text in this genre was *El laurel de Apolo* of 1657. The composer who collaborated with Calderón and other writers in the development of the court musical plays after 1644 was Juan Hidalgo, harpist and principal composer of secular music at court. Calderón's two opera librettos, *La púrpura de la rosa* (written in 1659 and first performed in 1659 or 1660) and *Celos aun del aire matan* (1660), were first set as fully-sung operas by Juan Hidalgo, although no score survives attributing the music for the 1660 performance to Hidalgo. The surviving score of *La púrpura de la rosa* was prepared for use in Lima in 1701 and it is ascribed to Tomás de Torrejón y Velasco.

Calderón supplied the texts of the allegorical one-act religious plays known as *autos sacramentales*, performed in Madrid from 1648 until his death. These were given annually for the festival of Corpus Christi in open-air performances in city plazas, with costumes and scenery constructed in special large movable carts. The texts of his 80 *autos sacramentales* draw on many sources (the Bible, patristic texts, scholasticism, liturgical tradition, sacred and secular poetry, humanist lore, popular songs and contemporary theatre), whose elements Calderón

treated with exquisite poetic virtuosity in the service of moral and religious dogma. As in the court plays, the *autos sacramentales* were produced with spectacular visual effects and music. While some of the *autos* include elaborately musical scenes like those in the semi-operas (the *autos Andrómeda y Perseo*, *El divino Orfeo* and *El jardín de Falerina*, for example), others call for well-known and popular songs within the practice of the standard secular plays (*comedias*). The music for the Madrid performances of the *autos* was performed by the musicians and singers in the acting troupes, as was the music of the court plays (although continuo players from the court's musical establishment performed in the latter but not in the *autos*). Many composers in addition to Juan Hidalgo composed songs for the *autos*, including Cristóbal Galán, Juan Romero, Gregorio de la Rosa, Juan Serqueira de Lima, Manuel de Villaflor and later José Peyró. In addition to *comedias*, *autos*, court plays and opera librettos, Calderón contributed short comic pieces and skits performed with the *autos* and between the acts of the *comedias*.

LOUISE K. STEIN

Caldwell, John (Anthony) (*b* Bebington, 6 July 1938). English musicologist. He studied the organ at the Matthay

School of Music, Liverpool (FRCO 1957), and music with Westrup and Frank Ll. Harrison at Keble College, Oxford (BA 1960, BMus 1961, MA 1964), taking the DPhil there in 1965 with a transcription of and commentary on a composite manuscript (*GB-Lbl* Add.29996, *c*1548–*c*1650) containing mostly English liturgical organ music. After working as assistant lecturer in music at Bristol University (1963–6), he was a lecturer at the University of Oxford (1966–96) and a Fellow of Keble College (1967–92); he was appointed reader at Oxford in 1996.

Caldwell's main areas of research are English music, particularly of the medieval and Renaissance periods, keyboard music and music theory. His publications include a pioneering study on English keyboard music before 1800 (1973), an authoritative book on editorial practice (1985), the standard reference work on English music until the 18th century (1991), and numerous articles on early keyboard music. He contributed short appendices on the music of *Measure of Measure* and *Love's Labour's Lost* for the Oxford Shakespeare series and has published a number of critical editions of early English music. He has served as general editor of Musica da Camera, Corpus of Early Keyboard Music (from 1982) and Early English Church Music (from 1995), and was co-editor of *Plainsong and Medieval Music*, 1992–6. He also composed the opera-oratorio *Good Friday* (produced in Oxford, February 1998), a semi-staged dramatic work performed in different locations with processions between scenes.

ROSEMARY WILLIAMSON

Caldwell, William (*fl* Maryville, TN, 1834–7). American composer and tune book compiler. He is known to have been associated with Ananias Davisson, at least through his use of *Kentucky Harmony* (1816) and *A Supplement to the Kentucky Harmony* (1820), from both of which he borrowed extensively for his own compilation, *Union Harmony: or Family Musician* (Maryville, TN, 1837). Union Harmony in turn influenced later Tennessee tune books, such as John B. Jackson's *Knoxville Harmony* (1838), Andrew W. Johnson's *American Harmony* (1839), and W.H. and M.L. Swan's *Harp of Columbia* (1848). Caldwell claimed 42 tunes in *Union Harmony*, which he indicated were 'not entirely original' but carried his harmonizations. These tunes are predominantly in the American folk-hymn idiom.

HARRY ESKEW

Calegari. Italian family of musicians. Besides the Calegari family members listed below, there were many other musicians named Calegari, Callegari or Caligari, active in Venice or Padua from the mid-17th century to the 19th and not known to be related. They include the singers Giovanni, a castrato in the S Marco choir who accompanied Cavalli to France in 1660, and the prima donna Isabella, who sang in Venice from about 1705 until 1730. The impresario Matteo, who managed the finances of the Grimani theatres in Venice (1688–1706), is said to have been of Genoese descent. An Antonio Calegari played the violone in the orchestra of S Antonio, Padua, around the beginning of the 18th century. In the early 19th century a Francesco Calegari published much guitar music and gave guitar concerts in Germany. Another Francesco published a method for children, *Elementi generali di musica* (Bologna, 1822, enlarged 2/1828, 3/1836), which Fétis incorrectly attributed to Francesco Antonio Calegari. A Calvi Calegari and one or two composers named Giovanni wrote arias and instrumental music. A Giovanni Calegari was active at the Théâtre-Italien in Paris, visited London and had the title of composer to the Naples court. Several of his works are in the Bibliothèque Nationale. Other pieces that cannot be precisely assigned include settings of Metastasio's cantatas *La primavera* and *La pesca* (Paris, n.d.) and the group of published instrumental pieces wrongly attributed by Eitner to Antonio Calegari: *Cavatina per il clavicembalo*, *Divertissement facile: les deux petites demoiselles*, *Introduction et variations* and *Capriccio e variazioni*.

(1) **Giuseppe Calegari** [Callegari] (*b* Padua, *c*1750; *d* Padua, 1812). Cellist, impresario and composer. He studied the cello with Antonio Vandini (possibly also with Antonio Campioni) and replaced him in the orchestra of

the basilica of S Antonio on 2 June 1770, becoming first cellist by the time of his teacher's death in 1778. Also in 1770 his first dramatic work, a setting of Metastasio's *L'isola disabitata*, an *azione teatrale*, was performed at a private academy in Padua. Between 1777 and 1782 three of his operas were performed at leading houses in Venice and Modena. He served Padua's Teatro Nuovo as impresario intermittently from 1787 until 1801. In August 1792 the Venetian administration prohibited the Teatro Nuovo from functioning during Carnival and spring (when Padua's Teatro Obizzi gave comedies), but by choosing his repertory carefully, however much it reflected a local taste for comic opera, Calegari was able to keep his theatre in a leading position. A contemporary reference (*AMZ*, ii, 1799–1800, 345) to his cello playing suggests that it was one of Padua's chief musical attractions.

WORKS

OPERAS, CANTATAS

(2) **Antonio Calegari** [Callegari] (*b* Padua, 17 Feb 1757; *d* Padua, 22 or 28 July 1828). Composer and theorist, brother of (1) Giuseppe Calegari. He was probably not a nephew of FRANCESCO ANTONIO CALEGARI; nor was he a son of Luigi Calegari (*d* ?1767), whose name has incorrectly been associated with Urbino Cathedral, but a younger son of Angelo Calegari and Anna Albanese, both native to Padua. He was often called 'Il seniore' to distinguish him from his nephew (3) Luigi Antonio Calegari. His musical studies began with Jacopo Scalabrin (called Fantoncino) and possibly Fernando Turrini, and were continued in Venice under Ferdinando Bertoni. He conducted the first performance in Padua of Bertoni's short opera *Orfeo ed Euridice* on 2 May 1776 at the Teatro Obizzi. His earliest surviving work is an oratorio, *La risurrezione di Lazzaro* (1779, Padua). His oratorio for women's voices, *Coronatio Salomonis*, was performed by the choir of the Ospedale degli Incurabili in Venice in 1780. His *Deucalione e Pirra* (1781, Padua), a *festa teatrale*, initiated a series of stage works that established him for several decades as the most popular and respected composer among Paduans. One notable failure, however, was his serious opera *Telemaco in Sicilia*, lavishly staged in 1792 at Padua's Teatro Nuovo. He was music director at the Nuovo from about 1790 until 1796 or later, while his brother Giuseppe was impresario there.

In 1801 Antonio became first organist at the basilica of S Antonio in Padua, where his brother was a cellist; he became *maestro di cappella* there on 14 July 1814. To judge from the many sacred works that he composed for this institution, it is unlikely that the basilica's musical forces were seriously hampered by the suppression of the Order of Minor Conventuals (to which he belonged, according to Tebaldini) that left the basilica's monastery empty from 1814 until 1829. However, his arrangements for two or three-part men's chorus of 15 masses and at least 24 other liturgical works (originally for four-part mixed chorus) by Vallotti, probably indicate the depletion of forces at his disposal on non-festive occasions. As some of his own compositions feature solos for harp, trombone and many other orchestral instruments, it is evident that he used musicians from local theatres on occasion.

Antonio was a respected composition teacher and numbered among his pupils his nephew (3) Luigi Antonio Calegari, Melchiorre Balbi, Pietro Bresciani and G.B. Foresta. He taught the theoretical system associated with his predecessors at the basilica, F.A. Calegari, Vallotti and L.A. Sabbatini, and presented it in his *Trattato del sistema armonico*, published posthumously by Balbi (Padua, 1829, 3/1878). His *Modi generali del canto* (Milan, 1836), a method for teaching elaborate vocal ornamentation, was based on the practices of his close friend, the singer Pacchierotti. It is nearly identical to a manuscript, dated 1809, in the Padua Conservatory library naming Antonio as sole author: *Modi e maniere onde adornare le spogli cantilene opera di Antonio Calegari*. Showing the ornamentation encountered in Antonio's dramatic scores and some of his sacred works, the treatise is the most valuable description known of the highly decorated vocal style that was disappearing at the beginning of the 19th century.

Antonio was already a recognized composer in the learned, sacred musical style in 1791, when he was awarded membership in the Bologna Accademia Filarmonica. However, this reputation was challenged in 1802 after the publication of his *Gioco pittagorico*, a book that purported to be an amusing means whereby the musically illiterate amateur could compose simple pieces by combining short musical phrases in up to 1400 different ways according to the throws of dice. Published in both Venice and Padua (1801, 1802), it provoked several published letters and was republished twice in French translation as *L'art de composer la musique sans en connaître les élémens* (Paris, 1802, 1803). Its dedication to Joséphine Bonaparte undoubtedly prompted the often cited, but groundless, conjecture that Antonio visited Paris.

WORKS

OPERAS, ORATORIOS AND CANTATAS

La risurrezione di Lazzaro (orat), 4vv, orch, Padua, 26 March 1779, *I-Pca*
Alessandro nell'Indie (dramma per musica, 3, P. Metastasio), Verona, Filarmonico, carn. 1779

(3) Luigi Antonio Calegari (*b* Padua, *c*1780; *d* Venice, 1849). Composer, nephew of (2) Antonio Calegari and possibly a son of (1) Giuseppe Calegari. He was a pupil of his uncle Antonio and he is also said to have studied with Giuseppe. His first opera, *Il matrimonio scoperto*, was staged with considerable success in both Padua and Venice in 1804. It was followed by seven others produced in those cities, Parma and Rome. *Amor soldato* of 1807, his most successful comic opera, was revived in Padua (1809), Trieste (1812) and Venice (1812), where, according to the *Allgemeine musikalische Zeitung* (xiv, 1812, 61), it was received with enthusiasm. Of much greater interest is his setting of Alfieri's tragedy *Saul*, performed privately in Venice in 1821. Its accompaniment consisted of two pianos, one of which was a 'forte piano organistico' built by Gregorio Tretin. The composer played this instrument as he conducted the five solo singers (including Nicola Vaccai) and a large chorus. He is later said to have retired from music for a government post in Milan. The Luigi Calegari appointed music teacher at Urbino Cathedral on 11 September 1807 was probably a different person.

SVEN HANSELL

Calegari, Cornelia. *See* CALEGARI, MARIA CATTARINA.

Calegari [Callegari, Caligari], **Francesco Antonio** (*b* Venice, 1656; *d* Venice, 12 Nov 1742). Italian composer and theorist. He took his vows as a Franciscan at the convent of Palma del Friuli in Venice, and earned the bachelor's degree at the Franciscan seminary in Assisi; he then studied counterpoint with Lotti. On 1 September 1700 he was elected *maestro di cappella* of S Francesco in Bologna. He later held the same position at S Maria Gloriosa dei Frari in Venice from 1701 to 1703, and at the basilica of S Antonio in Padua from 3 May 1703 until 5 April 1727. He exchanged posts with Giuseppe Antonio Rinaldi, *maestro di cappella* at the Frari (1715–27), and thus returned to the Frari to spend his last years. During his lifetime Calegari was well known for his music and his extensive knowledge of music theory. Benedetto Marcello sent Calegari his psalms *Estro poetico-armonico* and his *Trattato teorico musico* for criticism; Calegari's letters of critique (1724 and 1726) were published with the psalms.

Calegari expounded the theory of the inversion of chords a little before Rameau, as is clearly shown in the figured bass of a Kyrie dated 1721. Unlike Rameau's theories, however, Calegari's were never published; they therefore exerted only a local influence, mostly on his pupils, among whom was Francesco Antonio Vallotti. These composers, especially Calegari himself, employed inversions of dissonant chords to such an extent that they were referred to as the 'Scuola dei rivolti'; their rules were rationally explained by Giordano Riccati in a short treatise published in 1762. Calegari's most important theoretical treatise is *Ampla dimostrazione degli armoniali musicali tuoni* (1732), which contains several novel and unique concepts, among them an unusual treatment of dissonance. When writing a figured bass, Calegari explained, a composer might use the numbers 2, 4 and 6 for convenience, but the performer should understand that they represent the dissonances of 9th, 11th and 13th respectively. Calegari's harmonic vocabulary does indeed include chords of the 9th, 11th, 13th and 14th, and he showed remarkable skill in inverting them. He did not, however, show how the figures in his music examples should be realized. In ex.1 it is not clear whether the

Ex.1 *Ampla dimostrazione*, f. 83*r* and f. 111*r*

player should realize all the figuresor, if so, whether they were to be played strictly in the given vertical order. Calegari's early music often has a light-textured basso continuo style. But as he studied the music of Palestrina,

Ex.2

and as his own theories developed, his music took on a fuller, more elaborate polyphonic sonority, for which he often used as many as eight parts. These later works show how Calegari handled some of the dissonances in question. Ex.2 (from the psalms for Terce, 1731) shows a striking dissonance where the first soprano enters after a rest, sounding the note of resolution against a suspension in the second soprano. Unlike many theorists of his day, Calegari never referred in his writings to acoustics or mathematics.

Calegari, Isabella. *See* ISABELLA LEONARDA.

Calegari, Maria Cattarina [Cornelia] (*b* Bergamo, 1644; *d* Milan, after 1675). Italian composer. She was well known as a singer in her native city but on 19 April 1661 she took final vows at the Benedictine house of S Margarita in Milan. Maria Cattarina was her religious name. Armellini's account of her early death is inaccurate, since she is listed at this monastery into the 1670s. Calvi mentioned that her *Motetti à voce sola* was printed in Bergamo in 1659; no trace of this collection survives, nor of the madrigals, six-voice Masses and Vespers that Calvi reported she had composed. The disappearance of her music may have resulted from her conflicts with S Margarita over her spiritual dowry as well as from Archbishop Alfonso Litta's musical restrictions at the monastery in the 1660s.

ROBERT L. KENDRICK

Calenda. A 17th-century villancico written to be sung on Christmas Eve at the traditional reading of Christ's genealogy. The name itself refers to the section of the Catholic martyrology listing the names and acts of saints, but all surviving villancicos bearing this name seem to be for Christmas. One of these is included in each of the eight cycles of villancicos by the Puebla *maestro de capilla* Juan Gutiérrez de Padilla dating from the 1650s (*see* VILLANCICO, §3). The title 'calenda' has sometimes been used to describe an energetic dance of black Americans (*see* CALINDA).

E. THOMAS STANFORD

Calés (Otero), Francisco (*b* Madrid, 12 Feb 1925; *d* Villa del Prado, 10 Aug 1985). Spanish composer and teacher. He entered the Madrid Conservatory in 1940, where he trained, initially under the guidance of his father, Francisco Calés Pina, in harmony, composition, counterpoint and fugue. At the same time he studied at university, taking a degree in law. In 1947 he was appointed at the conservatory as an assistant professor in solfège and theory (made permanent in 1949), and he became head of the department of counterpoint and fugue in 1954. As director of the conservatory he taught several of the Generación del 51. His emphasis on traditional counterpoint can be seen in his *Tratado de contrapunto* (Madrid, 1997), while his influence as a teacher is demonstrated by the works presented in his honour by his pupils Carlos Galán, Polo Vallejo, Mercedes Padilla, José Luis Turina, Sebastián Mariné, Jesús Villa Rojo, Carmelo Alonso Bernaola, Antón García Abril and Agustín González Acilu at the Madrid Conservatory on 17 April 1986, which highlighted the great diversity of languages developed from the common beginnings of Calés's teaching. He won several prizes for his compositions.

MARTA CURESES

Calestani, Girolamo (*b* Lucca; *fl* 1603). Italian composer. He may have been related to Vincenzo Calestani. He is known only by a volume of eight-part *Sacri fiori musicali* op.2 (Parma, 1603), which includes a *Te Deum* for two four-part *cori spezzati* with instruments and continuo.

Calestani, Vincenzo [Vincenzio] (*b* Lucca, 10 March 1589; *d* in or after 1617). Italian composer. He may have been related to Girolamo Calestani. He lived in Pisa, where he taught music to Isabella Mastiani, a member of a leading family there. She had sung his songs while he accompanied her, as he explained when dedicating to her (under her married name) his only known volume, *Madrigali et arie … parto primo*, for one and two voices and continuo (Venice, 1617[12]; facs. in ISS, ii, 41–92; 2 solo songs in K. Jeppesen: *La flora*, Copenhagen, 1949, i, iii; 2 in Aldrich; 1 in Leopold; 1 duet in Whenham). He may have had connections with the Medici court and more probably with the Cavalieri di S Stefano at Pisa, since he included in his volume pieces by Antonio Brunelli and Giovanni Bettini, who worked for the knights, and by Giovanni Del Turco, who was one of the knights himself, as well as a duet of his own, *Vagheggiando le bell'onde* (ed. in Whenham), described as 'Scherzo sopra il tamburo alla turchesca', possibly referring to the knights' Turkish exploits.

Calestani's volume, which contains 25 solos and three duets of his own, is one of the most attractive and varied Italian songbooks of the early 17th century. In the madrigals, which are distinguished by expansive declamation and pliable rhythms, he shows a real feeling for form: a piece such as *Arde, misera, il core*, which exhibits

all these qualities, is an excellent example of a solo madrigal. In rather duller music Calestani demonstrates two ways of setting ottavas. A few of the strophic songs show the influence of dance music; for example, the music of *Io pur deggio partire* in galliard rhythm, is turned into a corrente in the ensuing *Accorta lusinghiera* (both ed. in Aldrich; the latter also in Jeppesen, op. cit., i, p.17). Like most of the strophic songs here they also include ritornellos that are variations on the songs themselves. These pieces are attractive enough, but they are surpassed by *Damigella, Tutta bella* (ed. in Fortune, 1953 and 1968/*R*, and in Leopold), which is in hemiola rhythm and is one of the catchiest songs of its time, and by *Folgorate, Saettate* (ed. in Fortune, 1968/*R*), which is probably the first song to herald the later transformation of the short strophic song into the sensuous, broader and more sophisticated aria of the later 17th-century cantata. The many corrections to the copy of Calestani's book in the Biblioteca Nazionale Centrale, Florence (the one used for the facs. in ISS, ii) are probably in his own hand. Brunelli included a song by him in his *Scherzi, arie, canzonette e madrigali* (Venice, 1614[14]), and there are two responsories by him (RISM 1612[2]).

Caletti [Caletto], **(Pietro) Francesco.** *See* CAVALLI, FRANCESCO.

Caletti [Caletto, Caletti di Bruno], **Giovanni Battista** (*b* Crema, 26 March 1577; *d* ?Crema, in or shortly before 1642). Italian composer and organist, father of Francesco Cavalli. He was *maestro di cappella* of Crema Cathedral, probably from the late 1590s and certainly by 1604, and he seems also to have been organist there. He published *Madrigali a cinque voci … libro primo* (Venice, 1604[16]; 1 ed. in *Mostra bibliografica*), which also includes an eight-voice piece in three *partes*. There are also two pieces by him in *Il primo libro de'madrigali a cinque voci* (Venice, 1617[15]) by his pupil G.B. Leonetti; one of them is a seven-voice *balletto pastorale* in honour of Federico Cavalli, Venetian governor of Crema from July 1614 to March 1616, whose name Caletti's celebrated son later took.

THOMAS WALKER

Calì, Giovan Battista (*b* Licata, Sicily, ?*c*1590; *d* after 1605). Italian composer. He published *Il primo libro di ricercari a due voci* (Venice, 1605[17]; ed. in MRS, ii, 1971); the title-page gives his birthplace and indicates that he was a pupil of Antonio Il Verso, and in the dedication, addressed from Palermo to his fellow pupil Antonio Formica, he explains that this was his first music. The collection, which also includes a four-part piece by Calì as well as two duets by Il Verso and one by his finest pupil, Giuseppe Palazzotto e Tagliavia, is the equivalent in the third generation of the Sicilian polyphonic school of the books of two-part music published in the preceding generations by Il Verso (in 1596) and by the latter's teacher, Pietro Vinci (in 1560). The lightness and the characteristic opening rhythm of these instrumental pieces come from the *canzon francese*. The themes are melodic cells determined by the harmony; they occasionally assume distinctive rhythmic patterns, only to dissolve into rapid chains of quavers.

PAOLO EMILIO CARAPEZZA, GIUSEPPE COLLISANI

Calichon [mandora, gallichon]. A type of bass lute used for continuo accompaniment and solos from the late 17th century to the mid-18th century, especially in Germany and Austria. The range of various spellings (*gallichona, Gallischon, Gallischona, gallichone, gallichane, galizona, galizono, galiziono, gallicono, calichon, colachon, caliciono, colocion, calachon, calcedon, calzedono, callezono*) indicates a wide diffusion of the instrument. The term MANDORA, which came into fashion at about the same time, was used to describe the same instrument or a smaller version of it: it seems that until about 1740 the term 'calichon' and its variants was used for the larger continuo instrument tuned in A, and the name Mandora reserved for a smaller instrument tuned a 4th higher, in D. However, in many cases both names were used indiscriminately for the smaller instrument; similarly, the same piece sometimes appears in tablatures assigned variously to the calichon or the MANDORE (a term usually applied to a type of small lute found in 16th- and 17th-century France). 'Calichon' and its variants finally disappeared in the second half of the 18th century, whereas 'Mandora' continued in use into the 19th century. The similarity of names notwithstanding, the calichon must be clearly distinguished from the COLASCIONE, a long-necked, two- or three-string Italian instrument.

The calichon is usually in the form of a six-course lute, with five double courses and a single chantarelle. It seems likely that the earlier form was tuned *C–D–G–c–e–a*, a tuning identical with that of the English bandora, and implying a lute of large dimensions. James Talbot (MS, *c*1685–1701, *GB-Och*) described the *colachon* owned by Gottfried Finger as such an instrument. T.B. Janovka (*Clavis ad thesaurum magnae artis musicae*, Prague, 1701/*R*) emphasises the usefulness of this type in continuo-playing. A manuscript in Brno (early 18th-century, *CZ-Bm*, D 189) documents two five-course *callezono* tunings: *D–G–c–e–a* and *C–F–A–d–g*. Janovka also mentions an eight-course type tuned *A–B* (or *B♭*)*–C–D–G–c–e–a*and notes that the *galizona* or *colachon* can also be single-strung.

The use of this earlier type of calichon as a continuo instrument is confirmed in various sources; it is specifically scored in operas by J.S. Kusser and Reinhard Keiser, and mentioned in texts by Kuhnau, Mattheson, Baron and others (see Lück, 1960). Unfortunately, no such instrument seems to have survived intact.

The smaller form of the calichon (also called mandora) was usually tuned *F–G–c–f–a–d′*. The lowest course could be retuned to *E♭*, *D* or *C* according to the key of the piece that was to be performed. Furthermore, the Brno manuscript mentioned above describes a *Callezono ad modum Violae di Gamb* (the same tuning as a bass viol), *D–G–c–e–a–d′*. This tuning is confirmed by Beyer (1703) and Eisel (1738). The several calichon manuscripts in Dresden (*D-Dl*) show some more unusual variant tunings (*D–G–c–f♯–a–d′*, *D–F♯–A–e–a–d′*, and *E♭–G–B–f–b♭–e♭*), while a manuscript in Donaueschingen (1735, *D-DO* Ms.ms. 1272) contains pieces for the tuning *E–A–B–e–a–c♯′*.

Besides its employment as a continuo instrument, solo and chamber music for this type of calichon also survives in manuscript. The notation is in French lute tablature (*see* TABLATURE, §3(iv)) with the usual ornamentation signs, and the playing technique is also derived from the lute. While most of the pieces are anonymous, 18 suites for 'Gallichone' by G.A. Brescianello, and several chamber works for 'Gallichona' and other instruments by Johann Paul Schiffelholz are in the Sächsische Landesbibliothek, Dresden, and some pieces by P.C. von Camerloher are in Metten Abbey. 114 manuscript tablatures for calichon or mandora have so far been discovered.

So many instruments of the smaller type have been preserved that it may be concluded that in some regions the calichon was more prevalent than the Baroque lute. Outwardly the surviving instruments resemble the Renaissance lute. The body practically always consists of nine ribs, the pegbox is usually angled back from the neck and carries a bracket for the chantarelle. The most prominent of the 30-or-so builders whose instruments have been preserved is G.F. Wenger (*b* Vienna 1681; *d* Augsburg, 1767). (For illustration *see* MANDORA.)

DIETER KIRSCH

Califano, Giovanni Battista (*b* ?Naples, ?*c*1550–60; *d* ?Naples, before 1601). Italian composer. He may have been related to Michele Califano 'de Napoli', who in 1567 published a book of three-voice canzonettas.

The dedication of G.B. Califano's *Primo libro de madrigali* for five voices (Venice, 1584) is dated Naples, 15 August 1584. Included in it is an ottava stanza praising Carlo Tappia (*c*1565–1644), a brilliant young lawyer and later an important government official in the Kingdom of Naples, whom Califano may have known. According to Fétis, Califano was an organist in Venice at the church of S Nicolò da Tolentino, constructed 1591–1601; however, he is listed among dead Neapolitan composers in Cerreto's *Della prattica musica* (1601).

Califano was progressive neither in musical style nor in his choice of poetry. His madrigals, to poems by Petrarch (eight), Vincenzo Quirino, Francesco Coppetta and Sannazaro (one each), make little or no use of those features characteristic of the *seconda pratica* works of Cipriano de Rore, Giaches de Wert or Luzzasco Luzzaschi. Small chordal phrases are repeated in different registers but without the finesse of Andrea Gabrieli. Imitated motifs are often combined in staggered parallel 5ths or octaves. Although chromaticism is rare in these pieces, coloration occurs frequently as a madrigalism.

KEITH A. LARSON

California mission music. The colonization of Alta California (now the state of California, begun in 1769 by Franciscan missionaries, resulted in the establishment of a chain of 21 missions (the first of which was at San Diego) by 1823. These missions, each centred on a church, were the most prosperous and populated settlements in northern New Spain. Every one had a library and undertook the schooling of Indian residents. Collections of string, woodwind, brass and percussion instruments were amassed at each mission. Choirs and orchestras, some of significant size, were trained, often to a level of considerable proficiency. The surviving sacred-music manuscripts constitute the most extensive and diverse body of plainchant and polyphony from any of Spain's colonies in the contiguous 48 states. Research has shown that much of the polyphonic music was brought to California from Spain and Mexico.

Plainchant, transmitted to the missions in the form of printed music books, missals and manuals, was the usual musical vehicle for Catholic worship throughout California. Performed at first by Franciscans stationed at the missions, it was soon taken up by choirs of Indians. Polyphonic sacred music was also widely used, and more than 30 manuscripts and fragments survive containing one or more polyphonic settings of the Mass Ordinary. The various extant masses range from two-voice works in unrelieved parallel 3rds, such as the *Misa viscaína*, through homophonic four-voice ones with instrumental preludes and interludes (*Misa de los angeles*, Mass in the 5th Tone) to four- and eight- voice concerted works for soloists, chorus and orchestra by Ignacio Jerusalem and F.J. García Fajer. Polyphony was also widely cultivated in other services, especially Vespers and Tierce for patronal feasts and for the dedication of a church; there are polyphonic psalms and *Magnificat* settings that resemble *falsobordone* settings known from Spain and Italy. The Mass for the Dead is prominently placed in many manuscripts, and a number of sources contain a polyphonic Requiem in one of two arrangements (for three or four voices) brought from Majorca to California by J.B. Sancho. One unique manuscript source contains

polyphony for the Office of the Dead in a style reminiscent of the simpler polyphonic masses.

A great deal of devotional polyphony with Spanish texts is also extant, much of it for two, three and four voices in a simple homophonic style with some or all voices moving in parallel 3rds. This music, which often presents translations of such well-known prayers as *Pater noster* and *Salve regina*, was used during processions, recitation of the doctrina or the Rosary, and Benediction. In all, more than 200 individual polyphonic works with sacred texts survive from California and testify to the richness and diversity of the musical culture of the mission communities.

Secular music in the form of dance-tunes and folksongs was widely used at the missions by both Indians and Spaniards, but only one manuscript source survives. It is known also that a number of tunes of English, Irish and French origin gained currency in California, having been transmitted to this distant region on cylinders used in barrel organs left by merchant ships.

The most indefatigable of the Franciscan musicians working in California was Narciso Durán, who arrived in 1806 and by 1813 had begun producing large-format choirbooks for his orchestras and choirs. His own dated copy of one of these manuscripts, containing an important preface that sets forth his views on how music should be taught to the Indians, is extant. At least another ten surviving manuscripts and fragments show the influence of Durán's pedagogical principles. Felipe Arroyo de la Cuesta, a student of native Californian languages, compiled at least one manuscript setting texts in the Mutsun Indian language. José Viader and Estevan Tapís were each associated with an important manuscript, now in the Santa Clara University Archive and the Mission San Juan Bautista. Florencio Ibáñez and J.B. Sancho had formal musical training and also served as choirmasters in their Spanish convents, Ibáñez at Zaragoza and Calatayud. He arrived in California in 1801 and compiled at least one music manuscript at Mission Santa Clara as well as writing a *Pastorela* that was produced widely throughout California.

Sancho, who served for 28 years at Mission San Antonio de Padua, arrived in 1804 from Palma, Mallorca, bringing a large amount of music (more than 100 pages containing works that he himself had copied). He also owned at least one other manuscript containing a trilingual *dal segno* aria with orchestral accompaniment that began life in a setting by an unknown composer of Metastasio's *Artaserse*. Converted to sacred use by the imposition of two contrafactum texts, this aria could function both as a solo setting of the psalm for Vespers of a Martyr Bishop and as an extra-liturgical devotional work for feasts relating to the Precious Blood of Christ. It was probably Sancho who brought the copies of four orchestral masses, two by Jerusalem (*maestro de capilla* at Mexico City Cathedral, 1749–69), one by García Fajer and a fourth by an unknown composer, to California. Sancho's own manuscripts reveal him to have been a skilled keyboard player with a special aptitude in figured bass. His manuscripts contain the figured bass parts (all that survives) of the only two villancicos now known to have been performed in Spanish California.

Calkin. English family of musicians. Many of them had connections with the Philharmonic Society and the Society of British Musicians.

(1) Joseph Calkin (i) (*b* London, 10 Jan 1781; *d* London, 31 Dec 1846). Violinist and viola player. The son of Joseph and Mary Calkin, he had violin lessons from Thomas Lyon and Paolo Spagnoletti before gaining a position in the Drury Lane orchestra (1798–1808). He later played the violin, viola and sometimes the cello in several London orchestras, appearing at the King's Theatre, the Concert of Ancient Music, the Vocal Concerts and the Philharmonic Society; in 1821 he became a member of the King's band. In 1813 he married into the family of the bookseller and founder of the Western Madrigal Society, George William Budd (1806–50), and by 1828 was in business with him at 118 Pall Mall, London. The firm, Calkin & Budd, specialized in antiquarian music-selling and flourished until 1852. From 1819 until his death Calkin was also the librarian of the Philharmonic Society.

(2) James Calkin (*b* London, 19 Sept 1786; *d* Camden Town, London, 18 Jan 1862). Violinist, organist and composer, brother of (1) Joseph Calkin. His brother first taught him the violin. At the age of 13 he was apprenticed to Thomas Lyon, studying the violin, cello, piano and thoroughbass. By 1807 he was playing the violin, viola and cello in the orchestras at Drury Lane and Covent Garden. In 1823 he was elected an associate member of the Philharmonic Society, later becoming a director. He was organist of Regent Square Chapel, Gray's Inn Road

(from 1824), and a member of the management committee of the Society of British Musicians. He was reputed to be a devoted teacher. Most of Calkin's published compositions are piano pieces and songs. He also wrote a symphony (rehearsed by the Philharmonic Society orchestra in 1819) and two string quartets: the second, in a *brillant* idiom, was dedicated to Nicolas Mori and first performed at the British Concerts in 1823. Calkin's four-part madrigal *When Cloris weeps* was awarded a prize by the Western Madrigal Society in 1846.

His brother Samuel Calkin (*b* London, 3 Sept 1792; *d* Lenton, Notts., 31 Jan 1869) played the violin and viola in the orchestras of the Drury Lane and Haymarket theatres and for the Covent Garden oratorios. William Calkin (*b* London, 5 Sept 1796; *d* Arundel, Sussex, 29 April 1849), another brother, began his career playing the violin and cello in the Drury Lane orchestra, but by 1837 was organist at St Nicholas, Arundel; he also served the Duke of Richmond as organist for the county of Sussex.

Four of James Calkin's sons were musicians: James Joseph Calkin (*b* London, 8 April 1813; *d* London, 11 Oct 1868), who played the violin at the Covent Garden and Drury Lane theatres before gaining a position in the Philharmonic Society orchestra; (3) Joseph Calkin (ii); (4) John Baptiste Calkin and (5) George Calkin. A Miss Calkin (possibly his daughter) appeared frequently as a pianist at the Society of British Musicians' concerts in the 1840s. Other family members include Samuel Calkin's sons Pierre-Jacques-Piotry Calkin (*b* London, 2 March 1831; *d* London, 30 March 1894), a violinist and viola player, and Joseph George Calkin (*fl* 1849–66), a dancer who began his career apprenticed to his uncle, the bookseller (1) Joseph Calkin (i).

(3) **Joseph Calkin (ii)** [Joseph Tennielli; Tennielli] (*b* London, 13 Jan 1816; *d* London, 6 June 1874). Tenor, son of (2) James Calkin. He took the name Tennielli from his mother Victoire Calkin (née Tenniel). He studied in Milan with Francesco Lamperti, then returned to London where he sang at the Philharmonic Society, the Society of British Musicians and in other concerts. He also worked as a singing teacher and composed a few songs. He was a director of the Philharmonic Society, 1854–68, and served as its co-treasurer in 1872.

(4) **John Baptiste Calkin** (*b* London, 16 March 1827; *d* Hornsey, London, 15 April 1905). Composer and organist, son of (2) James Calkin. He learned the organ from his father and served as organist, preceptor and choirmaster at St Columba's College in Ireland from 1846 to 1853. On his return to London he became organist at Woburn Chapel (1853–7); appointments followed at Camden Road Chapel (1863–8) and St Thomas's, Camden Town (1870–84). He was a member of the Philharmonic Society and later (1867–8) a director; he also served on the council of the Trinity College of Music (1881–91) and taught the piano at the GSM (1883–1905). A prolific composer, he wrote church music, piano pieces, songs and chamber works. His anthems and services, in particular, gained wide acceptance.

(5) **George Calkin** (*b* St Pancras, London, 10 Aug 1829; *d* Hampstead, London, 13 July 1911). Cellist, organist and composer, son of (2) James Calkin. By 1852 he was engaged as a cellist in London at the Italian Opera, Drury Lane theatre, Philharmonic Society concerts and in provincial festivals. According to Brown and Stratton, he was organist at St Mark's, Regent's Park, for 25 years, taught at the London Academy of Music (founded by Henry Wylde, 1861) and conducted choral concerts at Vestry Hall, Hampstead. He was active as a composer from 1866 to 1895; among his compositions were 16 books of organ voluntaries and several short piano pieces. His organ transcriptions of Mendelssohn's music, including items from *Elijah*, *St Paul* and chamber works, were published by Novello (1864–94).

CHRISTINA BASHFORD

Call, Leonhard von (*b* Eppan [now Appiano], 19 March 1767; *d* Vienna, 19 Feb 1815). Austrian composer. He was employed as a liquidator's assistant in the Vienna court treasury and was active as a guitarist and composer, his works appearing in the Viennese publishing houses from 1802. His instrumental works suited the tastes and demands of amateur musicians who wanted pleasant chamber music that could be performed easily. Apart from songs with guitar or piano accompaniment (in a few cases, with string or wind accompaniment), he wrote collections of male choruses which contributed significantly to the early history of the genre.

WORKS

Vocal: partsongs, 3–4 male vv; songs, 1–3vv, pf/gui
Chbr (for various combinations of fl, gui, vn, va, vc, bn, pf): 2 sextets, 4 qnts, 14 qts, 34 trios, 52 duos
Solo: 12 works for fl, gui, pf

Callado, Joaquim Antônio de Silva. *See* CALADO, JOAQUIM ANTÔNIO DE SILVA.

Callas [Kalogeropoulou], **(Cecilia Sophia Anna) Maria** (*b* New York, 2 Dec 1923; *d* Paris, 16 Sept 1977). Greek soprano. She was American by birth and early upbringing, and Italian by career and by marriage to G.B. Meneghini, whose surname she incorporated with her own during the period of her marriage (1949–59). In 1937 she left the USA for Greece and in 1940 became a pupil of the well-known soprano Elvira de Hidalgo at the Athens Conservatory. Two years later she sang Tosca in Athens (27 August 1942), and went on to appear, in 1944, as Santuzza, Marta (in d'Albert's *Tiefland*), and Leonore (*Fidelio*). Returning to New York with her parents in 1945, she was heard by former tenor Giovanni Zenatello, who engaged her for Ponchielli's *La Gioconda* in Verona. This successful appearance (2 August 1947) under Serafin was the start of her real career and she was soon in demand in Italian theatres for such heavy roles as Aida, Turandot, Isolde, Kundry and Brünnhilde. A rare versatility was shown in Venice in 1949 when, only three days after singing a *Walküre* Brünnhilde, she deputized for an indisposed colleague in the florid bel canto role of Elvira

in Bellini's *I puritani*. Thereafter, under the guidance of Serafin, she gradually relinquished her heavier roles in order to concentrate on the earlier Italian operas. Besides adding to her repertory Bellini's Amina, Donizetti's Lucia and Verdi's Leonora (*Il trovatore*), Violetta and Gilda, she was in constant demand whenever rare and vocally taxing operas of the older school were produced, such as Haydn's *L'anima del filosofo* (in its world première, 1951, Florence), Gluck's *Alceste* and *Iphigénie en Tauride*, Cherubini's *Médée*, Spontini's *La vestale*, Rossini's *Armida* and *Il turco in Italia*, Donizetti's *Anna Bolena* and *Poliuto*, and Bellini's *Il pirata*. Her greatest triumphs were won as Norma, Medea, Anne Boleyn, Lucia, Verdi's Lady Macbeth and Violetta, and Tosca. Many of these roles she repeated in the major opera houses of the world, where her fame reached a level that recalled the careers of Caruso and Chaliapin.

Callas first appeared at La Scala as Aida (12 April 1950); her débuts at Covent Garden (8 November 1952), the Lyric Theatre of Chicago (1 November 1954) and at the Metropolitan (29 October 1956) were as Norma. Her relations with the Bing regime at the Metropolitan were uneasy, and the same could unfortunately be said, in latter days, of those with the Rome Opera and La Scala. Nevertheless, sensational publicity suggesting that she was a difficult and jealous colleague was an accusation resented by many of those who worked with her most closely. The truth was probably that an exacting, self-critical temperament coupled with recurrent vocal troubles often forced her into a difficult choice between withdrawal from contractual engagements and singing below her best form. Whether her vocal problems (inequality of registers, harshness in the middle voice and tremolo on sustained high notes) were mainly due to inadequate training or to some physical intractability remains uncertain.

Of Callas's artistic pre-eminence there can be no doubt. Among her contemporaries she had the deepest comprehension of the Classical Italian style, the most musical instincts and the most intelligent approach. There was authority in all that she did on the stage and in every phrase that she uttered. Her voice, especially during the early 1950s, was in itself an impressive instrument, with its penetrating individual quality, its rich variety of colour and its great agility in florid music. During the 1960s Callas's growing vocal troubles led to her gradual withdrawal from the stage; after her last operatic appearance (at Covent Garden, as Tosca, on 5 July 1965) she made only sporadic returns to the concert stage (in 1973–4) and organized some masterclasses. Fortunately, numerous recordings, notably her Tosca with de Sabata, her Violetta with Franco Ghione, her Butterfly and her Lucia (both with Karajan), remain to show that her technical defects were outweighed by her genius as an interpreter.

Maria Callas as Leonora in Verdi's 'Il trovatore'

DESMOND SHAWE-TAYLOR

Callaway, Sir **Frank Adams** (*b* Timaru, New Zealand, 16 May 1919). New Zealand conductor, educationist and administrator, resident in Australia. He studied in Dunedin, Otago (MusB 1946) and London, where he won composition prizes at the RAM (1948). He played both the violin and bassoon in his early years, but decided to devote himself to fostering national and international cooperation in music education, working at all levels from pre-school to advanced and adult education. He taught in Dunedin from 1942 to 1953, when he settled in Perth. He was foundation professor and head of the department of music at the University of Western Australia from 1959 to 1984 and, despite the geographical isolation, built up a team of dedicated specialists. In 1967 he founded two successful periodicals: the *Australian Journal of Music Education*, the official organ of the Australian Society for Music Education, and *Studies in Music*, an annual musicological journal. In 1958 he became a member of the board of the ISME, and served as its

president (1968–82); he edited its journal, the *International Journal of Music Education*, from 1982 to 1985. In recognition of his services to music and education he was made Knight Bachelor (1971) and was awarded the CMG (1975) and the OBE (1981); he received honorary doctorates from the University of Western Australia (1975) and the University of Melbourne (1982). In 1975 he was elected to the executive committee of the International Music Council. In 1995 the Callaway International Resource Centre for Music Education (CIRCME) and the Frank Callaway Foundation for Music at the University of Western Australia were founded, for which he serves as consultant. His publications include many papers on music education, and he is co-editor with David Tunley of *Australian Composition in the Twentieth Century* (New York, 1978); he also edited a Festschrift in honour of Tunley (Nedlands, 1995).

WERNER GALLUSSER

Callcott, John Wall (*b* Kensington, London, 20 Nov 1766; *d* Bristol, 15 May 1821). English composer and theorist. Entering music as a largely self-taught amateur, he became a popular glee composer and a respected authority on music theory.

He was the son of a builder, Thomas Callcott, by his second wife, Charlotte Wall, and was educated at a private school by William Young; he was a brilliant student of classics, Hebrew and philosophy. Until he was 13 it was planned that he should become a surgeon, but he was so disgusted by witnessing an operation that he gave up this idea. He had learnt something of music from Henry Whitney, organist of Kensington parish church, and he began to practise the organ seriously while continuing to pursue, untaught, the study of languages and mathematics. He also learnt to play the clarinet and the oboe, and began to compose. In 1782 he became acquainted with Samuel Arnold and Benjamin Cooke, who encouraged him to enter the profession; the next year he became assistant organist of St George's, Bloomsbury. Through Cooke he was admitted as a 'supernumerary hautboy' at the concerts of the Academy of Ancient Music. From this time onwards his efforts in composition were mainly devoted to the glee. His first glee, *O sovereign of the willing soul*, was an unsuccessful candidate for the Catch Club prize in 1784, but in the following year he carried off three of the four prizes, for a catch, a canon and a glee. This remarkable success secured his reputation as a composer. He was awarded the BMus degree at Oxford on 4 July 1785, his exercise being a setting of Warton's *Ode to Fancy*. Several other odes, and his oratorio *Elijah*, date from this period. In the next ten years he composed a very large number of glees and other partsongs, possibly more than 200. He virtually monopolized the Catch Club's annual prizes, which may explain the club's decision to abolish them after 1793. 64 of his compositions are among the collection of pieces submitted for the prize contests. He was active, with Arnold and others, in the formation of the Glee Club in 1787.

In 1789 Callcott was elected jointly with Charles Evans to the organistship of St Paul's, Covent Garden, and he was organist of the Asylum for Female Orphans from 1792 to 1802. During this period an increasing part of his time was occupied in teaching. He took a few lessons from Haydn in 1791, with a view to improving his skill in writing for instruments; but he seems never to have become really proficient in this line. When he showed Storace the score of a song he had written with full accompaniments, requesting him to 'draw his pencil' through such parts as did not please him, Storace looked over the score, drew his pencil through the whole, and returned it with the single exclamation, 'There!'. Perhaps as a result of this, or under the influence of Haydn, Callcott restricted himself in later years mostly to composition for unaccompanied voices, in which his mastery was undisputed.

Meanwhile Callcott had become more and more deeply interested in the theory of music, partly through his friendship with Marmaduke Overend, organist of Isleworth, who had acquired Boyce's manuscript writings on harmony. On Overend's death in 1790 Callcott purchased all his manuscripts, including Boyce's, and began to study them and to acquire a large library of theoretical works. He gradually formed a plan to write a music dictionary, and issued a prospectus to subscribers in 1797. He engaged in a voluminous correspondence with other theorists, including August Kollmann. His last important compositions show the newly antiquarian bent of his mind: they are a Latin cantata, *Propter Sion non tacebo*, written as an exercise for the DMus degree at Oxford (18 June 1800), and a six-part Italian madrigal, *Padre del ciel*, in imitation of the Renaissance style, composed the same year. His few later compositions were occasional.

The compilation of his dictionary proceeded slowly, and without any attempt to classify his materials; more and more he was consumed with the sheer love of gathering abstruse information. In 1804, however, thinking that the public would expect something from him on the theory of music, he laid aside the larger project and prepared his *Musical Grammar*, which he completed and published in 1806. In the following year he was appointed, in succession to Crotch, to lecture on German music at the Royal Institution. Further activity was interrupted soon afterwards by mental collapse, and from 1807 to 1812 he was in an asylum. His friends organized a benefit concert for him on 7 April 1809, which was so heavily subscribed that it had to be moved from the Hanover Square Rooms to the King's Theatre. Callcott made a partial recovery in 1812, and was able to resume teaching, but another attack followed in 1816 and he was never again restored to health. In addition to the materials for his dictionary of music he left an alphabetical dictionary of musicians, completed only as far as the letter O.

Callcott married Elizabeth Mary Hutchins on 14 July 1791 and had seven children, at least three of whom became musicians. His daughter Elizabeth married WILLIAM HORSLEY, who in 1824 brought out a three-volume collection of Callcott's best vocal part-music, preceded by a valuable memoir and appreciation. It contains 61 glees, four catches, four canons, a round, an elegy and the Italian madrigal; but this is only a small proportion of the total output. Callcott is generally regarded as one of the half-dozen leaders in the glee tradition: Baptie selected him for the frontispiece of *Sketches of … Glee Composers*. He was particularly skilful at simplifying his style to suit the domestic use, often with piano accompaniment, that had become fashionable by the 1790s. Many of his glees were written for the new combination of two sopranos and a bass; others, originally for male voices, were arranged for that combination by his son W.H. Callcott. His most popular glees were *Forgive, blest shade* (from an epitaph in the

churchyard at Brading; 1795); *The New Mariners* ('You gentlemen of England', J. Oliver, later adapted to Campbell's words, 'Ye mariners of England'; 1795); and *The Red Cross Knight* ('Blow, warder', anon.; 1797). Some were fashionably Gothic in their texts, including many on poems by 'Ossian' and some settings of Scott's verses. The best of all, in Horsley's opinion, was *O snatch me swift from these tempestuous scenes* (SATBB). The concluding double fugue, according to Baptie, is 'worthy of Handel himself'. Fuller Maitland gave the palm to *Father of heroes*.

Callcott also had considerable success with the catch, the solo song and the anthem. His large-scale compositions are less satisfactory, and his instrumental pieces are of little importance. He did useful work for parish-church music by compiling, with Arnold, an admirable selection of harmonized psalm tunes. Some of his glees were originally provided for theatrical productions, and he wrote the entire music for a two-act farce, *The Mistakes of a Day*, which may have been performed at Norwich in 1787. His *Musical Grammar* was a good instruction book breaking no new ground, and was many times reprinted during the 19th century. In general, Callcott founded his musical thought on that of an earlier period; there is little in his musical style, or in his writings, to suggest that he was in sympathy with the idiom of Mozart or of his teacher Haydn.

WORKS

all printed works published in London

SACRED VOCAL

I heard a voice from Heaven, sentence from the Burial Service (1802)
6 Sacred Trios (1804)
Jubilate (A), B, SATB, orch, 1784; Elijah (orat, T.S. Dupuis), 1785, excerpts perf. London, 13 Feb 1786; O come let us sing unto the Lord, anthem, SATB, SATB, orch, 1785; Propter Sion non tacebo, cant., soloists, chorus, orch, perf. 18 June 1800; 2 Latin motets, 1785, 1786: all *GB-Lbl*

SECULAR VOCAL

Sapho to Phaon [scena with 6 songs], op.2 (*c*1785)
Ode to Evening (W. Collins), perf. London, 14 April 1785, *Lbl*
Ode to Fancy (T. Warton), perf. Oxford, 4 July 1785, *Lbl*
Ode to the Humane Society (E.B. Greene), 1785–6, perf. London, 13 Feb 1786 *Lbl*
The Bard (ode, T. Gray), 1786, *Lbl*
Ov. and Airs for The Mistakes of a Day (farce, 2 acts), ? perf. Norwich, 1787, *Lbl*
Some 200 glees, catches and partsongs in MSS (145 in *Lbl* Add.27642–5; 64 in *US-Bp* Catch Club Collection), pubd singly and/or in 18th- and 19th-century anthologies; these include Callcott's collections: A first Collection of Catches, Glees, Canons etc., op.4 (1789); A Collection of 5 Songs, 4 Duets and 3 Glees, op.6 (*c*1790); A Select Collection of Catches, Canons and Glees (*c*1790); A Collection of 4 Glees, composed at Blenheim (1800); A Collection of 6 Glees (*c*1800); A Collection of 5 Glees (1801); A Collection of 6 Glees (1802); A Collection of 5 Glees, chiefly for Tr voices, op.12 (1805); also 61 glees, 4 catches, 4 canons, 1 round in A Collection of Glees, Canons and Catches, ed. W. Horsley, i–iii (1824)
Padre del ciel (Petrarch), madrigal, 6vv (1800); also in A Collection of Glees, Canons and Catches, ed. W. Horsley, i–iii (1824)
Various songs and duets pubd singly and in 18th-century anthologies

INSTRUMENTAL

6 Sonatinos, pf/hpd, vn acc., op.3 (*c*1786)
2 Quartetts and 2 Sonatas, pf/hpd (*c*1795)
God Save the King, with Progressive Variations, pf/hpd (n.d.); The Kensington March & Quick Step, pf (1798); The Kensington Troop, pf (1798)
Ov. (C), insts, 1784, *GB-Lbl*; Sinfonia (F), insts, 1785, *Lbl*; Sonata (C), hpd, *Ge*

EDITIONS

The Psalms of David for the Use of Parish Churches (1791), collab. S. Arnold
The Sentences, Psalms, Hymns, and Anthems, as sung at the Asylum Chapel, i, ii (*c*1799)

WRITINGS

An Explanation of the Notes, Marks, Words, &c. Used in Music (London, 1792)
A Musical Grammar (London, 1806, ?5/1883)
A Dictionary of Musicians (MS, *GB-Lbl*) [A–Pa only]
Materials for a dictionary of music, 36 vols. (MS, *Lbl*, 1797–1802); Essays and lectures on musical subjects (MS, *Lbl*)

NICHOLAS TEMPERLEY

Callegari. *See* CALEGARI family.

Callegari, Francesco Antonio. *See* CALEGARI, FRANCESCO ANTONIO.

Callido, Gaetano (Antonio) (*b* Este, 14 Jan 1727; *d* Venice, 8 Dec 1813). Italian organ builder. He built 430 organs in 44 years in the Venetian Republic, north-east Italy, Istria, Dalmatia, Emilia-Romagna, Marche and Istanbul. All of his instruments were built in the Venetian style (the *Ripieno* divided in single ranks that break at 1/8′, no composed mutation stops) as exemplified in the work of PIETRO NACCHINI (Callido's teacher), Antonio Barbini (*b* 1699) and others, but with some added characteristics of his own. These last include a large-scaled Principale, flutes of various types (conical, chimney or stopped, but never cylindrical), and a Voce umana tuned flat instead of sharp. In 1776 he built three organs for S Marco in Venice. One of them, a 12′ single-manual organ, was moved to S Maria Formosa, but was restored and put back in its original position in 1995. A standard Callido organ has only one manual of 45 keys (*C*–*c*‴, with short first octave), 57 keys (*C*′–*c*‴, short octave), or 62 keys (*C*′–*f*‴, short octave), and the following specification: Principale (divided), Ottava, Quintadecima, Decimanona, Vigesimaseconda, Vigesimasesta, Vigesimanona, sometimes Trigesimaterza and Trigesimasesta; Voce umana (treble); Flauto in Ottava and Flauto in Duodecima; Cornetta (treble); one or two reed stops with short resonators, i.e. Tromboncini 8′ (tin resonators) and Violoncello 8′ (wood resonators); larger organs have Viola (or Violetta) 4′ (bass and treble); Pedal: contrabassi, Ottave di contrabbassi, Tromboni (8′). The bass and treble divide between *c*♯′ and *d*′ in keyboards of *C*–*c*‴ compass, and between *a* and *b*♭ in organs with more extended keyboards. The organ of the Carmelite church at Lugo di Ravenna (1797; restored 1967–8) is probably the best existing example of

an organ with this specification. Callido also built two-manual organs, the finest existing example being the instrument at Candide di Comelico (1797–9, opus 367; restored 1995: the stop-list is given in ORGAN, Table 22).

Gaetano was succeeded by his two sons, Agostino (1759–1826) and Antonio (1762–1841), who introduced the Ottavino (a 2′ flute stop), the Flutta (8′ flute in the treble) and normal reed stops in the manual: Fagotto (8′ bass), Clarinetto (8′ treble) and Corno Inglese (or Corni da caccia; 16′ treble). Around 1830 the firm passed to Giacomo Bazzani.

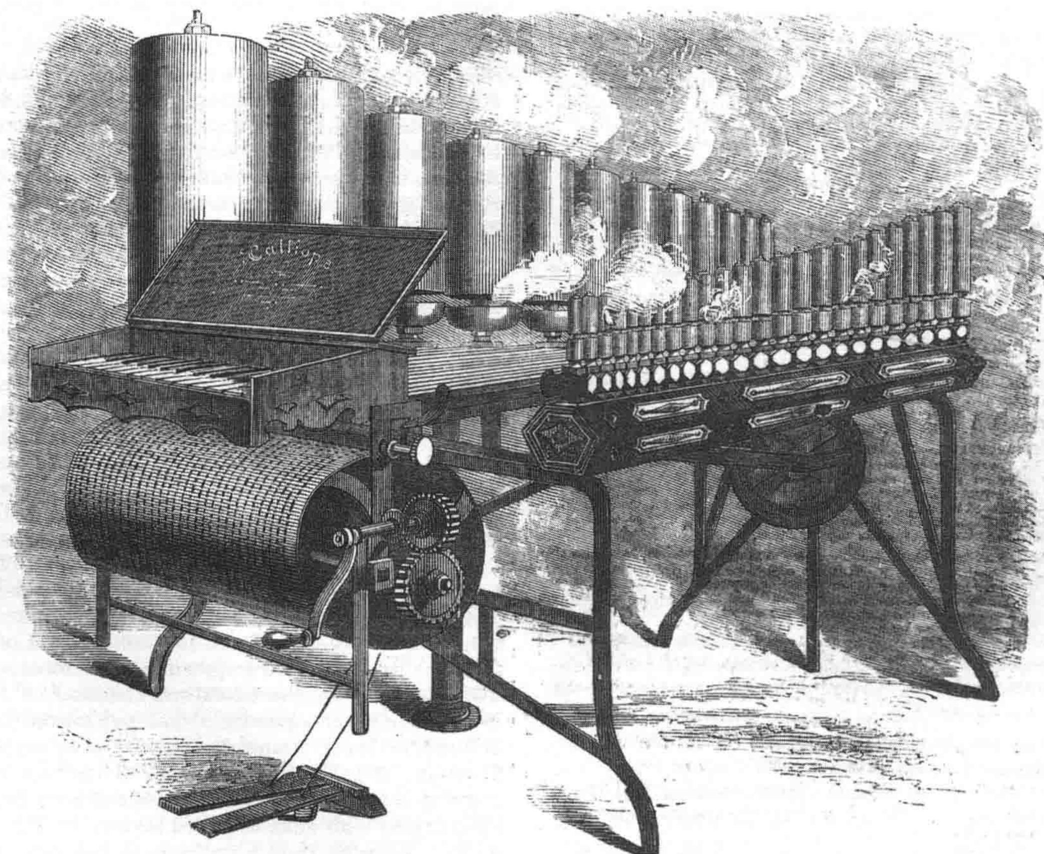
UMBERTO PINESCHI



Callihou, James. *See* MORIN, LÉO-POL.

Callinet. Alsatian family of organ builders, active in the first half of the 19th century. Louis Callinet became part of the Parisian firm DAUBLAINE-CALLINET (MGG1 suppl. (G. Bourligueux)).

Calliope (i) [Calliopea, Kalliope, Kalliopeia]. The Muse of heroic poetry and of playing on string instruments. *See* MUSES.

Calliope (ii). A musical instrument intended for outdoor use and operated by steam or compressed air. It was invented by Joshua C. Stoddard (*b* 26 Aug 1814; *d* 4 April 1902), who settled in Worcester, Massachusetts, in 1845; he supported himself by keeping bees while working on a variety of inventions and experiments. His invention of the calliope (named after the Greek muse of eloquence) is said to have been inspired by his noticing the great carrying power of locomotive steam whistles.

Stoddard's completed instrument was first introduced to the public in 1855. It consisted of a steam boiler, a set of valves, and 15 graded steam whistles, played from a pinned cylinder. It was claimed that it could be heard for 8 km – the Worcester City Council banned Stoddard from playing it within the city limits. Having nevertheless secured financial backing from some Worcester industrialists, he developed a keyboard model and founded the American Steam Piano Co. After financial difficulties a few years later, Stoddard was supplanted as head of the company by Arthur S. Denny, who changed the firm's name to the American Steam Music Co., and later claimed Stoddard's invention as his own. In 1859 Denny took to England a 37-note calliope that played from both keys and barrels (see illustration). A low-pressure, 5 lb (2·27 kg) model, it was exhibited at the Crystal Palace, London, but Denny assured potential purchasers that outdoor

Steam-operated calliope by Arthur S. Denny: engraving from the 'Illustrated London News' (3 December 1859)

models were available that employed up to 150 lbs (68·2 kg) of steam pressure and could be heard for 19 km. The instrument never caught on in the British Isles, although it achieved popularity in a variety of applications in the USA.

As early as 1858 calliopes were installed on river showboats, either on the top deck or on a steam towboat, and their music became familiar to several generations of dwellers along the banks of the Mississippi and other great rivers. One such steamboat, the *Delta Queen*, continues to maintain a regularly played calliope in the 1990s; at night its clouds of steam are illuminated by coloured spotlights. One of the few calliopes to be exported in the 19th century was used by the pasha of Egypt on his private steamer. Calliopes also replaced the large and cumbersome barrel organs of some circuses and fairgrounds, doubtless because they were considerably louder. After the turn of the century compressed-air calliopes were developed; these proved more popular (and more portable) for such purposes and were even used in parades and political rallies, while steam instruments were retained for riverboats with their ready supply of steam. The air calliopes could be played from either a keyboard or a paper roll, and were manufactured by the Artizan Co. (Air-Calio), the Tangley Co. (Calliaphone), the Harrington National Calliope Co., and the Han-Dee Co. Some had as many as 58 notes, but the ones heard at carnivals and in parades are usually much smaller, and are almost always played from a keyboard. Air calliopes based on the 43-note Tangley Calliaphone were still being made by the Miner Mfg. Co. of Fort Madison, Iowa, during the late 1980s.

The one feature common to all calliopes is their whistle construction, which is the same as that of factory and locomotive steam whistles: a mouth surrounds the circumference of the pipe, the top and bottom being attached by four brackets or ears. Those in steam calliopes are invariably made of heavy brass; other materials are sometimes used for air calliopes. The music played, often in just two parts on short-compass instruments, is always of a simple nature, consisting usually of familiar songs, dances and marches; a calliope makes an appearance in the film *Showboat* (1951).

BARBARA OWEN

Calloway, Cab(ell) (*b* Rochester, NY, 25 Dec 1907; *d* Hockessin, DE, 18 Nov 1994). American popular and jazz singer and bandleader. He spent his childhood in Baltimore and began his professional career in Chicago as a singer and dancer. In 1929 he led such groups as the Alabamians in Chicago and New York and the Missourians in New York, where he also appeared in the revue *Hot Chocolates*. In 1930 the Missourians played and recorded under Calloway's name; they performed with great success at the Cotton Club in 1931, and soon replaced Duke Ellington's band there as house orchestra. The group continued at the Cotton Club regularly until 1940. It also toured Europe in 1934, appeared in several films (including *The Big Broadcast*, 1933, *The Singing Kid*, 1936, and *Stormy Weather*, 1943) and made a large number of recordings before it was disbanded in 1948. Calloway then performed mainly in musical theatre, assuming the role of Sportin' Life in Gershwin's *Porgy and Bess* (1950s), appearing in the Harlem Globetrotters basketball team's touring show (mid 1960s) and taking part in the African American production of *Hello, Dolly!* (late 1960s), but he occasionally assembled bands for specific occasions. He continued to perform and tour into the 1980s, appearing on television, in the film *The Blues Brothers* (1980) and with his daughter Chris in the show *His Royal Highness of Hi-de-ho: the Legendary Cab Calloway* (1987).

Calloway was one of the most successful bandleaders of the 1930s and 40s, and was famous for his extroverted singing and flamboyant appearance (Gershwin modelled the role of Sportin' Life on him), as well as for his scat singing. His sobriquet 'the Hi-de-ho Man' was derived from the refrain of his most famous song, *Minnie the Moocher* (1931, Bruns.). He also composed a large number of songs for his group. The band promoted the careers of several important jazz musicians, among them Chu Berry, Ben Webster and Dizzy Gillespie, and Calloway made a number of excellent recordings with these soloists.

JOSÉ HOSIASSON

Calmo, Andrea (*b* 1509–10; *d* Venice, 23 Feb 1571). Italian actor, poet and writer of comedies, active in Venice. Some of his poems were set by Lodovico Agostini in *Musica sopra le rime bizzarre di M. Andrea Calmo, & altri autori* (1567). More significant are his 'piacevoli et ingeniosi discorsi in più lettere compresi' (ed. in Rossi), which include many references to music and musicians. A few of these fanciful letters in dialect are addressed to composers of his day, for example Willaert, whose music, according to Calmo, was alchemically 'distilled', 'purged' and 'refined' to the point where it had reached 'la condition de l'aurum potabile' (Rossi, p.199). Calmo was also an able musician in his own right in the tradition of the humanist *improvvisatori*; according to Alessandro Zilioli (*Vite dei poeti italiani*) he played the parts of Pantalone and 'the singer' for the 'famous companies of comedians which flourished in Italy at that time' (see Rossi). He is now regarded as one of the creators (along with ANTONIO MOLINO and ANGELO BEOLCO) of the *commedia dell'arte*.

CHARLES WARREN

Calori, Angiola (*b* Milan, 1732; *d* *c*1790). Italian soprano. She sang in a pasticcio at Treviso in 1755, at Brescia, Venice, Padua and Ferrara in 1756 in operas by Galuppi and Cocchi, and in 1757 at Reggio nell'Emilia in Traetta's *Nitteti*. Cocchi was doubtless responsible for her engagement in London when he was appointed composer to the King's Theatre in 1757. She made her début there in the pasticcio *Demetrio, re di Siria* and remained a member of the company, first as seconda donna and eventually as 'serious woman' (Burney), until 1761. She appeared in about 20 operas, including six by Cocchi, Perez's *Farnace* and *Didone abbandonata*, and Galuppi's *Attalo*, *Il mondo della luna* and *Il filosofo di campagna*, sometimes in male parts. During her stay in London she appeared in Handel's *Samson* and *Messiah* at Covent Garden, possibly in 1759. In July 1759 she sang in a cantata by Cocchi at Oxford for the inauguration of the Earl of Westmorland as chancellor. She sang at Verona in 1763, Reggio nell'Emilia in 1764, Venice in 1765 (Bertoni's *L'olimpiade* and Traetta's *Semiramide*), Prague in 1767 (Mysliveček's *Bellerofonte* and P.A. Guglielmi's *Tamerlano*), and at Dresden in 1772, when Burney heard her in Salieri's *L'amore innocente*. He was not impressed, but admitted that earlier in London she 'wanted only spirit to make her an excellent performer; for then her voice, shake, and execution, were good'. At Vicenza in 1778 she was billed as *prima buffa*. She continued to appear in opera until 1783.

WINTON DEAN

Calsabigi, Ranieri [Raniero] [de', de, da]. *See* CALZABIGI, RANIERI.

Caltabiano, Ronald (*b* New York City, 7 Dec 1959). American composer. Early lessons from Elie Siegmeister and Andrew Thomas led to studies with Vincent Persichetti and Elliott Carter at Juilliard (1978–85) and with Peter Maxwell Davies at the Dartington Summer School (1979–81). After serving as Copland's music assistant, he taught at the Manhattan School and the Peabody Conservatory. In 1996 he joined the faculty of San Francisco State University. He has received awards from the American Academy of Arts and Letters and the Guggenheim and Rockefeller foundations.

Caltabiano attracted considerable international attention in his early twenties with his String Quartet no.1 (1981), and with prominent commissions for cello, trombone and double bass sonatas. These youthful works, culminating in the Concerto for Six Players (1987), exhibit maturity, individuality and immense dramatic variety; they incorporate chromatic and modal harmonic languages, and employ motivic and serialized rhythmic elements as unifying agents. With the composition of *Concertini* (1992) for the San Francisco SO, Caltabiano began to experiment with short, dramatically disparate movements, each with a sharply defined character. These multi-movement works are unified by a single overarching line and by motivic and rhythmic transformations. Concurrently, Caltabiano began to use an increasingly broad (and increasingly modal) harmonic palette. In subsequent large-scale works, such as the one-movement *Preludes, Fanfares, and Toccatas* (1995) written for the Dallas SO, he evokes the schizophrenic dynamism of the multi-movement works, but on a broader scale.

Calung. Term referring to bamboo XYLOPHONE, bamboo xylophone ensemble or metallophone of Indonesia (the bamboo xylophone and xylophone ensemble are found in Java and Sunda, while the metallophone is found in Bali). For details on Sundanese usage, *see* INDONESIA, §V, 1(ii)(b); this entry deals with the *calung* ensemble of Banyumas, west Central Java.

Calung typically comprises two multi-octave bamboo xylophones which play interlocking patterns; two single-octave bamboo xylophones (*slenthem* and *kethuk-kenong*) which play a central melody and its colotomic punctuation, respectively; a blown bamboo gong; two small *kendhang* (drums); and a female vocalist (*sindhèn*) who is also often a dancer (and then referred to as *lènggèr*). Instrumentalists also participate in the vocals, providing stylized responses to both the female vocalist and certain *kendhang* cues. The performance style involves dense interlocking, rapid changes of tempo and density, lively syncopated drumming and comic vocal interchanges. *Calung* is performed on various celebratory occasions, including the festive all-night performance *lènggèr* (named after the featured female singer-dancer of the same name) and types of *jaranan* (horse trance dance).

In Bali, the *calung* is a single-octave metallophone with tube resonators (also called *jublag*) in several gamelan-type ensembles that plays a central mid-range melody (for details of Balinese usage, *see* INDONESIA, §II, 1(ii)(d)).

Caluza, Reuben Tholakele (*b* Edendale, 14 Nov 1895; *d* Kwa-Dlangezwa, nr Empangeni, 5 March 1969). South African composer. He was one of the leading black South African composers of the 1920s and 30s, known for his ragtime songs in the Zulu language. Caluza's early career between 1915 and 1929 was as a teacher at Ohlange Institute, one of the first black colleges in Durban, established by the African National Congress founding president John L. Dube. Caluza and his Double Quartet were invited to England in 1930 to record well over 100 titles for HMV's Zonophone label, many of which were Caluza's own compositions. These recordings counted among South Africa's bestsellers in the mid-1930s. From 1930 to 1935 Caluza studied at the Hampton Institute, Virginia, and Columbia University. He returned to South Africa in 1936 to become professor of music at Adams College, near Durban, where his activities included the training of a variety of choral ensembles and the collection of traditional Zulu music. Caluza withdrew from active musical life in 1947, devoting the rest of his life to a number of shops he had opened throughout Natal.

VEIT ERLMANN

Calvé [Calvet] **(de Roquer), (Rosa-Noémie) Emma** (*b* Decazeville, 15 Aug 1858; *d* Millau, 6 Jan 1942). French soprano. A pupil of Jules Puget, Mathilde Marchesi and Rosina Laborde, she made her début as Marguerite in *Faust* at the Théâtre de la Monnaie, Brussels, on 23 September 1881, and three years later appeared in Paris, mainly at the Opéra-Comique. In 1887 she was called to La Scala, Milan to create the heroine of Samara's *Flora mirabilis*; but she did not achieve lasting success until a triumphant return in 1890 as Ophelia in Thomas' *Hamlet* (with Battistini in the title role) was followed by appearances with Fernando de Lucia in *Cavalleria rusticana* in various Italian cities and with the same tenor in the première of Mascagni's *L'amico Fritz* (31 October 1891, Rome). Calvé soon became one of the first favourites of the international public, especially in London and New York, where her Santuzza and above all her Carmen were considered incomparable. Although these parts were to dominate her repertory, Massenet wrote two roles for her, Anita in *La Navarraise* (1894, Covent Garden) and Fanny in *Sapho* (1897, Opéra-Comique), and she also created the title role of Hahn's *La Carmélite* (1902, Opéra-Comique). In 1904, having taken part in the 1000th performance of *Carmen* at the Opéra-Comique, she announced her intention of leaving the stage, and did not thereafter reappear at either the Metropolitan or Covent Garden; but she sang at Oscar Hammerstein's Manhattan Opera House in 1907 and 1908, and continued to give concerts in the USA (including appearances in

Emma Calvé in the title role of Bizet's 'Carmen'

vaudeville) until 1927. Her voice – a luscious, finely trained soprano strong in both chest and head registers (originally extending to high F), the secret of which she claimed to have learnt from Domenico Mustafà, the Italian castrato who became director of the choir at the Cappella Sistina – derived charm from its combination of absolute steadiness with rich colour. As an interpreter she was intensely dramatic and impulsive, to the point of capriciousness in later life. Her records, though disappointingly limited in repertory, are none the less extraordinary; among the best, apart from her *Carmen* excerpts, are the unaccompanied Provençal air, *O Magali*, incorporated in *Sapho*, the 'Air du mysoli' from David's *La perle du Brésil* and the folksong *Ma Lisette*, with its exquisite, sustained *pianissimo* high D♭.

DESMOND SHAWE-TAYLOR/KAREN HENSON

Calvesi, Vincenzo (*b* Rome; *fl* 1777–1811). Italian tenor. His first known appearance was in Rome in 1777. He sang in comic opera in Italy until 1782, specializing in *mezzo carattere* roles. From 1782 to 1783 he sang in Dresden, and in 1785 he settled in Vienna, making his début there as Sandrino in Paisiello's *Il re Teodoro*.

Except for a year's leave of absence in 1788, which he spent mainly in Naples, he remained in Vienna until 1794. A versatile lyric tenor, he created leading roles in operas by Martín y Soler (*Una cosa rara* and *L'arbore di Diana*), Storace (*Gli sposi malcontenti* and *Gli equivoci*) and Salieri (*La grotta di Trofonio* and *Axur, re d'Ormus*), as well as Ferrando in Mozart's *Così fan tutte*. In 1785 he sang the Count in the quartet 'Dite almeno, in che mancai' K479 and the trio 'Mandina amabile' K480 written by Mozart for Bianchi's *La villanella rapita*. He was described in *Grundsätze zur Theaterkritik* (1790) as 'one of the best tenors from Italy ... with a voice naturally sweet, pleasant and sonorous'. On his retirement from the stage in 1794 Calvesi returned to Rome, where he became one of the city's leading impresarios (*c*1796–1811).

Vincenzo's wife Teresa sang small roles in Vienna from 1785 to about 1789, when she left on her own to pursue her career in London and Italy. A Giuseppe Calvesi is known to have been active 1784–91; he, and not Vincenzo, sang in London in 1787 and 1788.

Calvet Quartet. French string quartet. It was founded in Paris in 1919 by Joseph Calvet (*b* Toulouse, 8 Oct 1897; *d* Paris, 4 May 1984), Georges Mignot, Léon Pascal and Paul Mas. Mignot and Pascal had previously played in Marcel Chailley's quartet. In 1928 the ensemble gave its first Beethoven cycle at the instigation of Nadia Boulanger. In 1929 Daniel Guilevitch replaced Mignot and during the 1930s the Calvet Quartet was considered to be among the world's finest, hailed for its performances and recordings of both the modern French and the Classical repertories. In 1940 it was disbanded and Guilevitch emigrated to the USA, where as Daniel Guilet he led the Guilet Quartet and (from 1952) Toscanini's NBC SO. In 1955 he founded the BEAUX ARTS TRIO. In 1941 Pascal founded his eponymous quartet, which after the war became the official ensemble of the French Radio and made many records. In 1945 Calvet started a new ensemble with Jean André Champeil, Maurice Husson and Manuel Amédée Recassens; this Calvet Quartet, which gave the premières of works by Jolivet, Sauguet and Schmitt, was dissolved in 1950. Calvet taught many of the next generation of French chamber musicians, including the original members of the Parrenin Quartet.

TULLY POTTER

Cálvez, Gabriel. *See* GÁLVEZ, GABRIEL.

Calvi, Carlo (*fl* 1646). Italian guitarist and music editor. He edited a collection of pieces for five-course Baroque guitar entitled *Intavolatura di chitarra, e chitarriglia* (Bologna, 1646). The book contains brief instructions on how to read tablature and tune the instrument, followed by 65 *battute* (strummed) and 24 *pizzicate* (plucked) pieces comprising such typical mid-17th-century Italian forms as the passacaglia, ciaccona, folia, spagnoletto and Ruggiero. According to the book's title-page it includes the works of two 'professori'. Although no composers' names are given, 25 of the *battute* can be identified as paraphrases of works by Francesco Corbetta. The identity of the other 'professore' remains a mystery, but many of the other works in the book exist in earlier versions. The extent of Calvi's contribution as composer, rather than arranger, is therefore open to question.

ROBERT STRIZICH/RICHARD PINNELL

Calvi, Lorenzo (*b* ?Pavia; *fl* 1609–29). Italian music editor and singer. Since he was known as 'magister et reverendo' he must have taken orders. He was a bass singer in the choir of Pavia Cathedral from 1609 to 1626. He is of greatest interest as the collector of four noteworthy anthologies of north Italian church music published in Venice (RISM 1621[4], 1624[2], 1626[3] and 1629[5]); all contain motets except the third, which consists of litanies. The volumes include eight works by Monteverdi, seven of which are found in no other printed sources, and ten *unica* by Alessandro Grandi (i) and four by Rovetta (his earliest published works). Other prominent north Italians represented are Stefano Bernardi, Banchieri – who dedicated his *Gemelli armonici* (1622) to Calvi – Ignazio Donati, Ghizzolo, Merula, Orazio Tarditi and Turini. Calvi himself contributed motets to the first two and included pieces by his *maestro di cappella* at Pavia, Benedetto Re. Much of the music in these anthologies seems to have been new, and Calvi must have had many contacts in the highest church-music circles. Certainly his are among the best and most representative of the numerous anthologies issued at Venice in the early 17th century. (J. Roche: 'Anthologies and the Dissemination of Early Baroque Italian Sacred Music', *Soundings*, iv, 1974, pp.6–12)

JEROME ROCHE/R

Calvin [Cauvin], **Jean** (*b* Noyon, 10 July 1509; *d* Geneva, 27 May 1564). French theologian, one of the leaders of the Reformation in Switzerland.

1. Life. 2. Calvinist music: (i) Monophonic (ii) Polyphonic.

1. LIFE. In 1523 he studied theology in Paris, then studied law in Orléans in 1528 and in Bourges in 1529. In 1531 he returned to Paris to complete his classical studies, publishing a commentary on Seneca's *De clementia* in the following year. Between 1528 and 1533 he became converted to reformed doctrines and in 1533 he had to leave Paris when the Lutheran sect at the university was proscribed by the court. He went to Basle at the end of 1534 and began work on his *Christianae religionis institutio*; in the dedication of the first edition (1536) to François I he called for toleration of Protestants. In 1536 he stayed for a short time at the court of Renée of France in Ferrara, and there met Clément Marot. On his way back to Strasbourg he went to Geneva, where the reformer Guillaume Favel persuaded him to help with the organization of the Church. However, in 1538 the city

authorities forced Calvin to leave on account of his excessive zeal and strictness in introducing the order of service which he desired.

He went to Basle and then to Strasbourg, there meeting Martin Butzer, who probably greatly influenced his musical ideas. Butzer had played a leading role in establishing the pattern of worship in Strasbourg, so that there was a tradition that unison congregational singing was the only music in the service. In 1539 *Aulcuns pseaulmes et cantiques mys en chant* was published under Calvin's guidance for the congregation of refugees in Strasbourg. This anthology of settings of Marot's and Calvin's translations included several tunes from earlier Strasbourg hymnbooks.

When Calvin returned to Geneva in 1541 he dedicated himself anew to establishing an order of service that included music. In the following year he published another anthology of psalms which, with its enlarged editions, became the nucleus of Calvinist music.

By the time he died Calvin's efforts had established a musical practice that is still widely accepted today. Unlike Luther his outlook was influenced by his understanding of the theological position rather than by his own response to music – in fact he does not appear to have had any particular musical sensibility. As a humanist, familiar with the musical ideals of antiquity, he was convinced of the power of music to affect human behaviour, referring to it in his letter *A tous chretiens et amateurs de la parole de Dieu*. He agreed with the ancient theological concept of the divine origins of music and from that inferred that music should be used 'pour invoquer Dieu d'un zèle plus véhément et ardent'. However, he believed that the psychological effect of vocal music should be kept within reasonable limits and he excluded instrumental music because it belonged to the Old Testament. Congregational singing had already proved its advantages and suitability, but Calvin was strict in maintaining that all the music was to be monophonic: any kind of polyphonic texture would distract the congregation from the meaning of the words, and for Calvin the scriptures were of supreme importance. For the same reason he insisted on the use of the vernacular for all church worship.

2. CALVINIST MUSIC.

(i) Monophonic. Strictly speaking, Calvinist music is limited to music composed for use in the reformed churches adhering to Calvin's doctrines; as such it comprises unaccompanied, monophonic settings of the psalms and some canticles in rhymed vernacular translations, designed for congregational singing. *Aulcuns pseaulmes et cantiques mys en chant* incorporated these ideals. Calvin himself added verse translations in French of the *Nunc dimittis*, the Decalogue, the Creed and six psalms. Greiter composed a few of the melodies; the other composers are unknown. Although Marot's psalm paraphrases were sung to various popular tunes in France, even at the Catholic court, it is now accepted that the melodies of the 1539 psalter do not use secular tunes. Five of its psalms were included in the so-called First Genevan Psalter of 1542, *La forme des prieres et chantz ecclesiastiques* (for facsimile of Psalm cxxx *see* PSALMS, METRICAL, fig.1), which was completed soon after Calvin's return to Geneva. In 1543 he published *Cinquante pseaumes*, based on Marot's translations of the same year. This psalter seems to have gone through several editions by the time Loys Bourgeois's *Pseaumes octante-trois* appeared (?1554, lost), with 34 translations by Bèze. Bourgeois claimed in the preface that he composed the melodies for Bèze's psalms and either rewrote or revised 36 others out of a total of 85. His melodies are far superior to the others both in this edition and in subsequent ones. In 1562 the complete psalter (sometimes called the Genevan or Huguenot psalter) with 125 tunes was published simultaneously in Geneva, Paris, Lyons and elsewhere. Bourgeois appears to have had no connection with the psalter after the first edition; the additional tunes were attributed to 'Maître Pierre'. Pierre Du Buisson, Pierre Dagues and Pierre Vallette have all been suggested as possible candidates (Vallette wrote a new musical preface to the 1556 edition, but this makes no mention of the composition of melodies); however, it seems that Pierre Davantes is most likely to have been the composer.

The melodies are characterized by the exclusive use of minims and semiminims, syllabic settings and simple flowing melodic lines. Contemporary secular and Catholic music, though having similar traits, had developed patterns of detailed textual interpretation and word-painting, but these found no place in Calvin's church: both the strophic nature of the psalms and the religious ethos behind the psalter precluded such a relationship between words and music.

Calvin's musical ideals and his psalter rapidly gained support in other countries. In the Netherlands the main Calvinist activity was in the Dutch-language area. In 1564 Plantin printed the 1562 psalter in Antwerp (in French), but it was banned and he had to destroy the edition. A Dutch metrical translation of the psalms by Willem Zuylen van Nyevelt had been in use since 1540; these *Souterliedekens*, based on Lutheran models and provided with folksong melodies, enjoyed great popularity into the 17th century but were gradually superseded by Dutch translations of the Genevan psalter. Translations by Utenhove, using the Genevan melodies, appeared in London and Emden where he and his fellow Protestants were exiled, and by 1565 he had completed his psalter, which was published in 1566, the year after his death. Petrus Dathenus published a translation of Marot's and Bèze's psalms, with Genevan melodies, also in 1566, and two years later it became the official psalter of the Dutch Reformed Church. Dathenus's texts were used until 1773 when most, though not all, of the reformed churches adopted other translations; but the Genevan melodies continued to be used. Further textual revisions were made during the 20th century, culminating in a new book of psalms and hymns published in 1973.

In Germany, Lutheran settings had been in use from 1524, but in 1573 Lobwasser published a German version of Calvin's 1562 psalter. It rapidly became popular and was used not only in Germany but also in German communities in Switzerland and the Netherlands, by Lutherans as well as Calvinists. It remained in general use among Calvinists until the end of the 18th century, when Matthias Jorissen's metrical psalter replaced it.

In England, Sternhold and Hopkins's incomplete psalter of 1556, intended for English refugees in Geneva, shows much of the character of the Genevan tunes. Their complete 1562 psalter included 13 Genevan melodies, and such later psalters as those by Ravenscroft (1621), Playford (1677) and Tate and Brady (1696) either used Genevan melodies or displayed their stylistic traits. The

Scottish Reformed Church was strongly influenced by the Genevan model after John Knox's return in 1559. Of 105 melodies in the first Scottish psalter of 1564, 42 were Genevan and were retained in the harmonized psalter of 1635.

Almost all the various psalters taken by colonists to America contained a few Genevan tunes. Towards the end of the 18th century, however, hymn singing gradually replaced the psalms and only a few congregations continued to use the Genevan psalter. Later the tunes were replaced by those of English or German provenance more suited to the texts, which had been translated into English. More recently there has been a return to the original tunes.

(ii) Polyphonic. Because of Calvin's belief that polyphony was distracting in church, it was cultivated only for domestic use. The settings varied in difficulty according to the use for which they were intended. The earliest known settings of the Genevan melodies used by Calvinists were by Certon, published by Attaingnant in 1546. The most influential were Bourgeois's *Pseaulmes cinquante de David* (Lyons, 1547), written in a four-voice chordal style with the psalm tune in the tenor. The same year he published *Le premier livre de pseaulmes*, 24 settings 'en diversité de musique, a sçavoir, familière ou vaudeville, aultres plus musicales et aultres à voix pareilles, bien convenable aux instruments'. As well as a few simple homophonic settings this collection included motet-like compositions, but not all use the Calvinist tunes. Further polyphonic settings of the psalms, the *Nunc dimittis*, the Decalogue and the Creed appeared in 1550, 1554 and 1561.

Polyphonic settings of the Genevan tunes were widely disseminated thanks to the work of Claude Goudimel. He set 67 psalms 'en form de motetz', but by no means all of them use the Genevan melodies. However, there are complete settings of the psalter in both note-against-note (1564, 2/1565) and imitative (1580) styles. In the 1564 volume the psalms are set syllabically for four voices with the psalm tune usually in the tenor (it occurs in the superius in only 17 psalms). Unlike psalm settings in free motet form, Goudimel's psalter was internationally recognized. It was translated into several languages and was officially approved by the Reformed Church; there is evidence that it was used in the actual service as early as the 16th century, although Goudimel stated in his own preface to the 1565 Genevan edition of his homophonic psalms that the settings were to be sung not in the church but in the home.

Claude Le Jeune was the most important French composer to set the Genevan psalter polyphonically. His *Dix pseaumes de David* (1564), using Bèze's translations, did not use the Genevan tunes, but he used them in his *Dodécacorde* of 1598, setting them in motet style for two to seven voices. The posthumous 1601 edition of his complete psalter in four- and five-voice chordal settings was soon widely circulated in several languages, and most of the psalter also appeared in a more contrapuntal three-voice version.

Sweelinck set the entire Genevan psalter (with French texts) for four to eight voices between 1608 and 1621. He composed the psalms in motet style throughout, treating the Genevan tune in different ways, for example as a cantus firmus or a point for imitation.

The Dutch SOUTERLIEDEKENS appeared in various polyphonic arrangements; the earliest were the three-voice settings by Clemens non Papa, published in 1556–7 by Susato. The Dutch version, using Dathenus's translations, of Goudimel's settings was the official psalter, remaining in use until 1938, when it was replaced by settings by Wagenaar.

In Germany, Sigmund Hemmel set the entire psalter (published posthumously by Osiander in 1569) using a few Genevan tunes alongside many Lutheran ones. Osiander's own 50 homophonic *Geistliche Lieder und Psalmen* (1586) had a lasting influence in both the Lutheran and the Reformed Churches. Lobwasser's translations too were applied to Goudimel's settings as well as being set by other composers.

Sweelinck was one of the last composers to arrange the Genevan psalter, for the melodies were not suitable for the new musical style of the 17th century. Today the complete Genevan psalter is used in relatively few churches, and scarcely any restrict themselves to monophonic singing. However, the polyphonic settings of the 16th century still provide the stylistic basis for the music in Calvinist churches.

Some instrumental versions appeared in the Netherlands, for example the keyboard arrangements by Sweelinck, Henderick Speuy and Anthoni van Noordt. In the 19th and 20th centuries composers showed new interest in the Genevan melodies: Jan Zwardt and his followers founded a short-lived fashion for organ psalm fantasias, and Gagnebin and Honegger composed works of greater importance using some of the old psalm tunes.

For the history of Calvinist music in England and Scotland *see* PSALMS, METRICAL, §§III and IV, 1; *see also* REFORMED AND PRESBYTERIAN CHURCH MUSIC, §I.

ALBERT DUNNING/R

Calvisius, Sethus [Kalwitz, Seth] (*b* Gorsleben, nr Sachsenburg, Thuringia, 21 Feb 1556; *d* Leipzig, 24 Nov 1615). German music theorist, composer, teacher, chronologist and astronomer. He was one of the most influential German theorists of his time and prominent in the musical and intellectual life of Leipzig.

1. LIFE. After attending schools at Frankenhausen and Magdeburg, Calvisius began his studies at the University of Helmstedt in 1579 and continued them from Easter 1580 at the University of Leipzig, where he had matriculated in 1576. In 1581 he became Kantor at the Paulinerkirche, Leipzig, only to move in November 1582, on the recommendation of the Leipzig theologian Nikolaus Selnecker, to Schulpforta as Kantor of the Fürstenschule. He spent 12 fruitful years there not only as an inspiring teacher but also in the study of history, chronology and music theory. In May 1594 he was recalled to Leipzig as Kantor of the Thomaskirche in succession to Valentin Otto. For a short period in about 1605 he also directed the music at the university church. Shortly before this, as a result of a knee injury which confined him to his bed for over a year and left him with a permanent limp, he found the time to complete his *Opus chronologicum* (1605), his most important non-musical work. Leipzig University rejected his *Elenchus Calendarii Gregoriani* (1613), but on the strength of his *Opus chronologicum* he was offered appointments at the universities of Frankfurt an der Oder and Wittenberg, neither of which he took up. He had a wide circle of scholarly friends, including the astronomer Johannes Kepler, Michael Praetorius and the music theorists Abraham Bartolus, Henricus Baryphonus, Nikolaus Gengenbach and Johannes Lippius. His many pupils included Erhard Bodenschatz and Martin Rinckart. He died with the words 'Domino moriar. Ich will dem Herrn sterben'; at his funeral the choir of the Thomaskirche sang his last composition, the eight-part motet *Unser Leben währet siebnzig Jahr*. After his death his reputation grew, and as late as 1690 he was enthusiastically admired by W.C. Printz in his *Historische Beschreibung der edelen Sing- und Kling-Kunst* (xii, 10).

2. WORKS. Calvisius's main work of music theory is *Melopoeia* (1592), a theory of composition based on Zarlino's *Le istitutioni harmoniche* (1558), which, together with the somewhat later *Composition Regeln* once thought to be by Sweelinck, first transmitted Zarlino's theoretical ideas to German musicians in a comprehensible form. He imparted his knowledge cogently in 21 methodically arranged chapters. In connection with progressions, he drew for the first time a clear distinction between perfect and imperfect consonances. He was more positive than Zarlino in regarding the 4th as a consonance, a point that Mattheson stressed over a century later in his *Forschende Orchestre* (1721). Unlike Zarlino, Calvisius distinguished between *fuga soluta* (fugato) and *fuga ligata* (canon). In chapter 18, 'De oratione sive textu', he broke new ground in his treatment of the relationship between poetic and musical figures. In so doing he allied himself with the proponents of *musica poetica*, and 'since it gives double pleasure' because of the presence of words he considered vocal music superior to instrumental. *Compendium musicae* (1594) is a didactic work; the third edition (1612), a simplified one with the title *Musicae artis praecepta*, deals with elementary music theory. *Exercitatio musica tertia* (1609) offers even more basic theoretical instruction, the presentation of rests, ligatures and proportions being greatly simplified. The first part of *Exercitationes musicae duae* (1600) deals with the modes, while the second includes a history of music theory. As he had done in his *Compendium musicae*, Calvisius here vehemently championed the seven-syllable bocedization system of sight-singing, in which the traditional solmization syllables are replaced by *bo*, *ce*, *di*, *ga*, *lo*, *ma* and *ni*, which were apparently introduced by Hubert Waelrant. The Gera Rektor Hippolyte Hubmeier violently attacked this method in 1609, and later that year Calvisius countered his arguments in his *Exercitatio musica tertia*.

Calvisius's compositions were primarily pedagogical in aim, notably the Latin and German hymns written for the choir school at Schulpforta in 1594, the bicinia on Latin passages from the gospels and the 22 tricinia, which were 'to be sung, and also practised on instruments' and are ambitious pieces, many of them canonic. He also published 43 four-part settings for the 1605 edition of

Cornelius Becker's psalter. As Kantor of the Thomaskirche he produced too the first Leipzig hymnbook, *Harmonia cantionum ecclesiasticarum* (1597); it contains 115 four-part settings, in which the melody is placed in the top part. The book went through five editions up to 1622 before being replaced in 1627 by Schein's *Cantional*. In his few surviving motets, for six, eight and 12 voices, Calvisius appears as a latterday adherent to the tradition of Lassus and Jacob Handl, though here and there in his treatment of the words there is clear evidence of the author of *Melopoeia* and the advocate of *musica poetica*.

WORKS

THEORETICAL WORKS

only those relating to music

Melopoeia sive melodiae condendae ratio, quam vulgo musicam poeticam vocant (Erfurt, 1592) [1582 according to Fétis and Gerber] (2/1630 with H. Baryphonus: *Pleiades musicae*)
Compendium musicae pro incipientibus (Leipzig, 1594, 3/1612 as simplified version *Musicae artis praecepta nova et facilima*); 11 examples from 1594 edn ed. A. Allerup, *Die Musica practica des J.A. Herbst* (diss., U. of Münster, 1931)
Exercitationes musicae duae (Leipzig, 1600)
Exercitatio musica tertia (Leipzig, 1609, 2/1611/R as *Exercitationes musicae tres*)

HYMNS

Hymni sacri latini et germanici, 4vv (Erfurt, 1594)
Harmonia cantionum ecclesiasticarum: Kirchengesänge und geistliche Lieder D. Lutheri und anderer frommen Christen, 4vv (Leipzig, 1597)
Der Psalter Davids gesangweis vom Herrn D. Cornelio Beckern ... verfertiget, 4vv (Leipzig, 1605)

OTHER SACRED VOCAL

Bicinia septuaginta ad sententias evangeliorum anniversorum ... additi sunt viginti canones, 2vv (Leipzig, 1599, enlarged 2/1612 with 90 works by other composers); 20 from 2nd edn ed. in Benndorf (1901)
Tricinia: ausserlesene teutsche Lieder, 3vv (Leipzig, 1603); ed. G. Trubel (Neuhausen-Stuttgart, 1975)
Der 150. Psalm Davids ... auf 3 Chor, 12vv (Leipzig, ?1615) [wedding music for Caspar Anckelmann and Maria Magdalena Heintze]
Unser Leben währet siebnzig Jahr, 8vv (Leipzig, 1616), lost; 1621[2]
9 motets, 1603[1], 1621[2]; ed. F. Commer, Musica sacra, xxviii (Berlin, 1887); ed. in Geistliche Chormusik, 4th ser: Chorwerk alter Meister, xiii
1 work in J.C. Demantius: Threnodiae, das ist Ausserlesene trostreiche Begräbnüss Gesänge, 4–6vv (Freiberg, 1620)
Joseph, lieber Joseph, 6vv, *D-Z*; ed. in Arion, iii (London, 1899)
Singet dem Herrn ein neues Lied, 8vv, *MÜG*; ed. A Tunger (Stuttgart, 1992)
Zion spricht: Der Herr hat mich verlassen, 8vv, *Bsb*

ADAM ADRIO/CLYTUS GOTTWALD

Calvo, Luis (Antonio) (*b* Gámbita, 28 Aug 1882; *d* Agua de Dios, 22 April 1945). Colombian composer and pianist. He received his first musical instruction as a child in his native town and in Tunja. After moving to Bogotá in 1905 he studied briefly at the National Musical Academy (theory, cello and various band instruments). He left Bogotá when diagnosed with leprosy in 1916 and settled in the Agua de Dios hospital and colony, where he remained until his death, with only occasional visits outside his confinement.

He is one of the most important composers of Colombian salon music for the piano during the first decades of the 20th century. His music is dominated by sentimental melodies tinged with tragedy and yearning. His intermezzos, preludes and capriccios are simplified versions of European Romantic miniatures, and he wrote many character pieces based on dances popular in Colombia, mainly the *pasillo*, *danza* and waltz. Several of his compositions were published as single sheets and in periodicals.

WORKS

(*selective list*)

Stage: Una noche en París (operetta), unperf
Pf: Adiós a Bogotá, danza; Arabesco; Cartagena, capricho; Diana triste, valse; Entusiasmo, pasillo; Genio alegre, pasillo; 4 intermezzi, incl. Lejano azul; Malvaloca, danza; Republicano, bambuco; Ricaurte, bambuco; Spes ave, prelude
Songs (1v, pf): Amapola; Cuando caigan las hojas; Dolor que canta

ELLIE ANNE DUQUE

Calvocoressi, Michel-Dimitri (*b* Marseilles, 2 Oct 1877; *d* London, 1 Feb 1944). Critic and musicologist of Greek parentage, French birth and English adoption. Calvocoressi studied classics at the Lycée Janson de Sailly, Paris, and entered the law faculty but soon abandoned law to study harmony with Xavier Leroux at the Conservatoire. Here he formed a lifelong friendship with Ravel. In 1902 he embarked on a career as critic and also as music correspondent of English, American, German and Russian periodicals. He was a remarkable polyglot, and from 1904 he specialized in the translation of song texts, opera librettos and books – ultimately from languages as unfamiliar as Russian and Hungarian, and into both French and English. He also began to champion Russian

music, particularly Musorgsky's, but his earliest book was on Liszt. From 1905 to 1914 he lectured at the Ecole des Hautes Etudes Sociales, mainly on contemporary music. Calvocoressi was principal French adviser to Diaghilev when the latter was introducing Russian orchestral music, opera and ballet to Paris (1907–10). In 1914, unable as a Greek subject to serve in France, Calvocoressi moved to London, working as a cryptographer in the Admiralty and other government departments. He settled in England, was naturalized, married an Englishwoman and wrote all his later books in English; but although he numbered many distinguished Englishmen among his friends – including Vaughan Williams and Arnold Bennett – he never enjoyed the influence and authority in London that he had exercised in Paris.

Calvocoressi's interests ranged from aesthetics, criticism and Greek folk music to Poe and Baudelaire, but they were mainly concerned with the 19th century and his contemporaries. From beginning to end of his career, he campaigned tirelessly in both French and English for the recognition and comprehension of Russian music. He wrote no fewer than three books on Musorgsky and was the leading champion in Western Europe of the unrevised score of *Boris Godunov*.

GERALD ABRAHAM

Calvoer [Calvör], **Caspar** (*b* Hildesheim, 8 Nov 1650; *d* Clausthal, 11 May 1725). German theologian and music theorist. After studying at Jena and Helmstedt, he became deacon at Zellerfeld in 1677 and superintendent in 1683. From 1710 he was general superintendent at Clausthal. His comprehensive private library, half of it consisting of theological works and half of specialist literature in the most diverse fields, is now housed in Clausthal-Zellerfeld University Library. Besides theological, historical and geographical writings (summary in Wrampelmeyer) he wrote two treatises on music. In 1702, on the occasion of the dedication of an organ built for Zellerfeld by Arp Schnitger, he published an essay on the history of the various types of sacred choral music: *De musica ac sigillatim de Ecclesiastica eoque spectantibus organis* (Leipzig, 1702, enlarged in *Rituale ecclesiasticum*, Jena, 1705, 671ff). He later contributed an important 46-page foreword, dated 1717, to *Temperatura practica* (n.d.) by Christoph Albert Sinn. Here he showed that he was familiar with the problems of temperament in music and acknowledged the fundamental ideas of *musica theorica*, according to which the basic principles of creation are revealed in music. He praised equal temperament – 'a new wonder' – whose intervals Sinn had calculated with the help of logarithms.

Calvoer had a decisive influence on Telemann, who had been sent by his mother to Zellerfeld in 1694 and entrusted to Calvoer's care so that he might overcome his musical leanings and continue his general education. Calvoer, however, not only awoke in him an understanding of classical literature but also imparted to him an insight into the relationship between music and mathematics and encouraged him to perform and compose.

MARTIN RUHNKE

Calvó Puig, Bernardo (*b* Vich, 22 Feb 1819; *d* Barcelona, 1880). Spanish composer. He studied music as a choirboy at Vich Cathedral with José Gallés, whom he succeeded as organist; he later became assistant *maestro de capilla* there. After further studies in Barcelona he was appointed organist at the churches of S María del Pino and S María del Mar, and later *maestro de capilla* of Barcelona Cathedral. In 1853 he was made director of the Escolanía de la Merced. He was a critic and prolific composer, whose works include 67 masses (many manuscripts in Barcelona Cathedral) and two oratorios, *El descenso de la Virgen en Barcelona* and *La última noche de Babilonia*, a Requiem, operas, including *Il solitario*, and zarzuelas.

ANTONIO IGLESIAS/R

Calypso. A style of music, dance and song of the southern and eastern Caribbean. Its main development has been in Trinidad alongside the evolution of Carnival celebrations there. Its origins go back to the *gayup*, a West African work song brought to the West Indies by plantation slaves, with a call and response structure and a lead singer called a *chantwell* (*chantuelle*, *shantrelle*, *shantwell*). When sung at competitive events the *gayup* often had two sections, the first celebrating victory and the second pouring scorn on the losers; both features are still found in calypso performances, as is the call of 'kaiso', a West African cry of encouragement (the word *cayso* was used for early forms of calypso).

A history of territorial struggle and the defiance of colonial authority lies within calypso. In the days of slavery Carnival was a time of rival celebrations among planters and slaves; the French planters maintained the Catholic tradition of celebrating Lent with masquerade balls and processions, while the slaves, with their permission, set up alternative processions based on West African end-of-harvest celebrations. From this came the tradition of a torchlit procession called *canboulay* (from Fr. *cannes brûlées*) at midnight on Shrove Tuesday. With

emancipation in 1834 elements from the two forms of Carnival merged; the masquerades became part of street processions and the *gayup* became calypso. Other influences on calypso were the early 'cariso' and 'caliso', improvised songs for pre-emancipation Creole drum dances such as the 'belair' and the 'old kalenda', as well as the 'bongo' wake dance and the 'paseo' of Venezuela. With English the language of political control in Trinidad in the 19th and early 20th centuries, French Creole was viewed by the authorities as subversive. Calypsos, sung wholly or partly in French Creole, became associated with *kalendas* (*kalindas*), the activities of stick-fighting *batoniers* whose combats were accompanied by percussion and boasting songs, with *chantwells* egging on and commenting on the action. By the 1870s large bands of stick-fighters marched against each other at Carnival time, asserting their neighbourhood identities and territorial dominance. The role of singer gradually became separate from that of the parading bands. By the 1930s competing teams of singers were performing in 'calypso tents', with new topical compositions each year; each session ended with a verbal 'war' in which singers in turn improvised stanzas glorifying themselves and disparaging their rivals. Although this tradition is no longer practised, some sound recordings were made. Prizes are still given to the best calypsos each year at the Dimanche Gas show on the Sunday before Lent.

Musically calypso resembles the Brazilian samba; it is in duple metre, well suited to Caribbean 'jump up' dancing and Carnival road marches (ex.1). Most modern calypsos

Ex.1 Calypso rhythms, transcr. O. Lewin

are in the major mode; earlier ones were slower and tended to be in minor mode (locally called 'me-minor' calypsos) (ex.2). Many have choruses involving enthusiastic group participation. Calypsos are typically played by steel bands, with groups of up to 150 pans accompanying Carnival street dancing, and smaller steel bands or dance band instruments playing for smaller groups on streets and for indoor dancing. From the 19th century calypso lyrics functioned as oral newspapers, with social and political comment, satirical treatment of scandal and topical themes. The words are witty with much double entendre. In keeping with the Carnival tradition of the reversal of power structures and hierarchies, calypsonians adopted sobriquets symbolizing their ability and status, for example the 'Tiger' (Neville Marcano) and, later, the 'Mighty Sparrow' (Slinger Francisco). Until the mid-20th century calypso lyrics remained largely local in subject-matter, but with the arrival in Britain of emigrants from the West Indies such calypsonians as 'Lord Kitchener' (Aldwyn Roberts) began to include international themes. Historical recordings of calypso include *Trinidad Loves To Play Carnival: Carnival, Calenda and Calypso 1914–39* and *History of Carnival: Christmas, Carnival, Calenda and Calypso from Trinidad 1929–39* (both in Matchbox Calypso Series MBCD 301–2, 1993, with disc notes by John H. Cowley).

JAN FAIRLEY

Calzabigi [Calsabigi], **Ranieri** [Raniero] (**Simone Francesco Maria**) [de', de, da] (*b* Livorno, 23 Dec 1714; *d* Naples, 12/13 July 1795). Italian writer and librettist. He was the librettist who most successfully and persistently challenged the Metastasian form of serious opera, in both librettos and polemical prose writings. He adopted the form 'de' Calsabigi' while in France, probably conforming to mispronunciations he frequently heard there, but his family name in Italian has always been simply 'Calzabigi'.

1. Early career. 2. Vienna, 1761–73. 3. Later career.

1. Early career. The first-born son of a merchant family in the port city of Livorno, he was educated at the Jesuit college of Prato between 1722 and 1729; in 1733 he took charge of the correspondence (largely French) of the family business, at the same time assembling a fine private library. Calzabigi's involvement in a poisoning, previously assumed to be the cause of his departure from Naples in 1750, has been shown by Masini (1987) to be connected with earlier difficulties in the management of his family's firm; the result was evidently banishment from Tuscany. Calzabigi's first literary productions date from the late 1730s; by 1740 he had become a member of the Arcadian Academy (as 'Liburno Drepanio'), and of the more classically orientated Etruscan Academy of Cortona.

In 1741 Calzabigi moved to Naples, partly because of declining patronage of the arts in Tuscany following the demise of the Medici. He gained a post under the French ambassador to the Kingdom of the Two Sicilies, the Marquis de l'Hôpital, whom he followed to Paris in about 1751. He also kept up literary contacts with Tuscany, even selling copies of a Florentine literary gazette in the public square. His first poems for music, both called 'componimenti drammatici', honoured the marriage of the French dauphin with Maria Teresa of Spain; only the second was performed, changing political circumstances having made the first out of date. He produced a similar piece, *Il sogno d'Olimpia*, for the birth of a son to Carlo III in 1747. This and other early works won praise from Metastasio (indeed they are largely dependent on his style), but also his criticism of their excessive naturalism and lack of artifice.

Relatively little is known of Calzabigi's sojourn in Paris beyond the portrait Casanova provides in describing the lottery scheme they devised (along with Calzabigi's younger brother Anton Maria) in 1757–8. (His arrival is to be dated between 21 March 1751 and 19 November 1752, according to documents cited by Bellina, 1994.) His time in the French capital was nevertheless crucial to his developing conception of theatrical spectacles. The most important product of his stay was the 'Dissertazione sulle poesie drammatiche del Sig. Abate Pietro Metastasio', which accompanied the first volume (1755) of his complete edition of the works of Vienna's imperial poet.

He had received a royal privilege to publish in December 1752, and was in close consultation with Metastasio throughout the editorial process. Indeed, the imperial poet supplied for insertion into the 'Dissertazione' an extended passage largely concerned with unity of place, in which, additionally, arias at the ends of scenes in operas are compared to choruses in ancient Greek tragedies. Calzabigi included a defence of Metastasio against certain French detractors over the explicit objections of the imperial poet, who feared further propagation of their rancorous views. In the event, Calzabigi's remarks combined high praise for Metastasio's passionate language, deft characterizations and expert conduct of plots with indirect criticism of his general approach. Despite harsh words for *tragédie lyrique* as it was usually practised, he closed with the suggestion that the Metastasian plan could be improved through judicious use of the French spectacle's 'numerous chorus, ballet, [and] scenery masterfully united with the poetry and the music'. In later years, answering the charge that in his 'Dissertazione' he had sought mainly to flatter the *poeta cesareo*, Calzabigi pointed specifically to this passage as evidence to the contrary. His *poema eroicomico* 'La Lulliade', begun in 1754, which documents the famous Querelle des Bouffons, likewise makes clear his basic hostility to French and Metastasian serious opera. (In his 'Dissertazione', Calzabigi had spoken of the Querelle as a dispute of European rather than local significance.)

Excerpts of the 'Dissertazione' in the *Journal étranger* were cited as the inspiration for an anonymous writer's more openly critical *Lettre sur le méchanisme de l'opéra italien* (1756). Although the pamphlet has sometimes been attributed to Giacomo Durazzo, head of Viennese theatres during this period, Heartz (1995) has proposed Calzabigi himself as its author, citing (among other clues) the lavish praise in the *Lettre* of the Marquis de Marigny (brother of Mme de Pompadour, the dedicatee of Calzabigi's edition of Metastasio), the writer's intimate acquaintance with opera houses in Naples and Florence, and numerous coincidences of opinion with the 'Dissertazione'. Though the author's minor disagreements with Calzabigi's signed essay might well indicate a desire to put 'would-be detectives off the scent' (as Heartz surmised), or even to state openly what the 'Dissertazione' could only hint at, some scholars have raised philological objections to Calzabigi's authorship of the pamphlet, which (unlike the French-language essays on *Don Juan* and *Sémiramis*) he did not later claim as his own.

2. VIENNA, 1761–73. For reasons possibly connected with the lottery, Calzabigi was exiled from French territory. It was long surmised that he went first to Brussels, in the Austrian Netherlands, but Bellina (1994) has shown this to be without firm foundation. (Calzabigi's command of English language and literature prompted Michel, 1918, to speculate also about a visit to England during this period.) By February 1761 he was in Vienna, working in the Netherlands Finance Ministry and as secretary to Chancellor Kaunitz. (Casanova, visiting Calzabigi during this Viennese period, portrays the poet as 'always speaking ill of Metastasio, who despised him'.) Calzabigi quickly came to the attention of the theatre director Count Giacomo Durazzo, another Kaunitz protégé. In a June 1761 memorandum to the count, Calzabigi recommended advertising in newspapers as a means of recruiting French actors. Also during that year he apparently helped draft the programme essay for Gasparo Angiolini and Christoph Gluck's pantomime ballet *Don Juan, ou le festin de pierre*; though Angiolini signed the essay, Calzabigi in 1784 claimed it as his own. His role in drafting the unsigned *Dissertation sur les ballets pantomimes des anciens*, which accompanied Angiolini and Gluck's ballet *Sémiramis* of 1765, is better established. Whereas in the Metastasio 'Dissertazione' Calzabigi had claimed that the modern, enlightened stage could no longer tolerate magic, or supernatural characters, in the *Sémiramis* essay an exception is made for ghosts and their pronouncements, in which (according to Voltaire), 'all of Antiquity [had] believed'.

During 1762 the same group collaborated to produce the first of the so-called Viennese reform operas, *Orfeo ed Euridice*. Though not entirely free of Metastasian features (there are reminiscences of both *L'olimpiade* and *Alcide al bivio*), Calzabigi's poem is essentially a rebuke of both Metastasio's system and his language. It largely dispenses with similes and exit and da capo arias, taking inspiration instead from the large-scale *tableaux* and integral ballets of *tragédie lyrique*, and even the *romance* of *opéra comique*. (Calzabigi articulated his notion of tragedy as a series of *quadri* or *tableaux* in several later writings, citing Horace as precedent.) The remarkable directness of Calzabigi's language (derived in part from Virgil) was noted by Lablet de Morambert, who in the 'Réflexions' accompanying his French translation of the libretto stated that 'his works seem like extracts of pieces; the beauties are more indicated than developed; but it must be noted that the words of an opera are not made to be read'.

Early in 1764 Calzabigi welcomed to Vienna another progressive Tuscan poet, Marco Coltellini, who had already impressed the court with his libretto for Traetta's *Ifigenia in Tauride* of 1763. (Coltellini's next work, *Telemaco*, was for Gluck, and librettos for Giuseppe Scarlatti and Gassmann followed.) Calzabigi himself did not write another libretto until *Alceste* (1767), which celebrated Empress Maria Theresa's devotion to her recently deceased husband, Francis of Lorraine. *Alceste* was viewed by many, including its author, as the purest embodiment of opera reformed along the lines of ancient tragedy. Rousseau and others criticized its uniformity of sentiment, but this and the opera's architectural monumentality Calzabigi defended as virtues. In the dedication of the score published two years later he wrote, in Gluck's name, a forceful manifesto on opera reform; his authorship is confirmed in a letter of 12 December 1768 to Antonio Greppi. As *Alceste* was being composed, Calzabigi sought assurances concerning its proper casting, and at the same time vented his scorn for Metastasio's subjects and his manner of treating them, in an extraordinary letter to Kaunitz (published by Helfert in 1938), who following Durazzo's dismissal served as protector of the reform. (It was Kaunitz who secured the empress's permission for the text of *Alceste* to be dedicated to her; he had earlier offered the poet a position as imperial counsellor in Milan, according to letters transcribed by Croll), 1996. In 1769 Calzabigi penned a different sort of critique of traditional *drammi per musica* and their performers, a satirical libretto entitled *La critica teatrale* (set by Gassmann as *L'opera seria*). His next (and last) text for Gluck, *Paride ed Elena* of 1770, he himself acknowledged as a failure, saying that the commission

for a festive opera excluded strong passions of the sort he had brought into play in *Alceste* – although in 1762 such considerations had not prevented *Orfeo* being given for the Emperor's name-day. In 1772 Calzabigi wrote a *dramma per musica* for Giuseppe Scarlatti, *Amiti e Ontario, o I selvaggi* (of which only the libretto survives), which shows the influence of the *drame* and of newer, more serious *opéras comiques* (such as Grétry's *Le Huron*, recently performed in the Burgtheater). Even so, Calzabigi also claimed a classical inspiration in Horace for some of the work's verses. The opera's text was later reworked (probably by Giuseppe Palomba) for Paisiello as *Le gare generose* (1786, Naples). As Biagi Ravenni has noted, two further comic librettos from this period for Salieri (*Le donne letterate* and *L'amore innocente*, both 1770), sometimes attributed to Calzabigi, were in fact written by Giovanni Gastone Boccherini (as the elder poet himself attested, in the latter case).

With Gluck turning towards Paris, and *opera seria* in Vienna threatened by drastic economies in the theatres, Calzabigi began to contemplate leaving the Habsburg capital. (Around this time he encouraged Boccherini in his career as a librettist, but there are no reasons for the assumption that the two collaborated.) At the moment of his departure – in 1773, according to a letter of Metastasio – he was embroiled in polemics between Angiolini and his successor Jean-Georges Noverre, supporting his former colleague though later he would shift his sympathies somewhat. In 1774 he published in Livorno a fine edition of his works, dedicated to Kaunitz, which included besides librettos various poems, translations from the English and his 1755 'Dissertazione'.

3. LATER CAREER. By 1775 Calzabigi had established residence in Pisa; there he composed two tragic librettos, which in 1778 he offered to Gluck: a *Semiramide* (now lost), and an *Ipermestra, o Le Danaidi*, meant as a critique of Metastasio's *Ipermestra*. The composer declined to set either work but passed *Le Danaidi* on to his protégé Salieri; in 1784 it was presented in Paris, translated and much reworked, and at first passed off as a work by Gluck. News of the production caused Calzabigi (since 1780 back in Naples) to publish his original libretto immediately and to commission a partial setting by the castrato Giuseppe Millico. He also sent an indignant letter of protest to the *Mercure de France*, in which he claimed principal credit for the reform of opera and stated that he had had to teach Gluck how properly to set Italian declamation in *Orfeo*. He was more generous towards the composer in his *Lettera … al Sig. Conte Vittorio Alfieri sulle quattro sue prime tragedie*, referring to Gluck as 'the foremost composer of this century'. In a lengthy footnote to this same essay Calzabigi claimed to have authored both ballet programme essays for Angiolini, and even (contradicting the essays themselves) that Noverre's *ballets en action* for Stuttgart had preceded those of Angiolini and himself for Vienna. This note was suppressed in subsequent editions of the *Lettera*.

During his later years Calzabigi continued sporadically to compose opera texts. For Senigallia in 1780 he wrote a *componimento drammatico per musica, Comala*, after Ossian, set by Pietro Morandi. In the early 1790s he wrote two librettos for Paisiello, *Elfrida* (1792) and *Elvira* (1794). The model for the former piece was a dramatic poem by William Mason, medieval in subject, but 'written on the model of the ancient Greek tragedy'. In a published letter to Count Alessandro Pepoli, Calzabigi explained several novel features of the opera, and his most recent thinking on the setting of operatic texts generally. During this same period Calzabigi was largely occupied with critical writings and the completion of his epic 'La Lulliade'. In 1790 he replied anonymously, but transparently, to Esteban Arteaga's *Le rivoluzioni del teatro musicale italiano*, in which he had been called 'one of [the] principal corruptors of modern musical theatre'. His mock-picaresque *Risposta … [di] Don Santigliano di Gilblas* contains a hyperbolic yet revealing account of the Viennese reform and of Gluck's character and capabilities, a comparison of his and Metastasio's treatments of the Danaides myth (much to the latter's disadvantage), as well as a revisionist gloss on his 'Dissertazione' on Metastasio. Calzabigi's death, variously dated by his biographers, is referred to as having occurred 'the day before yesterday' in a letter of Paisiello's dated 14 July 1795.

Calzabigi's reform librettos, though few in number, stand as landmarks in the history of opera. Rarely have aesthetic idealism and a classicizing spirit (in his case, founded on a profound knowledge of ancient literature) been realized so successfully in the theatre. This success was due in large part to his having found in Gluck a composer temperamentally better equipped to portray powerful passions and 'theatrical tumult' than the decorous comparisons and maxims found in Metastasio. The unique theatrical situation in Vienna in the 1760s was likewise crucial, as was demonstrated by later misguided performances of *Orfeo* and *Alceste* in impresarial theatres. Calzabigi himself later attributed the success of his pieces for Vienna in large part to the cosmopolitan, discerning nature of his audience, whose theatrical experiences included French dramas expertly performed by a troupe sponsored by the court. Calzabigi's stance towards the French theatre was a complex matter. Though openly an admirer of French classical drama, in writings both private and public he heaped scorn on the French language, style of singing and general approach to opera, which he asserted was in many respects still mired in 17th-century practices. Yet in the *Risposta* to Arteaga he stated that the corrected French plan of melodrama, as described at the end of his 'Dissertazione' on Metastasio, was precisely what he had used in his Viennese operas for Gluck. More important for Calzabigi than questions of nationality were emotional directness and rational dramatic design. Horace's dictum of 'simplex … et unum' had been cited by both Racine and Metastasio, but Calzabigi put it into operation with uncommon rigour, and was tireless in his opposition to what he saw as the amorous intrigues and *cicisbeatura* of Metastasian texts. He combatted the prevailing sociability of *opera seria* also by requiring increased concentration on the part of spectators by means of his large-scale stage *tableaux* – rendered all the more continuous by Gluck's frequent blurring of boundaries between numbers.

Even after the imperial poet's death, Calzabigi's literary production was still largely defined in opposition to Metastasio's, whether in scathing critiques such as the *Risposta* or in lyric texts such as *Elfrida*. Despite forays into medieval subject matter as in this last piece, Calzabigi's aesthetic was fundamentally resistant to emerging Romanticism, not least (as Gallarati has noted)

in his insistence that musical expression in opera be subservient to poetry.

WORKS

Editions: *Poesie di Ranieri de' Calsabigi* (Livorno, 1774) [L]
Poesie e prose diverse di Ranieri de' Calsabigi (Naples, 1793) [N]
Scritti teatrali e letterari, ed. A.L. Bellina (Rome, 1994) [R]

OPERA LIBRETTOS

La gara fra l'Amore e la Virtù (componimento drammatico), planned for 3 Aug 1745, unperf., lost; *L'impero dell'universo diviso con Giove* (componimento drammatico), G. Manna, 1745; *Il sogno d'Olimpia* (festa teatrale), G. de Majo, 1747; *Orfeo ed Euridice* (azione teatrale per musica), C. Gluck, 1762, L i, N i, F. Bertoni, 1776; *Alceste* (tragedia per musica), Gluck, 1767, L i, N i, P. Guglielmi, 1768; *La critica teatrale* (dramma giocoso per musica), F.L. Gassmann, 1769, as *L'opera seria*, ed. R. Candiani (Rome, 1993); *Paride ed Elena* (dramma per musica), Gluck, 1770; *Amiti e Ontario, o I selvaggi* (dramma per musica), G. Scarlatti, 1772, L i, rev. G. Palomba as *Le gare generose*, Paisiello, 1786 L i; *Semiramide*, by 1778; *Comala* (componimento drammatico per musica), P. Morandi, 1780; *Ipermestra, o Le danaidi*, G. Millico, 1784 (A. Salieri, 1784, as Les Danaïdes); *Elfrida* (dramma per musica), Paisiello, 1792; *Elvira* (tragedia per musica), Paisiello, 1794

Spurious: *Le donne letterate* (commedia per musica), Salieri, 1770 [actually by G.G. Boccherini]; *L'amore innocente* (pastorale per musica), Salieri, 1770 [by Boccherini]; *La contessina* (dg), Gassmann, 1770 [by M. Coltellini, after C. Goldoni]; *La finta giardiniera* (dg), Anfossi, 1774 [possibly by G. Petrosellini]; *Cook, o sia Gli inglesi in Othaiti*, 1785 [Paisiello and others; text attrib. to Calzabigi by Faustini-Fasini]

CANTATAS, ODES

Epitalamio per le felici nozze di Antonio Lefroy ed Elisabetta Langlois, 18 Feb 1738 (Florence, 1738), L ii; *Celebrandosi dalla nobile Accademia Etrusca della antichissima città di Cortona le solenni feste Callisteie*, ode (Florence, 1740), L i; *No, del divino ardore … alla S.R.M. di Luigi XV re di Francia*, ode (Naples, 1745), in *L'impero dell'universo diviso con Giove*, L i; *All'illustrissima signora Elisabetta Le Duc* (cant., E. Bambini), 19 Nov 1752 (Paris, 1752); *L'amore a Silvia*, canzonetta, in *Journal étranger*, i (Nov 1754), L ii; *I capelli di Silvia*, canzonetta, in *Journal étranger*, ii (June 1755), L ii; *Venite, o Muse … a sua eccellenza la signora marchese di Pompadour* (cant.), in *Poesie del signor abate Pietro Metastasio*, i (Paris, 1755); *Arianna* (cant.), in letter of 5 May 1789 to Giovanni Fantoni [see Candiani, 1984]; *Odo in lontan squilla lugubre: il suono*, stanze, in *I pianti d'Elicona su la tomba di Teresa Ventura Venier* (Parma, 1790); *Al signor conte Giovanni Fantoni*, ode, in letter of 21 May 1792 to Fantoni [see Candiani, 1984]; *Vaga rosa porporina*, ode/canzonetta, L ii; *Saggio di traduzione del Paradiso perduto di Milton*, L ii; *Parafrasi dell'ode di Gray intitolata I progressi della Poesia*, L ii; *Traduzione dell'inno di Thomson che termina i suoi poemi delle Stagioni*, L ii; *Doni splendidi, Erberto, anch'io farei*, ode, N ii

BRUCE ALAN BROWN

Camacho, Marvin (*b* Barva, Heredia, 23 Feb 1966). Costa Rican composer and pianist. He studied at the Castella Conservatory from an early age and in 1983 obtained a school certificate in the arts, specializing in the piano. In 1981, under the auspices of the Ministry of Culture, Youth and Sports, he gave his first recital in Costa Rica, in which he played his early works. In 1984 he obtained the National Arts Prize for composition. Later in the same year he began his studies at the University of Costa Rica (piano with Benjamín Gutiérrez; composition with Flores Zeller). In 1991 he obtained a degree in music with composition as his specialization, and attended workshops with Roger Wesby, Mario Alfaro Güell y Luis and Luis Diego Herra Rodríguez. He has worked as a piano teacher and also taught in the elementary music programme of the Regional Atlantic Headquarters of the University of Costa Rica; since 1992 he has been the programme's co-ordinator.

He has written works for solo instruments, voice, chamber groups and orchestra, and also for modern dance productions and the theatre. His *Stabat mater* was first performed in 1984 at the Colombia Choir Festival, his *Danzas primitivas latinoamericanas* at the 1991 Latin American Festival, his *Preludio sinfónico* (played by the National SO) at the National Theatre in 1992. In 1989 his *Isopanisha* was first performed at the Caribbean Composers' Forum, held at the University of Costa Rica. In 1994, at the same forum, also held in San José, he played the première of his piano piece *Visiones de San Agustín*, composed in memory of the victims of Bosnia.

JORGE LUIS ACEVEDO VARGAS

Câmara Cascudo, Luiz da. *See* CASCUDO, LUIZ DA CAMARA.

Camarella, Giovanni Battista (*b* ?Venice; *fl* early 17th century). Italian composer and musician. According to the title-page of his only known volume, *Madrigali et arie* op.1, he was a musician in the service of the signory of Venice and prefect of the Accademia Fileleutera there. The date of this publication, which appeared in Venice, is obscured in the only known copy (in *PL-Kj*) but is believed to be 1633. The volume consists of solo songs with continuo and includes one each by Donato Core, Giovanni Francesco Ferrante and Monteverdi (*Ecco di dolci raggi*, published in his *Scherzi musicali* of 1632); nearly half of the contents are furnished with chordal accompaniment (in alphabetic tablature) for the guitar. Camarella's only other surviving piece is *Dietro al fonte colà fra verdi allori*, a madrigal for alto, tenor and continuo published in Antonio Marastone's *Concerti* (1624).

COLIN TIMMS

Camargo, Ignacio (*fl* 1689–1702). Spanish theologian. A Jesuit priest, he taught theology at the royal college of his order in Salamanca and was the author of several works on moral and theological questions. His *Discurso theológico sobre los theatros y comedias de este siglo* (Salamanca, 1689), a vigorous attack on moral grounds on the theatre of his day, is frequently quoted for its account of contemporary Spanish stage music. He describes its beauties with great eloquence, suggesting that they may have been inspired by the Devil, and elaborates in suspiciously vivid terms on its power to arouse amorous feelings. It is unlikely that he can be identified with the Ignacio Camargo who in the 1660s composed some 40 vocal works (*E-V*).

Cambefort, Jean de (*b c*1605; *d* Paris, 4 May 1661). French composer and singer. He began his career as a singer in Cardinal Richelieu's private chapel. After Richelieu's death in 1642 he transferred his allegiance to Cardinal Mazarin, who always remained his loyal patron and to whom he dedicated his second book of *airs de cour*. In 1644, through Mazarin's influence, he succeeded François de Chancy as *maître des enfants de la chambre du roi* and immediately discovered a rival in Jean-Baptiste Boësset, who was protected by Jean Baptiste Colbert. In 1650, again through Mazarin's influence, he became *compositeur de la musique de la chambre* to Louis XIV. In 1655, by order of the king, he went to Languedoc to recruit new choirboys. When, five years later, he failed to obtain the post of *maître de la musique de la reine* he addressed a letter of complaint to Mazarin. This shows his own good opinion of himself, for he judged that both Le Camus and Boësset, who were successful, lacked the qualities necessary for the post. He did, however, hold the appointment of *surintendant de la musique du roi* (which Lully acquired after his death). He was married to a niece of Paul Auget.

Cambefort wrote all the music sung in the *Ballet de la nuit*, which Menestrier considered the most accomplished of all *ballets de cour*. He also contributed at least one *air* to the *Ballet du temps* (1654) and in the same year sang a number of songs in Carlo Caproli's *Le nozze di Peleo e di Theti*. He was undoubtedly a skilled singer who, while remaining unmoved by the extravagant Italian style of, for example, Luigi Rossi, developed a dramatic style of his own which sacrificed none of his lyrical gifts. His ballet *airs* are remarkable for their free and soaring lyrical qualities (for example, the song of Venus in the *Ballet de la nuit*, Act 2 scene i) and for the expert way in which he adapted his melodies to the rules of prosody, respecting both rhyme and caesura. These characteristics, as André Danican Philidor stated at the beginning of his collection, marked him out as one of the first to have anticipated Lully. The chorus of the hours in dialogue with the moon, also in the *Ballet de la nuit*, explores a succession of harmonies that also anticipate the style of Lully; the 'Récit du temps et des quatre saisons' in the *Ballet du temps* is similar. Cambefort was also one of the last composers of *airs de cour*.

Lully's reputation and success were such that Cambefort, disenchanted, turned away from secular works in his last years. His church music, however, does not survive, but Jean Loret, in his letter of 23 April 1661 (*La muze historique*, Paris, 1650–65), admired the skill of his last religious work, which was performed a few days before his death.

MARGARET M. McGOWAN

Cambert, Robert (*b* Paris, *c*1628; *d* London, Feb/March 1677). French composer and organist. He was the co-creator, with Pierre Perrin, of French opera. A pupil of Chambonnières, he was appointed organist at St Honoré, Paris, in 1652. He had begun to collaborate with Perrin by 1657, when he set as a sarabande 'Filles du ciel', a poem celebrating Cardinal Barberini's return to France. According to Menestrier, several of Cambert and Perrin's *airs en dialogue* were performed for Cardinal della Rovere between 1656 and 1659. In 1658 Cambert composed *La muette ingratte*, an elegy for three voices in dialogue, which he claimed was the outcome of his 'longstanding desire to introduce into France *comédies en musique* like those found in Italy'. A substantial piece lasting at least 45 minutes, it was performed in concerts and, according to Cambert, inspired Perrin to write the libretto for his first stage work. The resultant *Pastorale* (1659) was Cambert and Perrin's first major collaboration. It was billed by Perrin as the 'première comédie françoise en musique' (a dubious claim, for Charles de Beys and Michel de La Guerre's *Le triomphe de l'Amour* of 1655 almost certainly satisfied the same criteria) and required three sopranos, an *haute-contre*, tenor, baritone and bass. It was staged eight or ten times in the house of M. de la Haye at Issy early in April 1659; later it became known as the *Pastorale d'Issy*. As Perrin was in prison at the time, Cambert had to organize the entire enterprise. Although the music is lost, it is known that each act opened and closed with an instrumental *symphonie* and that short *ritournelles* linked the scenes. The five acts were relatively short, and the piece lasted an hour and a half. Perhaps because of its modest length, the *Pastorale* was a great success with the French, who had hitherto been subjected to overlong Italian operas, the words of which

few could understand. Jean Loret (1659) claimed that about 300 people attended each performance.

After a special royal command performance in late April or early May at Vincennes, the opera-loving Cardinal Mazarin suggested to Cambert that a second *pastorale* be composed. Cambert and Perrin accordingly produced *Ariane, ou Le mariage de Bacchus*. No music survives, but it is clear from the libretto that Cambert attempted a more ambitious score, with a chorus of Corybantes as well as eight solo roles, four entr'actes, each comprising two entrées, percussion instruments (cymbals and tambourines) on stage, and trumpets and woodwinds in certain instrumental items. In spite of public rehearsals in Paris, in about 1660–61, the work was not formally performed, and Mazarin's death in 1661 effectively put an end to Cambert and Perrin's experiments. According to Loret and Robinet, Cambert directed several sacred concerts at convents and elsewhere in the late 1650s and 1660s. In 1662 he became *maître de musique* to the Queen Mother, Anne of Austria. During the next few years his sole stage piece appears to have been the *trio-bouffe Bon di Cariselli*. His collection of *Airs a boire*, published in 1665, includes settings of texts by Perrin.

In March 1669, when the royal privilege to establish *Académies d'opéra* in France was in the offing, Cambert and Perrin resumed their partnership and began to rehearse *Ariane* once more. The official privilege was awarded to Perrin on 28 June and shortly afterwards he and Cambert started to set up a proper company. By April 1670 four or five singers had been recruited from churches in Languedoc and brought to Paris, where Cambert began the long process of training them. Plans to perform *Ariane* were abandoned at about this time and a new collaboration, *Pomone*, was taken into rehearsal.

Pomone finally opened at the theatre at the Jeu de Paume de la Bouteille in March 1671. Considered by modern scholars to be the first true French opera, it involved ballets (danced by male dancers under the direction of Pierre Beauchamp and Des Brosses), spectacle and elaborate machine effects (designed by the Marquis de Sourdéac). It was a great success with audiences and performances continued to be given for seven or eight months. Robinet (*Lettres en vers à Monsieur*, 18 April 1671; repr. in Nuitter and Thoinan) marvelled at the many aural and visual delights:

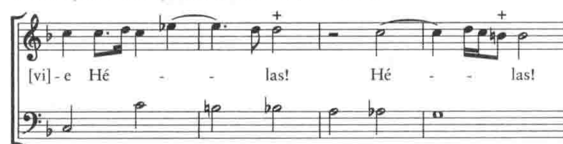
> Je l'ai vû cet opéra-là
> Et je pensais n'avoir pas là
> Suffisamment d'yeux et d'oreilles,
> Pour toutes les rares merveilles
> Que l'on y peut ouir et voir,
> Et qu'à peine on peut concevoir.

But behind the scenes all was not well: none of the company was apparently paid – including Cambert, who had been promised a salary of 250 livres per month – because of the machinations of Perrin's business associates, Sourdéac and Champeron; and in June 1671 Perrin was imprisoned for debt. Cambert subsequently collaborated with the playwright Gabriel Gilbert on a second opera, *Les peines et les plaisirs de l'amour* (1672). Saint-Evremond judged it a better work than *Pomone*, and it looked set to enjoy a long run. Performances were brought to an abrupt end, however, on 1 April 1672, when the *Académies* were closed by royal edict, Lully having seized control of the privilege. Around the time of the first performance of *Les Peines* there had also been plans for

1. Scene from Cambert's pastorale 'Pomone': engraving from 'Recueil général des opéra', i (Paris: Ballard, 1703)

the production of an enlarged version of *Ariane*, though it is not clear whether Cambert had written any additional music.

In 1673 Cambert moved to London, Louis XIV having arranged for him to become *maître de musique* to Louise de Querouaille, Duchess of Portsmouth and Charles II's principal mistress. Early in 1674 his *pastorale*-like *Ballet et musique pour le divertissement du roy de la Grande-Bretagne* was performed at court in celebration of the marriage of James, Duke of York, and Mary of Modena. Then followed (30 March) the inauguration of a French-style Royal Academy of Musick with a production of a revised and enlarged *Ariane*. The libretto had been expanded before Cambert left Paris and was on a similar scale to that of *Pomone*. A new prologue with an English royalist slant was added in London (fig.2). Luis Grabu was deeply involved in the production and is thought to have collaborated with Cambert, writing some, if not all, of the extra music. The enterprise was unsuccessful, and Cambert appears thereafter to have kept a relatively low profile. There is no evidence in English sources to support the idea (first put forward by Bauderon de Sénecé) that Cambert was murdered.



Cambert is remembered primarily for having written the music for the first French opera. His achievement as a

2. Prologue of Cambert and Grabu's 'Ariane, ou Le mariage de Bacchus', Drury Lane Theatre, London, 1674, showing London Bridge and three river nymphs representing the Thames, Tiber and Seine: engraving from the libretto (London, 1674)

composer is difficult to assess, since very little of his output is extant. In 1671 Christophe Ballard began to print the scores of *Pomone* and *Les peines et les plaisirs* but, due perhaps to the escalation of affairs at the *Académies*, did not finish them. The lack of an extant first soprano part for the *Airs a boire* renders all but one of them (*Sus, sus, pinte et fagot*) unperformable; its uppermost part was discovered by Henry Prunières in a manuscript dating from the mid-1680s.

Cambert's operas were essentially mixtures of airs, récits, ensembles, dances and spectacle. Each began with an overture and a laudatory prologue to the monarch. The overtures to *Pomone* and *Les peines et les plaisirs* are scored for four-part string band (Lully used a five-part ensemble); in each a seemingly stately introduction gives way to faster, contrasting sections of dance-like music. Wind instruments are specified in *ritournelles* of individual numbers. Surviving bass *airs* such as 'Voila le prix' (*Pomone*, Act 1) suggest that the instrumental doubling of the melody underneath two accompanying treble instruments may have been a favoured device. Providing music for dance and spectacle was an important part of Cambert's brief. He wrote numerous entrées for insertion in or between acts and may have intended certain choral ensembles – those imbued with triple-metre dance rhythms – to accompany dance and spectacle. He is said to have been particularly skilled at composing expressive melody and recitative. Saint-Evremond wrote that 'the laments in *Ariane* were equal to Lully's finest music' and praised the funereal 'tombeau de Climène' in *Les peines et les plaisirs*. Although both passages are lost, there are good examples of affective word-setting in surviving recitatives. In a passage in Act 1 scene i of *Les peines et les plaisirs* Cambert places an expressive vocal line above a descending chromatic bass (ex.1). He also shows skill in handling

Ex.1 *Les peines et les plaisirs de l'amour* (after Ballard)

vocal ensembles: duos and trios are most common, but *Les peines et les plaisirs* includes music for four and even six voice parts.

CHRISTINA BASHFORD

Cambiaggio, Carlo (*b* Milan, 12 Dec 1798; *d* Milan, 13 April 1880). Italian bass, impresario, librettist and composer. His father traded in silk and he himself was in trade until he made his début in 1829 at the small Piedmontese town of Varallo, in Mercadante's *Elisa e Claudio*. For the following 30 years he combined singing with acting as impresario of comic opera seasons; he was one of the last to work the 18th-century system of moving about with the core of a permanent company. In 1832–3 and again in 1834 he managed the Teatro Carcano, Milan, putting on two new operas by Michael Balfe (a member of his company) and himself achieving success as Dulcamara in *L'elisir d'amore*, for which he composed a duet in Milanese dialect. In 1837–8 he unsuccessfully ran seasons in Lisbon and Oporto. He developed a theatrical agency on which he concentrated in later life, in addition to acting as Milan representative for leading impresarios. When he was praised as a singer it was for his comic verve and acting ability: in a one-act opera (to his own libretto), Frondoni's *Un terno al lotto*, he sang all the parts.

JOHN ROSSELLI

Cambiare (It.: 'to change'). In orchestral parts an instruction for a woodwind player to change to another instrument, a brass player to another crook, or timpanist to another tuning. More commonly, the plain imperative *muta*, 'change', is used.

□

Cambiata (It.: 'changed [note]'). An unaccented NON-HARMONIC NOTE that intervenes in a melodic resolution but is not contained in the interval circumscribing the resolution, and which is approached in the same direction as that of the resolution.

In American usage 'cambiata' denotes the changing voice of an adolescent boy; both the term and the music associated with it recognize the special qualities and requirements of such voices.

See also NOTA CAMBIATA.

□

Cambini, Giuseppe Maria (Gioacchino) (*b* Livorno, ?13 Feb 1746; *d* ?Paris, 1825). Italian composer and violinist. His birthdate was supplied by Fétis, who mistakenly gave Cambini's forenames as Giovanni Giuseppe (Jean-Joseph). Fétis also stated that he studied with Polli, who is otherwise unknown. Cambini's own account (*AMZ*, vi) of his playing quartets as a young man with Manfredi, Nardini and Boccherini contains errors that raise questions about its validity, but it is likely that he worked with Manfredi. The tradition of his study with Padre Martini is doubtful, as is that of his personal contact with Haydn.

Cambini may have been active in Naples in the mid-1760s. Fétis related the story, based on an ironic anecdote in Grimm's *Correspondance littéraire*, that Cambini, having produced an unsuccessful opera in Naples in 1766, started home with his fiancée and was captured by Barbary pirates. After lurid hardships on the voyage, his freedom was finally bought by a wealthy Venetian. But the authenticity of this romantic adventure is also open to serious doubt.

The first certain fact of Cambini's career is his arrival in Paris in the early 1770s. He performed one of his symphonies concertantes at the Concert Spirituel on 20 May 1773, and the following December his op.1, a set of string quartets, was issued by Vernier. Thereafter his works appeared with remarkable rapidity, and by 1800

close to 600 instrumental works had been published under his name. He was hardly less active in other areas. He composed, or contributed significantly to, at least 14 operas, of which a dozen were produced in Paris. The number of his vocal works, some performed at the Concert Spirituel, was substantial, and he evidently had some connnection with Gossec's Concerts des Amateurs. From about 1788 he led the orchestra and performed other influential duties at the Théâtre des Beaujolais; after the theatre closed in 1794 he held a similar post at the Théâtre Louvois.

Unlike many foreign musicians in Paris, Cambini seems to have adapted well to the Revolution. He wrote a number of popular revolutionary hymns and odes, and twice he was awarded 2000 livres by the Committee of Public Instruction. After 1794 he led private concerts for the munitions maker Armand Seguin, for whom he wrote more than 100 string quintets.

Cambini's works appeared less frequently after 1795, at which time his interest turned to writing about music. In about 1795 his *Nouvelle méthode théorique et pratique pour le violon* was published by Gaveaux, and in 1799 Naderman et Lobry issued his *Méthode pour la flûte traversière*. In 1804 he wrote an article about string quartet performance for the *Allgemeine musikalische Zeitung* (perhaps a few others also), and he collaborated with Alexis de Garaudé briefly as the anonymous editor of *Tablettes de Polymnie*. His career was evidently in decline, however, and almost nothing is known of him after 1810. Fétis's report that he died in the Hôpital Bicêtre in 1825 has been widely accepted. Trimpert's research has indicated that Cambini did not die in Paris, however, and Michaud's account that he retired to Holland and died before 1818 must be considered possible.

Cambini's name is best known today through a brief encounter with Mozart, who blamed him, with only circumstantial evidence, for Legros' cancellation of the performance of his Symphonie concertante (the lost K297*b*) at the Concert Spirituel. The envy and intrigue that Mozart suspected is not reported elsewhere, and Gluck knew Cambini's personal reputation well enough to recommend him as an honest man.

Cambini's achievements as an opera composer are difficult to assess because only two of his 14 stage works are preserved complete, with three others surviving in fragmentary form. It is obvious, however, that his success was limited. His importance in that area rests more on the role he played in the theatrical life of Paris before and during the early years of Revolution than on his creations. Nor did he stand in the front rank of Parisian violinists; references to his playing are rare. His instrumental compositions, however, particularly the quartets and symphonies concertantes, were valued by his contemporaries, as is clearly shown by their number and widespread multiple editions. Even Mozart admitted that Cambini's quartets were 'quite pretty'. During the 1770s and 1780s, reviews were brief and conventional but favourable. Not until the 1790s did harsh criticism begin to appear, particularly in German periodicals. Gerber was the first to accuse him of writing too much, and this criticism has been frequently repeated ever since. There is little evidence of carelessness in Cambini's works, however, and there is no reason to suppose that time would have supplied the missing elements of seriousness and originality. Cambini's works show facility far above the average and a degree of craftsmanship adequate to his purpose and imagination. He never tried to do more than please his audience, and in this he was justly successful. He was the *galant* Parisian composer *par excellence* – facile, charming, brilliant and very occasionally novel.

During the time that he was active in Paris, the most popular type of orchestral music was the symphonie concertante, and Cambini's orchestral output reflects this preference. While he composed only nine symphonies and 17 concertos, he wrote 82 symphonies concertantes, far more than any of his French contemporaries. Most of these were published during his lifetime by several Parisian firms, including Berault, Durieu, Sieber, Le Menu et Boyer and Imbault; Berault issued 20 of them on a monthly subscription basis, starting in March 1776. Cambini's symphonies concertantes, like those of his Parisian contemporaries, are typically structured in two fast movements, both in a major key; only 12 are in three movements, none in four or more. The key relationships between the movements are conventional, though the inner movements are most often in minor rather than major keys. The tempo indications of the inner movements are also unusual in that the majority are marked either Adagio, Largo or Larghetto – tempos that are rarely found in the symphonies concertantes of his contemporaries. The melodic material is pleasant and appealing and the harmonic vocabulary simple and predictable. Cambini's use of frequent diatonic and chromatic dissonances, however, adds a richness to his music which would otherwise be lacking. While the tutti instrumentation is fairly uniform, consisting most often of parts for two violins, viola, bass, two oboes, and two horns, the solo instrumentation is much more varied; Cambini was apparently the earliest composer in France to devote a considerable portion of his symphonies concertantes to wind soloists.

Efforts have been made to portray Cambini as a pioneer in the development of the string quartet. Actually, he was only one (although one of the most prolific) of many composers contributing to a development in France that was for some time denied the consideration it deserves.

WORKS

for full lists see Trimpert (1967) and Gribenski (MGG1)

STAGE

music lost unless otherwise stated; all known first performances in Paris

Les romans (ballet-héroïque, 3, L.-C.-M. de Bonneval), Opéra (Palais-Royal), 2 Aug 1776, 1st entrée *F-Po**

Rose et Carloman (comédie-héroïque, 3, A.D. Dubreuil), Comédie-Italienne (Bourgogne), 24 April 1779; lib as Rose d'amour (Paris, n.d.)

La statue (comédie, 2, M.-R. de Montalembert), Hôtel de Montalembert, ?2 Aug 1784, *Pn*

La bergère de qualité (comédie, 3, Montalembert), Hôtel de Montalembert, 24 Jan 1786

Le tuteur avare (opéra bouffon, 3, J.-L. Gabiot de Salins), Beaujolais, 1 March 1788 (Paris, *c*1789) [ov., nos.12–17 and part of no.11 by Cambini, the rest from P. Anfossi: L'avaro]

La croisée (comédie, 2), Beaujolais, 26 April 1788, 14 airs (Paris, *c*1789)

Colas et Colette (opéra bouffon, 1), Beaujolais, 20 June 1788, 2 airs in Journal hebdomadaire, composé d'airs d'opéra, xxiii (Paris, 1788)

Le bon père (opéra bouffon, 1, J.-F. Le Pitre), Beaujolais, 18 Oct 1788, air arr. Fournier for 2 vn in Douze petits airs pour deux violons (Paris, 1789)

La prêtresse du soleil (drame, 3, Gabiot de Salins), Beaujolais, 26 March 1789; also as Cora, ou La prêtesse du soleil

La revanche, ou Les deux frères (comédie, 3, P.U. Dubuisson), Beaujolais, 12 July 1790; also as Les deux frères
Adèle et Edwin (opéra, 3), Beaujolais, ?1790; rev. (1), Louvois, 19 Aug 1791
Nantilde et Dagobert (opéra, 3, P.-A.-A. de Piis), Louvois, 1 Oct 1791
Les trois Gascons (opéra, 1, Cambini, ?after N. Boindin), Louvois, 1 July 1793
Encore un tuteur dupé (comédie, 1, P.-J.-A. Roussel), Montansier, 22 Feb 1798

Doubtful: Alcméon (tragédie lyrique, 3, Dubreuil), Opéra (Porte-St-Martin), 13 July 1782 [cited by Goizet; according to Fétis, unperf.; does not appear in the records of the Opéra]; Alcide, 1782 (opéra, 3, Dubreuil), unperf. [cited by Goizet]; L'Amour et la peur, ou L'amant forcé d'être fidèle (oc, 4, Cambini), Jeunes Artistes, 20 Oct 1795 [cited by Goizet]; contribs. [cited by Fétis] to Campra's Les fêtes vénitiennes, 1789, to Armide and to 4 pantomimes

Spurious: Les fourberies de Mathurin (oc, 1, B. Davesne), Beaujolais, 5 Aug 1786 [actually by F. Bambini]

SACRED

Le sacrifice d'Isaac (oratoire françois), Concert Spirituel, April 1774, *B-Bc*
Joad (oratoire françois), Concert Spirituel, May 1775, *Bc*
Samson (oratoire, Voltaire), Concert Spirituel, 2 Feb 1779, lost
Le sacrifice d'Abraham (oratoire), Concert Spirituel, 1 April 1780, lost

2 masses, 1 Kyrie, *D-Bsb*; 3 masses, *Bsb*; Domini est terra (Ps xxiii), *F-Pc**
Lost: Miserere, motet à grand choeur, 1775; sacred 'hyerodrame', Concert Spirituel, 4 June 1775; several solo and small motets perf. at Concert Spirituel, 1773–5

OTHER VOCAL

Appollon prends pitié, scène lyrique, 1v, orch (Paris, n.d.)
Le compositeur, scène comique, 1v, orch (Paris, *c*1786)
Les amours d'Heloïse et d'Abelard, duo dialogué (Paris, 1793), lost
Andromaque, scène lyrique, 1v, orch, *F-Pn*
Various airs in 18th-century anthologies
Revolutionary hymns and odes, partial thematic catalogue in Pierre: Les rois, les grands, les prêtres; Hymne à l'égalité; Hymne à la liberté; Hymne à l'Etre Suprême (Ame de l'univers!); Hymne à l'Etre Suprême (Ordre éternel); Hymne à la vertu; Hymne à la victoire; Ode sur les deux jeunes héros Bara et Viala; Ode sur la victoire; Ode sur nos victoires; Le pas de charge républicain; piece(?s) in Chansonnier des amateurs, dédiés aux amis de la République (Paris, 1794); lost works, incl.: Les coalisés; Les dangers de l'idolatrie; Ode au peuple françois sur le nouveau triomphe de la liberté; Salut et respect à la lois; Stances sur la translation des jeunes héros Viala et Bara; La femme républicaine; Les exploits du Roi Guillaume; Ronde patriotique sur les crimes des anglais

INSTRUMENTAL

most published in Paris (1773–95), many also in London and Germany; Trimpert (1967) lists all known editions; op. nos. in parentheses are those assigned to later editions; thematic catalogue of symphonies and symphonies concertantes in The Symphony 1720–1840, ser. D, v (New York, 1983) and in Parcell (1984)

Syms.: 3 for str, 2 ob, 2 hn, op.5 (1776), 1 ed. in The Symphony 1720–1840, ser. D, v (New York, 1983); 3 symphonies à grand orchestre, 2e livre, for str, fl, 2 ob, bn, 2 hn (1787), no.2 also attrib. J.M. Kraus; 3 for str, 2 ob, 2 hn (?1788), also attrib. P.-D. Deshayes
Symphonies concertantes (82, of which 76 pubd and 51 extant, 3 ed. in The Symphony 1720–1840, ser. D, v, New York, 1983) [only solo insts listed]: Première suite (1774–*c*86) [13 for 2 vn, 2 lost; 8 for 2 vn, va; 3 for 2 vn, vc; 1 for vn, vc; 1 for vn, va, vc; 3 lost, insts not stated]; Seconde et nouvelle suite (1782–7) [6 for 2 vn; 2 for 2 vn, va; 1 for vn, vc; 1 for 2 vn, vc; 1 for 2 vn, fl; 1 for fl, vn; 1 for 2 fl; 1 for ob, bn; 1 lost, insts not stated]; Troisième suite (1777–*c*86) [13 for 2 fl, 9 lost; 4 for 2 ob, 3 lost; 3 for ob, bn; 2 for fl, vn, 1 lost; 2 for ob, vn, both lost; 2 for fl, ob, bn, 1 lost; 2 for ob, vn, va, both lost; 1 for 2 ob, bn, lost; 1 for fl, ob, lost; 1 for fl, vn, va; 1 for ob, vn, vc]; La Patriote, 2 vn (1794); 1 for fl, vn, va, *I-Fc*; 1 for fl, ob, hn, bn, lost; 1 for 2 vn, lost; 1 for fl, 2 vn, lost; 1 for vn, vc, cl, bn, lost

Concs.: 3 for vn (1782–5), 1 ?*CZ-CH*, 2 lost; 1 for va, *Pnm*; 5 for fl, incl. 2 in op.37 (1785), 2 lost; 4 for fl on 'airs connus', 2 lost; 1 for ob (1785), lost; 1 for bn (1786), lost; 3 for hpd/pf, op.15 (1780), nos.1 and 3 ed. in Antica musica strumentale italiana (Milan, 1964, 1959)
Qnts: nos.1–110 (?orig. 114), 2 vn, va, 2 vc, *US-Wc**, some inc.; 3 unnumbered for 2 vn, va, 2 vc, *Wc*, inc.; 11 for fl, 2 vn, va, b, opp.8(9), incl. 5 in *CZ-Pnm*; 6 for fl, vn, 2 va, b, op.13; 3 for cl, fl, ob, hn, bn (*c*1802); 1 with 2 vc, 1 with 2 va: both in 4 quatuors, op.23 (1781); 3 for hpd, 2 vn, va, b, *D-Dl*
Qts, complete thematic catalogue in Trimpert: 149 str qts (1773–1809); Quatuors d'airs ... variés, str qt, 5 bks; Suite d'airs de [Lemoyne's] Phèdre, with Ouverture en quatuor, str qt; 6 qts, vn, 2 va, vc, op.21 (?1782–4); 18 qts, fl, vn, va, vc, opp.9(10), 23–4; 6 quatuors d'airs ... variés, fl, vn, va, vc; 6 qts, hpd/pf, 2 vn obbl, [?vc]; 5 qts, ob, vn, [?vc,] kbd, *F-Pn*
Trios: at least 12 for 2 vn, va, incl. opp.3 (1, 5, 30), 34; 6 'd'air choisis', 2 vn, va/vc (*c*1785), lost; at least 24 for 2 vn, b, incl. opp.6, 8, 15, 18; 18 for vn, va, vc, opp.33 (2, 6, 10, 17), 36, 40; 6 for fl, vn, va, op.26 (1782); at least 18 for fl, vn, b, incl. opp.3, 8; at least 6 for 2 fl, va; 6 for 2 fl, b, op.3 (*c*1790), no.6 (Zürich, 1976); 6 for fl, ob, bn, op.45 (*c*1785)
Duos/sonatas: at least 30 for 2 vn, incl. opp.4(2), 16, 21, 28; 12 'd'une difficulté progressive', 2 vn, opp.47, 52; 12 'd'aires ... variés', 2 vn; 6 airs patriotiques variés, 2 vn; 6 for (2 vn)/(vn, vc); at least 18 for vn, va, incl. op.12(14), 46; 12 airs ... variés, vn, va; 12 for 2 va, incl. op.13; 12 for vn, vc, incl. op.35; 18 for fl, vn, incl. op.16(20); 6 for fl, va, op.4 (1781); at least 32 for 2 fl, incl. opp.2, 11(5), 50; at least 12 airs ... variés, 2 fl; 6 for 2 vc, op.49; 30 airs variés, 2 fl, in 5 bks, 3 bks lost
Solo inst: 6 sonates, vn, b, 'd'une difficulté graduelle' (1786); Petits airs variés, vn; A Favourite Capriccio, vn, et boutade et potpourri; Preludes et points d'orgue dans tous les tons, mêlés d'airs variés, vn; at least 12 sonatas, fl, b; 6 sonatas, hpd/pf, vn acc., op.21 (1781); Air de Marlborough avec variations, pf/hpd, vn obbl; 6 sonates, hpd/pf, fl acc.; Marche des Marseillois et la Carmagnole variées, fl, b, also arr. cl; Petits airs connus variés, fl, b, also arr. cl; Air variés, fl, op.6; Différens solfèges d'une difficulté graduelle, 1v, bc (1788)

ARRANGEMENTS

6 qts [trios], hpd, acc. vn, va, arr. from str qts op.7
Arrs. of many works by Boccherini and some by Pleyel, see Gribenski (*MGG1*)
Other arrs. pubd singly, in duos on 'airs connus', and in 18th-century anthologies

WRITINGS

Nouvelle méthode théorique et pratique pour le violon (Paris, *c*1795/*R*)
Méthode pour la flûte traversière suivie de vingt petits airs connus et six duo à l'usage des commençans(Paris, 1799/*R*)
'Ausführung der Instrumentalquartetten', *AMZ*, vi (1803–4), 781–3
2 articles in *Correspondance des professeurs et amateurs de musique* (Paris, 1804), 283, 457
'Über den Charakter, den die italienischen und deutschen Musik haben, und die französische haben sollte', *AMZ*, vii (1804–5), 149–55 [doubtful]
6 articles in *Les tablettes de Polymnie* (Paris, 1810–11) [doubtful]

CHAPPELL WHITE, JEAN GRIBENSKI, AMZIE D. PARCELL

Cambio, Perissone. *See* PERISSONE CAMBIO.

Cambodia, Kingdom of (Khmer Preah Reach Ana Pak Kampuchea). Country in South-east Asia. It is bordered by Laos in the north, Vietnam in the east, the Gulf of Thailand in the south and Thailand in the north and west. Its population is more than 90% Khmer but also includes small numbers of Vietnamese, Chinese, Khmer Loeu ('Highland Khmer') and Cham. This entry mainly concerns the music of the Khmer majority.

During the 12th century, Mahayana Buddhism had strong royal support and consequently became the state religion; by the beginning of the 14th century the Khmers had converted to Therevada Buddhism, which has been practised up to the present.

1. HISTORY. By the beginning of the Christian era, Kaundinya (believed to have been a Brahman) had set to sea from India to conquer and defeat the indigenous queen Soma, whom he wedded. He was crowned as the first King of Funan (Founan), the centre of which was situated on the lower Mekong delta with its territory covering the southern part of present-day Vietnam, the middle Mekong and large parts of the Menam valley and the Malay peninsula.

At the beginning of the 8th century CE, the country was divided into two states, Chenla Kok in the north and Chenla Toeuk in the south. In 802, Jayavarman II, having taken refuge in Java at the confutation of succession, liberated and unified Chenla, founding the kingdom of Angkor. This was the most glorious period of Khmer history in terms of military power, territorial expansion, healthcare, educational achievement, agricultural development and cultural expression. On the walls of the great temples constructed during this period in the Angkor vicinity are carved *apsara* (celestial dancer) figures along with musical instruments: *pinn* (harp), *sralai* (quadruple-reed oboe), *korng vung* (semicircular gong-chime), *ching* (small hand cymbals), *sampho* (small double-headed barrel drum), *skor yol* (suspended barrel drum) and *skor thom* (large double-headed barrel drum). The similarity between the carvings and present-day Khmer instruments suggests strong musical links between the two periods.

The death of Jayavarman VII in 1219 ended this fruitful period. Under his successor, Khmer power began to decline; in 1432 Angkor was abandoned to the Siamese. After the fall of Angkor, the country was unstable and unable to resist foreign invasions. Finally, with the help of the Siamese in 1842, Ang Duong ascended the throne and reigned until 1860; during this period Khmer arts underwent a revival.

On 11 August 1863, three years after King Ang Duong's death, the Khmer kingdom became a French protectorate. Independence from the French was proclaimed on 9 November 1953 by Prince Norodom Sihanouk, who gave up his throne in 1955 and became Head of State. On 18 March 1970, Prince Sihanouk was overthrown in a military coup, and Marshal Lon Nol created the Khmer Republic. On 17 April 1975 the Khmer Rouge took over; in their reign of terror (1975–9), during which some two million Khmers were killed, classical dancers were considered enemies of the state, and revolution propaganda was the only recognized form of art. The Khmer Rouge were deposed on 7 January 1979, and national elections in May 1993 resulted in a national constitution, a coalition government and the reinstallation of the monarchy.

2. MUSIC PERFORMING PRACTICE AND ENSEMBLES. Khmer music consists of polyphonic stratification; it is organized linearly and is based predominantly on the pentatonic scale (more specifically the anhemitonic pentatonic scale, one without semitones), though the heptatonic scale is also used. Both the pentatonic and heptatonic scales contain unequidistant intervals, and their tunings vary from one ensemble to the next. Embellishment or ornamentation is an inherent characteristic in the rendition of Khmer music. Musicians in ensembles have a collective melody with prescribed important structural points in mind, which is embellished rather than sounded.

Instruments in ensembles are not grouped according to families (aerophones, chordophones etc.); instead they are grouped according to their register (high-pitched or low-pitched) or time-keeping functions. In performance the high-pitched instruments tend to play more notes to the beat; the low-pitched instruments play fewer notes to the beat, and the timekeeping instruments regulate the tempo. Traditionally, pieces are not written down but are passed on aurally from master to pupil; the composers of compositions are not usually known. Music is an important aspect of Khmer life and culture, epitomizing the history of Cambodia, its society, people, art, customs and beliefs. Music is central to dance, theatre and traditional and religious ceremonies including weddings and spirit-worship.

There are several types of ensembles, used in different contexts. Ritual ensembles include *arak* (used in spirit-worship), *kar* (wedding ensemble), *klang khek* (funeral ensemble) and *pey keo* (used in ancestor-worship). *Pin peat*, originally a court ensemble, also accompanies certain theatre forms and monastic rites, while *mohori* is performed primarily for entertainment. There are ensembles associated with folkdance (*kngaok Posat* and *tunsong*; see §3(ii) below) and those deriving their name from the type of theatre they accompany, for example *basak* (theatre of Chinese origin) and *yike* (folk theatre of Muslim origin; see §4 below). There are also ensembles associated with vocal genres *ayai* (repartee singing) and *chrieng chapey* (epic singing).

Arak. The Khmer living in remote rural areas still adhere to animistic practices. The *arak* ensemble (the oldest Khmer ensemble) is used to induce a medium into trance in order to detect the cause of an illness. The ensemble includes *pey prabauh* (double-reed oboe), *Khse muoy* (musical bow), *tror khmai* (three-string spike

fiddle), *chapey* (long-necked lute), *skor dey* (goblet drum) and *chamrieng* (vocals).

Kar. From the time of building a house as a dowry to the intention of the bride's family to the second day during the ceremony of hair cutting, each part of the wedding ceremony is accompanied by *phleng kar* (*phleng khmai*), considered to be one of the oldest Khmer music ensembles. Two types of instrumentation are often found. The older one consists of *pey brabauh* (double reed aerophone), *khase muoy* (musical bow), *tror khmai* (three-string spike fiddle), *chapey* (long necked lute), *skor dey* (goblet drum) and *chamrieng* (vocals). The newer type includes *khloy* (duct flute), *tror so tauch* (medium-high-pitched two-string fiddle), *tror ou* (low-pitched two-string fiddle), *krapeu* (three-string floor zither), *khimm* (hammered dulcimer), *chhing* (small hand cymbals), *skor dey* (goblet drum) and *chamrieng* (vocals). *Phleng kar* refers to both the ensemble and its repertory. Airs such as *Preah Thong* and *Neang Neak* (named after two mythical characters), commemorate their union and are played during the nuptial prostration or while the groom holds the bride's scarf when entering their bedroom for the first time.

The *pin peat* is a wind and percussion ensemble of reed aerophones, xylophones, metallophones, gongs, cymbals, drums and vocals. It can be dated as far back as the Angkor period through the evidence of stone carvings of its instruments on temple walls. It accompanies Khmer court dance, masked play, shadow play and religious ceremonies (for instrumentation, *see* PIN PEAT).

Mohori refers to both the ensemble and its repertory. The most commonly found *mohori* ensemble comprises wind, string and percussion instruments. The instrumentation varies, depending upon patronage and ownership of the ensemble (for further information, *see* MOHORI). *Mohori* is light in character and is used in secular contexts, at banquets or to accompany a *mohori* play and folkdances of recent origin.

Klang khek is a funeral ensemble used in the procession of a body to the crematorium. It consists of *sralai klang khek* (oboe) and several *skor yol* (suspended barrel drums). The ensemble plays a single piece, called *klang yuan*.

Pey keo is an ensemble used in ancestor-worship in the palace by the royal family and high-ranking officials, or by commoners during the Ancestral Day ceremony. It consists of *roneat* (xylophone), *korng thom* (low pitched circular gong chime), *khloy* (duct flute), *tror khmai* (three-string spike fiddle), *chapey* (long necked lute), *skor dey* (goblet drum) and *chamrieng* (vocals). The ensemble shares its repertory with the *arak*.

Ayai is a type of repartee singing, usually the alternation of a man and a woman, accompanied by an ensemble of the same name. Vocalists perform for hours, improvising on short topical themes that are sometimes agreed upon before the performance. *Ayai* singers perform an unaccompanied line of text, immediately followed by a small ensemble of strings (*tror, krapeu* and *khimm*), flute (*khloy*) and drum (*skor dey*) playing standard patterns. Sung phrases conform to set poetic metres, often in a 28-syllable stanza consisting of four phrases of seven syllables each. This art requires fast thinking, a good voice, some acting ability and a mastery of Khmer poetry. Intellectuals and the élite consider *ayai* to be a low-class entertainment for common peasants, an attitude partly due to the bawdiness of the language. In traditional Cambodia, refined young women were not allowed to watch these performances.

Chiang chapey. Epic singing is a solo performance in which the male singer is also the player of the long-necked lute (*chapey*). He usually improvises on a theme or story, alternately singing a line and playing the lute.

3. DANCE.

(i) Court dance. Khmer court dance, performed in the palace and known as *Ikhaon luong* ('king's theatre') or *Ikhaon preah reach troap* ('king's treasure theatre'), was set with lavish costumes incorporating elaborate jewellery. This dance or dance–drama has been associated with the royal court of Cambodia for over 1000 years. In 1353, after the collapse of the civilization of Angkor, dance moved away from the temple and followed the king's entourage to each new capital city.

Khmer court dance has been regarded as a female tradition, with women performing all the roles. Only in the 20th century were male dancers allowed to perform alongside women, playing the monkey role in the style of the men's dance drama *lkhaon khaol* (masked play); females, male and demon characters are played by female dancers. Each of the four major character types (females, males, demons and monkeys) uses its own particular movement vocabulary and syntax, which together with costumes, headdresses and masks, identify the characters.

Dancers are trained from the age of six in the royal palace, traditionally only venturing beyond the palace walls to attend to the king. Their training encompasses painful exercises to stretch and bend the waist, arms, elbows, wrists and fingers in order to communicate a wide repertory that includes romances, myths, non-programmatic pieces and regional epics such as Preah Chinnavung, Preah Chan Korup and Reamker (the Rāmāyaṇa). Court dance is traditionally accompanied by the *pin peat* ensemble. The choir sings texts that tell stories, while dancers express the plots through dance movements and gestures.

After the overthrow of the monarchy in 1970 and the genocidal communist regime of Pol Pot in the 1970s, Khmer court dance changed its image and status, moving outside the palace walls to the University of Fine Arts campus in Phnom Penh, to the refugee camps along the Thai–Khmer border and to Khmer communities abroad. In this latter environment, Khmer court dance has been learnt and performed widely by members of the Khmer communities, particularly children, to the extent that it is viewed simply as traditional Khmer dance.

(ii) Folkdance. While Khmer court dance is subject to particular rules, strict form and a prescribed language of movements and gestures, Khmer folkdance is spontaneous and is created for emotional expression. It is solely of peasant origin and use. In rural Cambodia people dance around the village green or on a rough stage built under spreading trees. Dances are usually based on local legends and everyday events, with themes concerning religion and nature. Folkdances are usually accompanied by the standard *mohori* ensemble. However, there are particular dances, such as *kngaok Posat* and *tunsong*, which call for other ensembles. The ensemble accompanying *kngaok Posat* consists of *tror khmai* (three-string spike fiddle), *skor kngaok Posat* (frame drum) and *chamrieng* (vocals), while that accompanying *tunsong* comprises *ploy* (mouth

organ), *skor tunsong* (frame drum) and *chamrieng* (vocals).

(iii) Popular dance. *Robam pracheaprey* ('popular dance') is ubiquitous in Cambodia, involving people of all ages and both genders. Included in all social events, it is accompanied by the modern popular band of electric guitars, electric basses, keyboards, drum kits and vocals. Larger bands also include wind and string sections. Songs are often based on rhythms borrowed from Latin American music (e.g. CHA CHA CHA, BOLERO and BOSSA NOVA) with Khmer melodies and lyrics. Cover versions of Western pop music are also performed; however, the most popular songs employ Khmer rhythms, including *roam vung*, *roam kbach*, *saravane* and *laim Leav*, as well as using other elements of Khmer melody and performing style.

Popular Western music and social dances were introduced to Khmers by the Filipinos and the French. In the early 1900s, the Khmer court received from the Philippines the gift of a large band. The Filipino musicians taught marching music to Khmer royal symphonic orchestras, participated in court ensembles and performed in jazz bands at night clubs. The musicians introduced Latin and other popular dance rhythms into Khmer dance, founding big bands that played at ballroom dances and were called *phleng Manil* (Manila music). Western music was also disseminated by French schoolteachers and in some military academies, and high-ranking officers received formal training in European-derived dances.

At parties, musicians usually play dances in pairs, one in slow tempo, the other fast. *Roam vung* is always the first dance at any social event. The traditional Khmer social dances (*roam vung*, *roam kbach*, *saravane* and *laim Leav*) are all couple dances, danced in a circle with the men behind the women in an anticlockwise direction; the host or other prominent person leads. The female leads the man, moving from side to side and seeking eye contact; these dances are an important part of courtship.

Among the Khmer communities abroad (mainly in America, Australia and France), social dancing helps bring individuals and families together at celebrations and fundraising activities. Many Khmers remember dancing the *roam vung*, *roam kbach*, *saravane* and *laim Leav* in Cambodia in the ricefields at the completion of planting and harvest, to the accompaniment of the *tror* (two-string fiddle), *skor dey* (goblet drum) and *chamrieng* (vocals).

4. THEATRICAL GENRES. There are several types of theatre: *lkhaon mohori* (mohori theatre), *lkhaon yike* (folk theatre of Muslim origin), *lkhaon basak* (theatre of Chinese origin), *lkhaon khaol* (masked play) and *lkhaon sbaik* (shadow play). In cities and large towns across Cambodia, social, cultural, national and religious events seldom took place without theatrical performances.

Lkhaon yike is a folk theatre genre of Muslim origin, believed to have been developed from an Islamic religious ceremony performed by the Cham ethnic minority who have been settled in Cambodia for centuries. *Lkhaon yike* combines dancing, acting, speaking and singing. The themes are drawn from the Buddhist *jataka*s (life stories of the Buddha) and folk legends. The *yike* ensemble consists of *tror ou* (low-pitched two-string fiddle), *skor yike* (large frame drums) and *chamrieng* (vocals). The leader of the troupe sets the plots, supervises the performances and is the lead narrator in performances. Although most of the original characteristics have been 'Khmerized' over the years, some elements, such as the musical instruments – particularly the *skor yike* and songs – remain identifiably Muslim.

Lkhaon basak is believed to have been developed from the Chinese opera, which was brought to Cambodia at the turn of the 20th century. Although several Chinese characteristics have been modified to suit Khmer tastes, some Chinese elements remain, such as the headdresses, face-painting and costumes, as well as the music ensemble and repertory. Of the Khmer theatre forms, the *basak* is perhaps the most popular. Like the *lkhaon yike*, the *lkhaon basak* combines dancing, acting, speaking and singing. Themes are drawn from the Buddhist *jataka*s and popular legends. The *basak* ensemble includes the *tror ou* (low-pitched two-string fiddle), *khimm* (hammered dulcimer) and various percussion, including *pann* (woodblocks), *chhap/khmuoh* (cymbals) and *skor basak* (drums).

The *lkhaon khaol* (masked play) is a male dance-drama tradition, and has its home in the village. All characters in the Reamker (Rāmāyaṇa) story wear masks, except the female characters who cover their faces with white powder. The *pin peat* ensemble serves as the accompaniment to the *lkhaon khaol*, which at one time was an inherent part of life of the rural Khmers. Unfortunately, this theatre form has declined. It is now almost extinct, practised minimally by a troupe in Vatt Svay Andet (Kandal province), at the Royal University of Fine Arts and at the Department of Arts and Performing Arts, both in Phnom Penh.

There are three types of *lkhaon sbaik* (shadow play) in Cambodia: *lkhaon sbaik thom* (large-sized shadow play), *lkhaon sbaik tauch* (small-sized shadow play) and *lkhaon sbaik poar* (coloured shadow play). The *lkhaon sbaik thom* features life-size panels, placed above the head and danced with by the puppeteer. The *lkhaon sbaik tauch* features small puppets with moveable arms and jaws, manipulated by the puppeteer. Similar in size to those of the *lkhaon sbaik thom*, the puppets of *lkhaon sbaik poar* are painted with a range of colours. The *lkhaon sbaik thom* and *lkhaon sbaik poar* draw their theme from the Reamker story, while the *lkhaon sbaik tauch* draws its plots from popular legends and current events; both are supported by the *pin peat* ensemble. The screen against which the puppeteers hold their puppets was formerly illuminated by an enormous brazier, set about 3 to 5 metres away from the screen to allow the puppeteers to pass freely, but now projectors replace the flames. In villages there are performances that last all night; however, with the advent of television and cinema, the popularity of *lkhaon sbaik* has declined.

SAM-ANG SAM

Cambrai. Town on the Escaut (Scheldt) river in north-east France. It changed hands many times between France and the Holy Roman Empire before it was finally declared French in 1678; its musical importance belongs largely to the 15th century, when it was under the control of the Dukes of Burgundy. Like most cities in that area, Cambrai became poorer as Europe's economic axis moved away from Bruges. For political rather than economic reasons the bishopric became an archbishopric in 1559, but by the 17th century Cambrai had dwindled to insignificance both as a city and as a cultural centre.

Musical activity can be documented from the 10th century when there was a song school. New offertory prosulas are found in a 12th-century cathedral manuscript (*F-CA* 172); neumas and conductus are attributed to a 13th-century Augustinian canon, Peter, of the abbey of St Aubert in Cambrai. In the late 12th century and the 13th Cambrai was also near the centre of the trouvère tradition, and while it can boast no names more famous than Huon III d'Oisy, Guy de Cambrai, Geoffroy de Barale, Martin le Béguin, Jaque de Cambrai and Rogeret de Cambrai, song fragments surviving in the Bibliothèque Municipale (*F-CA* 1328) include trouvère music of Adam de la Halle, Gaidifiers d'Avion and Baudes des Arteus. That Cambrai minstrels were widely admired in later years is indicated by the choice of Cambrai as the location for the annual minstrel schools of 1366, 1427, 1428, 1435, 1436 and 1437.

However, the main source of Cambrai's musical fame was the cathedral, built in the 12th and 13th centuries, whose choir is depicted in the portfolio of Villard de Honnecourt; it was one of the largest and finest architectural monuments of the north until its destruction in 1796. It never had an organ; but it possessed a well-endowed choir, so that in 1428 Philippe de Luxembourg could claim that Cambrai Cathedral exceeded all others in Christendom with its fine singing, its bright lighting and its sweet bells. In 1484 Bishop Henri de Berghes claimed that scarcely any Christian church was superior in the number and the talent of the singers it employed. These included canons, *grands* and *petits vicaires* (the foundation for the latter was augmented following supplications to the Pope in 1452 and 1455), choristers and their *maître de chant*; in 1499 Pope Alexander VI permitted the chapter to reappoint incomes and enlarge the choir.

Du Fay was a chorister there from 1410 to 1414 under Nicolas Malin and Richard Loqueville, and returned as a canon in 1439 after establishing a name for himself in the south; his subsequent visit to the south in 1452–8 resulted in such fame that many young composers seem to have gone to Cambrai to learn from him, among them Tinctoris and Ockeghem. Other distinguished musicians of the 15th century at Cambrai Cathedral included Nicolas Grenon, Reginaldus (?Libert), Johannes Dusart, Simon le Breton, Constans Breuwe, Alexander Agricola and Obrecht (who remained only a year); among the 16th-century musicians there, Louis van Pullaer, Jean Courtois, Crispin van Stappen, Matthieu Lasson, Jean de Bonmarché, Johannes Lupi, Philippe de Monte and Jacobus Kerle (1579) are important. Their works include monophonic sequences and plainchant for a Marian office as well as the principal genres of sacred polyphony. A music treatise by the dean Egidius Carlerii survives.

A full picture of the cathedral music can be reconstructed from three sources: the cathedral archives, now housed in the Archives Départmentales du Nord at Lille (série 4G), especially the accounts of the Fabric and of the *petits vicaires*; the *acta capituli* from 1364 (*F-CA* 1052–99); and the many volumes of plainchant and polyphony from the chapter library now in the Bibliothèque Municipale, which include a copy of Pope Hadrian's sacramentary (811–12), two 12th-century graduals, a 13th-century antiphoner, 13th–15th-century noted hymnaries and processionals, a pair of choirbooks from the 1440s, the first antiphoner printed in Paris (*c*1508–15), the gradual of Bishop Robert of Croy (1540) and manuscripts containing 16th-century polyphony. The 15th-century accounts of the Fabric are especially interesting because they document the activity of professional music scribes, of whom Simon Mellet was the most prominent, and give uniquely detailed descriptions of surviving and lost compositions with approximate dates.

Several of the many other religious establishments in Cambrai had choirs, choir schools and polyphonic music. The most important was the collegiate church of St Géry, whose choristers sang for the entry of Bishop Jean de Bourgogne in 1442, and entertained the Duke of Burgundy with music when he was a guest there in 1449. The leaves of 14th-century polyphony in the manuscript *F-CA* 1328 came from a matching set of bookbindings made in the late 15th century for the new library at the abbey of St Sépulcre; all but two of the leaves belonged originally to a single volume, which may well itself have been at St Sépulcre.

DAVID FALLOWS/BARBARA H. HAGGH

Cambreling, Sylvain (*b* Amiens, 2 July 1948). French conductor. He studied at Amiens and with Pierre Dervaux in Paris, and won the 1974 conductors' competition at Besançon. He became assistant to Serge Baudo at Lyons in 1975, making his operatic début there in the same year with *La Cenerentola*, soon followed by *The Rake's Progress* at the Opéra-Comique. From 1976 he worked with Boulez and the Ensemble InterContemporain and in 1980 conducted the Chéreau production of *Les contes d'Hoffmann* at the Opéra. In 1981 he was at Glyndebourne for *Il barbiere* and conducted *Louise* for the ENO. Cambreling was music director at La Monnaie, Brussels, between 1981 and 1992, where his carefully detailed, spirited performances of a broad repertory developed the company's reputation. His versatility extended to the premières of Hans Zender's *Stephen Climax* (1990) and *Reigen* by Philippe Boesmans (1993), as well as a *Ring* cycle and complete *Les Troyens*. Meanwhile, he made his Metropolitan début in 1985 (*Roméo et Juliette*) and his Salzburg Festival début in 1986 (Debussy's *Le martyre de St Sébastien*), subsequently returning to Salzburg with operas ranging from Mozart to Stravinsky. He received high praise for his conducting of Messiaen's opera *Saint François d'Assise* at Paris in 1993. The same year he became music director and Intendant at the Frankfurt Opera, where his performances have continued to advance his reputation.

Cambridge. University city in England.

1. 13th century–1684. 2. 1684–1914. 3. Since 1914.

1. 13TH CENTURY–1684. The presence of the great monastery of Ely, 24 km to the north, led to meetings betweeen the Ely monks and wandering scholars from Oxford University, and Cambridge University, the second English university grew from their teaching and preaching. The first Cambridge college, Peterhouse, was founded in 1284 by Hugh of Balsham, Bishop of Ely. Music was included among medieval subjects but it was probably studied only as a theoretical, not a practical, art. Of the early collegiate foundations at Peterhouse the most important from the musical point of view was King's (1441), linked with the school at Eton; both were founded by King Henry VI, and King's College was provided with a choir of 24 'singing men and boys'.

The world's first music degrees are recorded as having been conferred at Cambridge in 1463/4; Thomas Saintwix (St Just) received the MusD and Henry Abyngdon (Abington) was awarded both the MusB and the MusD. These earliest degrees seem to have been in the nature of honorary degrees bestowed on distinguished scholars or musicians, but before long an 'exercise' in the form of one or more original compositions was required of candidates, although they were not expected to reside in the university. Thus Robert Fayrfax gained the MusD in 1501 and Christopher Tye the MusB in 1536. The English Reformation did little harm to the university from the musical point of view; many academic musicians retained their appointments, King's College Chapel (fig.1) and its choir still took a leading part in Cambridge music and music degrees continued to be conferred. Tye proceeded to MusD in 1546; later Cambridge music graduates included Robert White (MusB 1561), William Blitheman (MusB 1586), John Dowland (MusB before 1597), Thomas Ravenscroft (MusB 1607) and John Hilton (MusB 1626). Orlando Gibbons (MusB 1605) belonged to a musical family closely connected with King's College Chapel. The

1. King's College Chapel, Cambridge, built 1448–1515: interior of the antechapel looking east

Cambridge Waits (town band) were also in existence by this time, but they never seem to have attained the celebrity of the Norwich Waits.

During the Civil War Cambridge became the military headquarters of the parliamentary forces, but King's College Chapel escaped serious damage, even the splendid stained-glass windows being preserved. But the organ (built between 1605 and 1606 by the famous organ builder Thomas Dallam) was dismantled and the choral service was discontinued by government edict. Yet in the middle of the Commonwealth period, Cromwell, as Lord Protector, ordered the university authorities to confer the

MusB on his household musician Benjamin Rogers, admonishing them to see that he merited such an award professionally. At the Restoration (1660) choral services were resumed in the college chapels and the organs restored. In 1684 Cambridge acquired its first professor of music in the person of Nicholas Staggins, Master of the King's Band of Musick. Charles II had followed Cromwell's example and laid a royal injunction on the university to create Staggins MusD and the authorities, almost in revenge, elected Staggins public professor of music, without a salary. The professorship they founded has continued to the present, the list of holders of the chair being as follows: Nicholas Staggins (1684–1700), Thomas Tudway (1705–26), Maurice Greene (1730–55), John Randall (1755–99), Charles Hague (1799–1821), J. Clarke-Whitfeld (1821–36), T.A. Walmisley (1836–56), W.S. Bennett (1856–75), G.A. Macfarren (1875–87), C.V. Stanford (1887–1924), Charles Wood (1924–6), E.J. Dent (1926–41), Patrick Hadley (1946–62), Thurston Dart (1962–4), Robin Orr (1965–76), Alexander Goehr (1976–99) and Roger Parker (1999–).

2. 1684–1914. During the late 17th century and the early 18th various concert-giving organizations grew up in the colleges and also in the large rooms of the local inns, in particular the Red Lion and the Black Bear (fig.2). Professional musicians who made Cambridge their centre for teaching and concert-giving included J.F. Ranish (flautist and oboist), F.E. Fisher (violinist), Antonio Manini (violinist) who ran several seasons of subscription concerts in the 1780s, and Pieter Hellendaal, the eminent Dutch violinist, organist and composer, who was organist of Peterhouse in the second half of the 18th century. Maurice Greene's friend and pupil William Boyce composed a fine ode for the installation of the Duke of Newcastle as chancellor of the university in 1749 and performed this and his doctoral exercise (an anthem) and other works in a kind of Boyce festival in the following commencement week. At university ceremonies of this period so-called music speeches were delivered, but they had little to do with music. There was no formal academic tuition in music, nor were there any proper examinations. The unsalaried and often non-resident professor was occasionally asked to examine an 'exercise' for some candidate for the MusB or MusD degrees, otherwise his duties were practically non-existent. In the second half of the 18th century John Randall and his successor in the professorship, Charles Hague, were resident, but they gave no formal lectures. A certain amount of music publishing was undertaken by the local music sellers, such as John Wynne, but it never assumed large proportions. Robert Smith, Master of Trinity College, published his notable book on harmonics in Cambridge in 1749. Richard, Viscount Fitzwilliam, a well-known Cambridge amateur of music, bequeathed his music (which included autographs of Handel and other famous composers and the celebrated Fitzwilliam Virginal Book, as well as his books, pictures etc.) to the university, thus founding the world-famous Fitzwilliam Museum. Fitzwilliam was one of the instigators of the Handel Commemoration in Westminster Abbey (1784) and the fashion for festivals was soon followed in Cambridge as in most cities in Britain.

Black Bear Concert.

Tuesday, November the 23d, 1790.

PUBLIC NIGHT.

ACT I.

Overture—*1st Bach.*

Concerto—*4th Geminiani.*

GLEE, Four Voices—*Paxton.*

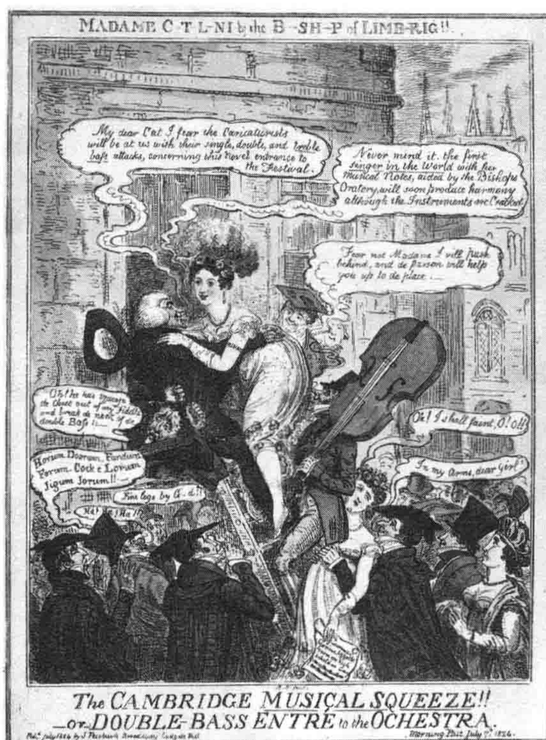
Overture—Alexander—*Handel.*

ACT II.

Concerto—*4th Avison.*

Song, Mr. Clabburn—*Hook.*

Solo Violin, Mr. Scarborough.



Trio Flute—*Stamitz.*

Grand Concerto—*5th Handel.*

N. B. No Stranger can be admitted without applying for a Ticket to a Member or the Steward.

2. Programme for a concert held at the Black Bear, Cambridge, 23 November 1790

During the 19th century music lectures, sporadic at first, gradually became established and better organized. By the end of the century candidates for music degrees were required to reside in the university, instead of being allowed to study externally. Practical music-making was given new stimulus by the Peterhouse Music Society (founded 1843), which became known as the Cambridge University Musical Society (CUMS) in 1844. William Sterndale Bennett greatly enhanced the status of the professorship, and his successor G.A. Macfarren was well respected as a teaching and examining professor, rather than as a mere figurehead. The next professor, C.V. Stanford, was a man of great energy, organist first of Queens' College, then of Trinity, and conductor of the CUMS chorus. In July 1893 (the CUMS jubilee) he persuaded Boito, Saint-Saëns, Bruch and Tchaikovsky to accept honorary degrees and to conduct their works with the CUMS chorus and orchestra in the Guildhall; among the guests at the celebratory banquet was Vaughan Williams, then an undergraduate at Trinity College (MusB 1894, MusD 1901). Stanford, always an irascible man, had many differences with the university, particularly on matters of salary, which ended by his refusing to live in Cambridge; he is said to have visited Cambridge by train, given his supervisions in the railway hotel and returned immediately to London, without setting foot in the town itself. His successor as Trinity College organist, the gifted Alan Gray (MusD 1899), was Vaughan Williams's organ

3. *'The Cambridge Musical Squeeze': hand-coloured etching by 'R.C.', 1824; so great were the crowds outside a concert held at Senate House, 7 July 1824 (the last of a series to mark the opening of new wards at Addenbrooke's Hospital), that the performers Angelica Catalani, Giuditta Pasta and Domenico Dragonetti had to enter by the windows*

teacher. New regulations for music studies enhanced the value of Cambridge degrees, and attracted some gifted students including the doyen of Cambridge musicologists Edward J. Dent (MusB 1899), C.B. Rootham (MusD 1910, later music director of St John's College) and Bliss (MusB 1913). Among recipients of honorary degrees were Sullivan (1891), Dvořák (1891), Grieg (1894), Dohnányi (1899) and Elgar (1900).

The Cambridge Philharmonic Society catered for the town's amateur and professional performers, as it still does. The Cambridge University Musical Club (CUMC), founded in 1899, has been since its foundation the focus of the small-scale musical activities of the university amateurs, though in the 1960s the club began giving large-scale concerts as well.

3. SINCE 1914. Just after World War I a number of gifted music students returned to Cambridge to complete their studies; among them was Boris Ord who in 1929 succeeded A.H. Mann, the noted organist, choir-trainer and Handel scholar, as director of King's College Chapel Choir. Other musicians of this generation included H.S. Middleton, P.A.S. Hadley, later precentor of Gonville and Caius College and professor of music, P.F. Radcliffe and Robin Orr, also holder of the Cambridge chair.

Cambridge became distinguished in the 1920s and 1930s for its stage productions of Mozart, Purcell and Handel. *Die Zauberflöte* had been produced under Dent's and Rootham's auspices in 1911. Purcell's *The Fairy Queen* was planned for 1914 but delayed until 1920 (and revived in 1931). There followed, under Rootham's and later Ord's baton, *Semele* (1925), *King Arthur* (1928), *Samson* (1932), *Jephtha* (1934), *Saul* (1937), *The Tempest* (1938) and *Idomeneo* (1939). Another important theatrical venture was the triennial production of the Greek Play Committee, begun in 1882, for which the music was always newly composed. The music for *The Wasps* (1909) by Vaughan Williams is the best known, but other notable scores were Hadley's *Antigone*, Leigh's *Frogs*, and Orr's *Oedipus at Colonus*. Other outstanding Cambridge productions of this period were Vaughan Williams's folk ballet *Old King Cole* (1923, Trinity College) and *The Poisoned Kiss* (1936, Arts Theatre). At this time the music faculty acquired a new home with a small concert hall in Downing Place and was able to accommodate CUMS and CUMC, and the celebrated Thursday concerts of chamber music.

After World War II the University approved new regulations (1947–8) for the study of music as a first degree (BA with honours in music), and the MusB became a postgraduate degree, often leading to PhD studies. The faculty staff included H.C.C. Moule, H.S. Middleton, P.A. Tranchell and Thurston Dart, later professor. Among honorary MusD recipients of postwar years are Boulez, Britten, Carter, Gerhard (who was long resident in Cambridge), Ligeti, Lutosławski, Walton, Bliss and Tippett. The last two received honorary degrees on the celebration of the quincentenary of Cambridge music degrees (1964). In the 1960s the practice developed of appointing composers-in-residence in the various colleges; among these have been Nicholas Maw, Roger Smalley and Judith Weir.

In the 1980s and 90s the faculty admitted about 50 undergraduates a year. In 1977 the Music School moved to a new building designed by Sir Leslie Martin, with a fine concert hall, lecture rooms, practice and teaching facilities and a much enlarged Pendlebury Library.

The larger-scale music-making in the university continues to be organized by CUMS, with a large chorus, two symphony orchestras and a wind orchestra, conducted by a musical director (successively Boris Ord, David Willcocks, Philip Ledger and Stephen Cleobury) assisted by undergraduate conductors selected by competition (including, among others, David Atherton, Andrew Davis, John Eliot Gardner and Roger Norrington). The society has given first or early performances of music by Benjamin (*Ringed by the Flat Horizon*), Britten (*Cantata academica*), Goehr (*Behold the Sun* and *The Death of Moses*) and Holloway. CUMC founded a chamber orchestra in the 1960s which is usually conducted by visiting professional conductors. The University Opera Group and its successor, the University Opera Society, have given many notable performances, including works by Britten, Cimarosa, Copland, Liebermann, Monteverdi, Orff and Stravinsky.

The standard of music-making in individual colleges varies with successive generations of undergraduates, but its continuity is assured by the structure of college life: nearly all the 24 undergraduate colleges have chapels, offer organ scholarships and maintain chapel choirs, and some also offer choral scholarships (though choristers do not necessarily study music); all have their own or joint music societies. Other smaller university societies depend on the enterprise of individuals, and they rise and fall accordingly. Some become well established (the Classical

Guitar Society, the Gilbert and Sullivan Society); others have shorter lives (the Britten Society, the Decadent Music Union, the In Nomine Singers, the Purcell Society, the Susato Consort and many others).

Special festivals have been a frequent feature of musical life. Between 1920 and 1960 there were several, usually of British or English music, including a Handel Festival in 1935. From 1962 to the late 1980s the City Council sponsored an annual festival. In recent years there have been festivals commemorating Mozart (1991), Elgar (1995) and Schubert (1997). In the field of popular music the Cambridge Folk Festival (founded 1962) has become highly regarded.

Camden, Archie [Archibald] **(Leslie)** (*b* Newark, 9 March 1888; *d* Wheathampstead, Herts., 18 Feb 1979). English bassoonist. After winning a scholarship offered by Hans Richter, he went on to study in Manchester: piano with Egon Petri and bassoon with the Viennese Otto Schieder, whom he soon joined in the Hallé Orchestra and in 1914 replaced as principal. In 1933 he left Manchester for London, where he was to spend the rest of his career, remaining active as an orchestral player and soloist until his 80th brithday. He was made an OBE the following year.

Camden's playing career of almost 65 years was uniquely long and distinguished. The first native professional player of the German bassoon in England, his virtuosity and musicianship on the instrument set new standards for the time. The pioneering record of the Mozart concerto which he made in 1927 served by its witty style and pleasing if somewhat dry tone to bring both him and his instrument before a wide musical public. Eric Fogg and Gordon Jacob wrote concertos for him. As a teacher first in Manchester and later at the RCM in London, he trained several generations of players. Camden had two sons who are well-known musicians, Anthony (*b* 1938), who plays the oboe, and Kerry (*b* 1936), who is a bassoonist.

WILLIAM WATERHOUSE

Camera (It.: 'chamber', 'room'). In the Baroque period, the qualification 'da camera' was added to individual vocal or instrumental pieces or to entire volumes, denoting that the work or collection was suited for performance in the chamber, rather than in the church (*da chiesa*; *see* CHIESA) or theatre. G.M. Bononcini (op.2, 1667) used 'da camera' and 'da ballo' to distinguish dances intended for listening from those meant for dancing. Legrenzi applied 'sonata da camera' to one-movement pieces in binary form; more often it meant a preludial movement followed by a set of dances. At that time, 'da camera' did not necessarily imply performance by one player to a part, a concept associated with chamber music only since the later 18th century. In modern usage, however, *musica da camera* is chamber music in this sense.

MICHAEL TILMOUTH/SANDRA MANGSEN

Cameraco [Cameracy] (*fl c*1400–1428). Composer, possibly French. Though he could be the Johannes de Comeriaco at the papal chapel in 1417 (Haberl), he is far more likely to be the Henry de Cambray documented at St Vincent, Soignies, as a 'bas vicaire' in 1415–28 (Mons, Archives de l'Etat, Chapitre de Soignies: vols.148–50, 153–5 and 506). The rondeau *Belle voliés*, ascribed 'Cameracy' in the lost Strasbourg manuscript (*F-Sm* 222), resembles the songs of his sometime Soignies colleague Johannes Legrant; the Credo ascribed 'Cameraco' in Strasbourg (where it is incomplete, though it is complete but without ascription in *I-Bc* Q15) is very much in the manner of the northern French composers, with its declamatory style and heavy use of fauxbourdon-like textures.

DAVID FALLOWS

Camerarius [Cammerarius, Camerer], **Leonhard** (*fl* late 16th century). German composer. Originally from Bavaria, in 1582 he succeeded Nicolaus Rosthius as music teacher at the Lutheran school for the nobility in Linz. By

1584 he was Kantor of the Nikolaikirche in Berlin, described as 'argutus cantor musicus insignis cum theoreticus tum etiam practicus'. Three of his motets survive: *Decantabat populus Israel* (5vv; *PL-WRu* 30B), *Insano intonuit malignus ore* (6vv; *D-Mbs* 1641) and *Ascendit autem Joseph* (7vv; *D-Mbs* 1641).

WALTER BLANKENBURG

Camerata. A group of intellectuals, musicians and musical amateurs who frequented the salon of Count Giovanni de' Bardi in Florence between approximately 1573 and 1587. The term has sometimes been extended to cover the group that experimented with music drama under the auspices of Jacopo Corsi in the 1590s leading to the production of *Dafne* in 1598 and *Euridice* in 1600.

The first to use the term 'camerata' for Bardi's circle was Caccini in his dedication of the score of *Euridice* to Bardi (20 December 1600). Bardi's son Pietro also called it the 'Camerata' in a letter to Giovanni Battista Doni in 1634. Only three musicians can be linked securely with the Camerata: Caccini, Vincenzo Galilei and Pietro Strozzi. Caccini, however, testified that 'a great part of the nobility and the leading musicians and men of genius and poets and philosophers of the city' convened there, and Galilei recalled that many noblemen used to go there to pass the time in songs and discussions, which, according to Pietro Bardi, ranged over a variety of subjects, including poetry, astrology and other sciences. The earliest evidence of a meeting at Bardi's is in the *Diario* of the Accademia degli Alterati of 14 January 1573, where it is recorded that the Regent of the Academy, Cosimo Rucellai, 'sent someone from his household to say that he could not come because he went to the home of Monsig. de' Bardi to make music' (*I-Fl* Ashburnham 558, ii, f.3*v*).

Bardi's leadership was undoubtedly responsible for Galilei's research into Greek music and his contacts with Girolamo Mei, who by 1573 had studied every source then known about Greek music. One can easily imagine the excitement that the letters from Mei in Rome stirred in Bardi's circle, culminating in Galilei's attempts in 1582 to imitate the ancient songs in a setting of the lament of Conte Ugolino from Dante's *Inferno* (xxxiii, 4–75), and in his Lamentations and responsories for Holy Week, all now lost. Caccini mentioned having first performed three songs for the Camerata, *Perfidissimo volto*, *Vedrò il mio sol* and *Dovrò dunque morire*, in a manner of 'speaking in melody' and treating dissonances passing over a held chord with 'a certain noble carelessness ('sprezzatura')'.

Two important manifestos issued from Bardi's Camerata, a discourse by Bardi addressed to Caccini (*c*1578) and Galilei's *Dialogo della musica antica et della moderna* (1581). They have a number of principles in common, understandably, since they both derive from Mei: the ancient *tonoi* should be imitated, because they allow the affections of the texts to be expressed by the appropriate range of the voice; only one melody should be sung at one time, counterpoint being useful only for assuring fullness of harmony in the accompaniment; and the rhythm and melody should follow carefully the manner and speaking voice of someone possessed of a certain affection. Galilei, in addition, propagated Mei's theory that the ancient Greek dramas were sung continuously, a belief that is reflected in the prefaces of Rinuccini, Caccini and Peri to their editions of the poetry and music for *Euridice*.

CLAUDE V. PALISCA

Camerloher [Camerlochner, Cammerlocher], **Joseph Anton** [Josephus Antonius] (*b* Murnau, 4 July 1710; *d* Munich, 17 June 1743). German composer. The eldest of eight children of Joannis and Maria Anna Camerloher, he attended the Ritterakademie in Ettal and was trained as a violinist. Between 1734 and 1741 he wrote nine *Fastenmeditationen* (now lost) for the Congregatio Latina BV Mariae in Munich. He was *Cammer-compositeur* (chamber composer) at the Munich court from 1739 until his death, possibly after two years as *Cammermusicus*;

the libretto of his opera *La clemenza di Tito* refers to him as *Concert-Meister*.

Much of Camerloher's music was formerly attributed to his brother Placidus. His known surviving works include 43 symphonies, 20 trio sonatas, one flute sonata (Duo), eight sacred works and one opera. Of the instrumental works only 11 symphonies (now in *A-Gd*; some also in the published sets) bear his full name, but documentary and stylistic evidence indicate that other works bearing only his surname are his too. The four-movement trio sonatas (for two violins and continuo), and sacred works are firmly grounded in the Baroque; the symphonies, mostly in three movements and scored for strings, look forward to the Classical era with their harmonic schemes and their differentiation of thematic material. Camerloher was admired for his two *opere serie*; *La clemenza di Tito* was performed posthumously on 18 and 23 July 1747 during festivities for the marriage of Elector Maximilian III Joseph and Princess Maria Anna of Saxony.

WORKS

thematic catalogue of symphonies in Forsberg (1990)

principal sources: A-Gd, SCH; D-DO, DS, HR, Mbs, MÜu, Rp; F-Pn; I-Gl

Sacred: 2 Christus factus est; 4 Pange lingua; Tenebrae factae sunt; Terra tremat coelum tonat; 9 Fastenmeditationen, 1734–41, lost

Stage: Melissa tradita (os), Munich, carn. 1739, lost; La clemenza di Tito (os), ?1741, Munich, 18 July 1747

Syms. (for 2 vn, va, bc unless otherwise stated): 11 in op.3 (Paris, *c*1751), no.8 ed. A. Hoffmann as Orchesterquartet (Wolfenbüttel, 1958; attrib. P. von Camerloher); 11 in op.4 (Paris, *c*1751), nos.2 and 4 ed. A. Hoffmann (Wolfenbüttel, 1957; attrib. P. von Camerloher), no.6 ed. in The Symphony 1720–1840, ser. C, ii (New York, 1984); Simphonia da camera . . . a 3 o 4, 3 vn, b (Paris, 1753); 1 in Sinfonie . . . da vari autori, hns ad lib (Paris, 1760); 14 others, 1 ed. in The Symphony 1720–1840, ser. C, ii (New York, 1984), 1 ed. A. Hoffmann (Wolfenbüttel, 195y; attrib. P. von Camerloher), 1 ed. A. Hoffmann as Orchesterquartet (Wolfenbüttel, 1958; attrib. P. von Camerloher)

Chbr: 6 Trio Sonatas, op.1 (Paris, *c*1751), lost, MSS extant; 6 Trio Sonatas, op.2 (Paris, *c*1751), no.2 ed. A. Hoffmann (Mainz, 1939; attrib. P. von Camerloher); 7 other trio sonatas; Duo, fl, b; 12 trio sonatas, lost, listed in Breitkopf catalogue, 1762

For works by either J.A. Camerloher or P. von Camerloher *see* CAMERLOHER, PLACIDUS VON.

SUZANNE FORSBERG

Camerloher [Camerlochner, Cammerlocher], **Placidus** [Cajetanus Laurentius] **von** (*b* Murnau, 9 Aug 1718; *d* Freising, 21 July 1782). German composer. The fourth of eight children of Joannis and Maria Anna Camerloher, he was the younger brother of the Munich court composer JOSEPH ANTON CAMERLOHER and the elder brother of Johann Gregor Virgilius Camerloher (*b* Murnau, bap. 17 Nov 1720; *d* 18 Oct 1785), a cellist at the Munich court from 1747. After schooling in Murnau, he attended the Ritterakademie in Ettal (1730–39). He studied theology at the Wilhelmsgymnasium in Munich from 1739 to 1741 while also participating as a singer in *Fastenmeditation* performances for the Congregatio Latina BV Mariae; he later composed 17 *Fastenmeditationen* for the congregation (1748–73). In 1745 Johann Theodor, electoral bishop (later cardinal) of Freising, Regensburg and Liège, appointed Camerloher Kapellmeister to the Freising court; Camerloher was also his director of chamber music in Liège (1753–9). Through his patron's influence, Camerloher received the necessary diploma of nobility to serve as prebendery and canon at the monasteries of St Veit (1748–53) and St Andreas (1753–82) in Freising, and he dedicated his symphonies op.1 to him. Johann Theodor's death in 1763 brought an end not only to Camerloher's travels (to Liège, Paris etc.) but also apparently to his symphonic output: as Kapellmeister under the next two bishops of Freising, he composed chiefly sacred works and school dramas.

Symphonies and sacred works comprise the majority of Camerloher's surviving music. 29 symphonies survive bearing his full name: three printed sets of six (opp.1, 2 and 4) and 11 manuscript symphonies (ten in *D-Mbs*, one in *CH-E*). Eight further symphonies can be assigned to him with some confidence (others formerly attributed to him are now believed to be by Joseph Anton Camerloher). The symphonies are mostly scored for strings alone, and all but one are in three movements. The earlier symphonies are short, but both the movements and the phrases of the later ones show a progressive increase in length. The thematic areas are quite clearly articulated, and those in later symphonies display characteristic features; the many antecedent–consequent sentences look forward to a later Classical style. Camerloher's unquestionably authentic sacred works include nine masses, which are large-scale works employing strings, clarino trumpets, timpani, chorus and soloists. The orchestral writing is primarily homophonic in texture, as in Camerloher's later symphonies, while more traditional elements, such as counterpoint and an occasional fugue, are reserved for the chorus.

WORKS

thematic catalogues: Mayer (1964) [sacred and dramatic works], Forsberg (1990) [symphonies]

principal sources: CH-E; CZ-Pk, Pnm; D-Esch, Mbs, Mk, MÜu, WEY

Sacred: Missa solemnis; 7 other masses; Requiem; 6 offs; 2 Miserere; 3 lits; 7 ants; 1 responsory; 2 Planctus Mariae; 1 motet; 4 arias; 1 Fastenmeditation; 1 off, doubtful; 17 masses and 29 other works, formerly in *D-FS*, lost, 16 Fastenmeditationen, lost

Dramatic: 19 school comedies, lost

Syms. (for 2 vn, va, bc unless otherwise stated): 6 as op.1 (Munich, *c*1748–53); 6 with 2 hn/tpt ad lib, op.2 (Liège, *c*1759–63), no.2 ed. in The Symphony 1720–1840, ser. SUZANNE FORSBERG

Cameron, (George) Basil (*b* Reading, 18 Aug 1884; *d* Leominster, 26 June 1975). English conductor. He studied with Tertius Noble in York and at the Berlin Hochschule für Musik (1902–6). After a period as an orchestral violinist he became conductor in 1912 of the Torquay Municipal Orchestra, where he assumed the name Hindenburg because of prejudice against English musicians. When war broke out in 1914 he was ironically bound to resume his own name, having established a reputation with a Wagner festival in 1913 and other events beyond the ambitions of the traditional seaside orchestra. In this and his subsequent similar posts at Hastings (1923–30) and Harrogate he followed the example of Dan Godfrey at Bournemouth in providing some symphony concerts and festivals as well as lighter musical entertainment. From 1930 to 1938 he was in the USA, first with the San Francisco SO, whose direction he shared with Issay Dobroven, then with the Seattle SO (1932–8). On his return to Britain he became assistant to Henry Wood in the Promenade Concerts. The days of the spa and seaside orchestra were by this time over and until his old age Cameron was a reliable conductor of catholic taste; he conducted concerts with the BBC SO, the LSO and the LPO, and with the Amsterdam, Berlin, Czech and Budapest symphony orchestras. He was made a CBE in 1957.

FRANK HOWES/R

Cameron, Douglas (*b* Dundee, 3 Nov 1902; *d* Ramsgate, 20 Aug 1974). Scottish cellist. He studied with John Reid in Dundee and Herbert Walenn at the RAM (1919–22). He was a member of Henry Wood's New Queen's Hall Orchestra and the Kutcher String Quartet (1931–8), and during World War II he led the cello section of the National SO and played concertos with the orchestra, working under many great conductors. His interpretation of the Elgar Cello Concerto was outstanding. Cameron had studied bowings and fingerings with Elgar, and had played in the orchestra when Beatrice Harrison recorded the concerto under the composer in 1928. He also gave recitals with his pianist daughter, Fiona, and played with the Blech Quartet (1942–50). In 1950 he formed the New London (later London) String Quartet. From this time he concentrated mainly on teaching and adjudicating. He coached the cello section of the National Youth Orchestra from its foundation in 1947 and was an inspiring teacher at the RAM, where he had been appointed a professor in 1927. He was made an OBE in 1974. (*CampbellGC*)

MARGARET CAMPBELL

Cameroon, Republic of (Fr. République du Cameroun). Country in West Africa. It has an area of 475,440 km² and a population of 15·13 million (2000 estimate). The national languages are French and English, reflecting colonial legacy. Cameroon was a German protectorate until 1916, after which time four-fifths of the territory became a French mandate, and the remainder formed a British mandate. The French administration granted the territory independence in 1960 and the British in 1961, forming a joint territory.

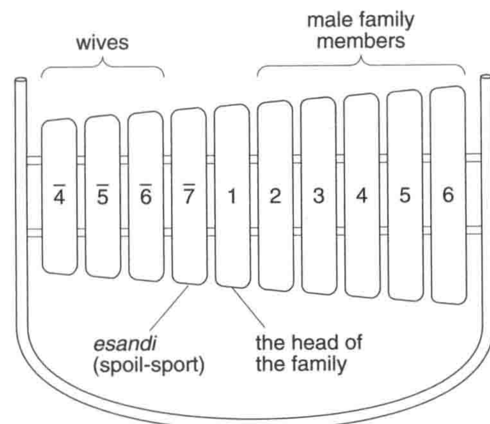
1. Ethnic groups, languages and historical background. Geographically, and in its ethnic and linguistic divisions, Cameroon is extremely varied. Dense tropical forests extend from the Atlantic coast to the south-eastern borders. The coastal and southern populations, for example the Duala, Beti, Bulu and Fang (Faŋ), and several 'pygmy' groups (notably in the area of Yokadouma), all speak Bantu languages. Among populations in the centre, from the Bamenda Highlands grassland in the west to Bétare Oya in the east, there is a patchwork of languages historically classified as 'semi-Bantu' or 'bantoid', but now grouped together with other Bantu languages as part of the greater Benue-Congo family. Further north, on the Adamawa plateau, long-established millet agriculturalists such as the Kutin (Peere), Chamba (Samba Leko) and others speak Adamawa-Eastern languages, as do the Gbaya on the eastern border. The FulBe (Fulɓe, Fulani or Fula) who migrated to the Adamawa area in the 19th century speak a West Atlantic language. Languages of the Chadic family in northernmost Cameroon are spoken by mountain dwellers such as the Matakam, and Saharan languages (e.g. Kanuri), are found among peoples living near Lake Chad in the north.

Biodiversity, long-term isolation of scattered ethnic groups in pre-colonial times and the impact of the 19th-century FulBe invasion are three factors that determined the contemporary cultural panorama of Cameroon. FulBe cultural and political influences reached as far south as the Kingdom of Bamum in the Cameroon grasslands, affecting populations such as the Tikar and the Vute. Conversely, aspects of southern Cameroon's oldest population, the 'pygmy' hunter-gatherers, have influenced the music and dance of peoples settled in the tropical forests that once extended from the Sanaga river into Gabon and the Congo.

2. Main musical style areas. Cameroon can be broadly divided into five large music and dance style areas, somewhat analogous to language divisions. In each area there are specific instrumental resources and distinct social and religious situations.

(i) Southern Cameroon. This area includes long-established ethnic groups such as the Duala and Bassa (Basaa) and the more recently settled 'Pahouin' peoples, including the Bulu, Beti, Fang, Eton (Etɔn) and Mvele. The 'Pahouin' group seems to have expanded from Gabon into southern Cameroon during the 18th century, and its musical style is characterized by the use of a hexa- to heptatonic tonal system; multi-part organization of vocal and some instrumental music in parallel thirds; the use of the *ngkul* (*ŋkul*) slit-drum for drum communication and/or dance drumming or both, as in the initiation dance called *ozila*; the importance of the *mvet* stick zither and the *mendzang* (*mendzãŋ*), gourd-resonated xylophone. Oral literature and music are inextricably intertwined in the *chantefables* studied by Eno-Belinga (1966; 1970), in the poetry of the *mvet* (Eno-Belinga, 1979) and the didactic songs for young women (*bikud-si*) (Awona, 1967).

The Mvet stick zither among the Beti and Bulu is known as *ebenza* among the Mvele and, in some parts of southernmost Cameroon, as *ŋgɔmbi* (a term that also



1. Mendzang (mɛnjyãŋ) ensemble of Gaston Bayiege (third musician from the left), including four gourd-resonated xylophones and one engis (rattle)

refers to the harp of the Fang people of Gabon). The *mvet* is known in southern Cameroon, Gabon, Ecuatorial Guinea, and border areas in the northern Congo and south-western Central African Republic. Although its history is not known, it is probably an autochthonous instrument of the Bulu-Beti-Fang group of peoples, giving this culture area an unmistakable musical identity.

Ensembles of gourd-resonated xylophones called *mendzang* (or *mɛnjyãŋ*) are also characteristic of southern Cameroon. These instruments are portable and have a built rail to position the keyboard away from the player's body. Four such instruments are usually played together with an *engis* (plaited rattle) and quite often also a tall, single-headed drum. Xylophones were used in the past as processional instruments to accompany chiefs on visits to neighbouring villages.

Individual names vary from language to language. Recorded in 1970 by Kubik, Gaston Bayiege from Mbang (Mbãŋ) village near Ngelemenduka, used the following terminology: the 13-note *olulong* (*olulɔŋ*: 'the whistle') functions as the lead xylophone; the nine-note *ebulu* is used for playing basic patterns in octaves; the five-note *ombɔk* (*ombɔk*: 'the one and only'), on which only one note at a time is played; and the four-note *endum* functions as the bass of the group (fig.1). The term for the latter is onomatopoeic, imitating the sound of bass notes: *ndum ndum ndum*.

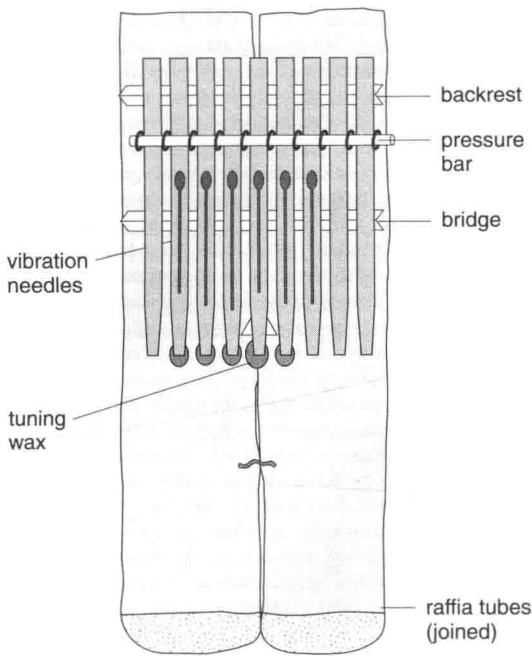
The tuning of southern Cameroonian xylophones has been subject to considerable controversy. Ngumu provided intracultural evidence from the Beti as to the tuning process and its conceptualization (1975–6, pp.14–18), suggesting that tuning begins at the centre of the middle-range xylophone of a group. This central note is considered analogous to the 'head of a family'. Tuning then proceeds in ascending order of pitch (fig.2). Octaves, sometimes referred to as 'wives', are then found for notes 4, 5 and 6. Ngumu suggests that the tuning was at one time hexatonic, but at some point musicians from an area known as 'Etenga country' began to introduce an additional note, $\bar{7}$ in fig.2, called *esandi* ('the spoilsport'), and accepted only reluctantly by local musicians (Ngumu, 1975–6, p.15). Ngumu states that local xylophone tunings

2. Tuning pattern of a southern Cameroon mendzang (mɛnjyãŋ) in cipher notation

in southern Cameroon were variable, although cent-measurements of several older specimens indicate a predilection for 'neutral 3rds' between notes spaced one key apart, e.g. 1 and 3, 2 and 4, etc. The harmonic basis for both xylophone and voice in this southern Cameroonian style are 3rds and octaves.

(ii) South-eastern Cameroon. The south-eastern Bantu-language area of Cameroon, near the towns of Yokadouma and Moloundou, includes individual languages such as Mpompo and Mpiemo (Mpyɛmɔ̃). Masking traditions and secret societies in south-eastern Cameroon demonstrate the proximity of the Congo and Gabon. Until recently, men participated in secret societies, called *so* (*sɔ*), devoted to a spirit who appeared as a mask. The *doyombo* (*dɔyombo*) mask that survives among the Mpiemo once belonged to a comparable secret society, but has now been reassigned to the level of teenage entertainment (Kubik, 1993, pp.40–41). But new secret societies form all the time. As recently as the 1960s, a female secret society called *akulavye* originated among the Bizami and, subsequently, became popular in the area east of Yokadouma among teenage girls.

A musical characteristic of this area is the presence of harmonic part-singing with a tendency, particularly in some *ṣya chantefables* among the Mpiemo, to use chord clusters shifted upwards by a semitone. Such predilections seem to originate with the *agwong* (*agwõŋ*) mouth bow that reinforces selectively partials 4–6 over two fundamentals a semitone apart. Mpiemo music is closely related to that of other peoples in the Republic of the Congo, such as the Pomo (Pol), Bakota (Kota) and Bongili, an area from which they migrated centuries ago. However, living close to the northern fringes of the tropical forest, they have also assimilated some traits from the Gbaya, a savanna population settled north of the Yokadouma-Nola axis who speak an Adamawa-Eastern language. Gbaya influence can be noted in songs with Gbaya texts and in the use of singing in parallel 4ths within a pentatonic framework.



A variety of musical instruments characterizes this area of dense forests; most of the instruments are shared with populations further south, in the Republic of the Congo and in the upper Sangha area in the Central African Republic. In a survey carried out on the Cameroonian side of the border in 1969, the following musical instruments were observed between the town of Yokadouma and Mgboe (Mgbɔɛ) village further east: *mentsyang* or *mɛntṣyãŋ* (*mendzãŋ*) gourd-resonated xylophones with 10–11 keys, usually played in pairs; *kembe* box- and gourd-resonated lamellophones brought by returning migrant workers from Brazzaville (Congo) in the 1920s; *kuli* (slit-drum) played with membranophones; log xylophones with a base of banana stems, also called *mentsyang* or *mɛntṣyãŋ*; *kama*, a plaited rattle used by women to accompany women's songs and lullabies; and home-made acoustic guitars used in drinking and dance band parties.

Prior to the migration of early Bantu-language speakers from the so-called Bantu nucleus (an area encompassing parts of western Cameroon and eastern Nigeria) to west-central Africa *c*1000–*c*400 BCE, the equatorial forest was inhabited by small groups of hunter-gatherers who were radically different from other speakers of Niger-Congo languages, namely the 'pygmies'. The Bantu languages spoken by forest hunter-gatherers today are believed to be adaptations of earlier Bantu languages spoken by migrants with whom the 'pygmies' first came into contact. However, a pre-Bantu 'pygmy' musical (as opposed to linguistic) culture seems to survive tenaciously. A distinctive polyphonic singing style, often combined with a highly developed yodelling technique, is found among 'pygmies' in widely separated areas. The strength of 'pygmy' musical culture is demonstrated by the near universal adoption of 'pygmy'-style polyphony. Two different 'pygmy' ethnic groups survive in south-east Cameroon who are still active as elephant hunters. Mpiemo women learnt to practise 'pygmy'-style polyphony with *enge* (yodelling) from 'pygmies', in contrast to the parallel harmonic singing used in most of their vocal music.

(iii) Cameroon grasslands. The Kingdom of Bamum was established in the 16th century by Prince Nshare Yen. It gradually assimilated neighbouring peoples, rising to a powerful centralized state during the 19th century. Under the Sultan Njoya (*c*1876–1933), spectacular forms of court music were developed in Fumban, the capital. Princes belonging to the *ngürri* secret society played flutes, rattles and elaborately carved drums. A masquerade formed one of the highlights. *Nguon* was an important festivity that took place for the last time in 1924. It included *nguon* (friction drums), flutes and other instruments (Geary, 1983). The *mbansie* secret society of Bamum originated in the 19th century with membership open to anyone who had fought with distinction against the Muslim FulBe. Tall double bells were used during public performances of the society, as were rattles and drums. During Njoya's reign, large slit-drums stood in the market-place of Fumban, to be used for summoning people to the palace. These drums were suppressed by the French administration after World War I, but in 1976 Sultan Seidou Njimoluh Njoya reconstructed one and had it consecrated a year later.

Bamum and western Cameroon are important areas for masked dancing. Masks appear in the *tso* and *kuosi* secret societies of the Bamileke. Among the Mankon of western Cameroon, masks are employed in dances such as *mambang*, accompanied by a 17-key log xylophone. Masks were worn only by males of the royal line, and membership of the secret society was open only to males of a certain standing (Njob, 1967). Masks have also been documented among the western Tikar (Koloss, 1985). The Cameroon grasslands is a traditional area of metal-working in bronze (produced with the lost-wax technique) and iron. It is an important distribution area of both single- and double-flange welded iron bells, the latter usually with a bow-grip.

More surprising and historically significant is that, by contrast, the manufacture of lamellophones, the other significant iron-age development in African musical instruments in this area, is strictly from plant materials as it is in south-eastern Nigeria. Two or three split raffia tubes are joined to form a resonating chamber; raffia needles (obtained from a raffia stem's hard surface) are placed within crosswise to reinforce the structure. A triangular or crescent-shaped soundhole is then cut into the soundboard. Lamellae obtained from the hard surface of the raffia stem leaf are then attached to the soundboard with a pressure bar placed between bridge and backrest. Lamellae are tuned by adjusting their position over the bridge and/or attaching lumps of black wax to their

3. *Cameroon lamellophone construction*

undersides (fig.3). A remarkable device is the use of vibration needles, also cut from the surface of a raffia stem leaf, attached lengthways with the help of black wax on top of many lamellae. Their pointed lower ends are raised, and as soon as the musician depresses a lamella, the vibration induces a sympathetic vibration of the needle, resulting in amplification and prolongation of the sound.

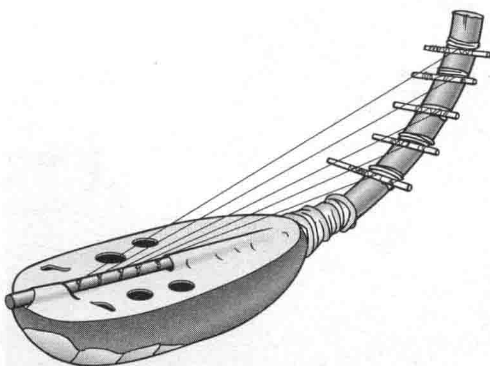
Mbø ong (*toŋ*) and *mbø enggo* (*ŋgo*) are Tikar names for the rafia lamellophone. They have 12–18 lamellae, and Tikar players use their thumbs and the index fingers of both hands in a pincer grip to sound the notes. An esoteric lamellophone used by the Tikar at Ngambe is known as *mbø menjang* (mɛnjãŋ or *mendzãŋ*). It has an oval bowl-shaped resonator and is used during sacrificial ceremonies for dead Tikar chiefs. The *mbø menjang* is played inside shrines in groups of three to four, accompanied by a cylindrical drum played in a horizontal position (fig.4).

At Ngambe, in Tikarland, a small pygmy group has long been employed as court musicians, performing the *nan* (*nã*) dance, and occasionally performing for Sultan Njoya in Bamum; they are the northernmost pygmy group known in Africa. Pygmy-influenced polyphony is evident in Tikar *ngbãnya* dance songs and in *nswe* (*nswɛ̃*) hunting songs.

Today the most popular instrument among the Vute people, located east of the Bamum kingdom, is the *timbrh* lamellophone (fig.5). Older specimens found in museums are made entirely of raffia, while those dating from the mid-20th century tend to have rectangular box resonators made from light wood. The lamellae are broad, arranged with their ends in a straight line and are tuned in octave pairs. Vibration needles create a buzzing sound.

The *timbrh* is tuned pentatonically. Smaller versions are used as solo instruments on long journeys (see Kubik, 1989, pp.52–3). Larger specimens are combined to form a *timbrh* ensemble of three or four instruments of different sizes, often with an accompanying flat seed-shell rattle (*kara*). Unlike the older playing styles, the performing technique of the *timbrh* since the 1950s has been based on the use of alternate thumb strokes, creating an interlocking pattern between left- and right-hand thumbs. Each thumb strikes simultaneously two adjacent lamellae tuned an octave apart. The result is a music in interlocking tone-rows of paired octaves. The themes are short and all

4. *Mbø menjang (mɛnjãŋ) and deu (drum) used as secret instruments in the shrine for the ntuoshie (dead chiefs) of the Tikar*



5. *Timbrh lamellophone ensemble directed by Philippe Kaing of Linté, central Cameroon*

based on cycle number 12 or 24. *Timbrh* ensembles generate an amazing swing and the vocal line is developed over a rhythmic-melodic foundation that is constantly reshuffled. Many song texts praise the chief and his retinue.

(iv) Northern Cameroon.

(a) Autochthonous cultures. The peoples of northern Cameroon use a pentatonic tonal system, and in some cultures, notably the Chamba, this pentatonicism is combined with two-part singing in parallel 4ths and 5ths. In music, older structural principles survive; the maintenance of a multiple main beat within interlocking patterns is just such an example. These concepts survive, despite the effects on many of these cultures since the 19th century of cultural imports along the Hausa trading network, and by dominant FulBe settlers. The Kutin people perform a secret dance with composite end-blown gourd horns called *fang* (*fãŋ*) *kure*, which are held by the musicians in their left hands while the right hand shakes a *sahare* (plaited rattle). These musicians perform a circle dance, moving anticlockwise while blowing their horns. Normally the horns are hidden in a house in the bush, taken out only for funeral rites and for commemorating the dead.

Double bells such as the *tong* (*toŋ*) *senwa* and tong (*toŋ*) *deni* are found in this area and further north. René Gardi (1969) noted their use in funeral ceremonies among the Doayo (Doyayo), a small mountain-dwelling people south of the Benue river. The presence of bells in northern Cameroon is testimony to the antiquity of highly developed iron-smelting and iron-working metallurgy in this part of Africa. Gardi also documented the use of music by blacksmiths among the Matakam in the Mandara mountains who play five-string *ganzavar* harps. The *ganzavar*'s resonator is covered with the skin of a varanus lizard. Soundholes cut into the skin may be covered with a mirliton from a spider's cocoon, giving the *ganzavar* its characteristic buzzing sound. In contrast to other harps of this type, the bridge is visible, appearing on the surface of the skin, so that the strings can be easily attached (fig.6). Harps were played among the Matakam to entertain blacksmiths at the furnace. While one man worked the bellows, another would play the harp. Harp music was thought to provide magical powers, since the extraction of iron was controlled by the local deity called *dzikile*.

6. Ganzavar harp of the Matakam (Mafa) people, northern Cameroon

(b) Hausa traders and FulBe immigrants. Hausa traders and minstrels have been active along the major trade routes for centuries. They still play the *garaya*, a two-string lute played with a plectrum (Kubik, 1989, pp.80–81). A piece of sheet iron with rattle rings is usually attached to the neck of the lute. Hausa lutists, dependent on neighbouring FulBe courts, often recite praise-poetry for the *lamido*. Amadou Meigogue Garoua, a Hausa musician, was recorded with his *goge* (*gogé* or one-string bowed lute) by Kubik in 1964. His *goge* had a gourd resonator covered with the skin of a varanus lizard, and the string of the lute and the bow was horsetail. The quality of his voice, his use of melisma and the melodic lines of his pentatonic accompaniment have been compared to North American blues.

FulBe immigrants who settled in northern Cameroon introduced court music and dance forms such as *nyawala*, *bonsuwe* and *chalawa*. During these performances, several female lead singers perform praise-poetry for the *lamido* and other important members of the court in a highly declamatory style with a thin and raspy tone. The response is sung by a chorus of men, singing in unison, some playing *ganga* double-headed snare drums covered with red or brown cloth, and carried on a strap around the musician's shoulders.

FulBe courts, with their musical traditions, have survived Western colonialism and continue to exist in the Adamawa region. The FulBe invaded the area at the beginning of the 19th century, and their court music is closely related to Hausa court music. FulBe court music also includes the use of *algaita* (*algeita*) (oboes) and *gagashi* (a metal long trumpet up to four metres in length), used particularly in a music called *ganjal*. Alfons M. Dauer (1985) has traced this instrumental combination back to the Sudanic cultures of the Middle Ages, with remote origins in Central Asia.

Despite segregationist policies, some processes of transculturation between the FulBe and autochthonous populations have taken place. Veit Erlmann emphasized that most of the professional musicians among the FulBe of northern Cameroon were of Kanuri or Mandara origins until the early 20th century. The *ciidal* end-blown flute, which is known in the area of Lake Chad, is an example of such assimilation of local traditions.

3. Modern developments. Colonialism, mass media technology of the 20th century and the migration of Cameroonian intellectuals to Europe, notably France, have allowed Cameroon to participate in cultural exchanges with other parts of Africa and overseas on a much greater scale than in previous centuries. In the late 19th century European musical instruments began to appear in the towns of Douala, Yaoundé and other emerging urban centres, as soon as the presence of missionaries, German administrators and army personnel was established. A letter written in German by a Cameroonian schoolboy in 1908 to a friendly missionary expected to return from Europe gives testimony to the popularity at that time among youths of a type of mouth organ called *Junker Kai Mundharmonika*. Another boy is known to have asked his priest for '*eine Harmonika welche zwei Töne hat*', which probably describes a chromatic type of harmonica. Equally popular were military brass and reed instruments used for marching in parades. The American banjo was brought to Cameroon in the 1930s via contacts with dance musics already

established along the West African coast, particularly in Ghana and Nigeria. By the 1960s, individual song styles with solo acoustic banjo and guitar accompaniment sung in Ewondo or French had developed in the south.

The availability of dance music from West Africa and the Congo on shellac discs in the 1950s caused a wave of new developments. Those who had access to guitars, accordions and saxophones formed groups with these new instruments. Some excellent accordion performers, such as the architect Raphael Nomo Etogo (stage name Oro Lux de Nkometou II; fig.7), decided, however, to avoid the limelight, playing MERENGUE music privately for their own children while pursuing a non-musical profession.

Music played with traditional instruments was also affected. Among the Vute of central Cameroon, compositions for *timbrh* lamellophones were often referred to by their performers as *marenge*, *contre-banjo* and *cha-cha*. *Merengue* from the Dominican Republic had the strongest impact on southern and central Cameroonian traditions in the late 1950s and early 60s. Early *merengue* was played with accordions and guitars, but also with the long-established *mendzang* (*mendzāŋ*) gourd-resonated xylophones. A famous group of 'modern' xylophone players that emerged in the 1960s was the Richard Band de Zoe Tele led by Richard Nze. This band recorded several albums, and appeared at the first Pan African Cultural Festival held in Algiers in 1969. Xylophone ensembles modelled after Richard Nze's played all over southern Cameroon at village dance parties for youths at one time. Groups such as the Roddy Band de Mengbwa recorded in the Ebolowa area, typically performing *merengue*, rumba, *rumba boucher*, cha cha cha and an adaptation of a local dance in a fast 12-pulse rhythm called *elak*. Most song texts were in either Bulu or French. Another, more urban-based group was the Miami Bar Band in Douala, playing with box-resonated xylophones in the town's red-light district. Their repertory was strongly based on Cuban dance rhythms, with some songs sung in Spanish.

The Catholic Church began to promote a more indigenized liturgical music in the 1950s, and one of the major exponents of these trends was the priest, church

7. *Merengue dance music played by the Cameroonian architect and accordionist Raphael Nomo Etogo, at Nkometou, near Obala, Cameroon*

music composer and musicologist Pie-Claude Ngumu and his ensemble, La Maîtrise des Chanteurs à la Croix D'ebène. Ngumu's ensemble included a choir, four xylophones, double-bell, slit-drum, rattle, membrane drum and stick zither. His goal was the adaptation of Christian liturgy to the African spirit. He recruited xylophone performers from village communities to perform in his ensemble. La Maîtrise appeared successfully at the Premier Festival des Arts Nègres de Dakar in 1966. Ngumu also composed a well-known mass, the *Messe Ewondo* (*see also* BEBEY, FRANCIS).

4. RESEARCH. Anthropological and ethnomusicological research in Cameroon began soon after the establishment of the German Kamerun Protectorate in 1884 by the diplomat Gustav Nachtigal. The German administration established early contacts with the Kingdom of Bamum during the rule of the eminent Sultan Njoya (*c*1876–1933). Njoya is remembered for his promotion of court music and the modernization of traditional script. Bernhard Ankermann made the earliest sound recordings on wax cylinders in Foumban, the capital of Bamum, in 1909. His photographs show the use of magnificent drums, bells and other instruments in the sultan's palace. In the south, Günter Tessmann published an ethnography of the Fang, *Die Pangwe*, that included a chapter on music by the distinguished scholar Erich Moritz von Hornbostel (1913). German sources on music in Cameroon prior to World War I include travellers', administrators' and missionaries' reports.

After a lull during the inter-war period, studies of music in Cameroon increased after World War II. Marius Schneider published the results of his research on drum language techniques among the Duala (Schneider, 1952; 1967), in which he distinguished three ways in which drums could be used: as signals for communication, as imitation of spoken phrases and for purely musical purposes. He emphasized that in order to 'talk' it was important for a Duala drummer to portray both the speech rhythms and timbre expressed in different vowels.

Field recording tours increased during the period after World War II. French teams in cooperation with OCORA, Paris, recorded among the Bamum (Bamun), Bamileke, Beti and Fali. Michel Houdry recorded what remained of Bamum court music in 1957, later published as *Danses et chants Bamoun* (*c*1975). Eldridge Mohammadou of the Centre Fédéral Linguistique et Culturel in Yaoundé began a systematic study of the history of the FulBe in northern Cameroon during this period (Mohammadou, 1965). Also in the north, René Gardi surveyed traditional crafts, including the harp music associated with iron smelting among the Matakam. In 1960, 1964 and 1969–70 Gerhard Kubik undertook field research within selected areas of Cameroon, particularly among the musical cultures of the Vute, Tikar, FulBe, Kutin, Sanaga, Njanti (Tibea), Eton, Mvele, Bulu, Gbaya, Mpiemo and others.

From the mid-1960s to the 1980s Cameroonian researchers in the south, such as Martin Samuel Eno-Belinga and Stanislas Awona, carried out integrated studies of oral literature, music and dance (Eno-Belinga, 1966; Awona, 1965; 1966; 1967). During the 1970s intensive, intracultural studies of southern Cameroonian *mendzang* or *mendzāŋ* (xylophone) music were initiated by Father Pie-Claude Ngumu and by Albert Noah Messomo who approached the subject more from a literary and social viewpoint. Hans-Joachim Koloss

undertook research trips in 1975 and 1981 to the small Kingdom of Oku in the Cameroon grasslands. He also worked among the westernmost Tikar, studying the manufacture and performance of masks. In addition, Artur Simon undertook field recording trips to Bamum and other areas of Cameroon in the 1980s.

GERHARD KUBIK

Cametti, Alberto (*b* Rome, 5 May 1871; *d* Rome, 1 June 1935). Italian writer on music, composer and keyboard performer. He studied the organ and piano with Filippo Capocci and Andrea Morucci and composition with Gaetano Capocci and Stanislav Falchi at the Accademia di S Cecilia in Rome. He was organist, composer and *maestro di cappella* at various churches, including the Chiesa Nuova (1887–1907) and S Luigi dei Francesi; in 1898 he also founded a schola cantorum at S Maria in Vallicella. He was a committed supporter of the Cecilian movement and worked for the reform of sacred music first in various articles (in *GMM* and *Bollettino musicale romano*, which he acquired and directed in 1899 and which was amalgamated with *Santa Cecilia* in 1900) and then as vice-secretary of the Commissione Pontificia di arte musica sacra formed by Pius X (1905). In 1919–20 Cametti toured the USA and Canada with the Quartetto Vocale Romano of the Capella Sistina as director and piano and organ soloist. He served as artistic director of the Accademica Filarmonica Romana (1925–7) as its librarian and historian (1925) and he was a member of the Arcadian Academy. His major musicological contributions, based on important archival research, concerned Roman music history, particularly that of the theatre. His compositions are predominantly sacred; they include a requiem, motets, litanies, antiphons and vespers. Many of his manuscripts now belong to the Accademia di S Cecilia.

CAROLYN GIANTURCO

Camidge. English family of organists and composers. Four members of the family, in direct male succession, were organists at York Minster from 1756 to 1859.

(1) John Camidge (i) (bap. York, 8 Dec 1734; *d* York, 25 April 1803). He was a chorister at York Minster under Nares, and later went to London to study the organ under Greene; he is said to have taken lessons from Handel. In 1755 he was a candidate for the post of organist of Doncaster parish church, but on 31 January 1756 was appointed to succeed Nares as organist of York Minster. In the same year he was also made organist of St Michael-le-Belfrey, next to the minster, and on 17 October he married Elizabeth Walshaw in that church. They had at

least seven children, of whom (2) Matthew was the sixth. Camidge retired from the minster in 1799 and from St Michael-le-Belfrey in 1801. He was reputed to be a fine organist of the florid school, and for many years directed the concerts of the York Musical Society. He began to give small-scale performances of *Messiah* in St Michael-le-Belfrey, probably in 1791; these grew into more elaborate music festivals, with orchestral performances in the minster. According to Bairstow he 'initiated the custom of singing excerpts from the *Messiah* at Christmas and Easter' instead of anthems, to the scandal of the minster congregation; but Fellowes accorded this doubtful honour to Aylward at St George's Chapel, Windsor. He published *Six Easy Lessons for the Harpsichord* (York, 1764) and a few songs. A number of his anthems remain in manuscript: 15 of them are listed by Foster.

(2) **Matthew Camidge** (bap. York, 25 May 1764; *d* York, 23 Oct 1844). Son of (1) John Camidge (i). His year of birth is usually given as 1758, but that is unlikely: children of (1) John and Elizabeth Camidge born in 1757 and 1759 were baptized within a few weeks of birth. At an early age he became a chorister of the Chapel Royal under his father's old master, Nares. Later he assisted his father at York, and eventually succeeded him at the minster on 11 November 1799 and at St Michael-le-Belfrey on 2 July 1801. He married Mary Shaw, of York, on 3 September 1789; besides (3) John, he had two sons who took orders, one becoming a canon of York Minster. He retired on 8 October 1842.

Camidge attained considerable renown, not only in York but in all northern England, as an organist and as a director of oratorio performances. He presided over the giant music festivals held at York in 1823, 1825 and later years, when his improvised preludes to anthems by Croft and others excited great admiration. He was also a proficient violinist, for he led the band of the York Musical Society for many years. He belonged to the evangelical group prominent in York under the leadership of William Richardson (1745–1821), incumbent of St Michael-le-Belfrey from 1771 and a vicar-choral at the minster. Richardson's *Collection of Psalms*, first published in 1788 for St Michael-le-Belfrey, was in use in at least 30 churches in and near York by 1818; and with hymns added by Jonathan Gray it became even more widely known as *The York Psalm and Hymn Book*. For this collection Camidge compiled, in about 1800, *A Musical Companion to the Psalms used in the Church of St Michael-le-Belfrey*. It consisted of an excellent selection of 30 tunes, well harmonized for organ. In the third edition (*c*1830) Camidge added a Sanctus, Responses and 12 double chants. It is likely that he introduced psalm chanting at St Michael-le-Belfrey well before the practice became widespread in parish churches.

He also published (in 1789) a curious edition of Henry Lawes's psalm tunes under the title *Psalmody for a single voice*, in which each tune by Lawes is followed by a 'variation' by Camidge: Sandys's texts were revised for the book by William Mason, precentor of York at the time. Camidge also published *24 Original Psalm and Hymn Tunes* (York, 1823), and a volume of *Cathedral Music* (York, ?1790). These are undistinguished, but his sonatas, most of them with accompaniments for violin and cello, are among the better English keyboard music of their time, solid in craft though in no way original. He was equally at home in the 'ancient' style: in the preface to his Organ Concertos, op.13 (?1815), he wrote that he had 'endeavoured to imitate the particular style of music which has been so long admired, namely that of Handel and Corelli. This acknowledgement will, he hopes, secure him from the critics' censure'.

WORKS

INSTRUMENTAL

Instructions, pf/hpd, and Eight Sonatinas with an Accompaniment for a Violin ... to which is added Useful Preludes (London, ?1795) [repr. as A Method of Instruction by Questions and Answers]
A First and Second Sett of Easy Preludes, pf (London, ?1795)
Ten Easy Sonatas, G, C, G, F, G, D, B♭, D, A, E♭, pf/hpd, vn acc. (London, ?1796)
Three Sonatas, C, D, B♭, pf/hpd, vn and vc acc. [op.5] (London, 1797)
A Favorite Sonata, B♭, pf/hp, vn/fl acc., op.8 (London, ?1800)
A Favorite Sonata, E♭, pf, vn/fl acc., op.9 (London, ?1800)
A Sonata, A, pf, vn, vc acc., op.12 (London, ?1809)
Six Concertos [i.e. suites], D, g, a, G, g, c, org/grand pf, op.13 (London, ?1815)
A Sonata, D, pf/hpd, vn acc. (London, n.d.)

CHURCH MUSIC

Psalmody for a single voice ... by Henry Lawes ... with a variation of each psalm tune ... by Matthew Camidge (York, 1789)
Cathedral Music (York, ?1790), Morning Service (TeD, Jub); Evening Service (Mag, Nunc); Sanctus with responses; Blessed is he (Ps xli.1–3); Consider and hear me (Ps xiii.3); Lift up your heads (Ps xxiv.7–10); O save thy people (Ps xxviii.10); Teach me, O Lord; Thy way, O Lord (Ps lxxvii.13–20); 30 chaunts
Sunday Hymns, the Words by the Revd. W. Mason (York, 1794), 2 texts (Again the day returns; Soon will the evening star) set to the same music
A Musical Companion to the Psalms used in the Church of St Michael-le-Belfrey, York (York, *c*1800, 3/*c*1830 with a Sanctus, responses, 12 double chants added)
Eternal King to Thee we bow (London, *c*1800)
Twenty Four Original Psalm and Hymn Tunes (York, 1823)
Chant in G, *GB-Ob*

(3) **John Camidge (ii)** (*b* York, 1790; *d* York, 21 Sept 1859). Son of (2) Matthew Camidge. He graduated MusB (Cambridge) in 1812 and MusD in 1819. He assisted his father at the York festivals and other local events, and as organist of the minster, where he succeeded him on his retirement in 1842. He played a leading part in the specification and planning of the very large new organ erected in the minster after the fire of 1829. After 1848, when he was suddenly paralysed, his duties were taken on by his son, Thomas Simpson Camidge (1828–1912). His principal compositions are in a volume of *Cathedral Music* (1828). John Camidge (1853–1939), his grandson (son of Thomas Simpson), was organist of Beverley Minster from 1876 until his death.

NICHOLAS TEMPERLEY

Camilieri, Lorenzo (*b* Corfu, 1874/1878; *d* New York, 20 April 1956). American composer and conductor of Greek origin. After studying at the S Pietro a Majella Conservatory in Naples (?1888–95) he held various posts in Athens, including those of conductor of the Omilos Philomousson music society (1896–1900), and professor of harmony and choral conductor at the Athens Conservatory (1902–5). In spite of the high standards he achieved and the adventurousness of his concert programmes, he was dismissed from the conservatory in July 1905 by its Germanophile director, Georgios Nazos. Camilieri responded with a polemical pamphlet, *Pros tous filous mou* ('For my Friends'), which contained a denunciation of Nazos. Later that year he left Greece and, after conducting appearances in Italy, England and France and a tour with the singer Maria Barrientos, settled in 1914 in New York, where he taught singing and founded a choir, the People's Liberty Chorus of New York. He took American citizenship in 1921.

Camilieri's known output as a composer consists mainly of small forms. His piano pieces display refinement and harmonic inventiveness, their style ranging from the late Romantic (*Romance*) to the neo-classical (*Danse*). His seven surviving songs display a keen sense of drama and a feeling for the inflections of the Greek language, sometimes (as in *I Xenoula* and *Sti varka*) combined with a subtle use of folk modes.

WORKS
(*selective list*)

GEORGE LEOTSAKOS

Camilleri, Charles (*b* Hamrun, 7 Sept 1931). Maltese composer. His abiding interest in the folk ethos of Malta and the Mediterranean basin has been instrumental in establishing an internationally acknowledged Maltese identity in music. Although he studied with his father, Joseph Abela Scolaro, Paul Nani, Carmelo Pace and with John Weinzweig at Toronto University, he is largely self-taught as a composer.

Camilleri's early exposure was to light music, his virtuosity on the accordion attracting much attention, as did, later on, his improvisations on the piano. The traditional music of his country was an inspirational source, especially the *għana* with its ingrained improvisatory vitality and subtle Semitic overtones. His early compositions were obsessively nationalist, the best of them probably being the orchestral *Malta Suite*, written when he was 15, which reveals a closeness to Debussy's sensibility in its orchestral colouring, and the highly acclaimed 'Mediterranean' Piano Concerto.

During the 1950s he lived in Australia, then London, and pursued a successful career in light music while continuing to evolve a quasi-modal style characterized by monody and its heterophonic elaboration. *Times of Day* and the piano sonatinas are good examples of this phase. In 1958 he moved to North America, where he established a celebrated music programme for the CBC. Contact with Kodály, Orff, Stockhausen and Stravinsky radically influenced his musical perceptions. His several compositions dating from this phase, such as the Fantasy Fugue for strings and the Violin Concerto no.1, reflect these experiences.

In the mid-1960s Camilleri returned to Europe to be nearer the roots of his spiritual and natural birthright, now dividing his time between Malta and London. This became a period of self-seeking and of deepening interest in philosophical and mystical conceptions, particularly the writings of the Jesuit theologian Teilhard de Chardin. In an attempt to encompass the essence of the Semitic and European totality of his country's traditions, especially the improvisatory basis of its folk music, he studied African and Asiatic musical languages, thereby developing the technique he called 'atomization of the beat' – the subdivision of each individual beat into self-contained rhythmical groups which shift accents beyond the confines of any imaginary barline or traditional time signature and, by way of added rests and further subdivisions, become almost improvisatory in execution (see ex.1). This complex technique comes very close to realizing those instinctive reactions towards rhythm often curbed, perhaps even destroyed, within the rigid Western system of notation.

Such powerfully progressive works dating from this period as *Maqam* (his Second Piano Concerto), which draws effective parallels between Arabic modes and Western tradition, the meditative *Missa mundi*, *Morphogenesis* for organ, the brooding *Cosmic Visions* for 42 strings and the introspective *Noospheres* for piano represent an impressive flowering of talent and the formation of a highly personalized idiom.

In 1977 he was appointed professor of composition at the Royal Conservatory of Music in Toronto, and also lectured at SUNY, Buffalo, where he met Carter, Feldman and Cage. His permanent return to Malta via London in 1983 came at a time of rising preoccupations with the language and general soundscape of a region, particularly in his case the Mediterranean basin, and with a composer's ability to translate it into meaningful musical terms. These ideas find expression in his book *Mediterranean Music*, a dialogue with the philosopher Peter Serracino Inglott, and also in his later concertos and symphonies, his Maltese operas *Il-Weghda* and *Il-Fidwa tal-Bdiewa*, and in the

Ex.1 Brass Quintet, 3rd movt, beats marked 84–91

oratorio *Pawlu ta' Malta*. In 1992 he was appointed first professor of music at the University of Malta, a position which he held till 1996. He continues to compose prolifically, including many commissioned works.

JOSEPH VELLA BONDIN

Camilli, Camillo [Camillus] (*b* Mantua, *c*1704; *d* Mantua, 21 Oct 1754). Italian violin maker. He was an excellent maker whose inspiration was the work of his Mantuan predecessor Pietro Guarneri. He may conceivably have been personally acquainted with Guarneri, who died when Camilli was just of apprentice age, but he is more likely to have been a pupil of another Mantuan maker, Antonio Zanotti. Camilli reproduced most of the features of Guarneri's work: rather high model, narrow purfling set near the deeply channelled edge and distinctive soundholes. On the other hand his scrolls were entirely his own, more influenced by Amati instruments, perhaps, and cleanly finished. He was capable of making an admirable violin in every way, though sometimes his wood was not of the handsomest and the varnish of a rather brittle texture. Many violins are known, but few, if any, violas or cellos.

CHARLES BEARE

Cammarano, Salvadore [Salvatore] (*b* Naples, 19 March 1801; *d* Naples, 17 July 1852). Italian librettist and playwright. His family, Sicilian in origin, settled in Naples in the 1760s and immediately established itself in the theatrical and artistic life of the city. He himself was first trained as a painter and sculptor, not without success, before turning to the theatre. In the 1820s he wrote a number of plays for Neapolitan theatres, many of them comedies but all showing a vein of melancholy. His first venture into librettos, in 1832, failed when Domenico Barbaia rejected his *Belisario* (later revised and set by Donizetti). Within a year or two he was established as poet and stage director at the royal theatres, a post which combined writing and revising librettos with responsibility for seeing operas on to the stage. His early training in art clearly influenced his work as a stage director. Surviving notes and sketches, and the detailed stage directions in his librettos, show that he had constantly in mind a picture of what was happening on the stage.

Cammarano's first major task, for which Giovanni Emanuele Bidera wrote the plot outline, was *Ines de Castro* for Persiani (1835, though it had involved a year-long struggle with the censors), but after *Lucia di Lammermoor* (Donizetti, 1835) he never looked back. Until Donizetti left Naples for Paris in 1838 he used no other librettist for his serious operas. Cammarano remained on the staff of the royal theatres for the rest of his life, writing for all the important (and many of the unimportant) composers of the period, among them Mercadante (eight librettos, including *La vestale*, one of Cammarano's best), Pacini (six, starting with *Saffo*, the text considered his best, against which his later output was judged) and finally Verdi (four, culminating in *Il trovatore*, which he finished on his deathbed, though Verdi later required a number of changes). Cammarano also rewrote *Ernani* as *Demetrio Alvexi* for performance in Naples, though there is no evidence that it was given in this version.

Cammarano was the most important, and the most fully professional, of the operatic poets in the generation following Felice Romani. Many of his working papers have survived, and show meticulous craftsmanship. His mellifluous verses were achieved only by careful polishing, and he had an evident concern for the sound of his lines. Composers like Donizetti, Pacini and Verdi often made wholesale changes to the texts they set, but Cammarano's seem to have been largely unaltered. He was a conscientious, if slow, writer, lavishing as much care on texts for lesser composers as on those for the likes of Donizetti or Verdi. He can be faulted only for his stilted language and his reliance on librettists' stock-in-trade of expressions and constructions.

His librettos drew on a wide variety of sources, mostly plays and ballets performed in Naples; none were original. There is an emphasis on the long-suffering, ill-used heroine, whose death provides a pathetic final curtain. Few of Cammarano's texts have a male protagonist, and even fewer are heroic. He was not wedded to conventional themes, and himself pointed out that he was quite prepared to do without a love interest. He had a highly developed sense of dramatic structure and was adept at moulding his plots into arias, ensembles and other components. With the exception of one hurried commission (Pacini's *Stella di Napoli*) he did not need to write explanatory prefaces, as his librettos were self-sufficient. When called on to experiment (as in *Il trovatore*) he was willing to cooperate, although the essential form of his librettos remained unchanged over the whole canon. Nevertheless he held surprisingly advanced views on the relationship of words and music in opera, considering that, ideally, both should come from the same hand. Inevitably he fell foul of the censors from time to time, but he was held in high regard and relations were generally smooth. He showed remarkable sensitivity in presenting his plots in ways which did not offend, and to pilot a libretto based on Victor Hugo's *Ruy Blas* through the Neapolitan censors, not once but twice, was a tour de force.

The composers he worked with invariably treated Cammarano with respect. He remained on friendly terms with Donizetti, who insisted on using him also for his Venetian operas. Verdi began by treating him warily, accepting with only a mild comment an inferior libretto (*Alzira*) previously rejected by Pacini. He never bullied him, although, like other composers, he complained constantly about delays. His distress at Cammarano's death was genuine, even if his first thoughts were to retrieve the draft libretto for *Re Lear*.

The physical and financial conditions of Cammarano's life were wretched, but he remained devoted to the theatre. Much of his work disappeared quickly, being tied to poor music, in the ephemeral ambience in which he worked. But it was no mean achievement to go down in the history of opera as the poet of *Lucia di Lammermoor* or *Il trovatore*; nor, as his contemporaries would have added, *La vestale* or *Saffo*.

WORKS

La sposa (dramma per musica), E. Vignozzi, 1834 (G. Miceli, 1858, as La fidanzata); *Ines de Castro* (tragedia lirica), Persiani, 1835 (Fabio Marchetti, 1840; P.A. Coppola, 1841; Luigi Gibelli, 1849, as Don Pedro di Portogallo; G. Pacini, 1851, as Malvina di Scozia; R. Drigo, 1868, as Don Pedro di Portogallo); *Un matrimonio per ragione* (melodramma), G. Staffa, 1835; *Lucia di Lammermoor* (dramma tragico), Donizetti, 1835; *Belisario* (tragedia lirica), Donizetti, 1836; *L'assedio di Calais* (dramma lirico), Donizetti, 1836; *Pia de' Tolomei* (tragedia lirica), Donizetti, 1837; *Roberto Devereux* (tragedia lirica), Donizetti, 1837; *Maria de Rudenz* (dramma tragico), Donizetti, 1838; *Elena da Feltre* (dramma tragico), Mercadante, 1839; *I ciarlatani* (scherzo melodrammatico), L. Cammarano, 1839

Il conte di Chalais (melodramma tragico), Lillo, 1839 (Donizetti, 1843, as Maria di Rohan); *La vestale* [Emilia] (tragedia lirica), Mercadante, 1840; *Cristina di Svezia* (tragedia lirica, Act 3 by G. Sacchèro), Nini, 1840 (Lillo, 1841, Act 3 by Cammarano; P. Fabrizi, 1844); *Saffo* (tragedia lirica), Pacini, 1840; *Luigi Rolla* (melodramma tragico), Federico Ricci, 1841; *Il proscritto* (melodramma tragico), Mercadante, 1842; *La fidanzata corsa* (melodramma tragico), Pacini, 1842 (Andreu, 1846, as La desposada corsa); *Il reggente* (tragedia lirica), Mercadante, 1843; *Ester d'Engaddi* (dramma tragico), A. Peri, 1843; *Il ravvedimento* (melodramma), L. Cammarano, 1843; *Il Vascello de Gama* (melodramma romantico), Mercadante, 1845

Bondelmonte (tragedia lirica), Pacini, 1845; *Alzira* (tragedia lirica), Verdi, 1845; *Stella di Napoli* (dramma lirico), Pacini, 1845; *Orazi e Curiazi* (tragedia lirica), Mercadante, 1846; *Eleonora Dori* (melodramma tragico), V. Battista, 1847; *Merope* (tragedia lirica), Pacini, 1847 (L. Zandomeneghi, 1871); *Poliuto* (tragedia lirica), Donizetti, 1848; *La battaglia di Legnano* [L'assedio di Arlem] (tragedia lirica), Verdi, 1849; *Luisa Miller* (melodramma tragico), Verdi, 1849; *Non v'è fumo senza fuoco* (farsa), L. Cammarano, 1850 (Lauro Rossi, 1867, as Lo zigaro rivale); *Folco d'Arles* (melodramma tragico), De Giosa, 1851; *Medea* (tragedia lirica), Mercadante, 1851; Il trovatore (dramma), Verdi, 1853; *Virginia* (tragedia lirica), Mercadante, 1866

Cammerton (Ger.: 'chamber pitch'). A general pitch standard in Germany. Although in modern usage 'Kammerton' implies a pitch of *a'* = 440, the frequency of Cammerton has varied throughout history. Calling it 'CammerThon', Praetorius (*Syntagma musicum*, ii, 1618) used it as his reference pitch ('rechte Thon'). In that period the Cammerton standard was about *a'* = 465 (about a semitone higher than *a'*= 440), and it was common to most instruments of his time. With the arrival of new woodwind instruments from France during the second half of the 17th century, Cammerton descended a whole tone or more (*see* PITCH, §I, 2(iii)). By about 1700 there were three general levels of Cammerton, at about *a'* = 415, *a'* = 403 and *a'* = 390 ('tief-Cammerton' or 'Opera-Ton').

18th-century organists naturally tended to identify the level of Cammerton in relation to the pitch of the organs on which they played, which were generally tuned much higher (i.e. in CHORTON or CORNET-TON). When the pitch of the other instruments was a major 2nd below the organ so that the organist had to play a B♭ (i.e. B in German) in order to match their C, the pitch was sometimes called 'B-Cammerton'. Likewise, when the interval was a minor 3rd, the pitch would be called 'A-Cammerton'. These terms could be used as transposing instructions for copyists. By 18th-century conceptions, then, the woodwinds at Cammerton were (as we would now say) 'in A' or 'in B♭' in relation to Chorton.

A few Cammerton organs were built during the first half of the 18th century, their pitches all close to *a'* = 416, which agrees well with those of contemporary instruments of relatively immovable pitch, such as recorders and flutes.

BRUCE HAYNES

Campa, Gustavo E(milio) (*b* Mexico City, 8 Sept 1863; *d* Mexico City, 29 Oct 1934). Mexican composer. He studied the piano with Felipe Larios and Julio Ituarte, and composition with Melesio Morales at the Mexico City Conservatory (1880–83). While still a student he formed a 'Group of Six' with some of his colleagues, among them Ricardo Castro, Felipe Villanueva and Carlos Meneses; Campa took the lead in the group after Pedrell and Kufferath had hailed him as the coming Mexican composer. The *Himno sinfónico* was played at the opening of the Mexican National Library (2 April 1884), and in 1900 Campa was sent to Paris as official Mexican delegate to an international congress. His opera *Le roi poète* concerns the Texcocan king Nezahualcóyotl (1402–72), but its style was too unabashedly Massenet-like for it to win the favour of a Mexican public accustomed only to Italian opera. Campa held appointments as government inspector of studies (1902–7) and at the Mexico City Conservatory as director (1907–13) and professor of composition (1913–25). He also edited the *Gaceta musical*, the house organ of the Mexico City publishers Wagner & Levien (1896–1914).

WORKS
(*selective list*)

ROBERT STEVENSON

Campagnoli, Bartolomeo (*b* Cento, nr Bologna, 10 Sept 1751; *d* Neustrelitz, 7 Nov 1827). Italian violinist and composer. According to the biography that Campagnoli prepared for Gerber, his first teacher was the Bolognese violinist Dall'Ocha, a pupil of Lolli. His father, who was a merchant, sent him to Modena in 1763 for further study with Guastarobba, a noted pupil of Tartini. Returning home in 1766, he took a position in the local orchestra (whether Cento or Bologna is not clear). When the touring violinist Lamotta came through Cento in 1768, Campagnoli became so fascinated with his playing that he followed him to Venice and Padua. In 1770 Campagnoli played successfully in Rome and spent a short time in Faenza. He then settled in Florence, where for the next five years he studied under Nardini and served as leader of the second violins at the Teatro della Pergola. He returned to Rome in 1775 to fill the same post at the Teatro Argentina, but after a year he left Italy and entered the service of the Bishop of Freysingen. Most of 1778 he was apparently on an extended tour through Poland, north Germany and Scandinavia. In Stockholm he was elected a member of the Swedish Royal Academy of Music. He became director of music at the court of the Duke of Courland in Dresden in 1779 but continued frequent concert tours. He performed in numerous Italian cities in 1784; he spent two months in Prague and visited Berlin in 1786, and in 1788 he was in Italy again.

In 1797, after the death of the Duke of Courland, Campagnoli became leader of the Gewandhaus Orchestra in Leipzig, and his concert tours virtually ceased. He went to Paris in 1801, however, where the playing of Kreutzer impressed him deeply. Although he had doubtless been an active composer in Dresden, few publications had appeared before he settled in Leipzig, and it was there that he began to produce the pedagogical works on which his fame largely rests today. In 1816 he took his two daughters, both of whom were singers, to Italy for a year;

he then took them to Frankfurt, where both girls received appointments in the opera. In 1818 he resigned from the Gewandhaus Orchestra, probably to help his daughters' careers. He moved with them to Hanover in 1820 and in 1826 followed them to Neustrelitz, where he may have held a position himself for the last year of his life.

As a performer, Campagnoli's style seems to have stemmed, through Guastarobba and Nardini, entirely from the school of Tartini. The influence of Lolli through Dall'Ocha is dubious, and it would not in any case have represented the more modern French school at that time. Spohr, who heard Campagnoli in 1804, reported that his playing was clean and fluent but his method old-fashioned. Other contemporary reports praised his playing of adagios and his facility in double stops. Campagnoli himself quoted with pleasure the judgment that his performance combined 'German learnedness with Italian soul' (see Schmid, p.160). As a composer, his finest contributions were pedagogical works. His other creations, mostly issued by Breitkopf & Härtel while he was in Leipzig, were pleasant and skilful but thoroughly conventional, with the exception of *L'illusion de la viole d'amour*, which used scordatura to imitate the sound of that instrument. His pedagogical works, including the fugues for violin alone, served several generations of violinists admirably, and his last opus, the *41 caprices* for viola, is a minor classic of its genre, still in use. The *Nouvelle méthode*, op.21, occupied Campagnoli's attention from the 1790s until its publication in 1824 by Breitkopf & Härtel. In part because of the unsupported assumption that an Italian edition appeared in 1797, the significance of the work has sometimes been overestimated. Although the treatment of tuning, as well as a few other matters, is forward-looking, some aspects – for example the holding of the bow – are distinctly old-fashioned. However, its systematic organization and the well graded exercises led to a deserved popularity. Both Lucca and Ricordi brought out Italian editions. An edition in English was issued in London in 1856 and was later published in Boston, Massachusetts.

WORKS

published Leipzig, n.d., unless otherwise indicated

CHAPPELL WHITE

Campagnolo, Francesco (*b* Mantua, ?2 Feb 1584; *d* Innsbruck, 7 Oct 1630). Italian tenor. As an adolescent he served at the Mantuan court (he was a godson of Duke Vincenzo Gonzaga), where he lived briefly with Monteverdi's family. He undoubtedly performed in entertainments of this period, including Monteverdi's *Orfeo and Arianna* and Marco da Gagliano's *Dafne*. In 1607 Vincenzo sent him to Rome for further vocal training. Campagnolo sang in the wedding entertainments for Cosimo de' Medici and Maria Magdalena of Austria in Florence in 1608. In 1609–10 he travelled in the Low Countries, to England and to the courts of Lorraine and Munich. He served Cardinal Ferdinando Gonzaga briefly in Rome in 1612. Four years later he sang in the restaging of Peri's *Euridice* in Bologna and visited the Salzburg court. The Accademia Filarmonica of Verona extended membership to him in 1617.

After a longer stay in Salzburg, he returned to Mantua in 1619 where, according to Monteverdi, he was among the best-rewarded employees of the court, and he earned the title of Cavaliere. In 1622 he travelled in Hungary. He sang in Gagliano's *Regina Sant'Orsola* (1624, Florence), and in 1627 he visited Monteverdi in Venice. During the war over the Mantuan succession he became theatre Kapellmeister at the imperial court in Innsbruck.

Campana (It., Sp.). *See* BELL (i). *See also* SPAIN, §II, 5.

Campana, Fabio (*b* Livorno, 14 Jan 1819; *d* London, 2 Feb 1882). Italian composer and singing teacher. He studied at the Liceo Musicale of Bologna, and his first opera was produced at Livorno while he was still a student. According to Fétis, the productions of his early operas in Italy were not very successful. In 1850 he moved to London, where he became well known as a singing teacher and composer of Italian songs. His opera *Almina* was given on 26 May 1860 at Her Majesty's Theatre with the soprano Marietta Piccolomini; his *Esmeralda*, after its première at St Petersburg in 1869, was produced in London (Covent Garden) in 1870 with Patti in the title role.

ELIZABETH FORBES

Campana, Francesca (*b* Rome; *d* probably in Rome, July 1665). Italian composer, singer and instrumentalist. In a letter of 3 December 1633 Fulvio Testi commended her to Duke Francesco I of Modena as a master of her art – she composed and played the spinet – and one of the two finest female singers in Rome ('though the most sensitive detect a little hoarseness in her voice'). She was probably the Francesca, daughter of Andrea Campana of Rome, who became the wife of the composer Giovan Carlo Rossi (possibly after 1633, since Testi mentions no husband) and thus sister-in-law of Luigi Rossi. Her extant music includes two pieces published in 1629 (RISM 1629[1]) – a florid setting for solo voice of the canzonet *Pargoletta vezzosetta* and a continuo madrigal for two voices, *Donna, se 'l mio servir* – and *Arie a 1, 2, e 3 voci* op.1 (Rome, 1629). As its title implies, this latter volume consists largely of strophic songs; most of them are in triple or in alternating triple and duple time, and some include virtuoso passages. The volume opens with a sonnet setting for solo voice, *Semplicetto augellin*, and closes with a madrigal, *Occhi belli*, apparently for three unaccompanied solo voices (two sopranos and bass). It is an attractive work, competently written, with some expressive chromaticism. Pitoni mentioned a '1º libro', possibly of madrigals, published at Rome in 1630 but it is now lost (see Ruini).

JOHN WHENHAM

Campana, José Luis (*b* Buenos Aires, 24 Aug 1949). Franco-Argentine composer. He studied composition in Buenos Aires with Jacobo Fischer (1968–75) and, as the recipient of a bursary from the French government, in Paris at the Conservatoire National Supérieur de Musique (1979–84), where his teachers included Jolas (analysis) and Malec (composition). He also attended IRCAM and courses at the Groupe de Recherches Musicales (1980–97). In 1990 he was awarded the SACEM Enescu Prize for the entire body of his work.

Employing an atonal language which balances consonance and dissonance, Campana's music is striking for its richly imaginative sounds and its use of electro-acoustics. In works such as *Imago* (1985), the distinction between voices and instruments or pre-recorded and altered sounds is often imperceptible. His articulation of musical forms is essentially dramatic; striking oppositions propel the musical discourse. Although his titles are often evocative and the musical atmospheres he creates suggestive, his compositions are not based on narrative structures. Instead, in works such as *Noctal 1-2-3* (1992), events obey a dream-like logic. His airy polyphony is based upon the interaction of clearly differentiated timbres (*Dholak*, 1988; *Involtura sonora*, 1989), subtly poised combinations of planes and eloquent melodic lines (*My*, 1986).

GÉRARD CONDÉ

Campane [campanelle] (It.). *See* TUBULAR BELLS.

Campanelas (Sp.). A term used by Gaspar Sanz (*Instrucción de música sobra la guitarra española*, Zaragoza, 1674, f.38) to describe the musical effect achieved on a plucked string instrument when as many notes in a scale passage as possible are played on open strings so that they ring over the succeeding ones. As the word implies, these elided tones are meant to suggest the ringing of little bells. The effect is most idiomatic to and found mainly in Baroque, five-course guitar music (*see* GUITAR, §4). It was facilitated by the guitar's characteristic re-entrant tunings, where the fifth and usually the fourth courses were tuned an octave higher than those of the modern guitar, allowing each note of the scale to be played on a different course, and thus to be held longer than would be possible if played in the normal manner in a non-re-entrant tuning. This idiom is carefully notated in tablature, and can be employed only by using the appropriate instrument and tuning.

Although Sanz was the only writer to apply a term for it, the idiom itself is found in many of the best tablatures of the 17th and 18th centuries, and, clearly, was a constituent part of solo technique. The theorbo, with its special tuning arrangement, and the Baroque lute tuned in D minor, also used this effect, but not nearly as extensively as the guitar.

JAMES TYLER

Campanella, Michele (*b* Naples, 5 June 1947). Italian pianist. He studied with Vitale at the Naples Conservatory, and in 1966, while still a student, won the Casella International Competition. He started to give concerts in Italy and then in other European countries and in the USA, quickly becoming known as one of the most interesting talents among pianists of his generation. After having graduated in 1969 from the Naples Conservatory he taught at the Milan Conservatory until 1973, when he left because of his growing concert engagements. Since 1987 he has given regular masterclasses at the Accademia Musicale Chigiana, Siena. Campanella is a pianist of sparkling technique and lively imagination. He is especially admired as an interpreter of Musorgsky, Ravel, Prokofiev and above all of Liszt: his repertory includes a large number of Liszt's original compositions for piano and for piano and orchestra, as well as some of the important operatic paraphrases (from Mozart, Bellini, Meyerbeer, Gounod etc.). His recordings include Liszt

transcriptions and a complete set of his Hungarian Rhapsodies.

Campanini, Cleofonte (*b* Parma, 1 Sept 1860; *d* Chicago, 19 Dec 1919). Italian conductor and violinist. After studying in Parma with C. Ferrarini and G. Dacci, he began a promising career as a violinist, which led him to Vienna, Berlin and London. In 1880 he made his conducting début at the Teatro Reinach, Parma, and in 1882 he conducted *Carmen* at the Teatro Regio with great success. Many of his early conducting appearances were with his brother, the tenor Italo Campanini. After assisting at the Metropolitan Opera in its inaugural season (1883–4) he returned to Italy, conducting the premières of *Adriana Lecouvreur* (1902), Giordano's *Siberia* (1903), and *Madama Butterfly* (1904) in Milan. He was on the rostrum for the première of *Les pêcheurs de perles* in Rome and for the American première of *Otello* (1888, New York) when his wife, Eva (the sister of Luisa Tetrazzini), sang Desdemona. His extensive travels took him to Nice, London, Buenos Aires, Montevideo, Rio de Janeiro, Barcelona, Madrid and Lisbon. From 1906 to 1909 he was principal conductor of Oscar Hammerstein's Manhattan Opera Company, where he conducted the American première of *Pelléas et Mélisande* (1908). In 1910 he moved to the Chicago Grand Opera Company, becoming general manager in 1913. For the Verdi centenary in 1913 he staged (at his own expense) and conducted a cycle of Verdi operas at Parma. In 1914 at the Parma Conservatory, with funds given by the American Edith MacCormick, he founded the Campanini-MacCormick competition for an opera composed by an Italian; winners included Lualdi's *La figlia del re* in 1917.

SERGIO LATTES, R. ALLEN LOTT

Campanini, Italo (*b* Parma, 30 June 1845; *d* Corcagno, nr Parma, 22 Nov 1896). Italian tenor. He studied with Griffini at the Regia Scuola di Canto in Parma, making his début there in 1863 as Oloferno Vitellozzo in Donizetti's *Lucrezia Borgia*. Engaged to sing Manrico in *Il trovatore* in Odessa, he stayed three years in Russia, returning to Italy for further study with Lamperti in Milan. In 1871, after singing Gounod's Faust, Don Ottavio and Gennaro (*Lucrezia Borgia*) at La Scala, he attracted wide attention when he sang Lohengrin at Bologna under Angelo Mariani, in the first Italian performance of Wagner's opera. At La Scala he also sang the title role of Marchetti's *Ruy Blas* and Lohengrin (1872–3). Having made his London début in 1872 at Drury Lane as Gennaro, in 1874 he sang Kenneth in the première of Balfe's *Il talismano*. In 1875 he sang Faust in *Mefistofele* in the first performance of the revised edition of Boito's opera at Bologna, and in 1878 Don José in the London (Her Majesty's Theatre) and New York (Academy of Music) premières of *Carmen*. Having sung Gounod's Faust at the opening of the Metropolitan in 1883, he returned (1891–4) as Almaviva, Don Ottavio, Raoul (*Les Huguenots*), Lohengrin, Edgardo (*Lucia di Lammermoor*) and Boito's Faust. He sang the title role of Berlioz's *La damnation de Faust* at the Royal Albert Hall in 1894, the year he retired. His voice was reportedly neither large nor perfectly even, but was sweet, flexible, brilliant on top and used with intuitive musicality.

ELIZABETH FORBES

Campanus [Kampanus, originally Kumpán; Campanus Vodňanský], **Jan** (*b* Vodňany, 27 Dec 1572; *d* Prague, 13 Dec 1622). Czech humanist, pedagogue and composer. From 1590 he studied at Prague University, where he graduated as a bachelor (1593) and gained a master's degree (1596). After holding a series of short teaching appointments he became, in 1603, professor of Greek language, Latin poetry and Czech history at his former university, where he also held the posts of dean (more than once) and rector (in 1621). He was one of the foremost humanist poets of his time in Bohemia, and is renowned for his Latin metrical versions of the psalms and his hymns, which were published in stages under the title *Odae sacrae*. His psalms, begun in 1600, are based on George Buchanan's paraphrases (1566) and were published complete in 1611 in Prague. Campanus also wrote hymns for Sundays and feast days which were published complete in 1612; the 178 texts of this edition also include translations and paraphrases of contemporary Latin and Czech sacred songs. The psalms and hymns were published together in Amberg in 1613 and a second, enlarged edition, *Sacrarum odarum libri duo*, was issued in Frankfurt in 1618. The Frankfurt edition was the first to include music, namely 38 four-part settings which form the largest and most valuable collection of humanist odes in the Czech Lands (ed. in MAB, 2/ix, 1978). Based on 36 poetic metres (*genera carminum*), they are structurally simple, homorhythmic pieces, some of which are enriched with the double-choir technique and with Campanus's melodic and rhythmic invention.

JAN KOUBA

Campbell, Alexander (*b* Tombea, Perthshire, 22 Feb 1764; *d* Edinburgh, 15 May 1824). Scottish composer, antiquarian, music teacher and poet. He was described by his friend and ex-pupil Walter Scott as 'a man of many accomplishments, but dashed with a *bizarrerie* of temper which made them useless to their proprietor'. Born on a farm, he moved to Edinburgh when young, and took lessons in singing and counterpoint from Tenducci; by 1782 he had a music teaching practice in Edinburgh and was organist at the Episcopal Chapel in Nicolson Street. He attempted to make a career as a composer, and in about 1792 brought out an imaginative but technically incompetent set of Twelve Songs; around 1795 he wrote a full-length opera which he sent to a London theatre and never saw again. Several other songs (now in *GB-Eu*) were introduced into Edinburgh theatrical productions,

and his tune to Tannahill's lyric 'Gloomy winter's now awa' enjoyed great popularity in pirated versions, bringing Campbell, however, neither fame nor reward.

Campbell was haunted all his life by visions of grand artistic projects requiring unattainable financial backing. But in 1815 a grant from the Royal Highland Society enabled him to collect 191 Gaelic folksongs in north-west Scotland and publish the excellent two-volume collection *Albyn's Anthology* (Edinburgh, 1816–18), dedicated to the Prince Regent. In this collection appear for the first time John Wilson's famous lyric 'Turn ye to me' and Hogg's 'Why should I sit and sigh?'; it was the happiest achievement of Campbell's life. Nevertheless, he died in poverty.

DAVID JOHNSON

Campbell, Archibald (*b* Kilberry, Argyll, 18 Jan 1877; *d* London, 24 April 1963). Scottish music editor. He was the third son of John Campbell 10th of Kilberry and was educated at Harrow and Pembroke College, Cambridge. After leaving university, he entered the Indian Civil Service. He was appointed a judge of the High Court in 1921, and in 1928 he retired to Britain and became a lecturer in Indian law at Cambridge (1929–41). Throughout his life he was interested in the music of the Highland bagpipe; he studied with some of the leading pipers of his day and became a competent amateur player and piping judge, but he came to prominence in the piping world principally as an authority on and editor of *pìobaireachd* (Gaelic: 'piping') music. He was a stalwart of the Pìobaireachd Society, which was established in 1903 for the purpose of improving public knowledge of *pìobaireachd*; and he edited ten collections of *pìobaireachd* for the Society between 1925 and 1961. He attempted to set down in staff notation some of his own teaching in *The Kilberry Book of Ceol Mòr*, which gained widespread popularity.

R. WALLACE

Campbell, Frank C(arter) (*b* Winston-Salem, NC, 26 Sept 1916; *d* New York, 12 June 1993). American music librarian. He graduated from Salem College in 1938 with the BM; in 1942 he received the MA in musicology from the Eastman School of Music. After a further year of graduate studies he began work as a music cataloguer in the Sibley Music Library of the Eastman School. In 1943 he accepted a position in the music division of the Library of Congress. From 1959 he was associated with the New York Public Library, first as assistant chief and, from 1966, as chief of the music division. Campbell's career combined training as a pianist and musicologist with experience in librarianship. While serving as head of one of the major music research collections in the USA he played an active role in professional organizations: from 1967 to 1969 he was president of the Music Library Association, and in 1970 was appointed editor of the association's journal, *Notes*, having acted as its music review editor from 1950 to 1966.

PAULA MORGAN

Campbell, James (Kenneth) (*b* Leduc, AB, 10 Aug 1949). Canadian clarinettist. He studied with Avrahm Galper at Toronto University and Yona Ettlinger in Paris, and in 1971 won the CBC Talent Festival and the Jeunesses Musicales International Clarinet Competition in Belgrade. While still a student he gave memorable performances with Glenn Gould for CBS, which are preserved on disc. In 1978 and 1979 he played Copland's Clarinet Concerto with the composer conducting. He has toured widely, and has had many works written for him, including concertos by Jacques Hetu and Robert Mundinger, and quintets by Ezra Laderman and André Prevost. He has appeared with the Amadeus, Allegri and Guarneri quartets, and plays regularly with the pianist John York, with whom he has made many recordings. A versatile clarinettist, Campbell also plays jazz with the pianist Gene DiNovi. He taught at Toronto University from 1978 to 1987, and in 1987 was appointed professor at Indiana University, Bloomington. From 1986 to 1990 he was director of the Festival of the Sound in Parry Sound, Ontario.

PAMELA WESTON

Campenhout, François van (*b* Brussels, 5 Feb 1779; *d* Brussels, 24 April 1848). Belgian singer, violinist and composer. His fame rests chiefly on the composition of *La brabançonne*, now the national anthem of Belgium, at the time of the revolution in 1830.

He began his career in the orchestra at the Théâtre de la Monnaie. Having developed a high tenor voice, he appeared on the stage, first in amateur performances, then professionally at Ghent and finally at La Monnaie. He studied further with Plantade, and during the ensuing 30 years sang in the chief towns of the Netherlands, Belgium and France, and made his farewell appearance at Ghent in 1828. He composed several operas, including *Grotius* (Amsterdam, 1808), *Le passe-partout* (Lyons, 1815) and *L'heureux mensonge*, a ballet *Diane et Endymion*, and much sacred and instrumental music, all of little importance. A requiem, four masses and a few other vocal pieces survive only in manuscript (*B-Bc*).

Campesius, Domenico. *See* CAMPISI, DOMENICO.

Camphuysen [Kamphuysen], **Dirk** [Theodorus] **Rafaelszoon** (*b* Gorinchem, ?1586; *d* Dokkum, nr Groningen, 10 April 1627). Dutch poet and schoolmaster. In 1608 he matriculated in the faculty of theology at Leiden University; he later worked temporarily as a private teacher. In 1614 he was appointed a teacher at the Hieronymus School at Utrecht, and in 1617 he became a preacher there. From this time he belonged to the Remonstrants, who rejected the strict Calvinist teaching of predestination. They were proscribed by the Dordrecht Synod of 1618, but he remained a member and so he was dismissed and forced to spend his last years in unsettled exile. He is significant in the history of music for his *Stichtelycke rymen, om te lezen of te zingen* (Hoorn, 1624), which in the first edition, and in the many subsequent ones, was published with music. Whereas in Dutch Calvinist church services only rhyming psalms to Geneva melodies were sung, the 17th century, thanks also to Camphuysen's poetry, saw the development of domestic devotional songs for one or more voices, which were often accompanied by, or arranged for, instruments. The editions of his collection up to the middle of the century used only existing melodies, Joseph Butler, in the 1652 edition, being the first to provide original music for the poems. Other composers followed his example and keyboard arrangements of individual settings have also survived (there are six examples in A. Curtis, ed.: *Nederlandse klaviermuziek uit de 16e en 17e eeuw*, Amsterdam, 1961). Camphuysen's poems enjoyed great popularity and gave to Dutch piety of the 17th and 18th centuries an individual character comparable to that of early Pietism in Germany. His *Uytbreyding, over De Psalmen des Propheten David* (Amsterdam, 1630), which also went into several editions, consists of interpretative poems set to the Geneva psalm melodies. He also published theological works.

Campion, François (*b* Rouen, *c*1685; *d* Paris, 21 Oct 1747). French musician, composer and theorist. In 1704 he succeeded Maltot as guitarist and theorbo player in the orchestra of the Académie Royale de Musique. He held this position until 1719, also teaching the guitar and theorbo in Paris. He seems to have moved in the circle of the Duke of Noailles. In 1731 he stayed in England for six months; he may have been a descendant of Thomas Campion. Thereafter his works are evidence that he was still active in Paris. On his death, his nephew respected his wishes by placing a copy of his *Nouvelles découvertes* (1705) and some manuscript pieces in the royal library. His inventory of 12 February 1748 shows that he owned a large collection of instruments.

Campion was well known as a composer before he turned to writing theoretical and polemical works. He composed several pieces for five-course guitar; although he provided the instrument with a new repertory, he unwittingly left it obscured by complex tablatures that make use of up to eight different tunings. His *Nouvelles découvertes* illustrated the limitations of the Baroque guitar rather than its possible adaptation to a new genre. In accordance with the taste of his time, he also wrote a series of *airs sérieux* and drinking songs. However, Campion was best known for his theoretical writings: his *Traité* (1716) and his *Addition* (1730) set out his 'régle d'octave', the former work in a systematic and the latter in a practical manner. No doubt wounded by criticism, he took the pseudonym of 'Monsieur l'abbé Carbassus' to protest against the playing of hurdy-gurdies and other instruments of a rustic nature, to the detriment of the lute, theorbo and guitar.

PHILIPPE VENDRIX

Campion [Campian], **Thomas** (*b* London, 12 Feb 1567; *d* London, 1 March 1620). English poet, composer, theorist and physician. Although he did not earn his living, like Dowland, Rosseter or Jones, as a professional musician, nor like Nashe, Greene or Drayton as a professional poet, Thomas Campion's reputation mainly rests on his ayres, for which he wrote both music and poem. After John Dowland, he was the most prolific of the English lute-song composers with well over 100 songs to his name. His lyric verse, independently of its music, is of a literary interest comparable with the likes of Ben Jonson, Samuel Daniel and even Sir Philip Sidney. Indeed, Campion was first presented to the modern age by Bullen and Vivian primarily as a poet and not a musician. Today he is well known as a composer-poet, having received more critical

attention from 20th-century commentators than most of his contemporaries, including Dowland. He was also an important exponent of the Stuart masque and a conspicuous theorist of both poetry and music. But, if we are to believe him, all his literary and musical exercises were 'superfluous blossoms of his deeper Studies' – his neo-classical Latin poetry.

1. Life. Campion's family background, typical of many 'new' Elizabethan gentlemen, enabled him to pursue what might seem a dilettante existence. He was the son of John Campion, a member of the Middle Temple and a Cursitor of the Chancery Court, and Lucy, already a wealthy widow at the time of her marriage to John in 1564. In October 1576 John Campion died, and within a year Lucy married Augustine Steward, a minor landed gentleman with a legal background and friend of the family. Lucy herself died in March 1580, leaving Mary Trigg, a daughter by her first husband, and the Campion children in the guardianship of their stepfather, who shortly after married Anne Argall.

In May 1581 Campion entered Peterhouse, Cambridge – at that time a progressive and prosperous college under Dr Andrew Perne – as a gentleman pensioner, together with his stepbrother Thomas Sisley. He left in April 1584 without having taken a degree. Campion recalled his Cambridge days, which must have been largely devoted to classical studies, with a topical allusion to Trumpington, in his treatise concerned with classical metres in English poetry, his *Observations in the Art of English Poesie* (London, 1602). On 27 April 1586 he was admitted to Gray's Inn. There is evidence he took a full and active part in the social and cultural life of the college. Masques and plays were written and presented by members for special occasions and acted by them before distinguished audiences, which not infrequently included Queen Elizabeth. In January 1588, for example, Campion played the roles of Hidaspes and Melancholy in a comedy presented before Lord Burghley. In 1594 he contributed verses for the production *Gesta Graiorum*. It is clear from his Latin epigrams that Campion was not attracted by legal studies and probably ceased residency in 1595 without having been called to the Bar.

Some 10 years later, on 10 February 1605, Campion was awarded a medical degree at the University of Caen. It is just possible, according to evidence adduced by Vivian, that Campion's first experience of Normandy came while he was still enrolled at Gray's Inn, when he served in the Earl of Essex's abortive campaign to raise the siege of Rouen in 1591.

In the 1590s Campion's reputation as both a Latin and an English poet increased. In 1595 a collection of his Latin poems entitled *Poemata* was published. A masque song, *Harke all you Ladies*, was included among the *Poems and Sonets of Sundry other Noblemen and Gentlemen* appended to Newman's surreptitious edition of Sir Philip Sidney's *Astrophel and Stella* (1591). George Peele refers to the quality of Campion's English poetry in his *Honour of the Garter* (1593); and several of his poems appeared in various commonplace-books. He also contributed dedicatory poems in others' publications, including a Latin epigram to Dowland's *First Booke of Songes or Ayres* (1597). After 1600 he continued to supply laudatory verses to various publications, and several of his poems were set by lute-song composers.

It is probable that Campion's interest in prosodical theory, initiated at Cambridge, intensified during the late 1580s and early 1590s. Although his *Observations in the Art of English Poesie* was not published until 1602, an entry in the Stationers' Register for 12 October 1591 almost certainly refers to a pamphlet of Campion's representing an early version of the treatise. There is good evidence that the *Observations* was complete by the end of the decade (see Wilson, 1989, pp. 183–5). This being the case, his publication of a treatise strongly attacking 'eare-pleasing rimes without Arte' the year after his publication of *A Booke of Ayres* (RISM 1601[17]) with its rhyming poetry may be more easily explained. In any case, Campion's interest in extending classical metres to English poetry by means of music is also manifest in this book in his setting of the sapphic *Come let us sound with melody* in the manner of *musique mesurée à l'antique*.

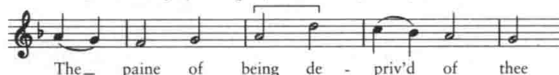
The first of Campion's five books of ayres was published in 1601 as a joint venture with his friend and colleague, Philip Rosseter. It is not certain how much Campion contributed apart from 21 songs in the first half of the volume. But the unique and fascinating Preface with its comparison of ayres to epigrams and classical literary allusions has the voice and manner of Campion, whereas the poems to Rosseter's songs are less obviously Campion's. The other books of ayres, though undated, followed in 1613 and 1617, again published in pairs but under single authorship.

From 1607 Campion was among the poets and composers who supplied texts and music for the lavish masques and entertainments presented at the royal court, most often before the king and queen in the Banqueting House at Whitehall. The first was performed on Twelfth Night in honour of Lord Hayes and his bride. Campion provided the text, preserved in the printed *Discription*, and the music for two songs. Other music that can be definitely attributed, including dances, was composed by Thomas Lupo and Thomas Giles. The *Description* of *The Lords Maske*, performed on 14 February 1613 for the marriage of Frederic Count Palatine and Princess Elizabeth, and of the Entertainment at Caversham House (near Reading) by Lord Knowles for Queen Anne in April 1613, were printed together in reverse order. Unlike the 'descriptions' of Campion's other masques, there is no music appendix. One song by Campion and dances by Coprario survive in other sources (see Sabol, 1978). Campion's final masque (the *Somerset* or *Squires*), performed at Whitehall on 26 December 1613 for the politically contrived marriage of Robert Carr, Earl of Somerset, and Lady Frances Howard, contains attributed music by Lanier and Coprario, printed in *The Description* together with Campion's 'Wooe her and win her' from *The Lords Maske*

Campion's collaboration with John Coprario, especially in the *Songs of Mourning: Bewailing the Untimely Death of Prince Henry* (1613) and the masques of 1613, probably resulted in the writing of his music treatise *A New Way of Making Fowre Parts in Counter-Point*. There are important similarities and comparisons to be made with Coprario's treatise, *Rules how to Compose*. Though undated, Campion's treatise was probably published shortly after the completion of Coprario's unpublished work, sometime in 1614. In many places, it could be derivative, but it also makes some new, even revolutionary, points concerning key relationships (tonality)

and fundamental basses – 'ancient Musitions . . . tooke their sight from the Tenor . . . to which they were compelled to adapt their other parts. But . . . the Base containes in it both the Aire and true iudgement of the key, expressing how any man at the first sight may view in it all the other parts in their originall essence' – and anticipates Rameau's explication of chord inversion by more than a century. Campion's little book on counterpoint continued to be read throughout most of the 17th century. John Playford's 1660 edition of *An Introduction to the Skill of Musick* has as its second book Campion's treatise annotated by Christopher Simpson. It was reprinted in various guises in subsequent editions of Playford's *Introduction* until it was replaced in the twelfth edition of 1694 with a new section contributed by Henry Purcell.

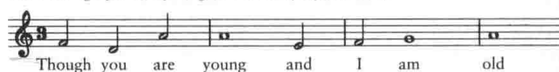
Between the publication of the counterpoint treatise and the *Third and Fourth Booke of Ayres*, Campion was implicated in the investigations into the murder of Sir Thomas Overbury, who had been falsely imprisoned in the Tower of London in April 1613 because of his opposition to the marriage of the Earl of Somerset and Lady Frances Howard. Campion, who wrote a masque for the celebrations, and his patron, Sir Thomas Monson, were involved when Monson, as Keeper of the Armoury, replaced the Lieutenant of the Tower, Sir William Wade, with the Howards' stooge Sir Jervis Elwes; Campion had unwittingly conveyed the bribe of £1400 from Elwes to Monson. Campion was exonerated following his deposition of 26 October 1615. Monson was finally cleared at the Court of King's Bench on 13 February 1617.



Campion's last publication, *Tho. Campiani Epigrammatum libri II*, appeared in 1619. It contains the completed version of his *Umbra*, together with poems from *Poemata* (1595) in original and revised forms, and elegies, though it omits the long panegyric, *De Pulverea Coniuratione* (On the Gunpowder Plot), completed in manuscript (with revisions) almost certainly by 1618. Campion died on 1 March 1620 and was buried the same day at St Dunstan-in-the-West. His nuncupatory will was proved on 3 August 1620, leaving his entire estate of £22 to his close friend and colleague Philip Rosseter.

2. WORKS. Campion's songs or ayres are contained in the five books published between 1601 and 1618, in the 'descriptions' of his *Lord Hays* (1607) and *Somerset* (1614) masques, and in one or two scattered sources. As far as we know, he wrote both words and music to all his songs, except the music for Coprario's *Songs of Mourning* (1613) and some masque songs. In the case of most lute-song composers, it is generally sufficient to discuss their musical interpretation of others' texts (though Dowland probably wrote some of his own). With Campion, commentators have wavered between intense literary scrutiny and conjoint musico-poetic evaluation, deducing examples of a perfect union of music and poetry. Both approaches may be justified. According to Campion himself, 'In these *English* ayres I have chiefely aymed to couple my Words and Notes lovingly together, which will be much for him to doe that hath not power over both' (*Two Bookes of Ayres*, 'To the Reader'). Yet later, in the same preface, he accepts that his ayres may be either sung or read as the recipient pleases: 'Si placet hac cantes, has quoque lege legas'.

Campion effectively sets out his musical aims, invoking literary analogue, in the prefaces to *A Booke of Ayres* and *Two Bookes*: 'What Epigrams are in Poetrie, the same are Ayres in musicke, then in their chiefe perfection when they are short and well seasoned' (*A Booke*); 'Short ayres . . . are like quick and good epigrams in poesy' (*Two Bookes* I). All his ayres are relatively short, well fashioned (both melodically and harmonically) and, according to his own stated principle, mainly eschewing the rhetorical gestures (localized repetition and intrusive word-painting) of the madrigal. Where it does occur, repetition fits naturally into the rhythmic flow, as for example in the refrain line, 'O come quickly' in the well-known *Never weather-beaten saile* (*Two bookes* I, no.11), or the ending of *Give beauty all her right* (*Two Bookes* II, no.7). Word-painting of individual words or phrases (unusually pervasive, for example, in *When to her lute*, 1601[17], no.6) does not detract from the mood and form of the whole stanza or poem, though it is most often applicable only to the first stanza.



Campion's musical voice is primarily embodied in his melodic writing, though it would be misrepresentative to regard him merely as a tunesmith. Two elements are noticeable; first, in contrast say to Dowland, Danyel or Morley, Campion rarely breaks the melodic flow either in the middle of the line or with extended line-end rests. Second, he is concise (mainly syllabic) and 'quick' or lively with a good deal of dotted rhythm and quaver movement. Idiosyncrasies of melodic shapes are derived from subtle twists of the expected to the unexpected, of regularity into irregularity, as when introducing disjunct intervals into conjunct movement (ex.1) or alternating/inverting

Ex.1 *Come, o come my lifes delight* (*Third Booke*, no.23)

rhythm (ex.2). Of the 15 kinds of forms employed in the English lute-song, Campion more than any other composer prefers first strain repetition AABB as opposed to

Ex.2 *Though you are young* (*A Booke of Ayres*, no.2)

the more common ABB form. That these forms are not entirely determined by tonality reinforces the view that Campion starts with the melody or 'ayre', whose patterning and natural order then effects a tonal scheme, often in related keys according to the principles laid down in his treatise.

In addition to 'quickness' and brevity, Campion refers to another quality he sees in (his) ayres, that is lightness. Contrasted to the 'grave' motet and madrigal, with its intricate polyphony, canonic and other rhythmical devices, and mannerist rhetoric, the 'light' ayre is melodically orientated, homophonically transparent, rhythmically straightforward – often dependent on or related to dance and popular song (see Lindley, 1986, pp.74–7) – and easily accessible to both performer and listener. Among Campion's best ayres, however, are his most serious, namely *Author of light* (*Two Bookes* I, no.1), *All lookes be pale* (*Two Bookes* I, no.21), *Oft have I sigh'd* (*Third Booke*, no.1) and *O griefe, o spite* (*Third Booke*, no.8). All four have an emotional intensity more often associated with Dowland or Danyel. In their melancholic tone, they contain rhetorical and other musical devices not usually

found in Campion's ayres, including repetition, word-painting, chromaticism and breaks in the vocal line for instrumental (lute) interjections.

Up to 1614 Campion could be regarded as second only to Ben Jonson as a writer of masques, despite Jonson's claim that Chapman and Beaumont were the most accomplished after himself. Campion's skill in musical matters gave his works an emphasis and importance not found in Jonson's masques, especially in the context of the competing roles of poet, composer and 'architect' or designer, as evinced in the quarrel between Jonson and Inigo Jones. It is the function Campion as poet gave to music in the masque that marks his most significant contribution to the genre. Rather than have music simply as an obvious adornment of the emblem of the masque, Campion accords it an increased dramatic function in addition to its various symbolic and neo-Platonist philosophical meanings. Had he been more interested in vocal declamation (*recitativo*), his approach to the integration of semi-drama and music might have led on to opera. Instead, Campion's masque career was cut short, partly by his innocent involvement with dangerous socio-political machinations (connected with the Somerset–Howard marriage for which he wrote a masque) and partly by destructive artistic conflicts that in turn became the masque's own undoing.

WORKS

SONGS

all for 1 voice, lute, bass viol; voices given below are those of the alternative versions where these were printed.

Two Bookes of Ayres, the First contayning Divine and Morall Songs, the Second Light Conceits of Lovers (London, ?1613/*R*1967); ed. in EL, 2nd ser., i–ii (1925), also ed. D. Scott (London, 1979) [1st book, 1613a; 2nd book, 1613b]
The Third and Fourth Booke of Ayres (London, ?1617); ed. in EL, 2nd ser., x–xi (1926; xi rev. 2/1969), and ESLS, 2nd ser., xi (1926) [3rd book, 1617a; 4th book, 1617b]
21 songs in 1601[17]/*R*1970; ed. in EL, 1st ser., iv, xiii (1922–4, rev. 2/1959–60, 3/1969) [1601[17]]
2 songs in *The Discription of a Maske* (1607/*R*1973) [1607]; see Writings
1 song [text only] in *Description, Speeches and Songs* (1613) [1613c]; see Writings
1 song in *The Description of a Maske* (1614/*R*1973) [1614]; see Writings

All lookes be pale, harts cold as stone, 2vv, 1613a
Are you what your faire lookes expresse?, 1617b
As by the streames of Babilon, 4vv, 1613a
A secret love or two, I must confesse, 3vv, 1613b
Author of light, revive my dying spright, 4vv, 1613a
Awake thou heavy spright, 4vv, 1613a
Awake thou spring of speaking grace, mute rest becomes not thee, 1617a
Be thou then my beauty named, 1617a
Beauty is but a painted hell, 1617a
Beauty since you so much desire, 1617b (same music as Mistris since you)
Blame not my cheekes, though pale with love they be, 1601[17]
Bravely deckt come forth bright day, 4vv, 1613a
Breake now my heart and dye, Oh no, she may relent, 1617a
Come away, arm'd with loves delights, 3vv, 1613b
Come chearfull day, part of my life to mee, 3vv, 1613a
Come let us sound with melodie the praises, 1601[17]
Come, o come my lifes delight, 1617a
Come you pretty false-ey'd wanton, 3vv, 1613b
Could my heart have more tongues imploy, 1617a
Deare if I with guile would guild a true intent, 1617b
Every dame affects good fame, what ere her doings be, 1617b
Faine would I my love disclose, 3vv, 1613b
Faine would I wed a faire yong man, that day and night could please mee, 1617b
Faire if you expect admiring, 1601[17]
Fire, fire, fire, fire loe here I burne, 1617a
Fire that must flame is with apt fuell fed, 1617a
Followe thy faire sunne, unhappy shaddowe, 1601[17] (same music as Seeke the Lord)
Follow your saint, follow with accents sweet, 1601[17] (similar tune to Love me or not)
Give beauty all her right, 3vv, 1613b
Good men shew if you can tell, 3vv, 1613b
Harden now thy hart with more then flinty rage, 3vv, 1613b
Harke all you ladies that doo sleepe, 1601[17]
Her fayre inflaming eyes, 1617b
Her rosie cheekes, her ever smiling eyes, 3vv, 1613b
How eas'ly wert thou chained?, 3vv, 1613b
I care not for these ladies, 1601[17]
If any hath the heart to kill, 1617b
If Love loves truth, then women doe not love, 1617a
If thou long'st so much to learne (sweet boy) what 'tis to love, 1617a
I must complain, yet doe enjoy my love, 1617b
It fell on a sommers daie, 1601[17]
Jacke and Jone they thinke no ill, 3vv, 1613a
Kinde are her answers, 1617a
Leave prolonging thy distresse, 1617b
Lift up to heaven sad wretch thy heavy spright, 4vv, 1613a
Lighten heavy heart thy spright, 3vv, 1613a
Loe, when backe mine eye, 4vv, 1613a
Love me or not, love her I must or dye, 1617b (similar tune to Follow your saint)
Maids are simple some men say, 1617a
Mistris since you so much desire, 1601[17] (same music as Beauty since you)
Most sweet and pleasing are thy wayes O God, 4vv, 1613a
Move now with measured sound, 1607; ed. in EL, 2nd ser., xxi (1969) (consort version in P. Rosseter: Lessons for Consort, London, 1609)
My love hath vowed hee will forsake mee, 1601[17]
My sweetest Lesbia, let us live and love, 1601[17]
Never love unlesse you can, 1617a
Never weather-beaten saile more willing bent to shore, 4vv, 1613a
Now hath Flora rob'd her bowers, 1607; ed. in EL, 2nd ser., xxi (1969)
Now let her change and spare not, 1617a
Now winter nights enlarge, 1617a
O deare that I with thee might live, 3vv, 1613b
Oft have I sigh'd for him that heares me not, 1617a
O griefe, O spight, to see poore vertue scorn'd, 1617a
O love, where are thy shafts, thy quiver, and thy bow?, 1617b
O never to be moved, 1617a
O sweet delight, O more than humane blisse, 1617a
Out of my soules depth to thee my cryes have sounded, 4vv, 1613a
O what unhopt for sweet supply, 3vv, 1613b
Pin'd I am and like to dye, 3vv, 1613b
Respect my faith, regard my service past, 1617b
Seeke the Lord, and in his wais persever, 3vv, 1613a (same music as Followe thy faire sunne)
See where she flies enrag'd from me, 1601[17]
Shall I come sweet love to thee?, 1617a
Shall I then hope when faith is fled?, 1617a
Silly boy 'tis ful moone yet, thy night as day shines clearly, 1617a
Since shee, even shee, for whom I liv'd, 1617b
Sing a song of joy, 4vv, 1613a
Sleepe angry beautie sleep, and feare not me, 1617a
So many loves have I neglected, 3vv, 1613b
So quicke, so hot, so mad is thy fond sute, 1617a
So sweet is thy discourse to me, 1617b
So try'd are all my thoughts, that sence and spirits faile, 1617a
Sweet exclude me not nor be divided, 3vv, 1613b
The man of life upright, whose cheerfull minde is free, 4vv, 1613a (same music as following)
The man of life upright whose guiltlesse hart is free, 1601[17] (same music as preceding)
The peacefull westerne winde, 3vv, 1613b
There is a garden in her face, 1617b
There is none, O none but you, 3vv, 1613b
The sypres curten of the night is spread, 1601[17]
Think'st thou to seduce me then with words that have no meaning, 1617b
Thou art not faire, for all thy red and white, 1601[17]
Though you are yoong and I am olde, 1601[17]
Though your strangenesse frets my hart, 3vv, 1613b

Thou joy'st fond boy, to be by many loved, 1617b
Thrice tosse these oaken ashes in the ayre, 1617a
Thus I resolve, and time hath taught me so, 1617a
To his sweet lute Apollo sung the motions of the spheares, 1617b
To musicke bent is my retyred minde, 4vv, 1613a
Tune thy musicke to thy hart, 4vv, 1613a
Turne all thy thoughts to eyes, 1617b
Turne backe you wanton flier, 1601[17] (same music as What harvest)
Vaine men whose follies make a god of love, 3vv, 1613b
Vayle love mine eyes, O hide from me, 1617b
View me Lord a worke of thine, 4vv, 1613a
Were my hart as some mens are, thy errours would not move me, 1617a
What harvest halfe so sweet is?, 3vv, 1613b (same music as Turne backe)
What is it that all men possesse, among themselves conversing?, 1617a
What means this folly, now to brave it so?, 1617b
When the god of merrie love, 1601[17]
When thou must home to shades of under ground, 1601[17]
When to her lute Corrina sings, 1601[17]
Where are all thy beauties now, all harts enchaining?, 4vv, 1613a
Where shall I refuge seeke, if you refuse me?, 2vv, 1613b
Where she her sacred bowre adornes, 3vv, 1613b
Why presumes thy pride on that, that must so private be?, 1617a
Wise men patience never want, 4vv, 1613a
Wooe her, and win her, he that can, 1613c (words only), 1614; ed. in EL, 2nd ser., xxi (1969)
Young and simple though I am, 1617b
Your faire lookes enflame my desire, 1601[17] (same music as following)
Your fayre lookes urge my desire, 1617b (same music as preceding)

DOUBTFUL WORKS

Tarry sweete love, harke how the winds do murmur at your flyghte, *GB-Och* Mus.439 (tune and bass only; see Joiner)
What if a day, in A. Gil: *Logonomia anglica* (London, 1619, 2/1621/*R*1969), 140 (p.144 in 2/1621) (tune and first stanza only; see Greer, 1962, for a full discussion of sources and authorship)

WRITINGS

only those on or containing music

The Discription of a Maske, presented before the Kinges Majestie at White-Hall, on Twelfth Night last, in honour of the Lord Hayes, and his Bride (London, 1607/*R*1973)
Description, Speeches and Songs of the Lords Maske, presented in the Banquetting-House on the Mariage Night of the High and Mightie, Count Palatine, and the Royally Descended the Ladie Elizabeth (London, 1613)
A New Way of making Fowre Parts in Counter-point, by a most Familiar, and Infallible Rule (London, ?1613–14)
The Description of a Maske presented in the Banquetting Roome at Whitehall, on Saint Stephens Night Last, at the Mariage of the Right Honourable the Earle of Somerset, and the Right Noble the Lady Frances Howard (London, 1614/*R*1973)

CHRISTOPHER R. WILSON

Campionatore (It.). *See* SAMPLER.

Campioni [Campione], **Carlo Antonio** [Campion, Charles Antoine] (*b* Lunéville, 16 Nov 1720; *d* Florence, 12 April 1788). Italian composer and violinist of French birth. The formative years of Campioni are still uncharted, but it is worth noting that during his youth the lively musical life

at the Lorraine court was under the direction of the accomplished French composer Henry Desmarets. Because the father was in the service of the court, it has been supposed that the family followed the court to Tuscany in about 1737 when the Duke of Lorraine succeeded to the grand duchy of Tuscany. According to Anton Raaff, Campioni was also the product of the Paduan school of Tartini. By 1752 he was *maestro di cappella* at Livorno Cathedral; from 1763 until his death he was *maestro di cappella* to the grand duke in Florence, where he also served at the cathedral of S Maria del Fiore and at the oratory of S Giovanni Battista.

For several months in 1761–2 Campioni was evidently in Paris, where he supervised the publication of several works including a revised reissue of Paris op.2, the harpsichord sonatas (Paris, op.4) and a *Salve regina* (the only published sacred work). Perhaps the London (Walsh) series of string works had followed the order and grouping originally prescribed by the composer, but Campioni, in preparing further sets of trio sonatas (opp.6–7) for Paris publication, was obliged to regroup them to complement Amsterdam or Paris sets already in circulation there.

Campioni's string trios and duos were popular for more than two decades, with publishing centres in London, Paris and Amsterdam. The London issues were widely disseminated, reaching the Virginia colony where the young amateur violinist Thomas Jefferson was an enthusiast and wished to own all of Campioni's string music. Jefferson made a thematic catalogue of the seven collections he then owned, and this catalogue still serves as an aid to sorting out the bewildering confusion of Campioni's printed works. By 1789, when he left Paris, Jefferson owned nearly all of the authentic string music. Most modern revivals of Campioni's chamber music have been connected with Jefferson's collection or with colonial American music-making. The single set of harpsichord sonatas may have first been written for Campioni's wife Margherita who, according to Burney, was a 'neat' harpsichordist as well as accomplished painter.

Among surviving sacred works (masses, responsories and offertories) several were occasioned by imperial events, including requiem settings for Emperor Franz I (1766) and his widow Maria Theresa (1781). A solemn *Te Deum* of March 1768, hailing the February birth of the royal heir (Francis Joseph; from 1792 Emperor Francis II) required more than 150 performers.

Burney visited Campioni in Florence in 1770, perhaps in part because of his large collection of early music. His position at court evidently provided leisure and means to become an ardent antiquarian and Burney estimated Campioni's collection to be second only to that of Padre Martini. (Campioni's surviving correspondence with Martini is in *I-Bc*.)

WORKS

Thematic catalogue: Untitled MS catalogue by T. Jefferson, *c*1783, *US-CHua*

VOCAL

Salve regina, S, str, op.8 (Paris, ?1762); other sacred works in *A-Wn*, *I-Fc* and elsewhere

INSTRUMENTAL

Sonatas (sets of 6), 2 vn, bc: op.1 (London, 1756), as op.2 (Paris, 2/1762); op.2 (London, 1758), as op.1 (Paris, *c*1760), 4 sonatas first pubd in D. Ferrari: 6 Sonatas (1757, reissued with Campioni's name 1764); op.3 (London, 1759); op.4 (London, 1762); op.5 (London, 1765); op.6 (London, 1765)

Duets: 6 for vn, vc, op.7 (London, 1765), as op.7 (Paris, *c*1765), as op.9 (Paris, *c*1769), as op.8 (Amsterdam, 1772); 6 for 2 vn, op.8 (London, ?1764)

Other works: 2 pieces in 6 Favourite Solos, vn, bc (London, *c*1760) [nos. 3–6 are by Carlo Chiabrano]; 6 Sonatas, hpd, no.6 with vn, op.4 (Paris, 1761)

Doubtful: 6 Sonatas, 2 vn, bc, op.4 (Paris, 1761); 6 Duets, 2 vn (London, 1763), attrib. Haydn (Amsterdam, 1770) and Antonín Kammel

DIDACTIC

Trattato teorico e pratico dell'accompagnamento del cimbalo, MS, *I-Fc*

RONALD R. KIDD

Campisi [Campesius], **Domenico** (*b* Regalbuto, nr Enna, Sicily, 1588; *d* Palermo, 29 Dec 1641). Italian composer and organist. He entered the Dominican order in 1605 and took his vows the following year. In 1608 he was organist of S Domenico, Palermo, and received tuition in music from Antonio Il Verso. On the title-pages of his two surviving publications he described himself as 'bachelor of sacred theology'; in 1629 he became a master in this discipline. Allacci included him among the most important people living in Rome in 1630. From there Campisi returned to Palermo famous and admired; fulsome tributes to him on his death survive in manuscript in the Biblioteca Comunale, Palermo. Such fame is not supported by the quality of his music, which perpetually oscillates between a monotonous tonic and dominant, is melodically insignificant and contrapuntally obvious, and amounts to no more than an impoverished cheapening of the contemporary style of the sacred concerto.

Camp-meeting spiritual. Term used for folk hymns sung at camp meetings during the Great Revival in early 19th-century America; *see* SPIRITUAL, §I, 2. *See also* GOSPEL MUSIC, §I, 1(i).

Campo (y Zabaleta), Conrado del (*b* Madrid, 28 Oct 1878; *d* Madrid, 17 March 1953). Spanish composer and teacher. He attended the Escuela Nacional de Música in Madrid, where his teachers included Emilio Serrano. As

early as 1894 he began to earn his living as a performer; he joined the orchestra of the Teatro Real as a violinist in 1896, later becoming its principal violist (1914–25). A co-founder and active member of the Cuarteto Francés (1903), the Madrid SO (1904) and the Wagner Society of Madrid (1911), he was appointed to teach at the Real Conservatorio Superior de Música in 1915, where over his four-decade tenure he earned a reputation as the most important Spanish music teacher of his time. He also served as adviser to the Ministry of Public Instruction (1921–6) and as a member of the Junta Nacional de Música y Teatro Líricos (1931–4). From 1939 to 1947 he was a regular conductor of the Madrid SO and after 1945 he conducted the Spanish National Radio orchestra. His many honours included memberships in the Real Academia de Bellas Artes de San Fernando (1931), the Círculo de Bellas Artes (1943) and the Ateneo of Madrid (1946), appointments as honorary director, and numerous composition prizes, including the Franz Schubert Prize of Vienna (1928) and the Spanish National Prize for Music (1944). In 1946 he was awarded the Grand Cross of Alfonso X El Sabio for his services to Spanish music.

Although he was largely self-taught, Del Campo possessed an unusually high standard of culture and education for the Spain of his time. His music was received with some reservation by his contemporaries, perhaps because of its affinity with the German tradition of Wagner and Strauss, whose aesthetic conflicted with the French ideals then prevalent in Spain. His compositional techniques, which included traditional formal concepts, a predominance of polyphonic writing and a late Romantic orchestral style were also controversial. Like his contemporary Falla, he included folk elements in his music; nevertheless he avoided allusions to the folklore of southern Spain, stereotypically associated with the country as a whole. Instead, some of his stage works (*El Avapiés*, 1918; *Fantochines*, 1922) and symphonic poems (*Bocetos castellanos*, 1929; *Obertura madrileña*, 1930) feature the local colour of central and northern Spain. It was his instrumental contributions (mainly in the field of chamber music), rather than his attempts to develop a Spanish national opera, that were most influential in breaking the hold of Italian opera over Spain.

Del Campo's extensive body of work was left mostly unpublished and in a state of confusion at his death. The majority of it was put in order between 1986 and 1998 by his former student Miguel Alonso. The latest editions of his works have been published on the initiative of the Asociación de Alumnos del Maestro Conrado del Campo, founded shortly after his death by a number of his former pupils. In addition to his compositions he left many writings, which attest to his constant concern for the development of Spanish music.

CHRISTIANE HEINE

Campo aperto, in (Lat.: 'in open field'). A phrase used to describe notation written in a space without ruled horizontal lines (dry-point, black or coloured). It is most often used of Western neumatic notations before the adoption of the Guidonian staff. It includes both DIASTEMATIC (where the pitch of notes is indicated by

their vertical placing on the page) and non-diastematic notations. *See* NOTATION, §III, 1(ii–iii).

Campoli, Alfredo (*b* Rome, 20 Oct 1906; *d* Prince Rinsborough, Berks, 27 March 1991). British violinist of Italian birth. His mother, Elvira Celi, was an opera singer, and his father, a professional violinist in Rome; in 1911 the family moved to London. Campoli was taught by his father, and by the time of his Wigmore Hall début in 1923 had a repertory of 11 major concertos. Although he subsequently toured with Melba and Clara Butt, Campoli turned to light music, and during the 1930s became a household name for his many recordings and broadcasts, especially with his Salon Orchestra, Trio and Welbeck Light Quartet. He also maintained a concert career, broadcasting Brahms's Violin Concerto in 1933 and playing Paganini's Concerto in D (arranged by Kreisler) at a Promenade Concert in 1937. When Italy entered the war in 1940 Campoli, who still had Italian citizenship, was for some time unable to broadcast, although he did perform on a number of occasions for the troops. After the war he moved away from light music, and soon established an international reputation as a classical player, making an acclaimed American début at Carnegie Hall in 1953 and visiting Russia in 1956 as part of the first British concert party since the war; later that year he was invited back to Russia to perform with the LPO.

Campoli's repertory was large, and included the major Classical and Romantic works as well as works by Moeran, Ireland, Bax and Walton; in 1955 he gave the first performance of Bliss's Violin Concerto, which was written for him. Campoli's extraordinary beauty of tone and phrasing, often likened to bel canto singing, was combined with an impeccable technique and an eloquently expressive approach to interpretation; he played a Stradivari of 1700, the 'Dragonetti'. Among his recordings are the concertos of Beethoven, Mendelssohn, Elgar and Bliss. Campoli was also an accomplished bridge player, and became a British National Master.

DAVID TUNLEY

Camporese, Violante (*b* Rome, 1785; *d* Rome, 1839). Italian soprano. She studied with Crescentini in Paris and made her début there in 1815. She made her London début at the King's Theatre in 1817, in the title role of Cimarosa's *Penelope*, later singing Donna Anna in the first London performance of *Don Giovanni*, as well as three other Mozart roles, Susanna, Dorabella and Sextus (*La clemenza di Tito*). She also appeared in Paer's *Agnese*. In 1818 she sang in the first performances of Morlacchi's *Gianni di Parigi*, Gyrowetz's *Il finto Stanislao* and Pacini's *Il barone di Dolsheim* at La Scala.

After singing Bianca at the première of *Bianca e Falliero* (1819, La Scala), she returned to London and appeared in several other Rossini operas. She sang Ninetta in *La gazza ladra* in 1821 (the first London performance) and the following year took part in *Pietro l'eremita* (*Mosè in Egitto*) at the King's Theatre. The same season she sang Desdemona (*Otello*), and in 1823 took her farewell of the London stage in *Ricciardo e Zoraide*. Her voice was of wide compass and even throughout the scale, while technical mastery and the style learnt from Crescentini made her a particularly fine interpreter of Mozart.

ELIZABETH FORBES

Campos-Parsi, Héctor (*b* Ponce, 1 Oct 1922; *d* Cayey, 30 Jan 1998). Puerto Rican composer. After early music studies in Ponce and a general arts education at the University of Puerto Rico in Río Piedras (1938–44), he went to the New England Conservatory (1947–50). Subsequently he studied with Copland and Messiaen at Tanglewood (1949 and 1950) and with Boulanger at Fontainebleau (1951–3). He returned to Puerto Rico in 1955 and took an active part in its educational and cultural life, notably as adviser to the government-sponsored free schools of music, as organizer of the cultural promotion programme of the Institute of Puerto Rican Culture, as director of that agency's musical events, publications and research, and as professor of composition and theory at the Puerto Rico Conservatory. In 1988 he became a member of the faculty of the University of Puerto Rico (Cayey campus), where he remained until his death. He was made a member of the Puerto Rican Academy of Arts and Sciences after receiving its highest music award, the Gran Premio de Música, in 1970. Other prizes he received include the Maurice Ravel Prize (Paris, 1953) and the Publication Prize of the Organization of American States (Washington, DC, 1954). His mature music followed two parallel lines of development: one nationalist, incorporating elements of Puerto Rican folk music; the other international, progressing from the neo-classicism of his scores of the early 1950s to electronic and aleatory music. An attractive and successful point of departure for both these tendencies is his *Divertimento del sur* (1953).

DONALD THOMPSON

Campra, André (*b* Aix-en-Provence, bap. 4 Dec 1660; *d* Versailles, 29 June 1744). French composer. He was a

leading figure in French theatrical and sacred music in the early 18th century.

1. LIFE. Campra's father and first music teacher was Jean-François Campra, a surgeon and violinist from Graglia, near Turin; his mother was Louise Fabry of Aix. In 1674 he became a choirboy at St Sauveur under Guillaume Poitevin, and he began ecclesiastical studies on 4 May 1678. According to La Borde (*La BordeE*), who claimed to have received the information from Campra himself, he was *maître de musique* at Toulon in 1679, but this is unsupported by documentary evidence. He was certainly at Aix in 1681 and was threatened with dismissal for having participated in theatrical performances without authorization. His subsequent behaviour must have been beyond reproach, for on 27 May 1681 he was made a chaplain.

Campra left on 7 August 1681 to become *maître de chapelle* at Ste Trophime, Arles, where he remained until May 1683. In June he became *maître de musique* at the Cathedral of St Etienne, Toulouse, where he added two violins to the serpents and bass viol supporting the choir, which was considered the best in a city rich in musical resources. He was rewarded in 1685 by being appointed *maître de musique* for the important meeting (23 October to 10 December) of the Etats de Languedoc at Montpellier. The first evidence of his activities as a composer occurs in the deliberations of the St Etienne chapter for 4 August 1691, when he was asked to submit his works for approval before their public performance. On 8 January 1694 Campra was given four months' leave in Paris to 'render himself more capable of giving service'. He apparently did not return to Toulouse, for the St Etienne position was declared open in August 1694.

On 21 June 1694 Campra succeeded Jean Mignon as *maître de musique* at Notre Dame Cathedral, Paris. His examination was waived, perhaps because of the influence of Abbé de St Sever, canon of Notre Dame and adviser to Parlement, to whom Campra dedicated his first book of motets ('you are the one person in the world to whom I am most obliged'). In May 1696 he received a canonicate at St Jean-le-Rond. Titon du Tillet (1755; fig.1) alleged that Campra, on arriving in Paris, replaced Charpentier at the Jesuit College, Louis-le-Grand, but this appears to be false. Charpentier stayed at the college until his appointment as *maître de musique* at the Ste Chapelle in 1698. Campra's name, however, appeared on the college programmes as a composer of music to Latin tragedies from 1698 to 1737, and he may have received an official position there at some later date; the *Mercure de France*, August 1721, cited him as 'maître de musique du Collège Louis-le-Grand'.

1. André Campra: engraving from Evrard Titon du Tillet's 'Le Parnasse françois' (Paris, suppl. 1755)

Campra overcame some of the conservative bias of the canons of Notre Dame (he was allowed to introduce violins to support the choir); but the lure of the stage disturbed his execution of ecclesiastical duties. His talents were recognized by the Duke of Sully, the Duchess of la Ferté and the future regent, Philip of Orléans. In 1697 two of his works were performed: a divertissement commissioned by the Duke of Sully, and *L'Europe galante*, his first *opéra-ballet*. The question of author's royalties was resolved at the time of the latter's première. Campra and his librettist, Lamotte, refused the paltry fees offered them by an administration bent on economy. An agreement was worked out whereby composer and librettist would each receive 100 livres for each of the first ten performances and 50 livres for each of the next ten.

Given the puritanical climate surrounding Mme de Maintenon's presence at the Versailles court and the clergy's opposition to stage music on moral grounds, it is not surprising that Campra tried to hide his authorship of stage compositions while he remained at Notre Dame. Thus the first three Paris editions of *L'Europe galante* (1697, 1698, 1699) and the 1698 edition of the divertissement *Vénus, feste galante* appeared anonymously; and the *comédie lyrique Le carnaval de Venise* (1699; fig.2) and six of his *airs* carry the legend 'par M. Campra le Cadet', a reference to his younger brother, JOSEPH CAMPRA. A 1697 chanson shows that he fooled nobody:

> Quand notre Archevesque scaura
> L'Auteur du nouvel Opéra,
> De sa Cathédrale
> Campra Décampera.

Encouraged by the success of *L'Europe galante* and secured by royal patrons, Campra left Notre Dame on 13 October 1700. *Tancrède*, his masterpiece in the genre of lyric tragedy, was performed in 1702 at the Paris Opéra where he was a 'batteur de mesure'. A quarrel with the printer J.-B.-C. Ballard, 'Seul Imprimeur du Roy pour la Musique', forced Campra to seek a royal privilege to bypass Ballard's monopoly. A 12-year privilege was granted him on 9 May 1704 to 'engrave, print, sell and distribute anywhere in our Realm all pieces of music of his composition'. It was renewed on 7 September 1720 and 23 November 1736, long after his differences with Ballard had been resolved.

The regency of Philip of Orléans found Campra at his zenith as a stage composer. Le Cerf de la Viéville (1704–6) placed him first among post-Lully composers of operas. His *opéras-ballets* and earlier *tragédies en musique* enjoyed many revivals. His first two books of *cantates françoises* and his first four books of *petits motets* were in print. His *airs* graced the pages of *Recueils d'airs sérieux et à boire*. The young Louis XV (undoubtedly at the urging of the regent) granted Campra an annual pension of 500 livres on 15 December 1718 'in recognition of his talents as a composer of stage works for the Académie Royale [de Musique] and as an incentive to

2. Frontispiece to the first edition of the short score of Campra's 'Le carnaval de Venise' (Paris: Ballard, 1699)

continue such compositions'. In 1722 Campra became director of music for the Prince of Conti, for whom he composed several divertissements (the music of which is lost). Campra composed his last *opéra-ballet*, *Les âges*, in 1718. It was moderately well received. His late *tragédies* (*Télèphe*, 1713; *Camille, reine des volsques*, 1717; and *Achille et Déidamie*, 1735) were all failures.

Campra returned to the composition of sacred music in 1720 with his fifth book of *petits motets*. When Lalande gave up much of his work at the royal chapel, the 'regent's men' quickly filled in. In January 1723 Campra, Nicolas Bernier and Charles-Hubert Gervais were appointed *sous-maîtres* without the usual competitive examinations. After the deaths of Lalande (1726) and Bernier (1734), Campra and Gervais divided the work into two six-month periods until 1738, when they were joined by Antoine Blanchard and Henri Madin.

Campra replaced Destouches as Inspector General at the Académie in 1730 at a salary of 1500 livres. His health was deteriorating after years of double allegiance to chapel and stage. Still, Campra produced two books of psalms (1737 and 1738), and he left many *grands motets* in manuscript. In 1742 he relinquished the royal chapel and the training of its boy sopranos to his successor, Mondonville. He spent his last years in a small Versailles apartment, sustained mainly by his pensions. On his death at the age of 84 he left the little money he possessed to two faithful servants.

2. WORKS. Campra's main contribution to the French lyric stage was the creation of the *opéra-ballet* (or simply 'ballet'), in which each act (or entrée) contains its own characters and plot related in a general way to a collective idea. He and his librettists replaced the shopworn deities of the *tragédie lyrique* with lively *petits-maîtres*, amorous ladies and flirtatious soubrettes in recognizable contemporary settings, an innovation not lost upon audiences of the time. The flexible format of the *opéra-ballet* allowed for the substitution of new entrées for those lacking audience appeal. In 'L'opéra' (*Les fêtes vénitiennes*, third entrée) Campra exploited the device of a play within a play, as in his lyric comedy *Le carnaval de Venise* (1699); in an *avertissement* (1714) to *Les fêtes vénitiennes* Campra said that he had included 'melodies and symphonies by our most skilful composers', and the score includes extracts from operas by Lully, Destouches and Marais in the fourth entrée, 'Le bal'. He made a point of repeating thematic and textual fragments for dramatic purposes. For example, an extract from Nerine's opening *air*, 'Songez à vous défendre' ('L'amour Saltimbanque', scene ii from *Les fêtes vénitiennes*), recurs in dialogue recitatives later in the scene as she tries to warn her mistress against all lovers. Experimentation was not confined to *opéra-ballet*. Campra composed a trio for basses, 'Joignon nos voix', in *Le carnaval de Venise* (prologue); and in *Tancrède* he broke with tradition by using only low voices for the main male roles and scoring the role of Clorinde for mezzo-soprano (although the range is practically identical to that of the main soprano role).

Campra's musical style is seen at its best in his *opéras-ballets*. As he himself stated, it is a mixture of French 'delicatesse' and Italian 'vivacité'. The syllabic *airs* with short symmetrical phrases, a delicate sense of orchestral colour and an expressive and organic use of vocal ornamentation are characteristically French, as is the five-part texture inherited from Lully, which prevails in many *symphonies*. The complex vocalises of the *ariettes* and da

capo *airs*, the concerto-like rhythms of certain *ritournelles* and the use of rapid modulations all come from Italy.

Mellers observed that Campra was 'perhaps the most enchanting of dance composers'. He is borne out by the gestic directness of the minuets, with their almost Haydn-like triadic melodies, the carefree humour of the rigaudons in *Les âges*, with their unabashed parallel 5ths, suggesting the rustic dances of his meridional homeland, and the kinetic energy of the contredanses and *forlane*, which have an extra measure thrown in here and there to avoid symmetrical phrase groupings.

The music of the *opéras-ballets* also has a serious side. 'Sommeil qui chaque nuit' from *L'Europe galante* ('L'Espagne', scene i) is an elaborate monologue *air* on an eight-bar chaconne bass, the rigidity of which is minimized by the gentle dialogue between recorders and strings and the occasional lack of coincidence between important structural parts of the melody and bass. The debt owed to Campra by Jean-Philippe Rameau is illustrated in the accompanied recitative 'Vous noires deitez' from *Les muses* ('La tragédie', scene ii), where a diminished 7th chord is superimposed over a pedal – the device used later by Rameau in Phaedra's 'Dieux cruels' from *Hippolyte et Aricie*.

Although Campra forfeited the clean dramatic lines of a Lully–Quinault *tragédies lyrique* in his emphasis on decoration (he was accused of 'completely drowning the subject in the divertissement' of *Achille et Déidamie*), he and his contemporaries released some purely musical forces in their *tragédies lyriques* that helped form the operatic language of Rameau. Musical frescoes of nature in turmoil are found in *Hésione*, *Tancrède* and *Idomenée*. When describing an earthquake in *Tancrède* (Act 1 scene iv), the orchestra is independent of the chorus; the orchestra participates actively in the shipwreck scene of *Idomenée* (Act 2 scene i) and penetrates Neptune's recitative, 'Vents orageux, cessez'. This scene includes an offstage chorus of 'shipwrecked people who are heard but not seen', a device used earlier by Charpentier in *Médée* and much later (37 years) by Rameau in *Zoroastre*. *Tancrède* is Campra's best *tragédie en musique*: Le Cerf praised it, and Rameau considered it a 'masterpiece'.

Campra left three books of cantatas, which, if taken as a whole, show rapid assimilation of operatic techniques. Da capo *airs* and *ariettes* predominate. In the later examples he made greater use of obbligato instruments and shifted tonality within the movements (see *Enée et Didon*, book 2). *Les femmes* (book 1) includes a 'sommeil'; in *La dispute de l'Amour* (book 2) recitatives interrupt a bourrée; *Enée et Didon* is a miniature drama with a 'tempest' that dominates the duo 'Quel bruit soudain'; *La colère d'Achille* (book 3) is scored for strings, flutes, oboes and trumpets and includes a 'vengeance' *air* of great dramatic power.

The first two books of Campra's motets show the influence of popular melody and French dance rhythms (see for example the Alleluia from *O sacrum convivium*, book 1). At the same time Campra's interest in the expressive power of harmony is shown in the cross-relations and chromaticism of ex.1 from *O Jesu amantissime* (book 2).

From book 3 onwards Campra made a more conscious effort to imitate what he called 'la manière italienne', by incorporating repeated text fragments, concerto elements and virtuoso *airs* (for example the bass *air*, 'Elevaverunt flumina', from *Dominus regnavit*). At this point the *petit motet* and the *cantate françoise* differ only in subject and language; they employ similar melodic formulae shaped by French ornamentation and Italian melisma.

Ex.1 from *O Jesu amantissime* (*Motets*, book 2, 1700)

Books 4 and 5 are dominated by da capo *airs* with elaborate vocal melismas and instrumental obbligatos. *Salvum me fac Deus* (book 4) includes a *symphonie* resembling a Corelli trio sonata. Most motets in these collections are organized in a series of two or three *airs* interspersed with recitatives, and there is at least one example (*Coeli enarrant*, book 5) of a rondo form in which the final *air* is a shortened version of the first *air*.

Two books of psalms *à grand choeur* were printed by Ballard (1737 and 1738), each containing two psalms. A third psalm *à grand choeur* is found in book 3 of the *petits motets*. The greater part of the remaining 46 *grands motets* are found in manuscript at the Bibliothèque Nationale. Although they follow the tradition of the Versailles motet, they also borrow from the composer's *tragédies en musique*: there are bravura arias and virtuoso instrumental obbligatos; and *Notus in Judea Deus* (dated 1729 in *F-Pn*, printed in 1737) even has a 'sommeil'. All is not theatrical display, however: the *De profundis* (1723) conveys a mood of solemn grandeur, and the double fugue setting of 'Et lux perpetua' shows Campra's skill in constructing large-scale movements over ostinato basses.

Campra was the most catholic of the generation of composers that flourished between Lully's death (1687) and Rameau's début as an opera composer (1733). It is no longer possible to sustain the argument that Campra and his contemporaries were mere 'imitators of Lully'. With his delicate sense of orchestral colour, the kaleidoscopic brilliance with which he used the dance, his gift for melody and his sensitivity to the expressive possibilities of harmony, Campra greatly expanded the musical vocabulary of Lully. Through his *opéras-ballets* he introduced a degree of verisimilitude to the French lyric stage. On his limited scale and at his best, Campra was

a poet who, like the painter Antoine Watteau, created a world half real, half fantasy. His awareness of the primary role of the musician in opera was not shared by most contemporaneous French aestheticians, but it enabled him to turn to the Prince of Conti after the first performances of Rameau's *Hippolyte et Aricie* in 1733 and prophesy: 'There is enough music in this opera for ten operas; this man will eclipse us all'.

WORKS

printed works published in Paris unless otherwise stated

DRAMATIC

Editions: *Chefs-d'oeuvre classiques de l'opéra français*, ed. J.B. Weckerlin and others (Leipzig, c1882/R) [W]
André Campra, ed. G. Sadler, The Baroque Operatic Arias, ii (London, 1973) [S]

first performed at Paris Opéra unless otherwise stated

[Divertissement]	1		Paris, hotel of Duke of Sully, July 1697
Remarks; sources; publications: Commissioned by Duke of Sully in honour of Duke of Chartres; MS (private collection)			
L'Europe galante	opéra-ballet, prol, 4	A.H. de Lamotte	24 Oct 1697
Remarks; sources; publications: Entrées: La France, L'Espagne, L'Italie and La Turquie, last revival, 1775, La Turquie only; short score (1697), Nouveaux airs italiens (1698), full score (1724/R), W iv, 1 air in S			
Vénus, feste galante	divertissement, prol, 1	A. Danchet	Paris, home of the Duchess of la Ferté, 27 Jan 1698
Remarks; sources; publications: For 2nd version see Les fragments de Monsieur de Lully, for 3rd version see Les amours de Vénus et de Mars, for 4th version see Les nopces de Vénus; short score (1698)			
Le carnaval de Venise	comédie lyrique, prol, 3	J.-F. Regnard	20 Jan 1699
Remarks; sources; publications: *F-Pn* (facs. in FO, xvii, 1990), Act 3 incl. op, Orfeo nell'inferni; short score (1699)			
Hésione	tragédie en musique, prol, 5	Danchet	21 Dec 1700
Remarks; sources; publications: Last revival, 1743; short score (1700), Changement du 5e acte (1701), Airs nouveaux (1709)			
Aréthuse, ou La vengeance de L'Amour	ballet, prol, 3	Danchet	14 July 1701
Remarks; sources; publications: Short score (1701); Act 3, *Pc**; new prol by Pellegrin: *Alphée et Aréthuse* (1752)			
Les fragments de Monsieur de Lully	prol, 5	Danchet	10 Sept 1702
Remarks; sources; publications: Arr. from Lully (Les fêtes de l'Amour et de Bacchus, Le bourgeois gentilhomme, Les jeux pythiens, Les amours déguisés, Ballet des muses, La naissance de Vénus, La princesse d'Elide, La fête de Versailles and Alcidiane). Later perfs. with 4 new entrées by Campra, 1731: Le triomphe de Vénus [2nd version of Vénus, feste galante], La sérénade vénitienne; Le bal interrompu and Le jaloux trompé [2nd version of La sérénade vénitienne]; *Pn*			
Tancrède	tragédie en musique, prol, 5	Danchet, after T. Tasso	7 Nov 1702
Remarks; sources; publications: Last revival, 1764; short score (1702); Full score *Pn* based on 1737 edn, W iv, ed. R. Blanchard (Paris, 1973)			
Les muses	opéra-ballet, prol, 4	Danchet	28 Oct 1703
Remarks; sources; publications: Entrées: La pastorale (Amarillis in later perfs.), La satire, La tragédie, La comédie; *Pn* (pts); short score (1703)			
Iphigénie en Tauride	tragédie en musique, prol, 5	J.-F. Duché de Vancy and Danchet	6 May 1704
Remarks; sources; publications: Unfinished work by Desmarets for which Campra composed prol, 5 scenes and several airs, last revival, 1762; short score (1711)			
Télémaque, ou Les fragments des modernes	tragédie en musique, prol, 5	Danchet	11 Nov 1704
Remarks; sources; publications: Extracts from ops by Campra, Charpentier, Collasse, Desmarets, Marais and J.-F. Rebel, arr. Campra; *Pn*, *Po*			
Alcine	tragédie en musique, prol, 5	Danchet, after L. Ariosto	15 Jan 1705
Remarks; sources; publications: Short score (1705)			
Le triomphe de l'Amour	opéra-ballet, prol, 4	Danchet, after P. Quinault	11 Sept 1705
Remarks; sources; publications: rev. of ballet by Lully; music lost			
Hippodamie	tragédie en musique, prol, 5	P.-C. Roy	6 March 1708
Remarks; sources; publications: short score (1708), 3 airs in S			
Les fêtes vénitiennes	opéra-ballet, prol, 5 [orig. 3]	Danchet	17 June 1710
Remarks; sources; publications: Orig. prol (Le triomphe de la Folie sur la Raison) and 3 entrées (La feste des baquerolles, Les sérénades et les joueurs, L'amour saltimbanque), short score (1710). New entrées: La fête marine, Le bal, ou Le maître à danser, Le carnaval dans Venise [2nd version of orig. prol], Les devins de la place St-Marc, L'opéra, ou Le maître à chanter, Le triomphe de la Folie; *Po*; W v; ed. [based on *Po* MS, 1737] in Le pupitre, xix (Paris, 1971); last revival, 1759			
Idomenée	tragédie en musique, prol, 5	Danchet, after P.J. Crébillon	12 Jan 1712
Remarks; sources; publications: *Pn* [1731]; short score (1712), 2 airs in S			

Title	Genre, acts/entrées	Librettist	First performance
Les amours de Vénus et de Mars	ballet, prol, 3	Danchet	6 Sept 1712
Remarks; sources; publications: 3rd version of Vénus, feste galante; prol (1712) [with Le triomphe de la Folie]			
Télèphe	tragédie en musique, prol, 5	Danchet	28 Nov 1713
Remarks; sources; publications: *Po* (pts); short score (1713), 2 airs in S			
Enée et Didon	divertissement, 1		Marseilles, 29 Oct 1714
Remarks; sources; publications: In honour of Queen of Spain; *Pa*; pubd in Cantates françoises . . . livre second (1714)			
Camille, reine des volsques	tragédie en musique, prol, 5	Danchet	9 Nov 1717
Remarks; sources; publications: *Po* (pts); short score (1717), 1 air in S			
Ballet représenté à Lion devant M. le marquis d'Harlincourt	ballet	F. Gacon	Lyons, 17 May 1718
Remarks; sources; publications: Music lost			
Les âges	opéra-ballet, prol, 3	L. Fuzelier	9 Oct 1718
Remarks; sources; publications: entrées: La jeunesse, ou L'amour ingénu, L'âge viril, ou L'amour coquet, La vieillesse, ou L'amour enjoué, last revival, 1725; *Pc*; excerpts (1718), 1 air in S. New entrée: Les âges rivaux, *Pn*

JAMES R. ANTHONY

Campra, Joseph (*b* Aix-en-Provence, 10 Sept 1662; *d* Versailles, 31 March 1744). French composer, younger brother of André Campra. Joseph Campra was not, as described by the brothers Parfaict, a 'fort honnête homme' who never knew a note of music (*Histoire de l'Académie royale de musique*). He trained at the choir school of St Sauveur cathedral, Aix-en-Provence, and in 1686 he was conductor of the orchestra of the Marseilles Opéra, then under the direction of Pierre Gautier. At the time of *L'Europe galante* (1697) he was already playing the *basse de violon* in the Paris Opéra orchestra and allowing his older brother to borrow his name for the authorship of the *comédie lyrique Le carnaval de Venise* (1699) and some *airs*. But we should not deny Joseph the possibility of his having composed some of the six *airs* that bear his name in the Ballard *Recueils* from 1698 to 1700. That he was a composer in his own right is shown by the inclusion of *airs* by both André Campra and 'Campra le Cadet' in the *Recueil d'airs sérieux et à boire* in 1703.

In 1731 Joseph was a performer (*ordinaire*) in the orchestra of the Dijon Academy. While in Dijon, he composed two divertissements (both lost); the second, *Le génie de Bourgogne*, an allegorical piece performed in 1732, has been mistakenly attributed to André Campra.

JAMES R. ANTHONY

Camps, Pompeyo (*b* Paraná, 27 Oct 1924; *d* Buenos Aires, 2 Nov 1997). Argentine composer. He began his musical studies in his home province of Entre Ríos, where he performed in popular music ensembles. In 1947 he continued his studies in Buenos Aires with Pahissa. He wrote music reviews for Buenos Aires newspapers for several years. The four operas Camps composed between 1958 and 1995 are among the first written in Argentina. The first two, *La pendiente* and *La hacienda*, are a realistic depiction of rural and city life respectively and are linked with the tragic realism of Latin American novels. The last two, *Marathon* and *La oscuridad de la razón*, were written for the Teatro Colón. Based on librettos by the playwright Ricardo Monti, they combine contemporary musical language with the idioms of popular music. *Marathon* employs not only the normal orchestra but also a jazz orchestra and a tango orchestra.

WORKS
(*selective list*)

Ops: La pendiente (drama musical de cámara, 1, Camps), op.35, Buenos Aires, Independientes, 26 Nov 1958; La hacienda (farsa trágica musical, 1, Camps), op.90, Buenos Aires, Colón, 7 May 1987; Marathon (metáfora lírica, 2, R. Monti), op. 94, Buenos Aires, Colón, 19 Dec 1990; La oscuridad de la razón (op, 3, Monti), op. 98, Buenos Aires, Colón, 7 Nov 1995
Other stage: Balada de la cárcel de Reading (choreographic drama, after O. Wilde), 1964; Después de la mañana (ballet), 1966
Vocal: Romance de la ciudad de San Juan de la Frontiera, C, chorus, orch, 1962; Sinfonía para un poeta, Bar, orch, 1967
Chbr: 2 str qt, 1957, 1974; Tríptico arcáico, fl, va, vc, gui, 1961; Blues para una muchacha muerta, 1v, 4 inst, 1963; Danzas, perc, 1966; Reflejos, 13 brass, perc, 1966; Ciudad sin tregua, str qt, 1974; Rapsodia, op.83, vn, 1982; Sonatina, op.79, pf, 1985

JUAN MARÍA VENIARD

Can. German experimental band. They were formed in Cologne in June 1968 by Holger Czukay (*b* Gdańsk, 24 March 1938; bass) and Irmin Schmidt (*b* Berlin, 29 May, 1937; keyboards). This nucleus was augmented in 1968 by Michael Karoli (*b* Straubing, Lower Bavaria, 29 April 1948; guitar), Jaki Liebezeit (*b* Dresden, 26 May 1938; drums) and David Johnson (flute). Johnson left the group in late 1968, just as their début album *Monster Movie* (United Artists, 1969) was about to be released and was replaced by the vocalist Michael Mooney. Czukay had studied under Stockhausen (1963–6) and much of Can's early work elided the boundaries between classical and popular music utilizing drones, repetitive musical figures and tape loops as in *musique concrète*. An eccentric,

pulsing rhythm section driven by Czukay's bass and the percussive work of Liebeziet often underpinned these experimental techniques. Of their contemporaries, the only band working in a similar artistic terrain was the American-based Velvet Underground, which also featured a classically trained avant-garde musician in John Cale.

The band continually changed its line-up: Mooney left to be replaced by Kenji 'Damo' Suzuki who was recruited after being heard busking in Munich; *Tago Mago* (United Artists, 1971) and *Ege Bamyasi* (United Artists, 1972) followed before Suzuki's departure in 1973. In September 1975 the band switched record labels to Virgin. By the mid-1970s the band had a large cult following in the UK and even achieved a hit single with the excellent *I want more* in the autumn of 1976 from the album *Flow Motion* (Virgin). Can were also acknowledged by a number of new wave acts as prime influences with their minimalist style, and Czukay went on to record with Public Image Limited's Jah Wobble as well as with David Sylvian, the Eurythmics, U2's the Edge (David Evans) and Brian Eno. Czukay's departure from the band in 1977 effectively ended Can as a major force, and the band split up in 1978. They re-formed in 1989 for the critically acclaimed *Rite Time*, and Czukay, Schmidt, Liebezeit and Karoli remained active on the fringes of popular music throughout the 1990s.

Canada. Country in North America. It is bounded to the north by the Arctic ocean, to the west by the Pacific and to the east by the Atlantic; the only land borders it shares are with the USA, on the south and between Yukon and Alaska in the north-west. Although it occupies almost 10,000,000 km², the vast majority of the population of 30·68 million (2000 estimate) live within 160 km of the Canada–US border. The first permanent settlements were established by the French in the early 17th century.

I. Art music. II. Traditional music. III. Popular music.

I. Art music

1. Early historical background. 2. Choral, orchestral, band and chamber music. 3. Opera. 4. Education. 5. Composition. 6. Instrument making, music publishing. 7. Broadcasting.

1. EARLY HISTORICAL BACKGROUND. In the French colonies during the 17th century music was almost exclusively religious, associated either with the liturgy or with the conversion of the Amerindian peoples, whose attraction to European music was often noted by missionaries. In 1635 Father Le Jeune (1591–1664) began teaching elementary music, as did members of the Ursuline order after 1639, and 17th-century chronicles frequently refer to devotional singing and viol playing. The first indigenous practitioners of European music appear to have been the explorer Louis Jolliet (1645–1700) and Charles-Amador Martin (1648–1711). An organ, the first in North America, was in use in Quebec by 1661. Little record of secular music survives. An exception is the masque with music, *Le théâtre de Neptune*, written by Marc Lescarbot at Port Royal in 1605. Despite the censure of religious authorities, balls took place, and colonial administrators often brought music and instruments for personal use. An inventory made in 1728 of the possessions of the Intendant Claude-Thomas Dupuy includes most of the operas of Lully, as well as music by Campra and Clérambault. Materials in Quebec archives indicate that a good deal of French music and many books on music arrived in New France in the early 18th century.

Colonial life until the mid-18th century was conditioned by two ambitions: religious conversion and the development of the fur trade. Neither of these was conducive to the establishment of settled communities, and security was further disrupted by constant struggles between England and France. These problems were largely resolved by the Battle of the Plains of Abraham (1759), which secured British supremacy and brought a new measure of stability to the colonies. Thousands of loyalists migrated from the USA after the American Revolution (1776), of whom many were educated and came to make permanent settlements. A few German immigrants significantly helped the growth of music.

By the end of the 18th century the principal towns of Quebec, Montreal and Halifax had considerable musical life. In February 1770 the *Quebec Gazette* advertised 'Gentlemen's Subscription Concerts'. In Montreal there were performances of Shield's *The Poor Soldier* (1787), Egidio Duni's *Les deux chasseurs et la laitière* (1789) and other operatic works. Joseph Quesnel, J.-C. Brauneis and Guillaume Mechtler were prominent composers and teachers, and in Quebec, Frederick Glackemeyer was active as a teacher and dealer in music and instruments. In Halifax there were sufficient resources in 1789 to perform the final chorus of Handel's *Messiah* and one of his coronation anthems, and Dibdin's *The Padlock* was performed in 1791. The lawyer Jonathan Sewell (1766–1839) was a skilful and knowledgeable violinist and organized performances of Haydn and Mozart quartets in Quebec in the 1790s.

By the early 19th century musicians had formed a discernible group in Lower Canada (Quebec), and a varied musical life grew up both there and in the newer communities, such as Kingston, Toronto, Hamilton and London, in the predominantly English-speaking province of Upper Canada (Ontario). Communities had their own resident musicians and performing societies; halls and theatres were built; schools were set up; musical trades developed. After the middle of the century, a railway system vastly improved communication among Canadian towns and to centres in the USA. Occasional earlier visitors to Canada, among them John Braham, were soon to be followed by such figures as Thalberg, Patti, Vieuxtemps, Sarasate, Reményi and Anton Rubinstein, musicians who often played in any centre that was on the railway and had a suitable hall. As settlements grew up between the Great Lakes and the Pacific, these patterns of growth recurred in the western provinces.

2. CHORAL, ORCHESTRAL, BAND AND CHAMBER MUSIC. By the end of the 19th century most Canadian cities had sizable choral societies, which were the principal performing organizations; these included the Sacred Harmonic Choir in Toronto, which gave a complete performance of *Messiah* in 1857; the Philharmonic Society of Montreal (1875–99) under Guillaume Couture; the New Westminster Choral Union in British Columbia, which presented *Messiah* and *Elijah* during the 1880s; the Toronto Mendelssohn Choir (1894) and the Bach–Elgar Choir (1905) in Hamilton. Among the many choirs that originated in the 20th century are the Vancouver Bach

Choir (1930), and the Festival Singers (1954–79) and Elmer Iseler Singers (1979).

Orchestral ensembles sometimes existed as adjuncts to choirs, but the first independent orchestras were the Société Symphonique de Québec (1903) and the Toronto SO (1906). As the population increased during the 1930s, and particularly after 1945, every large city had a permanent orchestra, and many amateur and semi-professional orchestras were formed throughout the country. In 1969 an orchestra of about 50 under Mario Bernardi was formed at the National Arts Centre in Ottawa. In 1960 the National Youth Orchestra of Canada was formed, conducted by Walter Susskind; each summer about 100 Canadian instrumentalists aged between 14 and 26 assemble for private instruction, chamber music and orchestral playing.

Bands were important in 19th-century Canada; members of regimental bands frequently formed the core of instrumental ensembles in the cities, and community bands and bands sponsored by business firms were prominent in amateur musical life. The earliest military bands were attached to British regiments, but local organizations began early in the 19th century. The band at Sharon, a settlement founded north of Toronto by a religious sect called the Children of Peace, was well known during its heyday in the 1820s. In Quebec, Jean-Chrysostome Brauneis organized a band in 1832; he was the first of several outstanding bandmasters in Quebec province, including Charles Sauvageau (1802–49), Joseph Vézina (1849–1924) and J.J. Gagnier (1885–1949). By 1900 there were many civilian bands throughout the country. Among the oldest still active at the end of the 20th century were those in Newmarket, Ontario (1843), and Nanaimo, British Columbia (1872), as well as several Indian brass bands in British Columbia. Although military bands declined in importance, in 1990 there were still 39 authorized bands of the Reserve Canadian Forces using standard military instrumentation, as well as 23 pipe bands and nine bands in the Regular Forces.

Amateur performances of chamber music are recorded from the late 18th century, but professional ensembles were not formed until the late 19th century. Arthur Lavigne led the Septuor Haydn (1871–1903) in Quebec City. The Dubois Quartette of Montreal (1910–38), the Hart House String Quartet of Toronto (1924–46) and the Orford Quartet (1965–92) were established later. Since the 1960s several chamber groups have been centred on particular regions, frequently in association with the local orchestra and educational authorities.

Interest in historical performance was evident in the 1930s and 40s in Toronto and Montreal. A number of organizations later grew up to perform early music, notably the Manitoba University Consort (1963–70), the Vancouver Society for Early Music (1970), the Studio de Musique Ancienne de Montréal (1974) and, in Toronto, the Toronto Consort (1972), Tafelmusik (1978) and Opera Atelier (1983).

3. Opera. Grand opera was one of the most popular entertainments during the 19th century. As early as 1798, Grétry's *Richard Coeur de Lion* was performed in Halifax, and in the mid-19th century touring opera companies from the USA visited towns from Toronto to Quebec City. Before 1860 audiences were familiar with such operas as *Norma*, *Lucia di Lammermoor*, *La sonnambula*, *La traviata*, *Il trovatore* and *Der Freischütz*. In 1891 the Vancouver Opera House opened with a performance of *Lohengrin*. Winnipeg inaugurated a new theatre in 1907 with the Canadian première of *Madama Butterfly*. Edmonton prospered after 1900, largely as a result of the Klondike goldrush, and received its first touring grand opera company in 1909. Despite the enthusiastic reception of opera, the personnel did not exist to sustain local companies, and successes were outnumbered by failed enterprises until well into the 20th century.

Since 1940 opera has been produced in Montreal by the Montreal Opera Guild, the Montreal SO, the Opéra du Québec and, since 1980, the Opéra de Montréal. In Toronto the Canadian Opera Company grew out of the Royal Conservatory Opera Company (1950); though its main productions take place in Toronto, its touring company has visited most parts of the country, as well as many centres in the USA. There are also opera companies in Victoria, Vancouver, Edmonton, Calgary, Winnipeg, Hamilton, Ottawa and Quebec City, and opera has played an important part in the Stratford Festival and the summer activities of the National Arts Centre. The CBC Opera Company was formed in 1948 (see §7 below). Few operas and operettas were composed before the 1950s; those written since then are mostly small in scale, although larger-scale works have been composed by Harry Somers, R. Murray Schafer, Charles Wilson, Raymond Pannell, André Gagnon and Healey Willan.

4. Education. During the 19th century musical instruction was given mainly by private teachers. Specialized institutions were established at the end of the century: the Académie de Musique (Quebec, 1868), the Royal Conservatory of Music (Toronto, 1886), the Maritime Conservatory (Halifax, 1887) and the McGill Conservatorium (Montreal, 1904). In 1942 Quebec province founded the Conservatoire de Musique et de l'Art Dramatique. The University of Toronto awarded a bachelor of music degree as early as 1846 and set up a music department in 1918, but formal university music courses developed mainly after 1945. In 1965 the Canadian Association of University Schools of Music was formed; by 1995 it had 42 institutional members. Most towns have locally administered music courses in elementary and secondary schools; in 1959 provincial teachers' organizations formed the Canadian Music Educators' Association.

Private teaching continues to be important, particularly in early training; there are provincial associations of private teachers and a national organization, the Canadian Federation of Music Teachers' Associations (1935). The Royal Conservatory of Music and the Western Board of Music (1936, operating in association with the provincial universities in Manitoba, Saskatchewan and Alberta) set up local examination centres twice yearly throughout the country.

5. Composition. From the end of the 18th century much salon music was written in Canada. *Colas et Colinette* (1788), Quesnel's little *opéra comique*, was exceptional; more representative works of the period were the piano pieces of Sauvageau (1840s) and the songs and anthems of Stephen Codman (*c*1796–1852) and James Paton Clarke (1808–77). Subsequently larger works were produced, such as the operettas of Joseph Vézina, the opera *Torquil* (1896) by Charles Harriss, and the oratorios *Caïn* (1905) by Alexis Contant and *Jean le précurseur* (1911) by Couture. Several other composers

developed refined technical, if conservative skills, such as W.O. Forsyth, or more modernist outlooks, such as Rodolphe Mathieu. In the first half of the 20th century the principal Canadian composers were Claude Champagne and Healey Willan, influential through their teaching activities and through their serious purpose and technical skill.

From the 1940s onwards Canadian composers worked with distinctive voices in the wide variety of styles and media characteristic of the age. The Canadian League of Composers, founded in 1951 with John Weinzweig as president, has presented concerts, awards and scholarships and generally promotes the interests of Canadian composers. Membership grew from 20 in 1952 to about 250 in the 1990s. In 1959 the Canadian Music Centre was set up in Toronto as a service to composers and performers. By 1995 it had a library of some 13,000 published and manuscript scores and parts for circulation throughout Canada and abroad, and a collection of about 4000 recordings of Canadian music. Offices, with libraries, were set up in Montreal (1973), Vancouver (1977) and Calgary (1980).

In the 1950s studios for electronic music opened: the first was the ELMUS laboratory of the National Research Council in Ottawa under Hugh Le Caine; it was followed by the studio at the University of Toronto (1959). Other important studios soon opened: at McGill University (1964) in Montreal, Laval University (1969) in Quebec, the Royal Conservatory (1966) and York University (1970) in Toronto, Simon Fraser University (1963) and the University of British Columbia (1965) in Vancouver. By the 1980s most universities with a professional music faculty had a studio. Further developments including computer applications, of which Gustav Ciamaga was a pioneer at Toronto. A performer-composers' group, the Canadian Electronic Ensemble, was formed in Toronto in 1971 to promote live performances of electronic music.

6. INSTRUMENT MAKING, MUSIC PUBLISHING. Canadian instrument making dates from about 1820, when Richard Coates built a barrel organ with 133 pipes at Toronto. In 1836 Samuel R. Warren opened a successful organ building firm in Montreal. Paul-Olivier Lyonnais (1795–1850) and Augustin Lavallée (1816–1903) built string instruments; however, by far the largest manufacturing trade was in organs, melodeons, harmoniums and pianos. By 1870 about 70 firms and individuals were manufacturing these instruments for domestic and foreign sale; most of these enterprises either amalgamated or went out of business in the period 1914–18 or around 1930. Some, however, continued, notably the piano firm Heintzman & Co. (1860–1986) and the organ builders Casavant Frères (founded 1879).

Many musical import businesses had opened by the mid-19th century, the most notable being A. & S. Nordheimer, founded in Kingston, Ontario, in 1842 but active from 1844 to 1928 in Toronto. They were importers, publishers and, later, piano manufacturers. Whaley, Royce & Co. were founded in 1888, Ed Archambault in 1896.

Le graduel romain (Quebec, 1800) contains the first music printed in Canada. A few items of religious and popular music were printed during the first half of the 19th century, but the printing of sheet music developed substantially only after 1850, with the rise of such publishers as Nordheimer, Adélard, J. Boucher and Henry Prince. Music by local and foreign composers was sometimes included in periodicals, the earliest being *L'artiste* (Montreal, 1860); many other French and English journals followed, though they rarely lasted long. Two of the most successful were *Le passe-temps* and *Musical Canada* (both 1895–1948).

In 1925 the Canadian Performing Rights Society was formed in association with the British and American performing rights organizations. To accommodate increased activity in Canada, this was reorganized in 1947 as the Composers, Authors and Publishers Association of Canada Limited (CAPAC), which gradually became an entirely Canadian organization. In 1940 BMI Canada Limited (Broadcast Music Incorporated) was formed by its parent company in New York to license performing rights of Canadian composers, and this too evolved into a Canadian company. In 1989 the two societies amalgamated as SOCAN (Society of Composers, Authors and Music Publishers of Canada).

7. BROADCASTING. A government broadcasting system was inaugurated in 1933, and the Canadian Broadcasting Corporation was established in 1936, since when it has been the most influential single agency for all aspects of Canadian music. On its French and English networks, it carries regular broadcasts from abroad throughout Canada, and virtually all important musical events in Canada are broadcast and often also made available to foreign systems. In 1938 the CBC launched its own series of orchestral concerts and has subsequently maintained broadcasting orchestras, notably in Vancouver (1938), Winnipeg (1947–84) and Quebec City (1954–88). From 1952 to 1964 the CBC SO was maintained in Toronto, chiefly under the direction of Geoffrey Waddington, but with guest conductors and soloists from abroad who made important contributions to performing standards and broadened the repertory, especially of 20th-century music. In 1948 the CBC Opera Company was formed, and during the 1950s it presented Canadian performers in radio productions both of the standard repertory and of works such as Stravinsky's *The Rake's Progress* (1953), Dallapiccola's *Il prigioniero* (1953), Walton's *Troilus and Cressida* (1956) and Janáček's *Jenůfa* (1957). Televised opera began in 1953 with *Don Giovanni*, which was followed by many other productions; there have also been numerous television concerts. In 1966 the CBC became active as a record producer, first for broadcast and since the 1980s commercially. In the private sector, broadcasting has had little direct influence on musical development.

II. Traditional music

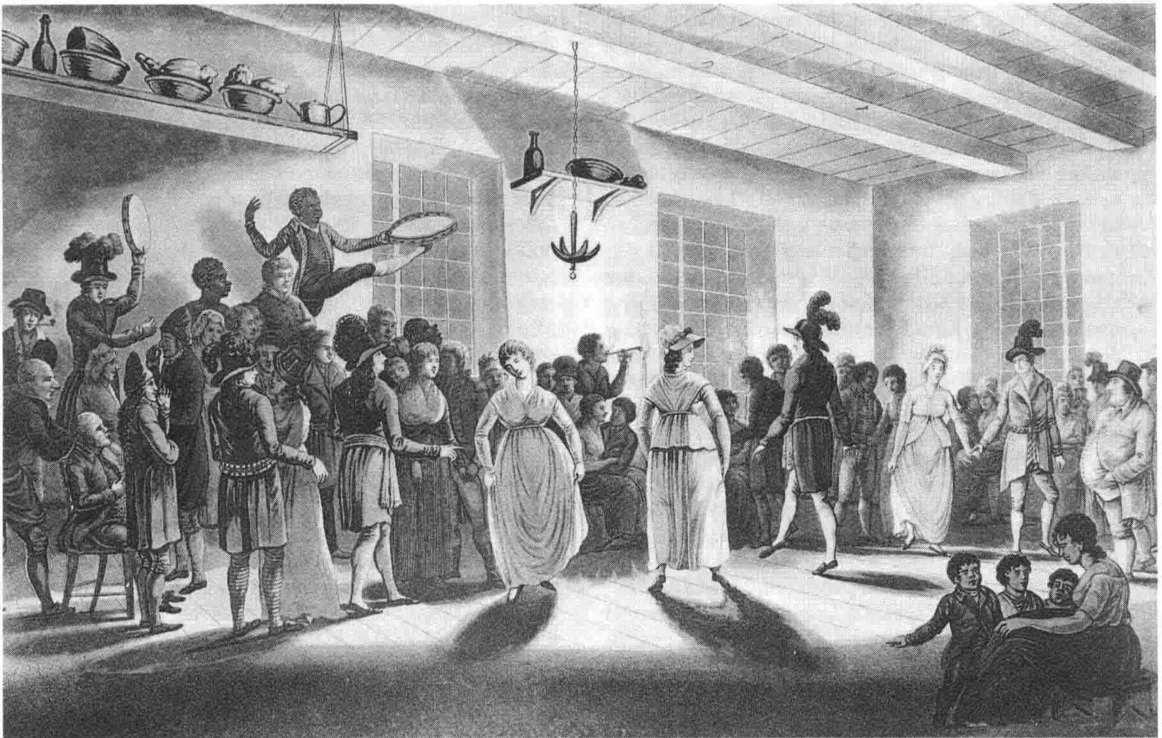
1. Introduction. 2. Early accounts. 3. Immigrant traditions: (i) French (ii) British and Irish: (a) Vocal music (b) Instrumental music and dance (iii) Other: (a) Ukrainian (b) Caribbean (c) Indian (d) Chinese (iv) Recent developments. 4. Indigenous adaptations of immigrant traditions. 5. Composition. 6. Research.

1. INTRODUCTION. Traditional music in Canada encompasses indigenous musics (for which *see* AMERINDIAN MUSIC), folk musics (including that of French, English and other recent immigrant groups; oral and written traditions; vocal and instrumental genres; and music from rural and urban contexts), transplanted Western and non-Western art music traditions and popular music.

References to indigenous and traditional music in reports by explorers, travellers, missionaries, priests and nuns from the 16th to 19th century are of historic value, even when tinged with ethnocentric biases. Early visitors to colonial Canada were particularly struck by the diversity of functions music played in Amerindian societies, as well as by the variety of social and performance contexts of music-making, musical instruments and dancing.

Attempts to convert Amerindians to Christianity in the maritime east coast region and New France (Quebec) often involved music. Many of the religious leaders from France were skilled in music and used music as a means of relating to the people and achieving their goal of conversion to the Roman Catholic faith, believing that native peoples had innate musical instincts. This process at times resulted in the blending of native and non-native musics, as in the singing of hymns.

In the 17th and 18th centuries, newcomers to Canada from France and the British Isles brought their musical, dancing and instrumental traditions, transplanting and cultivating them in their New World setting. Singing and dancing, often accompanied by instruments (see illustration), are an important part of the social history of colonial Canada. French-speaking Canadians in Quebec were major contributors to the folksong discovery movement in the 19th century, with important early collections rooted in the preservationist ideals that dominated much of the traditional music-collecting effort in English-speaking Canada from the turn of the 20th century until the 1950s.



In recent years, demographic patterns and changing processes of urbanization and Westernization have blurred the traditional versus art music boundaries and have diversified and enriched traditional music genres. Searching for 'authentic' folk or traditional music is no longer as important as is understanding the contextual processes reflecting the contemporary realities of an ethnically plural Canadian society. Popular music and cultural studies have also added important new dimensions to studies of traditional music in Canada.

2. EARLY ACCOUNTS. Ever since John Cabot landed in Newfoundland in 1497, accounts by travellers and settlers in Canada have included comments on musical activities that are valuable for providing details of music-making prior to the 20th century and the invention of sound recording. Their observations concerned musical expressions of indigenous peoples, folksong heritage, music of the church, professional touring musicians and music for dancing and in the home.

Except for melodies produced on an end-blown aerophone with an external block, these authors dismissed indigenous music as little more than noise. Before 1850 a few accounts provide valuable information about percussion instruments, dance, participation of women and the contexts of musical rituals. Marc Lescarbot (1609) was the first to transcribe Amerindian music using solfège syllables to notate four songs by the Micmac chief Membertou. As indigenous peoples assimilated more of the musical expressions of the settlers, they either abandoned their traditions or practised them secretly, as when the Canadian government passed ordinances against particular ceremonials in 1884 and 1895.

Until railway building began in 1853, visitors to Canada travelled by boat and heard French songs used to coordinate paddle stokes: 'They strike off singing a song peculiar to themselves called the Voyageur song: one man takes the lead and all the others join in the chorus' (Gray, 1809, p.155). Travellers often recognized that some of these *voyageur* songs had French origins with an added refrain. The songs were often modal and had an 'unusual minorish' quality for travellers; the songs were often closely modelled on melodic motifs from France. J.J. Bigsby noted that a whoop or 'piercing Indian shriek' finished performances of these songs, even when performed in the parlour and accompanied by piano (1850, p. 119).

In descriptions of music in homes, travellers often remarked on the ability of young women to both milk cows and play competently on the piano or organ and sing (Roper, 1891, p.90). The songs varied considerably

'Minuets of the Canadians': coloured aquatint by Joseph Constantine Stadler from G. Heriot's 'Travels through the Canadas' (London, 1807)

and included hymns, psalms, folksongs in French, Gaelic or English, comic ballads, glees, operatic arias, minstrel songs and current popular songs.

Travellers' accounts often comment on the great love that Canadians had for dance, especially during the long winter months. At formal dances, music would be provided by regimental bands or hired groups of musicians, but most dances were accompanied by fiddles, a jew's harp or other substitute. Lack of specificity by the travellers as to tunes used for round dances, quadrilles, lancers etc. played by fiddlers suggests that the repertories had been passed down orally for country dances, jigs etc. from French, Scottish, English and Irish traditions.

3. IMMIGRANT TRADITIONS.

(i) French. The singing of folksongs and the playing of traditional instruments by French settlers in New France and other parts of French-speaking Canada, notably the Acadian regions in the eastern maritime provinces of Canada, was and is an important part of everyday life. In the 17th and 18th centuries, folksongs were brought to Canada by French settlers, many of whom came from rural regions of Normandy and the Loire valley. Music played a central role in people's lives, serving as entertainment and as a sustaining force in a harsh physical climate.

The first to comment on the rich musical experiences of French-speaking Canada were visitors who made references in their travel reports and diaries to various aspects of music-making (John Bradbury, John MacTaggart, Mrs Jameson, James H. Lanman, John Jeremiah Bigsby and Johann Jeremiah Kohl). Of particular note were the paddling songs of the *voyageurs*, boatmen who travelled in large canoes between trading centres in Lower and Upper Canada. The romantic image of these adventurers had a particular appeal to European visitors who were impressed by the extent to which song was an integral part of the *voyageurs'* work (see §2 above).

In the 19th century, documentation of French folksong in Canada followed European paradigms. Aside from isolated instances, the first collections often contained texts only, following the philological preference of early German, French and British collectors. The Québecois folklorist Conrad Laforte compiled a list of over 40 manuscript and printed collections beginning with Cécile Lagueux (1817) through the numerous college and seminary songbooks of the 1840s–60s in Quebec (1973). Interest in documenting melodies as well as song texts is reflected in the *Chansonnier des collèges* series; the 1860 edition is the first to contain music. Compiled by teachers, students, nuns and priests, and intended for entertainment and to raise spirits and nationalist pride, these songbooks contain popular songs of the day. Thomas-Étienne Hamel's *Annales musicales du Peti-Cap* is a later example of this songbook tradition; the collection contains over 100 texts and melodies collected by Hamel during his tenure at the Petit-Cap seminary and retreat from 1866 to 1908.

As in France, folksong text collecting in Quebec began in 1840 by literary figures and historians with nationalist intentions. Inspired by romantic ideals of the people, folksong became a way to express national and local identity in the 19th century. Believing in the intrinsic value of oral tradition and exalted notions of the folk, French-speaking Canadian writers such as Philippe Aubert de Gaspé, Joseph-Olivier Chauveau and Joseph-Charles Taché followed their French colleagues, notably Châteaubriand, Champfleury, Gérard de Nerval and George Sand, by incorporating song texts into their literary works in order to provide local colour and illustrate 'peasant' life.

A point of departure between the French and French-language Canadian folksong movements was France's emphasis on collecting and preserving folksong repertories, while in Canada, Quebec folksong was regarded as a means of forming national identity. Following the 1837–8 rebellion and the Durham Report, which advocated assimilation, French-speaking Canadians turned to their past.

The mid-19th-century nationalist movement in Quebec produced two seminal folksong collections in the 1860s. The first was Hubert LaRue's 'Les chansons populaires et historiques du Canada', published in serial form in the nationalist Quebec City journal *Le foyer canadien* in 1863 and 1865. As much an essay as a collection of song texts, LaRue's work provides historical and conceptual discussion of folksong, references to the *Instructions (poésie populaires de la France)* (Paris, 1854–60) of French folksong collecting, and texts of well-known songs of the day. The lack of music in LaRue's essay prompted a comment by the French writer Champfleury published in *Le foyer canadien* (1864). LaRue's reply (1865) informed Champfleury that a collection with music was being undertaken by a musician colleague, Ernest Gagnon.

Like LaRue's work, Gagnon's 'Les chansons populaires du Canada' was published serially in six instalments in *Le foyer canadien* (1865–7). Trained in music in Quebec City, Montreal and Paris, Gagnon (1834–1915) already had a reputation as an organist, composer and promoter of Gregorian chant by the time his song collection was published.

The collection includes textual and musical transcriptions of over 100 songs, some of which Gagnon collected in the field. Gagnon also provided commentary for each song, and a concluding essay in which he examines musical aspects of the repertory. Gagnon's folksong collection anticipated later developments in ethnomusicology, particularly concerning the goals of musical transcription. His removal of appoggiaturas from the first edition foreshadowed the difference Charles Seeger later distinguished as prescriptive versus descriptive notation. Gagnon also foreshadowed Bartók in his distinction between two types of rhythm – *poétique* and *prosaique* – in folksong (Robbins, 1993). Further, Gagnon anticipated a later trend of separating rural and urban song repertories with a view to identifying the 'authentic' product and establishing hypotheses on issues of origin. His approach to establishing concordances with contemporaneous French and French-language Canadian sources followed the comparative methodology current in France, and anticipated the theme of text and tune dissemination that has been the focus of a number of folksong studies in the 20th century up to and including Marius Barbeau and Bertrand Bronson. One of the dominant analytical and ideological themes in Gagnon's work is the hypothesis that there is a link between the modality in the song melodies and that of plainchant. The hypothesis is explained by Gagnon in technical terms taking into account the current theoretical stances of François-Joseph Fétis, Louis Niedermeyer and Joseph d'Ortique. Gagnon's interpretation is important both in the emergent context of 19th-century ethnic identity and in the context of the current nationalist movement in Quebec.

An important collection at the end of the 19th century was Ernest Myrand's history of the French *cantique de Noël* tradition in Quebec (1899). Owing to Gagnon's influence, French scholars also turned their attention to French-language Canadian song traditions. Julien Tiersot's settings with accompaniments (1907) and George Doncieux's study of popular French songs (1904) are noteworthy examples. Interesting, if somewhat contentious, is Abbé F.-X. Burque's collection (1921) in which the compiler argues in favour of 'correcting' what he believed to be inferior musical and textual elements of the folk repertory.

Gagnon's work was later supplemented by the work of Edouard-Zotique Massicotte (1867–1947), who began collecting in the Montreal region in the 1880s, and by Marius Barbeau (1883–1969), whose long career as a collector and scholar of French folksong began soon after he was hired as an anthropologist by the Geological Survey of Canada. Educated in anthropology, archaeology and ethnology at Oxford and the Sorbonne, Barbeau was inspired initially by his German-born colleague, the anthropologist and linguist Edward Sapir, and by George Herzog. In cooperation with Massicotte, Barbeau published transcriptions of Massicotte's field recordings (1919) and, with Sapir, the landmark *Folk Songs of French Canada* (1925). Barbeau was largely self-taught and relied on the help of others to provide musical transcriptions of the melodies he collected. The *Romancero du Canada* (with Marguerite Béclard d'Harcourt, 1937) and the *Jongleur Songs of Old Quebec* (with Jean Beck, 1962) are two examples. In the latter collection, Barbeau and Beck attempt to establish links between French medieval secular song and the French-language Canadian repertory, an idea also discussed in the collections of Marguerite and Raoul d'Harcourt (1956) and Dominique Gauthier and Roger Matton (1975). Transcriptions of many of Barbeau's more than 10,000 field recordings appeared in his numerous collections, the largest of which is the four-volume *Répertoire de la chanson folklorique française au Canada: le rossignol y chante* (1962), and *En roulant ma boule* and *Le roi boit*, published posthumously (1982; 1987).

The influence of Barbeau's work contributed to the establishment of the Archives de Folklore at Laval University in 1944 by Barbeau, Félix-Antoine Savard and Luc Lacourcière, a pupil of Barbeau and director of the archives from its inception until 1975. Studies by instructors and students in the folklore programme at Laval include the song collections of Soeur Marie-Ursule (1951) and Russell Scott Young (1956), the sound recording *Acadie et Québec* by Roger Matton and the subsequent collection with Dominique Gauthier (1979). The musical analyses of the Young and Matton-Gauthier volumes focus on rhythmic elements in the song repertory. Expanding on the work of French scholars, two studies by Lacourcière and Barbeau included textual variants and musical versions of songs in an attempt to recreate a song's original version. Inspired by this work, Laforte began developing the *Catalogue de la chanson folklorique française* in 1958. The goal of a global methodological classification of French folksongs (including North America and French-speaking Europe) is discussed in Laforte's *Poétiques de la chanson traditionelle française* (1976).

The documentation of traditional French music in the Acadian regions of Canada (New Brunswick, Nova Scotia and Prince Edward Island) has been the focus of Québecois collectors Lacourcière and Matton, and of local individuals. Following the traditions of publishing songs in the

press, Acadian songs were gathered together by Joseph-Thomas Leblanc and published in the Moncton, New Brunswick, newspaper *La voix de Évangeline* in 1938–41. The work of Father Anselme Chiasson and Daniel Boudreau resulted in seven volumes of Acadian music from New Brunswick and Nova Scotia titled *Les chansons d'Acadie* (1942). The archives begun at the University of Moncton by Chiasson later became the Centre d'Études Acadiennes, the major repository of Acadian traditional instrumental and vocal music. The centre has focussed on collecting and comparative work led by its director Charlotte Cormier. Other regional work has been performed in Prince Edward Island (Arsenault, 1980), Nova Scotia (Chiasson, 1986; Labelle, 1988), and Newfoundland (Thomas, 1978).

The study of traditional French music in Ontario was initiated by Father Germain Lemieux who became the director of the newly established Institut de Folklore (renamed the Centre Franco-Ontarien de Folklore in 1975) at Laurentian University in Sudbury in 1959. Studies on Métis traditional music in the western provinces of Canada have been published by Barbara Cass-Beggs (1967) and Ann Lederman (1987). Regional studies by Robert Seguin (1986), Simone Voyer (1986), Carmell Bégin (1989) and Jean-Marie Verret (1983) demonstrate a recent interest in documenting dance genres. Studies of individual musicians include Bégin's examination of the life and music of the famous Québecois fiddler Jean Carignan (1981) and Colin Quigley's paradigmatic study of the equally famous Newfoundland fiddler Emile Benoit (1987).

After World War II a new generation of popular performing artists emerged in Quebec and gradually also in the Acadian region. Coinciding with the advent of television in the 1950s and changes in popular music, 'chansonniers' extended the trend of combining folk and popular music idioms in songs that often reflected the cultural, spiritual and political themes of emancipation and identity of the Quiet Revolution in Quebec. Inspired by folk music, indigenous poetry and songwriters from France such as Georges Brassens and Jacques Brel, the long list of successful Québecois chansonniers includes Hélène Baillergeon, Clémence Desrochers, Félix Leclerc, Claude Léveillée, Monique Leyrac, Ginette Reno and Gilles Vigneault. Robert Charlebois, Roch Voisine and Céline Dion have had international as well as national careers.

(ii) British and Irish. This section surveys orally transmitted English-language songs and instrumental music that derived immediately from traditions of the British Isles and that flourished continuously within Canada's current boundaries until the mid-20th century. Close parallels exist between Canada's English-language traditions and socio-historical migratory trends, as well as assimilation and adaptation by the constantly growing English-speaking population. Recorded in these traditions are significant Canadian events, the country's varied ethnic, religious and linguistic identities and conflicts, as well as its most distinctive socio-economic developments.

(a) Vocal music. Intensive English-speaking settlement began in the mid-18th century. Until the 1812–14 war with the USA, the majority came to the maritime provinces from New England, especially as loyalists after the American Revolution, and directly from England, Scotland and Ireland. By Confederation (1867), anglophones numerically surpassed francophones, despite Quebec's growing internal French-speaking majority and substantial French-language minorities, principally in New Brunswick, Ontario and Manitoba, but also in Newfoundland, Prince Edward Island and Saskatchewan. Notwithstanding frequent intermarriage and close contacts in seasonal work settings and permanent communities, few songs crossed over from one tradition to the other. Translations for singing songs in another language (e.g. the Huron carol), published in the 20th century by pan-nationalist anthologizers (e.g. J. Murray Gibbon and Marius Barbeau), entered oral tradition even more rarely, except through official venues (i.e. school songbooks). As with Gaelic and English, few oral-tradition songs combined French and English fully or systematically. Bilingual singers were known, however, to perform songs from both English and French-language traditions (e.g. in 1917 one of Barbeau's most prolific francophone informants, Eduard (or Edward) Hovington of Tadoussac, sang English-language songs learnt from Irish singer Patrick McGouch, with whom he had worked as a lumberman in Sept-Iles around 1847).

Until the 20th century, government policies greatly favoured British, Irish and francophone settlers, as well as Scandinavian and German-speaking immigrants. Many of the latter assimilated quickly to surrounding anglophone majorities, eventually adopting English-language traditions. Shared with other parts of the English-speaking world were the so-called Child, broadside (broadsheet, penny-slip) and Amerindian ballads. Also sung were comic, bawdy and local songs, as well as localized parodies, both serious and satiric. Singers' oral repertories also included psalms, hymns and songs created for and disseminated through homes, churches, singing schools and religious revivals, especially during fundamentalist tent-meetings or camp-meetings held for weeks at a time in the summer, as well as cognate social reform movements. Other sources for songs included music halls, minstrel shows and Tin Pan Alley; commercial recordings, especially of Irish and British musicians who immigrated in the early 20th century to the USA; musicians who toured Canada extensively and prominent Canadian singer-songwriters of early country and western music.

Local songs of the 19th and early 20th centuries often dealt with fishing, sealing, whaling, seafaring or lumbering. Later, songs explicitly concerning railways, lakeboats and mining circulated among workers in these economic sectors. Sea-shanties seem mostly to have been introduced orally from the British Isles, whereas other genres were originally introduced as broadsides, reworked to fit local settings or newly fashioned in Canada, albeit along traditional lines.

In permanent communities, frequent settings for song and dance included singing for personal pleasure during domestic chores and childcare, including ballads sung at bedtime. Kitchens were the frequent sites of evening house visits by neighbours and large-scale house parties for extended families and entire neighbourhoods or villages. Such events in Newfoundland ('sings' in Nova Scotia, 'sing-songs' in Alberta, 'ceilidhs' in Celtic-derived communities, and 'veillées' in francophone communities) were amplified by mumming and carolling at Christmas time. In ports, departures and arrivals of shipping and fishing crews prompted such gatherings on wharves or in stores, as would 'bees' and 'barn-raisings' on farms in other

regions. To mark important birthdays, anniversaries etc., and especially after wedding and funeral ceremonies, entire extended families or even communities gathered for song and dance. Community-wide celebrations, ranging from dances to more formal balls, were held in schoolhouses, church halls, service clubs and local hotels. Solo performance at such events was generally held as an obligation or service to one's family or local community; singing held the attention of all listeners, who offered encouragement during a song and discussed its contents afterwards.

In seasonal work settings, most songs were invented, refashioned or disseminated to serve recreational demands of the male workforce, rather than to facilitate work itself. Important exceptions were sailors' songs for the capstan and halyard. Often drawn from diverse families and localities, men worked together far from home in the forests for several months each year. These lumbermen were expected to entertain each other after hours with solo performances, including songs, stories and step dances.

In contrast with neighbouring Gaelic Scots tradition, the oldest English-language songs were almost exclusively narrative rather than lyric. About 100 Child ballads, generally originating before 1800, have been collected in many variants, some in more complete versions than those found overseas, though seldom more than two or three from a single singer. Ballad texts featured an inverted chiastic structure, parallel and framing stanzas and such commonplace, recurrent phrases as 'milk-white steed' migrating from song to song. Often known only in fragments, the stories generally opened in the middle of the action and leapt from scene to scene, lingering on dramatic episodes. Singers reportedly valued the ballads' tales of tragic love for their arcane settings, *dramatis personae* (including monarchs and nobles) and supernatural elements.

More typical of the public, male-dominated repertory were broadsides and Amerindian ballads featuring soldiers, sailors, merchants' daughters, tragic lovers and, among the few romantic ballads of North America, one about an Amerindian woman encountered in the countryside.

Especially frequent were 'come-all-ye's'. In these songs, as in centuries-old precursors of Western Europe, unaccompanied singers would address a specified audience of peers ('Come, all ye true-born sailor boys' or 'Écoutez-tous, petits et grands'). Often cast in stanzas of four phrases of six, seven or eight feet (yielding 32 main beats or 16 measures), their tunes tended to be twice as long as earlier ballads. As in the Child ballads, the 'come-all-ye' tunes were usually arch-shaped and in a major key, or often in Mixolydian, Dorian or Aeolian mode. The first and last phrases often concluded on the tonic or *finalis* of the scale or mode, further emphasized by anticipation on the penultimate beat. The second and third phrases often concluded on non-tonic degrees, intensifying the medial contrast, increased further by the clear similarity between the first and last phrases, and quite often between the second and third. Although Child ballads and 'come-all-ye's' provide the most vivid, best-documented contrast within the pre-1950 singing tradition, the actual repertory was much more varied in forms and genres, albeit unified and coherent as a whole.

Singers from Ontario and the maritime provinces (particularly from Prince Edward Island), especially of Irish background, were highly regarded throughout Canadian and northern USA lumber-camps. 'Truth' was generally valued in singing: factuality in local songs, a 'true-to-life' quality in fictive songs, a singer's empathy with a song's characters, and a compelling hold on listeners. Large repertories were also widely acclaimed, along with competitive prowess. Singers were deferred to for particular songs and ascribed generalized performance personalities. Also of importance was visualization, both schematic and in iconic detail, for recalling songs, as in the work of traditional storytellers and 'primitive' or folk painters.

Acclaimed by their communities and by scholars have been such singers as Angelo Dornan (*fl* 1889–1955) of New Brunswick, Ben Henneberry (*fl* 1930–32) of Nova Scotia and O.J. (Oliver John) Abbott (1872–1962) of Ontario. Specialists in satirical songs concerning sensitive local topics were greeted with enthusiasm and trepidation; such singers included Larry Gorman (1846–1917), Lawrence Doyle (*c*1847–1907) and Joe Scott (1867–1918). As in other specifically Canadian musical genres, contrafactum or parody was a principal creative technique, with older tunes and stanza patterns fitted to new words.

Irish emigration songs crossed the Atlantic in both directions. Within oral traditions, new items were introduced and memories refreshed by broadside prints from the USA or the British Isles. Such broadsides as *The Kelligrews' Soirée* and *The Trinity Cake* by Johnny Burke of St John's quickly entered oral tradition along with local songs and Tin Pan Alley hits Burke published in commercial booklets and songbooks in the early 1900s. Mass entertainment songs entered oral tradition increasingly at the turn of the 20th century, largely through sheet music, imported owing to the lack of Canadian copyright laws prior to 1923.

Other means of transmission included singers' own manuscript collections (e.g. Fenwick Hatt's 1883 MS), scrapbook compilations of lyrics and song titles, printed songbooks and pamphlets (Burke and Oliver, 1900; Murphy, 1902), 'Old Favourites' columns in rural newspapers, advertising venues such as St John's pharmaceutical distributor Gerald S. Doyle's *Old-Time Songs and Poetry of Newfoundland* (1927–), radio broadcasts, and recordings. Despite modern developments, old-time songs remained unaccompanied, whereas piano accompaniment became popular for parlour songs.

Although individual tradition-bearers became aware of categories used by scholars, they also maintained their own classifications. In particular, Newfoundland categories hinged on a polarity between ditties (satirical, comic, bawdy or childhood songs) and story-songs or simply songs (serious narratives closely corresponding to the scholars' category of ballads). Folk categories performed in Canada around 1900 include: (1) old songs, including songs from 'the old country' and comic Irish ballads, and 'come-all-ye's', especially love songs with 'sweet' tunes; (2) sentimental, melancholy songs about the lovelorn, tragedy and war, including 'Southern negro' (i.e. blackface minstrel show) ballads; (3) lumber-camp songs of love and local, topical events; (4) popular songs of Tin Pan Alley, travelling medicine shows and rural plays.

Settlement and sojourning in Canada's western and north-western regions accelerated greatly during the late 19th and early 20th centuries. Scots began to settle the prairies of the Red River Valley by 1812, and gold rushes in British Columbia and the Yukon were accompanied by road building. Cattle ranchers and farmers emigrated in great numbers from the USA during the 1870s, and some American songs became even better known in Canada.

(b) Instrumental music and dance. Instrumental music was less constrained by language differences and flourished within the same performance venues as songs, similarly paralleling the broad outlines of Canada's social history. Solo instruments only occasionally accompanied songs. Parlour songs were often accompanied by a piano during the early 20th century, although banjo and acoustic guitar accompaniments were popularized greatly by recording artists, including the 'singing cowboys' of the 1930s; earlier songs remained largely unaccompanied.

Through the fur trade, by the mid-18th century fiddlers of Scottish, English, German, French, Amerindian and mixed Métis background had come into contact with one another, for example at the Hudson's Bay Company's Moose Factory Post. Shared traditions continued until the mid-19th century. By the early 19th century, Prince Edward Island, Cape Breton, and eastern Ontario Highlanders cultivated a distinctive repertory of strathspeys marked by dotted and inverse-dotted ('Scotch snap') rhythms within the beat, spirited Scottish reels, as well as country dances, marches and jigs, both Scottish and Irish. Drawing on a vital tradition of tune books from the 18th century onwards and informed by bagpipe practices of the old country, Scottish fiddle traditions featured raised-bass tunings (A–E–A–E), underlying or explicit 'double-tonic' progressions (typically on A and G), upper and lower double stops, and drones.

In the early 19th century, Irish traditions dominated the Atlantic provinces and Ontario. For more than a century, step-dancing ('close-to-the-floor' in Newfoundland) and, for groups, the 'Lancers' characterized this tradition, partly sustained by imported books such as Francis O'Neill's anthology, *The Dance Music of Ireland* (1907), known widely among 20th-century players as 'the book'. Other tune books, sheet music and minstrel shows from the USA had already introduced such melodies as *Rickett's Hornpipe*, *Jenny Lind Polka* and *Marching through Georgia*.

The inexpensive, diatonic button accordion ('box', 'squeeze box', 'melodeon') was used in Ontario and the Atlantic provinces as early as 1850. Mass-produced in Europe, these instruments featured two brass or steel free reeds per right-hand button. By the early 20th century, inexpensive boxes were widely available through store catalogues (e.g. Eaton's), as were fiddles and harmonicas. Influenced by such Scottish and American gramophone artists as New York's John Kimmel, local virtuosos soon appeared. By the late 1920s, chromatic piano accordions replaced the diatonic box, though the latter maintained a vital tradition even in the Arctic, where it was brought by Newfoundland whalers.

These instruments generally supplied solo dance music by playing versions of traditional fiddle tunes. If instruments were unavailable for dancing, 'lilts' or 'diddling' (also called 'mouth', 'gob-', 'cheek-' or 'chin-music') substituted by rendering the tunes in vocables. Inspired in large measure by Tin Pan Alley hits, local manufacturers of inexpensive, upright pianos (e.g. Heintzman) flourished around 1900. In the early 1900s, the piano increasingly supplied semi-improvised chordal patterns ('chording', 'vamps') for traditional dance melodies, as well as fully notated, sheet music accompaniments for popular parlour songs. While chord-symbols and -tablatures were normative in sheet music for ukulele from the 1920s onwards, their roles in older dances and songs were slight, although, like the mandolin, they formed the basis for large, college- or community-based ensembles from the 1890s. Flutes and parlour or pump organs were also popular.

The *guimbarde* (jew's harp) and pairs of spoons or bones (e.g. from the shoulder of beef cattle) were commonly used as percussion accompaniment for traditional dancing. Struck together between a player's thigh and palm, such home-made idiophones supplied short rhythmic ostinatos, and were 'clogged' by alternating feet in the heel-toe accompaniment of seated solo fiddlers and singers, especially during extended refrains of older songs.

Large Canadian dance bands toured, recorded and broadcast extensively from the mid-1920s using traditional fiddle tunes as their main repertory. Through the mass-media, printed tune books and a later, long-running CBC TV show, Don Messer has been credited with establishing a large nationwide canon of fiddle tunes in down-east or old-time style that remains to this day.

Messer's broadcast and recording career and his own training in 'classical' violin playing influenced others to emulate his smooth playing style, in contrast to the lighter, close-to-the-tip, short-bow earlier styles. In these earlier styles the instruments used were often home-made and held without a chin rest against the neck, chest or shoulder and along the arm, discouraging performance in high positions and displaying the influence of foreign virtuosos such as Scott Skinner and Michael Coleman. Despite Messer's increasingly influential style, some players cultivated the more complex and frequent embellishment of earlier styles, extended and disseminated through foreign recordings of such virtuoso performances as Scott Skinner's strathspeys and Michael Coleman's Sligo stylings.

These Canadian traditions generated many newly composed tunes adhering to centuries-old patterns of 'four-square' phrasing, most often comprising eight-measure strains. The piano accompaniment of earlier styles was supplemented in the down-east tradition by drum-kit, bass and guitar or banjo for broadcasts, commercial recordings and professionally organized dances. Shared by all traditions were repertories of jigs and reels, the latter played somewhat faster in the down-east style.

(iii) Other. Canada is a country of immigrants, and beyond the English and French groups that constitute the largest segments of the population, other immigrant groups contribute significantly to the collective culture of the country. These immigrant groups produce essentially unchanged traditional musics, especially in rural communities; new musics created in traditional styles by immigrant groups; and musics influenced by the Canadian cultural mix. The diverse repertories of traditional music of later immigrant groups are evidence of the integral role that music plays within immigrant culture. Countries from which significant numbers of new Canadians arrived include the United Kingdom, Germany, Italy, USA, Ukraine, India, China, Poland, the Philippines and Portugal. The degree to which

cultures maintain traditions in Canada varies substantially. Geography plays a role, with rural-based groups holding on to their traditions longer than urban-based groups.

(a) Ukrainian. Canadians of Ukrainian heritage, one of the five largest cultural groups, number about one million people. Their original isolated, rural location in western Canada has helped preserve their musical culture. Arriving first in the 1890s, Ukranians immigrated in waves; the earliest settlers were homesteading peasants on the prairies who set up farms and farming communities. Later immigrants settled in the larger cities in central Canada. Performances of folk music and dance have been a primary site for the continuation and popularization of their cultural traditions, but Ukranian Canadians also embrace liturgical, country, popular and art musics. Ukrainians established a unique folk music tradition in Canada, retaining elements now obsolete in Ukraine. In addition, elements from Ukraine have taken on new meanings in Canada; the *tsymbaly* box zither is now the instrument most strongly identified with Ukrainian music in Canada, while the *bandura* plucked lute remains the most important instrument in Ukraine. The *tsymbaly* has gradually changed roles in Canada over the past few decades from its roots as an accompanying instrument to its emergence as a solo instrument. Other traditional instruments, such as the *lira* (hurdy gurdy), *kobza* (plucked lute), mandolin and violin all remain part of the Ukranian Canadian tradition. A choral tradition remains strong among Ukranian Canadians; several major cities and many large churches maintain choirs that sing a variety of repertories, including a large number of settings of folksongs.

Ballads comprise a popular folksong genre, and their narratives provide a window through which the values of the Ukrainian folk culture may be viewed; ballads were used to promote values, comment on life and its events, recall historical events and for entertainment. The traditional winter folksong cycle includes winter rituals and celebrations that are more developed than those of the other seasons owing to the lower level of farm activity during this period. Winter song types include *koljady, scedrivky* and *malanka*, New Year's Eve mummers' songs that are part of the tradition of door-to-door carolling.

Ukranian Canadians largely belong either to the Ukrainian Orthodox Church of Canada or to the Ukrainian Catholic Church of Canada; both churches are part of Eastern Christian liturgical tradition. The chants used by Ukranian Canadians are based on Kievan chant. During the 1988 celebrations of the millennium of Christianity in Ukraine, many new liturgical pieces were composed by Ukranian Canadians.

Religiously persecuted in Russia and Ukraine, Doukhobors (spirit wrestlers) began to emigrate to Canada in 1898, primarily to British Columbia, Alberta and Saskatchewan, with the largest concentration in the Castlegar region of British Columbia. Despite the existence of published Doukhobor song text collections such as *Dukhovnïye stikhi i narodnïye pesni dukhobortsev v Kanade* (Spiritual Verses and Folksongs of Doukhobors in Canada), their music is largely preserved orally. Psalms are the oldest part of their literature, and their texts embody the philosophy that guides Doukhobor social behaviour. The voice is the only instrument used in Doukhobor music since no material culture is permitted in their belief system. The polyphonic, unaccompanied choral music is generally sung without conductors or arrangements, using an improvised harmonic system. The performance style is unique; men and women sing in mixed choruses organized into groups that fulfil different roles. One group presents a monophonic version of a psalm melody in octaves, while the other group sings an improvisation on the original melody at intervals of 3rds, 4ths and 5ths. Singers learn a particular part of the harmony and usually continue to sing the same part, although there does not seem to be a formal organization controlling this practice. The resulting harmony is unique in that it has developed in seclusion from other forms of Christian choral singing for several hundred years, and it retains elements of medieval European singing styles.

Performance of the psalms is highly melismatic with repeated words and vocables. Despite the absence of a conductor, rhythmic accuracy and large melodic leaps are typical features of this performance style, indicating a high degree of musical skill. Owing to the melismatic nature of the music, performances are lengthy; initial verses are often sung, followed by faster, spoken recitation of later verses. The treatment of rhythm is free, with much use of rubato, almost to the point of being non-metrical. The construction of both the melodies and texts are asymmetrical; staggered breathing is used to create a seamless, continuous flow of sound. This rare and historical style of performance has almost disappeared from Europe and the former USSR.

In addition to traditional psalms, Doukhobors also perform other types of religious and secular choral music. There are several types of hymns, some of which contain more sophisticated harmonies than the psalms and have symmetrical structures. They serve multiple purposes, including presentation of non-religious but philosophical ideals and documenting past events in Doukhobor history. Modern influences are also apparent in Doukhobor choral repertory, with songs learnt from recordings of contemporary Russian choral groups adding a variety of musical genres to the Doukhobor canon. Secular folksongs drawn from Russian folksongs are an important part of the repertory. Composition of new hymns has continued in Canada, although they tend to remain stylistically traditional.

(b) Caribbean. Immigration from Caribbean countries has increased significantly since the mid-1960s. Emigrants from Jamaica, Trinidad and Tobago, and Guyana, like the majority of immigrants to Canada, have settled in Ontario, although many also sought new homes in Montreal. There is also a substantial Latin American group. In Toronto, these Spanish-speaking peoples contribute to a pan-Latin music style; salsa is the most popular style of music now performed in Toronto. Several public performance contexts exist for Caribbean peoples: community dances, performances featuring visiting musicians, night-club performances and other less commercial opportunities. Musicians sometimes play original music, but they often specialize in covering popular musics from Latin America. Calypso enthusiasts from Trinidad and Tobago and other countries have created festivals in a number of Canadian cities such as Edmonton, Montreal and Toronto, which hosts the annual Caribana Festival. Caribana began in 1967 and is based on carnival traditions, now drawing up to a million people to each of its annual parades which feature *mas'* (masquerade)

bands, steel bands and calypso groups. Caribana is modelled on Trinidad's carnival but it is also a pan-Caribbean festival that features a number of different musics. Few calypsonians in Canada were practising musicians before they emigrated, yet calypso associations have been formed in several provinces.

(c) Indian. There are numerous groups of people from the Indian subcontinent in Canada, and their musical communities differ according to region of origin, religion and language. Indian classical music is more prevalent than folk music, and both Hindustani and Karnatak *saṅgīt* are represented and encouraged by a number of groups, such as the Raga-Mala Performing Arts of Canada Society. Along with arranging and sponsoring performances by high-profile touring musicians, they also encourage the study of Indian musics. In addition to classical music performances, communities also participate in many regional styles of vocal and instrumental musics and dance. Music remains an essential part of many religious rituals and ceremonies, whether Christian hymns, Hindu *bhajans* or Sikh *gurdwara* or supporting more substantial events, such as the *Divālī* festival. Dance is also important in Indo-Canadian musical culture, and a number of schools exist to teach and promote dance.

Like other Indian communities outside India, cinema music from Mumbai (Bombay) is an integral part of the contemporary musical culture, and youths have adopted it as part of their popular music. *Bhangra*, a Punjabi traditional music, is also performed as popular music, drawing on Punjabi traditions, cinema music and also on reggae, house and hip hop musics. The music provides young people with opportunities to dance and listen, using materials from both traditional and mainstream musical cultures of Canada.

(d) Chinese. Chinese immigrants came in 1858 to search for gold and work on the transcontinental railway. The Canadian government made immigration for the immediate families of workers increasingly difficult, a situation that existed until the late 1940s. During that period, men congregated in 'dramatic societies' that served many purposes; they were places to socialize, preserve culture, raise charitable funds and discuss politics. These societies continue to exist in a number of cities, and they are now also referred to as music groups, music clubs and opera societies. As early as 1918, the dramatic societies sponsored performances of Cantonese opera by local amateurs, professionally trained artists and touring groups. Increased immigration began in the 1960s from the People's Republic of China and from the then British Crown Colony of Hong Kong. Musical performances among Chinese immigrant communities is expanding stylistically as a result, but increasing numbers of Chinese Canadian youths learn Western instruments such as the violin and piano and perform Western classical music instead of Chinese classical or traditional genres.

(iv) Recent developments. Traditional musics continue to be a part of the cultures of both immigrant groups and Canada as a whole. A majority of immigrants in recent years are choosing to locate in urban centres, affecting many of the repertories of individual immigrant groups. Some groups that originally chose rural locations are now experiencing the migration of youths to urban centres. While many groups have experienced the loss of aspects of traditional musical repertories, ongoing immigration to Canada strengthens those traditions. Perhaps more than any other tool, annual multicultural festivals in many cities provide opportunities for Canadians as a whole to experience the musics and cultures of the ethnic groups within Canada. These festivals serve as venues where large numbers of people are exposed to the music of many ethnic groups who are working to preserve their traditional musics.

As a result of its extensive and comprehensive research efforts covering much of Canada, the Museum of Civilization in Hull has a large collection of materials related to traditional and immigrant music resources. In addition to the museum's archives, it has published a number of monographs concerning the musics of specific cultural groups, along with other monographs that study specific cultural groups but cover music only as part of the greater topic. The Music Library at the National Library of Canada also houses significant archives. Universities with collections of Canadian immigrant traditional music resources include the University of British Columbia, York University and the Centre for Ethnomusicology at the University of Alberta. Other important archives include the Provincial Museum and Archives of Alberta in Edmonton, the Ukrainian Cultural and Education Centre in Winnipeg and the Canadian Broadcasting Corporation Program Archives in Toronto. Also, the Ralph Pickard Bell Collection at Mount Allison University has many items in its collection relating to folk and traditional musics. Several other universities have focussed collections dealing with specific facets or genres of traditional music.

4. Indigenous adaptations of immigrant traditions. For over 400 years the indigenous peoples of Canada have been hearing various musics brought and used by settler societies. Christian missionization was a prime goal of colonial powers and today various musics of the church play a major role in their musical expressions. Many hymns using indigenous languages were created and published. In residential schools operated by various church denominations, instrumental music in the form of bands and violin, organ and keyboard instruction often played a major component. As a result, references to a skilled Inuk organist at the community of Nain, Labrador, or to Job Nelson, a Tsimshian who led several all-indigenous bands in British Columbia during the early decades of the 20th century, are not unusual.

Inuit along the eastern coast were fascinated with the *kablooma*'s music from barrel organs and particularly the violins used by the whalers. After discovering that European-made violins would not withstand the rigours of Arctic weather, they made their own versions. These one- to three-string chordophones made out of available materials were used to reproduce the Celtic tunes they had learnt. Subsequently those tunes were transferred to concertinas. Meanwhile many of those same Celtic tunes were becoming the backbone of the Amerindian fiddling tradition that had begun to emerge around the Hudson Bay Company trading forts as early as the mid-18th century. Today in communities such as Moose Factory, traditional music is considered to be this kind of fiddling. Throughout the Mackenzie river area and into Alaska, the Dinjii Zhuh (Gwich'in) peoples faithfully reproduce the dances described in Scottish dance manuals of the early 19th century to their tunes played by a fiddler and guitarist.

Subtle differences in the performing practices of fiddling among indigenous peoples and European Canadians include timing, melodic contour and structure which are changed to conform more closely to musical characteristics of the parent culture (Keillor, 111–12). During the 20th century modern communications of recordings through crystal sets, radio and television have increasingly made their presence felt within indigenous communities. Consequently the range of musical influences heard by an indigenous musician, whether of European American or his/her parent-culture tradition, significantly affects the resultant style utilized by a musician. European American country music has had a very strong influence on resultant forms of fiddling, covers of songs performed and new songs created since the mid-20th century.

Os-ke-non-ton (Louie Deer; *c*1890–*c*1950), a Mohawk chief born in Kawnewake, PQ, performed a Western musical repertory throughout Europe and North America in opera and recital, rather than the staged presentations of traditional music which were the norm for indigenous performers in Wild West shows and exotic stage presentations. Because of governmental bans on important culture-carrying rituals such as the potlatch and the sun dance, indigenous peoples sensed that certain forms could be performed if adapted in part to the expectations of the dominant culture. Thus gatherings of several different indigenous groups became known as powwows which began to proliferate around 1900. Originally these took place on important holidays of the dominant culture such as Christmas.

The powwow dances used were initially certain of the traditional ones that were found in southern Plains cultures of North America. In the mid-20th century the sharp distinction known in the United States since 1900 between straight dancing and fancy dancing became established in southern Canadian powwows. Male dancers used feathered outfits for fancy dancing and more tailored ones for straight dancing, while women's outfits remained more based on traditional regional styles in buckskin or cloth. The tempos and the type of drumming varied for these two dance styles. Straight had slow tempos and a dignified form of dancing. Fancy required fast tempos and a flamboyant dancing style.

Often the traditional songs sung to accompany these were provided by musicians from Canadian Plains cultures. New songs based on the traditional forms began to be created for these events and could have words throughout, including some in English. Ancillary events included new couple-based dances that were strongly influenced by European-derived forms such as the waltz. To perform the required music the singers/drummers (as many as eight) sit around a large powwow drum or, in the more northern parts of Saskatchewan and Alberta, individual hand-held drums. Some women may now sit at the drum, but prior to about 1935 women would only add their voices while standing close to the drummers. The typical powwow song's structure consists of a lead sung by a soloist; a second which is a repetition by all the singers; then everyone sings the first chorus which ends with the first ending, usually set to vocables; the second chorus is sung by all, during which there are usually four to six downbeats or honour beats; the final ending of the second chorus completes one strophe or 'push-up'. Four push-ups are required but more may be sung. Depending on the dance, drummers will retain its particular tempo with a steady one-two beat; a drumbeat accented on one, or another accented on two for the round dance; a ruffle or roll may be inserted for the men's fancy dances. The vocal sound is produced at the back of an open mouth and throat and its quality is judged according to range and volume. The typical contour of a powwow song is predominantly descending over a wide range, in a form similar to traditional Plains-style songs. Because Plains and Plateau indigenous peoples became heavily involved in ranching and rodeos, the competitive aspect of the rodeo also became attached to the powwow. In southern Canada powwows are held as part of the extensive regular chain of such events throughout the United States.

About the mid-20th century musicians of indigenous heritage began to create songs largely based on country music models. The descending melodic contour and the frequent reiteration of the same pitch were qualities that resonated with experiences of the traditional music of their parent cultures. In addition the textual themes of the importance of family, hard work, the rambling man, prison, fate and religion related to prevalent aspects of their lives within Canada.

In the 1960s Mi'kmaq Willie Dunn and the Nehiyaw Buffy Sainte-Marie began to perform their own songs in coffee-houses and on the folk music circuits. By the late 1960s they were joined by David Campbell, Winston Wuttumee and Shingoose, among others, in creating songs that presented indigenous perspectives to a multi-cultural public, often using humour, a strategy highly valued in their parent-cultures. With television making its way even into the far north by 1973 via satellite, local rock bands were being formed on every reserve. The performance of standard songs in cover versions became known as powwow rock.

Robbie Robertson became a member of what has been called one of the most influential rock groups of all, THE BAND, with his guitar style based on what he heard back at his mother's Six Nations reserve. More recently he has written many songs dealing specifically with indigenous culture. The Mi'kmaq musician Don Ross has also strongly influenced writing and playing for guitar in Canada. Lawrence Martin, the first winner of the newly created Juno Award Best Music of Aboriginal Recording in 1994, has created a strong contemporary voice in a country form relating the experiences of his people, the Mistassini Cree.

The above musicians concentrated on writing songs usually only in English to reach a wide audience. Alanis Obomsawin, an Abenaki, who frequently joined Buffy Sainte-Marie on the influential TV series *Sesame Street*, sang and created songs in her own language, as well as English and French. Except for a few early songs written with an English text, Charlie Panigoniak initiated a strong tradition of country/folksongs with texts in Inuktitut concerning family, friends and everyday events in his life. His example has been followed by a number of Inuit performers including Tumasi Quissa, Sikummuit (Charlie Adams, Lucassie Koperqoaluk), Joseph Tuglavina, Alexis Utanaq and Lucassie Irqumia. Many now perform in a combination of their own language with one of Canada's official languages. The group Tudjaat (Madeline Allakariallak and Phoebe Atagotaaluk) often preface their bilingual songs with a rendition of an Inuit voice game. Susan Aglukark has become a strong spokesperson for

the north, particularly through her rendition of *Hinena Hoho Hine* by the Slavey Dene, Johnny Landry.

Many performers are now combining elements of their traditional parent-cultures such as instruments in a contemporary musical presentation. The Innu Philippe Mackenzie used a single-headed drum hit with maracas to approximate the traditional sacred drum with snares and modelled his songs on his parent-culture hunting songs. He greatly influenced the group Kashtin (Florent Vollant, Claude McKenzie) who sing in their own Innu language. Their second commercial recording *Innu* sold over 400,000 copies in its first six months. Jerry Alfred of the Northern Tutchone culture accompanies himself on guitar and a traditional drum for his contemporary songs in his own language. Jani Lauzon performs on a range of indigenous flutes and sings her songs based on the idiom of the blues. Murray Porter of the Iroquois culture calls his particular style 'country blues'.

In European-derived concert music indigenous peoples continue to contribute as performers and creators. Nathanael of Nain composed four-part anthems for the Moravian Mission. John Kim Bell, initially trained as an orchestral conductor, has written a number of acclaimed film scores including *The Trial of Standing Bear* (1988). Since the late 1980s he has devoted himself to encouraging indigenous performers in the arts and prepared the traditionally based music for the ballet *In the Land of the Spirits* (1988). In the 1990s the orchestral works of Barbara Croall of Ojibwa heritage were being performed in Canada and abroad.

5. Composition. Traditional music of the indigenous peoples of Canada is very different from European musical traditions. Amerindian and Inuit musical materials were not, therefore, used for art music composition until the mid-19th century. Missionaries did, however, prepare hymn tunes based in part on French folktunes with texts in indigenous languages. The most famous example is the Huron carol *Jesous Ahatonia*, probably created by Jean de Brébeuf (1593–1649) using the melodic opening of *Une jeune pucelle*.

The rich French-language oral tradition of song and dance became the basis for many art music compositions, usually in the form of settings for voice and piano or choral arrangements. The first well-known composition was Thomas Moore's *Canadian Boat Song*, written during a visit to Canada in 1804 and inspired by the opening of the *voyageur* song *Dans mon chemin j'ai rencontré*, which Moore heard while being rowed down the St Lawrence River from Kingston to Montreal. Initially published as a three-voice setting in London in 1805, the song had at least 12 other editions by 1825.

The piano piece *Canadian Dance with Variations*, composed by G. Pfeiffer and published in Philadelphia in 1817, could be based on an actual jig tune familiar at that time in Canada. Manuscripts from 1817 survive of Frederick Glackemeyer's settings of two *Chansons de voyageurs canadiens*. The first published volume of *Canadian Airs* (London, 1823), collected by Lt George Back, included arrangements by European musicians who freely adapted the tunes to current European practice. By 1840 folktunes (of French-language heritage) began to appear in Canadian periodicals in settings for voice and piano or as medleys and sets of dances for piano. Soon there were longer versions in sheet music form such as Antoine Dessane's *Quadrille canadien* (1855) or Ernest Gagnon's *Le Carnaval de Québec* (1862), which includes, in addition to French-language tunes, *Yankee Doodle*, possibly set shortly after the capture of Louisbourg on Cape Breton Island (1745), and *Dixie*, a tune that was extremely popular in American minstrel shows in the 1860s.

Gagnon prepared a landmark collection of over 100 French folksongs in his 'Chansons populaires du Canada' (1865). His transcriptions of the melodies provided a source for composers, and Gagnon showed such possibilities in his choral arrangments *Les soirées de Québec* (1887) and *Cantiques populaires du Canada français* (1897). His piano piece *Stadaconé: danse sauvage* (1858) appears to be the first art composition genuinely based on Amerindian traditional music. The band arrangement (1864) was heard by a group of Iroquois 'who recognized familiar elements of their own music in Gagnon's composition'.

Such band arrangements of music originally written for or published as piano music became increasingly common in the 19th century, and bandmasters prepared many versions of popular folktunes of individual regions based on available instruments. Thus, in English-speaking areas these tunes could be of Scottish, Irish or American origin. Susie Frances Harrison ('Seranus') was probably the first of many Anglo-Canadian composers to utilize French-language folktunes in her opera *Pipandor* (1884) and *Trois esquisses canadiennes* (1887) for piano. Beginning in the 1870s more large-scale works drawing on folk materials were created by Canadian composers, including Calixa Lavallée's *Pas redoublé sur des airs canadiens* (1870s) for band, Joseph Vézina's *Mosaïque sur des airs populaires canadiens* (1880) for band, Alexis Contant's *Fantaisie sur des airs canadiens* (1900) for orchestra, and Charles A.E. Harris's orchestral *Canadian Fantasy*, first performed in 1904. In his opera *Le fétiche* (1912) it appears that Vézina drew on his personal knowledge of Iroquois musical practices for the 'Chanson du scalpe'.

The systematic documentation of indigenous and traditional folk materials began with the advent of recording techniques at the end of the 19th century. The ethnologist Marius Barbeau was a key figure in this effort and by 1919 he was arranging concerts of francophone, anglophone and indigenous folksongs across the country and urging composers to use this material. In 1927 Ernest MacMillan accompanied Barbeau on a trip to northern British Columbia specifically to make transcriptions of Tsimshian songs which Barbeau was recording. *Eskimo Songs: Songs of the Copper Eskimos* (1925), transcriptions by Helen Roberts of recordings made during Diamond Jenness's Arctic expedition of 1913–18, remains an important source for Canadian composers including Léo-Pol Morin, John Weinzweig and Violet Archer.

The use of traditional music as source material was greatly stimulated through the performances organized in connection with the Canadian Pacific Railway Festivals, 17 of which took place in the period 1927–31 from Quebec to Victoria. A competition for the 1928 festival produced orchestral, string quartet, chamber, choral and vocal works using French-language folksongs. MacMillan's *Two Sketches for String Quartet* (1927) and Claude Champagne's *Suite canadienne* (1927) have become part of the Canadian canon. Other festivals displayed the richness of the musical traditions within Canada such as Regina (1929) with over 30 ethnic groups. Larger scale

compositions based on English-language sources began to appear at the 1929 Vancouver Festival.

Since singing and dancing to secular material was frowned upon by certain churches in the English-language communities, composers had fewer opportunities to hear or experience this heritage personally or through publications. Notated collections of English-language folk music began to appear with W. Roy Mackenzie's *Ballads and Sea Songs from Nova Scotia* (1928) drawing in part on informants of Acadian-French origin. Beginning in the 1960s studies of the musical expressions of other ethnic groups, over 70 of which have been documented to date, became available for Canadian composers to utilize. Victor Davies's *The Mennonite Piano Concerto* (1975), as well as several of Imant Raminsh's Latvian-inspired vocal works, are among those that are most frequently performed. Treatments vary considerably from simple and unconventional accompaniments of the original tune to considerable variation of the melody and rhythm as in Harry Somers's *Songs of the Newfoundland Outports* (1969). In instrumental settings composers frequently extend the tune by using 20th-century compositional techniques or by using the tune as a motivic source. The latter is the method most frequently used for indigenous materials. Malcolm Forsyth's *Atayoskewin* (1984) for orchestra and Christos Hatzis's radio documentary composition using Inuit materials, *Footprints in New Snow* (1996), have received acclaim.

Amerindian musicians have contributed greatly to popular and commerical musics, beginning with Buffy Sainte-Marie and Robbie Robertson. Recently John Kim Bell (*Land of the Spirit*, 1988) and Barbara Croall (*The Four Directions*, 1996) have composed orchestral works that reflect their respective Mohawk and Odawa musical heritages.

Since the early 1950s composers from Quebec have rarely drawn upon French-language folk music except for the rhythms and tunes of fiddle music. Since the early 20th century there have been many commercial recordings and later radio and television programmes that featured fine Canadian traditional fiddlers. As a result Canadian composers had ready access to this traditional heritage, and it appears in numerous works, including John Beckwith's String Quartet (1977) and Pierick Houdy's *Messe québécoise* (1973). Traditional fiddle music is at the core of the rhythmic essence of much Canadian art music.

6. RESEARCH. From historical and contemporary perspectives, Canada has played a major role in the study of traditional music. Canadian traditional music has been referred to in well-known works of historical interest incorporating non-Western illustrations. In the early days of comparative musicology at the end of the 19th century, Carl Stump's *Lieder der Bellakula Indianer* (1886) was one of a group of sources that focussed on Canadian traditional music. This work is often cited in histories of ethnomusicology as field of study (Robbins, 1993, pp.71–2). Many of the contributions by Canadians, and by others on Canadian traditional music, are discussed above.

The appointment of Marius Barbeau to the anthropology division of the Geological Survey of Canada (now the National Museum of Civilization) in 1911 was a turning point that led to sustained efforts in music research, and French-language folksong collecting and scholarship in the 20th century. Barbeau's extraordinary career included fieldwork and publication in a wide range of areas. Indeed he extended the dimensions of his research to include folklore, language and popular culture beyond his native Quebec to Amerindians of the Pacific Northwest Coast. He also participated in the establishment of important archival collections both at the National Museum in Ottawa and at Laval University (Archives de Folklore, 1944); his work also inspired, in part, the creation of folk music archives in Sudbury (French-language traditions in Ontario) and Moncton, New Brunswick (Acadian traditions). Beginning in Newfoundland and extending to the mainland provinces of Nova Scotia, New Brunswick and Prince Edward Island, the Atlantic region of Canada was an important focus for collectors in the first half of the century. Many of the early collectors were not Canadians (Maud Karpeles, Elizabeth Greenleaf, Grace Mansfield and Edward Ives). The long career of Nova Scotian folklore collector Helen Creighton (1899–1989) in the maritime provinces parallels, in some respects, that of Barbeau in Quebec, as well as that of Edith Fowke (1913–96) in Ontario.

While there was continued emphasis on collecting in the second half of the 20th century, researchers gradually broadened the scope of fieldwork, borrowing and incorporating ethnographic approaches from other disciplines. This is partly a reflection of the establishment of courses and programmes of study in ethnomusicology and folklore at Canadian universities. The first courses in folklore subjects were offered at Laval University in the 1940s by Luc Lacourcière, at the University of British Columbia from 1964 by Ida Halpern and at the University of Toronto from 1966 by Mieczyslaw Kolinski. By the late 1990s graduate programmes leading to doctoral degrees in folklore studies were offered at Laval University and Memorial University in Newfoundland, and graduate programmes in ethnomusicology were offered at the universities of Alberta, British Columbia and Toronto and at York University. Many Canadian universities offer undergraduate courses in ethnomusicology and folklore.

In recent years many Canadian fieldworkers have turned their interest towards investigating music in local and urban contexts. Publication of essays edited by Beverley Diamond and Robert Witmer (1994) reflects this shift. Incorporating current ideas of cultural studies, social structures, individual experience and gender studies, as well as considering new, alternative modes of representing the 'other' in ethnographic research, the work of Canadians such as Nicole Beaudry, Rob Bowen, Judith Cohen, Donald Deschenes, Monique Desroches, Beverley Diamond, Jocelyne Guilbault, Elaine Keillor, James Kippen, Regula Qureshi, Neil Rosenberg, Jay Rahn, Franziska von Rosen, Gordon E. Smith, Alan Thrasher, Geoffrey Whittam and Robert Witmer, among others, represents important new contributions to the study of traditional music.

III. Popular music

As with the USA, popular music in Canada can be logically divided in terms of ethnicity, language, region and style. Officially bilingual, the country has experienced mass immigration from all parts of the globe since the 1960s, prompting the United Nations' designation of Toronto as the most multicultural city in the world. Each wave of immigrants brought popular music traditions with them, and many of these new popular music hybrids have continued to develop within Canada, many featuring lyrics in languages other than French and English. There is also a range of popular music activity among Amerindians in a variety of indigenous languages. Although the popular music industry in Canada is largely tied to Western-based multinational corporations and tends to favour English-speaking artists operating within contemporary rock or pop styles, in the late 1990s a few Amerindian, French-speaking, African and South Asian artists achieved a significant degree of national success.

1. Before 1960. 2. 1960s and early 70s. 3. After 1971.

1. BEFORE 1960. In the first decades of the 20th century, Canadians clearly embraced new recording technologies, purchasing a variety of discs, the vast majority of which were recorded and pressed in the USA, England or France. Companies such as the Columbia Gramophone Co. established branches in Canada, while others such as the Victor Talking Machine Co. simply licensed their product to Canadian distributors. In these first few decades Canadians wrote several songs that were internatonal

hits, including *Peg o'My Heart* (lyrics by A. Bryan), *Til' We Meet Again* (lyrics by R. Egan), *K-K-K-Katy* (G. O'Hara), *Mademoiselle from Armentières* (Captain G. Rice) and *The World is Waiting for the Sunrise* (E. Lockhart and E.J. Seitz).

Guy Lombardo, born in London, Ontario, and his Royal Canadians made their first recording for the Richmond, Indiana-based Gennett label in 1924. Over the course of his 50-year career Lombardo had over 200 hit recordings, the only dance-band leader to sell over 100 million records. Before the end of the 1920s, Maritime country legend Don Messer began his radio career in St John's, Newfoundland. In 1930 another early Canadian country pioneer, Wilf Carter of Alberta, conducted his first radio broadcast. Two years later Carter's *My Swiss Moonlight Lullabye*, recorded by the Canadian branch of RCA Victor in Montreal, became the first Canadian hit to be recorded domestically. The producer of the Carter record, A. Hugh Joseph, signed Maritime-born Hank Snow to the Canadian branch of RCA Victor in 1934. Snow later moved to Nashville and became one of the world's most successful and influential honky-tonk artists.

Two Canadian jazz luminaries, flautist Moe Koffman and pianist Oscar Peterson, first came to prominence in the 1940s, as did the slick vocal quartet, the Four Lads. In 1951 the Four Lads backed up American singer Johnny Ray on his influential hit single *Cry*. A year later easy-listening orchestra leader Percy Faith had his first major pop hit with the single *Delicado*. Faith would continue to produce hits on a regular basis until his death in 1976.

The history of Canadian popular music closely parallels stylistic and technological developments in the USA. Beginning with the formation in Toronto of the Travellers in 1953, Canada produced a large number of performers whose roots were firmly planted in the urban Folk Music Revival. This legacy encompasses artists as diverse as Gordon Lightfoot, Ian and Sylvia, Neil Young, Joni Mitchell, Bruce Cockburn, Murray McLauchlan, Valdy and Stan Rogers. The 1950s were also notable for the advent of two white pop vocal quartets, the Crew Cuts and the Diamonds. Both groups were signed to the Chicago-based Mercury Records, and both enjoyed careers largely based on their covers of African-American materials recorded on independent record labels. The Crew Cuts' 1954 cover of the Chords' *Sh-Boom* reached Number 1 in the USA on *Billboard's* pop charts, becoming the best-selling record of the year. It is often cited as the first Number 1 rock and roll record. In 1957, Paul Anka signed with New York-based ABC-Paramount for whom he recorded *Diana*, which also went to Number 1 on the *Billboard* pop charts. Anka later wrote *It Doesn't Matter Anymore* for Buddy Holly and *My Way* for Frank Sinatra and enjoyed a number of easy-listening pop hits. In addition to such national and international successes in the 1940s and 50s there was a plethora of independent labels formed throughout Canada, primarily recording country, rockabilly and French-language materials on a regional basis.

2. 1960s AND EARLY 70s. Paralleling developments in the USA, the Canadian popular music scene exploded in the 1960s and early 1970s with artists such as the Guess Who, Buffy Sainte-Marie, Steppenwolf, Neil Young, Joni Mitchell, Leonard Cohen and the Band achieving significant international success. Other Canadians, such as Zal Yanovsky (Lovin' Spoonful) and David Clayton-Thomas (Blood, Sweat and Tears), achieved success as members of American groups. Because of Canada's underdeveloped industry infrastructure all of these artists, with the exception of the Guess Who, emigrated to the USA before they became successful. Part of the reason for the lack of such an infrastructure was a pervasive colonial mentality deeply rooted in Canadian culture which led many Canadians, including radio programmers, to believe that if a record did not come from the USA or Great Britain, it could not be of value.

3. AFTER 1971. To combat this situation, the Canadian Radio and Television Commission (CRTC) enacted legislation in 1971 requiring that 30% of the recordings aired by AM stations in Canada between 6 a.m. and midnight had to meet Canadian content criteria. Over the next several years, similar criteria were phased in for FM radio stations. Although radio programmers claimed that there was not enough high-quality Canadian-produced material to fulfil this quota, the eventual effect of this legislation was the development of a full-fledged industry with a substantial number of studios, record companies, concert promoters, managers and agents emerging around Toronto, Vancouver and Montreal.

Since this legislation came into effect, Canada has produced numerous artists who have been able to achieve success on an international level without having to move to the USA. Such artists include Anne Murray, Rush, Bachman-Turner Overdrive, kd lang, Loreena McKennitt, Bryan Adams, the Cowboy Junkies, Roch Voisine, Crash Test Dummies, Céline Dion, Shania Twain, Alanis Morissette and Sarah McLachlan. The content legislation has also fostered the development of a second tier of talent who, although not as successful on an international level, are popular within Canada and consequently are able to make their living as full-time musicians. Examples of such artists include Stompin' Tom Connors, April Wine, Kim Mitchell, Tom Cochrane, Rita MacNeil, and the Tragically Hip.

Canal, Marguerite (*b* Toulouse, 29 Jan 1890; *d* Cépet, nr Toulouse, 27 Jan 1978). French composer. She entered the Paris Conservatoire in 1903, where she won first prizes in harmony (1911), piano accompaniment (1912)

and fugue (1915) and studied composition with Paul Vidal, winning the Prix de Rome in 1920 with her cantata *Don Juan*. In 1919, she was appointed to teach solfège for singers at the Conservatoire, though she left for Rome the following year and did not resume her post until 1932. Canal was the first woman to conduct orchestral concerts in France (Palais de Glace, 1917–18).

She composed prolifically in the 1920s, when many pieces, including a volume of 100 songs, were published by her husband Maxime Jamin. Her vocal works reveal solid craftsmanship and faultless prosody, though their musical language is derivative of earlier French composers, particularly Debussy and Fauré; her Baudelaire and Verlaine settings do not bear comparison with those of her musical forebears. In *La flûte de jade* (1922), a cycle of songs to texts translated from the Chinese, she often uses the pentatonic scale and oriental vocal embellishments. She also composed a large-scale violin sonata in Rome in 1922, a direct descendant of Fauré's and Franck's sonatas. Canal's sonata is highly chromatic, but the language is always clearly rooted in tonality.

Many of her later vocal or instrumental works were written for children; others, such as the *Esquisses méditerranéennes* for piano (1930) and her settings of Paul Fort, reflect her love of French seascapes. Canal wrote her own prose texts for the cycle *Amours tristes* (1939), a work apparently inspired by her personal life. She published little after her divorce from Jamin, and ill-health curtailed her activities after World War II. The orchestration of the opera *Tlass Atka* (1922) remains incomplete, and an intended revision of her Requiem never materialized.

WORKS
(selective list)

Op: Tlass Atka (Le pays blanc) (4, P. Maudru and F. Gauthier, after J. London), begun ?1922

Vocal orch: La tête de Kenwarc'h (Leconte de Lisle), 1v, orch, 1914; Requiem, solo vv, chorus, orch, 1921; Don Juan (scène dramatique, E. Adenis), 1920 (1922)

Songs: Un grand sommeil noir (P. Verlaine) (1919); Ici-bas tous les lilas meurent (A. Sully-Prudhomme) (1920); 6 chansons écossaises (Leconte de Lisle), 1920–21; Les roses de Saadi (M. D. Valmore), 1921; Douceur du soir (Rodenbach), 1921; Au jardin de l'infante (A. Samain), 1921; La flûte de jade (F. Toussaint) (1922); 3 chants extraits du Cantique des cantiques, 1928; Le bonheur est dans le pré (P. Fort), 1928; Sagesse (Verlaine) (1931); Amours tristes (Canal), Mez, pf, 1939; 7 poèmes (C. Baudelaire) (1940); L'amour marin (Fort) (1947); many unpubd

Chbr: Sonata, vn, pf, 1922; Thème et variations, ob, pf, 1936; other pieces

Pf: Esquisses méditerranéennes (1930); other pieces

Principal publishers: Jamin, Lemoine

CAROLINE POTTER

Canale [Canali, Canalis], **Floriano** (*b* Brescia, *c*1550; *fl* 1579–1603). Italian composer. He was an Augustinian choir monk at S Giovanni Evangelista, Brescia, where he held the post of organist between 1581 and 1603. Earlier he may have been in Bologna; the preface to his *Sacrae cantiones* (1581) is signed from there. According to a note printed at the end of the *Canzoni da sonare* and ascribed to 'L'Artusi' (presumably Giovanni Maria Artusi), he had taught Bargnani, whose first book of instrumental canzonas, now lost, quoted melodic material from Canale's compositions 'to honour ... the writings of his master'. The *Canzoni da sonare* are dedicated to Count Alessandro Bevilacqua, patron of the famous Veronese *ridotto*, and each of the 19 works is further individually dedicated. The canzoni are in a variety of repetition schemes, and some are unified through skilful use of variation. According to Mischiati (*MGG1*), *Quem vidistis pastores*, from the six-voice *Sacrae cantiones*, represents the successful fusion of the traditional polyphonic motet style and the concertato style of the free canzona. Lively rhythms and rich figuration also characterize *La balzana*, which dates from about 1600 (according to Kirkendale), and is thus one of the earliest 17th-century pieces based on the *Aria di Fiorenza* bass pattern. It combines *Proportz* technique with ternary form and is for two instrumental choirs; it is not musically related to Orazio Vecchi's *L'humor balzano* in *Le veglie di Siena* (Venice, 1604), as has been suggested. By contrast, the *Missae, introitus ac motecta* are mostly in an uncomplicated post-Tridentine manner: largely homophonic, though enlivened in the longer movements by short imitative points at the beginning of each section. The edition includes settings of both the Proper and the Ordinary for three masses, including the *Missa pro defunctis*. The book concludes with a setting of the *Gaudeamus* which, in contrast to the rest, exhibits some of the contrapuntal and rhythmic vivacity of Canale's later works. His organ music, in the tradition of the Lombard school, is in the manner of Costanzo Antegnati and his followers.

Although it is clear that Canale wrote some works that are no longer extant, the evidence is vague and inconclusive: the reference in the Giunta catalogue (*MischiatiI*) to a set of four-voice Lamentations is clear, but the *canzon per sonar à tre* listed in the 1649, 1658 and 1662 Vincenti catalogues and Cozzando's reference to 'Canzoni a 3 in Venetia presso Alessandro Vincenti 1648', could be either a new publication or a later (?instrumental) issue of the *Canzonette* of 1601.

WORKS
printed works published in Venice unless otherwise stated

SACRED VOCAL

Psalmodia, 4, 5vv (1575)
Harmonica officia in triduo dominicae passionis, 4vv (1579)
Sacrae cantiones quae vulgo motecta dicuntur, 4vv (Brescia, 1581)
Missae, introitus ac motecta, 4vv (Brescia, 1588)
Sacrae cantiones, 5vv (1602), inc.
Sacrae cantiones ... liber primus, 6vv (1603)

Psalm, 5vv, 2 motets, 5, 6vv, 1590[7], 1611[1], 1613[2]
Lamentations, 4vv, lost (*MischiatiI*)

SECULAR VOCAL

Canzonette ... primo libro, 3vv (1601)

INSTRUMENTAL

Canzoni da sonare ... libro primo, a 4, 8 (1600); ed. in IIM, xiv (1989)
Ricercari di tutti li tuoni con una battaglia alla francese, a 4 (1601)
Canzoni, a 3 (1648), lost (see Cozzando and *MischiatiI*)
La balzana, a 8, *I-Bc* (see Torchi)

IAIN FENLON

Canang. Term denoting various types of gong, gong-chimes and related ensembles in parts of Indonesia, Malaysia and Brunei. In Sumatra the *canang* is a small suspended bossed gong which gives its name to a variety of ensembles. In Tanjung Pinang, Riau, the flat suspended copper gong known as *canang* (or *breng-breng*) is now obsolete. In Kelantan, Malaysia, the term refers to a small bossed gong and a gong-chime, usually made of brass (*see* MALAYSIA, §I).The *sanang* of the Palawan people in the southern Philippines is a related instrument.

Canario (i). A villancico from the Canary Islands. It is called a NEGRILLA when it depicts the music, song and dance of the black people of the islands.

E. THOMAS STANFORD

Canario (ii). An old dance from the Canary Islands. It is characterized by jumps, *zapateado* (stamping of the heels) and abrupt, violent choreographic movements, accompanied by fast music with energetic and highly syncopated rhythms. The dance was introduced into Spain as early as the 16th century and became popular on the Continent as the CANARY.

Canary (Fr. *canarie*; It., Sp. *canario*). A form of dance and music popular in Europe from the mid-16th century to the mid-18th. Two main types of music existed, an early Spanish and Italian *canario* and the later French *canarie*.

Covarrubias Horozco described the *canario* in his *Tesoro de la lengua castellana o española* (1611) as a type of 'saltarelo gracioso' that came to Spain from the Canary Islands. A piece called *Endechas de canaria* appeared in Pisador's vihuela book of 1552, and the dance was mentioned by Diego Sánchez de Badajoz in the *Farsa de Sancta Bárbara* (published in his collected works of 1554), and by Cervantes, Lope de Vega and many other Spanish writers throughout the 17th century. Discussing its origins and character, Arbeau (*Orchésographie*, 1588) noted that its 'passages are gay but nevertheless strange and fantastic with a strong barbaric flavour'.

This earlier canary often employs a short, two-phrase scheme that is relatively fixed melodically and harmonically (ex.1). Both phrases have the same harmonic progression (I–IV–I–V–I, also used by the Spanish saraband, the *villano* and the *passamezzo moderno*, or sometimes simply I–IV–V–I) and, in some cases, almost the same melody. The two phrases, each usually made up of four triple beats, are alternated and repeated in various ways, producing a strong sense of ostinato. Cesare Negri, in *Le gratie d'amore* (1602/*R*, 2/1604 as *Nuove inventioni di balli*), accompanied his description of the canary's choreography with music much like ex.1*b*, but with the C in each phrase harmonized with a VII chord instead of IV. Caroso gave examples in *Il ballarino* (1581/*R*) and *Nobiltà di dame* (1600) somewhat like those in ex.1, providing a choreography for the canary by itself, as well as appending one at the end of several groups of dances. It is a 'fiery wooing dance' with 'rapid heel-and-toe stamps' and 'noisy sliding steps' (Sutton, 1998). Shakespeare seems to refer to such a choreography in his *Love's Labour's Lost* and *All's Well that Ends Well*.

Other music examples, some of which differ from ex.1, appear in the *Moresca deta le canarie* of Barbetta (1585) and a *Canario spagnuolo* (manuscript, *I-Lg* 774) for lute, canaries for ensemble by Allegri (1618), Zannetti (1645), and G.B. Vitali (1667), and examples from 1606 to 1677 for the five-course guitar. In Spain the canary appeared in the guitar books of Sanz (1674), Ruiz de Ribayaz (1677), Guerau (1694) and Santa Cruz (manuscript, *E-Mn* 2209), and still survives as a folksong.

The French *canarie* is in 3/8 or 6/8 time and is made up of four- and eight-beat phrases with beats using the 'sautillant' figure (ex.2). Some canaries have an upbeat but most do not. Their music has no fixed melody or harmony and may be major or minor, with the free sectional structure common to most late Baroque dances (usually two repeated sections, with a variable number of bars in each). Several 18th-century writers (Walther, *Musicalisches Lexicon*, 1732; Mattheson, *Der vollkommene Capellmeister*, 1739) described the canary as a fast gigue.

Ex.1 Discant Melodies in the ostinato type of canary (transposed, where necessary, to G major)

(b) Praetorius: *Terpsichore* (1612)

(c) Van de Hove: *Delitiae musicae* (1612)

(d) *E-Mba* 1360 (1709)

(e) *F-Pa* Vm⁷ 3555 (1712)

Ex.2 Lalande: *Canarie* (1727), *F-Pa* Vm[7] 3077

The canary became popular in France from the 1660s when Lully first used it in his court ballets (*Ballet des Gardes*, Act 3; *Ballet de Flore*, Act 15; *Ballet des Muses*, Act 4; *Le bourgeois gentilhomme*, Act 1 scene i). It became one of the optional dances of the suite, appearing in compositions for solo lute (Bouvier, Denis Gaultier) and clavecin (Chambonnières, Louis Couperin, Lebègue); later it was included in ballets and operas by, for example, Campra, Destouches, Lalande, Collasse and La Coste. German composers (Gottlieb Muffat, J.C.F. Fischer, Kusser, Telemann) used it in suites for keyboard, small ensemble and orchestra, as did English composers including Purcell.

11 choreographies, including three by English choreographers, are extant in the Beauchamp-Feuillet notation (Little and Marsh). Most are difficult theatre dances employing virtuoso steps such as cabriolets. *Canaries* often appeared in pairs, for example in Lully's *Bellérophon* (1675, Act 5 scene iii; Little and Marsh, no.1320).

RICHARD HUDSON/MEREDITH ELLIS LITTLE

Canary organ. A type of bird organ. *See* BIRD INSTRUMENTS.

Canat de Chizy, Edith (*b* Lyons, 26 March 1950). French composer. After studying art, archaeology and philosophy at the Sorbonne, she entered the Paris Conservatoire, where, between 1978 and 1984, she won *premiers prix* for harmony, fugue, counterpoint, analysis, orchestration and composition. She studied composition with Malec and Ohana, and electro-acoustics with Reibel. She has been active as a violin teacher, and in 1986 she became director of the Conservatoire du XVème Arrondissement. She was made a Chevalier des Arts et Lettres in 1983.

Situated between atonality and modality, Canat de Chizy's music explores the dialectics of continuity and contrast. Her orchestral works use aleatory devices to introduce rhythmic flexibility and even on her purely instrumental works certain techniques of electro-acoustics (such as montage, loops and sound reversal) have left their mark. Harmony is also fundamental, for instance in *De noche* (1991), where noise-like sonorities alternate with elements of a more clearly harmonic or polymodal character. Her experience as a violinist has led her to explore the potentialities of string instruments, often in concertante settings (*Exultet*, 1995). While her vocal music is generally spiritual in inspiration, she has also been drawn to other kinds of texts, for instance in her lyric drama *Tombeau de Gilles de Rais* (1993), where the ambiguous nature of the central character is explored with great dramatic and musical intensity.

PIERRE MICHEL

Canavas [Canavasso], **Jean-Baptiste** [l'aîné] (*b* Turin, 25 March 1713; *d* Paris, 7 June 1784). Italian cellist and composer. He and his brother Joseph are the best-known members of this Piedmontese family of musicians who worked in Paris. In his *Confessions* J.-J. Rousseau stated that he met Jean-Baptiste in Savoy in 1732 at performances in the home of Mme de Warens in Chambéry; he mentioned that Canavas married in Paris later in the same year, but the date when he moved there is not known. Castil-Blaze wrote that a cellist by the name of Alexandre Canavasso performed in Paris in 1735, but this may be mistaken. A likelier date is 1745, the year in which he first joined the Musiciens de la Chambre du Roi. On 11 December 1747 he was accorded the succession to a seat in the 24 Violons, coming into full possession of it in 1765. He remained in the king's service until his retirement on 1 January 1779. He also performed with his brother in the Concert de la Reine. He published two sets of six

cello sonatas in 1767 and 1773 (discussed in N.J. McKenney: *The Violincello Sonatas of Giovanni Battista Canavasso (Canavas)*, thesis, U. of Kentucky, 1984).

For bibliography *see* CANAVAS, JOSEPH.

MICHELLE FILLION

Canavas [Canavasso], **Joseph** [le cadet] (*b* Turin, *c*1714; *d* Paris, 26 Sept 1776). Italian violinist and composer. Joseph and his brother, Jean-Baptiste, are often confused since they are seldom differentiated in contemporary sources and are frequently mistaken for one another or for less renowned members of the family. Because of Joseph's popularity as a performer, information on his life and works is more plentiful than for his brother. The date of his arrival in Paris cannot be determined with certainty. Castil-Blaze (*L'Opéra italien*, p.219) reported that J. Canavasso had performed at the Concert Spirituel as early as 1736. The first unequivocal reference to him is the privilege of 1739, connected with the publication of his first set of violin sonatas in Paris in the same year; the sonatas had just been published in Urbino, so it is possible that he only then arrived in Paris. The privilege refers to Canavas as *maître de musique* and member of the orchestra of the Prince de Carignan, a position which he held until 1741 when the orchestra was disbanded on the prince's death. Canavas continued to live at the residence of the Princesse de Carignan 'au Petit-Luxembourg' until 1766. In 1741 he made his first solo appearance at the Concert Spirituel; this was the beginning of a long association with this series both as soloist (until 1762) and as member of the orchestra (until 1773). Shortly afterwards he also became a member of La Pouplinière's orchestra and was principal violinist when the orchestra was dissolved on La Pouplinière's death in 1762. He also performed in the Concert de la Reine in the late 1750s and the Opéra orchestra, 1765–73; the Canavas brothers had been members of this latter organization as early as 1745. Joseph Canavas was at the height of his fame as a violin virtuoso between 1749 and 1762, when he made many solo appearances at the Concert Spirituel: two items that he played were a *Concerto de voix* by Mondonville (with Mlle Fel, 1754) and 'Spring' from Vivaldi's *I quattro stagioni* (1758). In 1757 he engraved a set of six trio sonatas by Besozzi.

In the 1760s Canavas turned from solo playing to composition and teaching, although his activities as an orchestral player continued undiminished until 1773. His major works, the lost symphony and the second set of violin sonatas (both from 1763), and the Violin Sonata in C minor (*c*1767) are from this period. His two sets of violin sonatas, separated by 24 years, are perhaps less interesting in themselves than as an indication of changing styles in the mid-18th century.

Canavas's son Charles-Augustin Canavas, a violinist, was performing in the operas and concerts of the king by 1773.

MICHELLE FILLION

Canazzi, Antonio (*fl* 1653). Italian composer. He composed the music for the opera *La Cleopatra* presented in Milan in 1653. Only the libretto survives (in *I-Mc*), by Marco Ettore Rorobella (the anagrammatic pseudonym of Carlo Bartolomeo Torre).

SERGIO LATTES

Canberra. Capital city of the Commonwealth of Australia. Designed by the American architect Walter Burley Griffin and founded in 1913, the city is an outstanding example of modern planning, and is home to some of the nation's leading cultural institutions, including the National Library, ScreenSound Australia (formerly National Gallery, Australian War Memorial, National Film and Sound Archive), National Museum, and the Australian Institute of Aboriginal and Torres Strait Islander Studies. Together, these organizations collect, preserve and provide access to Australia's most extensive collections of music-related materials. One of the most notable public monuments is the 53-bell carillon, a gift from the British government to mark Canberra's 50th birthday in 1963.

The character of the city's musical life reflects both its history and its demography. Initially the government promoted music societies as a means of overcoming social isolation for its small population of educated, middle-class public servants. The Canberra Philharmonic Society (established 1926) and Canberra Orchestral Society (1927) fused in 1928 to form the Canberra Musical Society, which was active in promoting concerts and bringing distinguished artists to the region until the 1950s. Throughout the 1930s and 40s, such organizations as the Stromberra Quartet, Canberra Male Choir, Canberra Ladies Choir, Combined Churches Choir and Canberra Band performed regularly, most often in the Albert Hall (1928). The National Eisteddfod Society was founded in 1937. The current large number of semi-professional and amateur musical organizations is a direct result of the continuing high level of participation in musical activity by the community.

The major performing organizations emerged during the 1950s when postwar construction finally secured the city's future: the Canberra Orchestral Society (1950, later the Canberra SO), Canberra Philharmonic Society (devoted to music theatre, 1951), and Canberra Choral Group (1952, later the Canberra Choral Society). In 1954 the Band of the Royal Military College, Duntroon, was established on a professional basis to undertake official duties at government and vice-regal ceremonies. The city's only significant operatic organization has been the Canberra Opera Society, later Canberra Opera, founded in 1970 and forced to close in 1984 in the wake of a financial scandal.

Established in 1965, the Canberra School of Music (amalgamated with Canberra School of Art in 1988, and since 1992 part of the Australian National University) has been home to many fine performers (including the Canberra Wind Soloists), jazz musicians, musicologists, teachers and composers, notably Don Banks, Donald Hollier and Larry Sitsky. Under founding director Ernest Llewellyn, the school created a new focus for national and local musical activities; its staff continues to form the

core of the city's musical life and music education. Among organizations catering for young people, the Canberra Youth Orchestra Society (1967), Canberra Children's Choir (1967) and Woden Valley Youth Choir (1969) have all achieved a national reputation and have undertaken numerous international tours.

The Canberra Theatre Centre (1965) was the first purpose-built arts complex operating in Australia and from 1976 has been complemented by Llewellyn Hall, the School of Music's fine 1440-seat concert hall. Both established Canberra on the regular touring circuit for the national performing arts companies and for Musica Viva, the ABC orchestras and guest artists, and the Australian Chamber Orchestra. The diversity of the musical scene, increasingly generating its own professional activity and supporting numerous youth, folk, jazz, indigenous and rock groups, as well as national folk and multicultural festivals, reflects an increasingly diverse community whose endeavours are often enriched by the embassies and high commissions.

ROBYN HOLMES AND PETER CAMPBELL

Cancan (Fr.). A dance that came into vogue in the music halls of Paris in the 1830s, apparently originating in Algeria. It is usually performed by a line of girls in frilly dresses and involves a good deal of high kicking and the splits. Because of the considerable display of female leg it was often considered disreputable. The music is in a lively 2/4 time, being derived from the quadrille or galop. The best-known example is in Offenbach's *Orphée aux enfers* (1858), others being found in Lehár's *Die lustige Witwe* (1905) and Cole Porter's *Can-Can* (1953).

ANDREW LAMB

Canção de lamento (Port.). *See* ENDECHAS.

Cancineo [Cancino], **Michelangelo** (*b* Viterbo, *c*1550; *d* after 1608). Italian composer. According to the title-page of his *Primo libro de madrigali a quattro, cinque, sei & otto voci* (Venice, 1590[21]) he was at that time *maestro di cappella* of Viterbo Cathedral. He dedicated this print, which includes six works by G.B. Locatello, to his patron Onofrio Santacroce; several of the madrigals are in Santacroce's honour, one of them, *Alle caste fiamelle*, celebrating his wedding. There is also a setting of a sestina in seven sections and an eight-part echo piece for double choir that shows the influence of the Roman school in its somewhat old-fashioned use of contrapuntal techniques. A further connection with Roman circles may be seen in the inclusion of two four-part madrigals by him in Giovanni Arascione's anthology *Nuove laudi ariose* (Rome, 1600[5]), where they are supplied with sacred texts. Cancineo's sacred works survive only in his *Motectorum quinque vocum, liber secundus, addita parte pro organo* (Venice, 1608), which was evidently preceded by a now lost first book.

DAVID NUTTER

Canción (Sp.: 'song'). A term used by poets and musicians up to the 15th century more or less interchangeably with 'cantiga', *cantar*, the Galician-Portuguese *canson*, etc., and from the 17th century to the 19th with *cantar*, *oda*, *poema* etc. From about 1450 to about 1530 its meaning tended to be restricted to a refrain song, like the villancico in its characteristic *ABBA* musical form but often more contrapuntal and usually based on a more serious poetic theme. Encina's contention that the VILLANCICO refrain had fewer than four and the canción refrain more than four lines of poetry is true of most of his own pieces but noticeably less true of other compositions in his day. The compiler of the table of contents of the Cancionero Musical de Palacio, working about 1500, apparently abandoned an initial plan to place canciones in a different category from villancicos, thereby reflecting a general

Cancan as danced at the Moulin Rouge, Paris: photographic montage, c1889; the dancers include La Goulue (centre)

tendency to look on so-called 'fixed' forms as flexible. From the 1530s, Spanish poets often turned to Italian forms in their various combinations of seven- and 11-syllable lines, including the canzone, and Spanish musicians such as Mudarra and Daza soon began to use the word 'canción' to designate a setting of an italianate poem in Castilian. Some 16th-century instrumental composers, for example Luys de Narváez and Venegas de Henestrosa, labelled arrangements or intabulations of French chansons 'canción' as well. In the 16th century and occasionally in the 17th 'canción' was sometimes used synonymously with CHANZONETA, and from the late 19th century, in the hands of the poets Antonio and Manuel Machado and García Lorca, it came to refer to more popular forms of song.

In 20th-century Latin America, the 'nueva canción' appeared in the 1960s, initially as an expression of social and political resistance in Chile, led by Violeta Parra and Victor Jara. Subsequently this movement spread to Argentina, Cuba, Central America and Mexico, becoming a symbol of Latin American cultural identity, as represented by singers such as the Cuban Silvio Rodríguez and groups such as the Andean Inti Illimani.

JACK SAGE/SUSANA FRIEDMANN

Cancioncilla (Sp., diminutive of *canción*). A term used in the 17th century to designate a short song of VILLANCICO type. *See also* CANCIÓN.

Cancionero (Sp.: 'songbook'; Port. *cancioneiro*). The term has in practice been used from the 15th century more often to designate a collection or anthology of poems without music, whether intended for singing or not. Indeed, the words 'cancionero' and 'cancioneiro' did not begin to appear in the titles of songbooks with music until the 19th century. Hence, some Spanish scholars now use the term 'cancionero musical' for a songbook with music.

1. Cancioneros without music. 2. Cancioneros with music.

1. CANCIONEROS WITHOUT MUSIC. The earliest Castilian collections now designated 'cancioneros' are two 15th-century anthologies of learned poems, one compiled in 1445 by Alfonso de Baena primarily for Juan II of Castile, the other a similar compilation made by Lope de Stúñiga for Alfonso V at the Spanish court of Naples about 1458. Neither was originally entitled 'cancionero', but the compilers must have had the classical link between poetry and music in mind since some of the poems are expressly described as having been set to music. The word 'cancionero' was first printed in a title in the *Cancionero* (Salamanca, 1496) of Juan del Encina. This collection too contains not a note of music, but the word was presumably chosen for the title to imply that the poems of this poet–musician were singable; many of them appear with music, often by Encina himself, in the Cancionero Musical de Palacio (see §2 below) and other songbooks of the 16th century. An impending divorce between poetry and music was clearly signalled in 1511 with the printing at Valencia of the most celebrated of the non-musical cancioneros, Hernando de Castillo's *Cancionero general*, and at Lisbon in 1516 by Garcia de Resende's primarily Portuguese *Cancioneiro geral*. Castillo's *Cancionero* produced a remarkable number of offshoots in the 16th century (see Rodríguez-Moñino, A1973). These too nearly always offered poems to be read as poems, though there were a few attractive exceptions containing lyrics expressly for singing or dancing, such as the *Cancionero de galanes* and *Cantares de diversas sonadas* (*c*1530–35).

Most 15th- and 16th-century cancioneros were compiled for learned or aristocratic readers. More mundane collections devoted exclusively to ballads (*romances*), intended for a wider public, began to appear with the *Cancionero de romances* (Antwerp, *c*1548). Here again there was no music, probably because those expected to use the book (possibly Spanish soldiers in Flanders) would be able to recall the simple, traditional tunes easily enough. Such ballad anthologies were often printed under appetizing titles – for example *Silva de varios romances* (Zaragoza, 1550) – but from about 1580 a few titles began to display the word 'romancero' ('ballad book') for anthologies of both traditional-type ballads and new more contrived kinds. The word 'romancero' has been widely used ever since to denote a collection of Spanish ballads of any kind, with or (more often) without music. M. de Madrigal's monumental *Romancero general* (Madrid, 1600–14) and the highly successful *Romances varios de diversos autores* (Zaragoza, 1640–64), for instance, were collections of new-type ballads that were primarily to be read as poems and were directed to a mixed public. Some anthologies of refrain songs, however, presented indiscriminately as villancicos or as *romances* to be sung to known tunes, were still printed in the 17th century; notable examples were the *Laberinto amoroso* (Zaragoza, 1618–38) and the *Primavera y flor* (Madrid, 1621–59).

2. CANCIONEROS WITH MUSIC. Although songbooks complete with music are at least as frequent in Spain and Portugal from the late 15th century as in other European countries, monodic collections were not compiled until the 17th century (for example *E-Mn* M3880–82, *c*1700). Important monodic songs appeared in the vihuela tutor books from 1535 (when Luys Milán brought out his *El maestro*), but their inclusion was incidental to the illustration of vihuela technique and not a consequence of any particular desire to compile cancioneros. From about 1620, guitar ciphers began to appear over the words of certain lyrics of some anthologies (see Acutis, A1971 and Wilson, A1973). These ciphers were numbers or, later, letters, indicating chords to be strummed as accompaniment to the tunes of the songs in question (Sage, A1984).

The earliest of the polyphonic songbooks, compiled between about 1480 and 1532, are related to each other insofar as they share some pieces. They are the Cancionero Musical de la Colombina (*E-Sc* 7–1–28, *c*1490), the Cancionero Musical de Palacio (*Mp* 1335, *c*1505–20), the Cancionero Musical de Barcelona (*Bc* M 454, *c*1500–32) and the Cancionero Musical de Segovia (in *SE*, early 16th century). All, especially the Cancionero de Palacio, contain some partsongs based on tunes (usually in the top part) which probably existed before 1450 (*see* ROMANCE, §1). The Cancionero de Montecassino (*I-MC* N 871, *c*1480–1500) falls into this early group as a Spanish cancionero only because it was culled from the musical repertory of a Spanish dominion, the Aragonese court of

Alfonso V at Naples, and because a handful of its contents are Spanish or Catalan songs. The Cancionero de la Colombina contains 95 pieces, the majority three- or four-part art songs of a simple kind based on texts dealing with courtly love; nearly all of them are villancicos. The most important of the early songbooks is the celebrated Cancionero de Palacio, representing the musical repertory of the Spanish court at the time of the Catholic Monarchs, Ferdinand and Isabella. 458 of the original 548 compositions have survived; most are for three or four voices and, again, most are villancicos, about 50 are canciones, and about 40 are *romances*. There are many more or less refined settings of courtly texts similar to those in the Cancionero de la Colombina, but there are also as many with folklike texts and tunes, though the distinction between the courtly and the popular is by no means clearcut. Indeed, one of the most striking features of this and most other early cancioneros is the way poets and musicians often produced a happy blend of plebeian and courtly elements. Religious songs are, as usual, in the minority. The most favoured composer is Encina, followed by Francisco Millán, Francisco de la Torre, Pedro de Escobar and Francisco de Peñalosa. The predominance of Spanish songs shows that the collection served as a testimony to native Spanish artistry; but there are a dozen pieces in Italian and French, and three are settings of Spanish texts composed by the Fleming Johannes Wreede including his celebrated *Nunca fue pena mayor* in pride of place at the head of the cancionero. On the other hand, Spanish texts appear in only 38 of the 204 pieces in the Cancionero de Segovia and in only 25 of the 122 in the Cancionero de Barcelona; the frequency with which foreign composers appear in these and other cancioneros of the 16th century as well as in the Cancionero de Valladolid (*E-V* M 255, 1650) in the 17th, added to the number of collections of foreign compositions compiled in Iberia in the 16th century (*see* CHANSONNIER (i)), shows that Spanish and Portuguese Renaissance composers were as aware of musical developments in the rest of Europe as they were of their national heritage. Moreover, recent studies of the frequency of Iberian song in the printed collections of neighbouring countries have shown that this influence was mutual. The last of the cancioneros related to the early cycle centred on the Cancionero de Palacio are the Cancionero de Elvas (*P-Em* 11973, *c*1550) and the Cancionero del Duque de Calabria (Venice, 1556). Although it was copied in the mid-16th century, 14 of the three-part villancicos in the Cancionero de Elvas are common to the Cancionero de Palacio, and most of the others are comparable in style. The Cancionero del Duque de Calabria probably owes its judicious selection of 54 villancicos to the fact that it was intended as some kind of prestige volume in the Duke of Calabria's circle; all are in Spanish, but six are by Gombert. Though the selection ranges over the first half of the century, many of the songs point to the madrigalesque style signalled more clearly by Juan Vásquez from 1551.

By the turn of the century madrigalism had led on to a search for new forms and rhythms often linked with provocative new dances such as the zarabanda and the *seguidilla* on the one hand and quasi-recitative on the other. Whereas, up to about 1570, cancioneros were built on a good deal of traditional material, 17th-century songbooks, beginning with such as the Romancero Musical de Turín (*I-Tn* Ris.Mus.1–14, *c*1600), *Romances y letras a tres vozes* (*E-Mn* 1370–72, *c*1600) and the Cancionero Musical de Sablonara (*D-Mbs* E 200, *c*1625) – the last-named drawn from the repertory of the court of Philip III – show how musicians grew so fascinated by novelty that they came close to making a clean break with tradition. One of the external features retained was the refrain form, now indiscriminately designated villancico and *romance*, though the restless new melodies are generally very different from the old four-phrase ballad tunes. The largest and in many ways the most interesting of the 17th-century cancioneros, *Libro de tonos humanos* (*E-Mn* M 1262, 1656), contains 226 partsongs by Spanish and Portuguese composers, notably Manuel Correa and Manuel Machado, active in the first half of the century. The new cantata-like villancico is exemplified by other collections (e.g. *Mn* M 3882). Another significant trend, the demand for 'hit' songs taken from the contemporary musical theatre, found an outlet in manuscript cancioneros (for instance *Mn* M 3880 and *I-Vnm* IV 470, both *c*1700, and *E-Mn* M 2618, *c*1730). These 17th-century sources received renewed attention in the last two decades of the 20th century, first by the modern editions of cancioneros and of songs for the theatre by Lope de Vega, Caldéron and Góngora, but also by a marked emphasis on the context and performance of the cancionero repertory. The *Libro de tonos puestos en cifra de arpa* (*Mn* M 2478, 1706) demands attention as a judicious selection of 17th-century Spanish songs arranged as harp solos. Single-composer cancioneros are rare. Apart from *Mn* M 3880, which is devoted mainly to partsongs by Juan Hidalgo, the most notable example is the collection of monodies with guitar accompaniment (*GB-Cfm* MU4, *c*1700) by José Marín, a good representation of the increasing trend towards music intended for domestic use.

Until the 19th century, Iberian musical cancioneros, for all their interest in traditional or popular words and tunes, were collections of compositions by courtly or professional musicians made without any specifically folklore intentions, though from the late 16th century they were aimed at a progressively wider public. The tunes in Salinas' *De musica* (1555) are sometimes presented as a folklore cancionero, though he in fact included melodies of many kinds simply to illustrate his arguments, not intentionally as a collection of traditional music. Collections of folksongs, without music at first, are a feature that came in the 19th century with the growth of interest in the art of the people, although – according to Eduardo Martínez Torner – the first man to plan such a collection, José González Torres de Nava, approached the Spanish government as early as 1799 for funds to help him transcribe popular dances and songs. By the 1880s a number of individual folktune collectors were at work, led by José María Valera y Silvar, Sixto Córdova y Oña, José Inzenga and Antonio Machado senior ('Demófilo'), as well as scholars and composers of the stature of Francisco Asenjo Barbieri and, later, Felipe Pedrell. These pioneers and those who followed them understandably adopted a variety of unreliable methods, although the selection was usually by region or village. The first to adopt disc recording in Spain is reported to have been Torner (see Katz, B1974), but the effective pioneer in scholarly techniques was Kurt Schindler. In 1929 he took down the tunes of 371 songs in the province of Soria, assisted by native Spaniards in recording the words; in 1932 and 1933 he recorded 369 more on an

aluminium disc recorder, and these served as the basis of his invaluable *Folk Music and Poetry of Spain and Portugal* (1941). Many cancioneros have been compiled since then, ranging from those by Manuel García Matos, which are at least as reliable as Schindler's volume, to those published by the Falangist movement, which contain songs freely harmonized and adapted. The collection of traditional song in the Iberian peninsula in the Hispanic diaspora (as sung by the descendants of Judeo-Spanish communities in north Africa, the Mediterranean, the Middle East and the Americas), the publication of its texts and music and, more recently, recordings are complemented by a move towards the systematic study of the repertory throughout the Spanish-speaking world.

EDITIONS OF CANCIONEROS WITH MUSIC
(*selective list*)

Cancionero de Montecassino, *I-MC* N 871, *c*1480–1500, ed. I. Pope and M. Kanazawa, *The Musical Manuscript Montecassino* (Oxford, 1978)

Cancrizans (Lat.: 'crab-like'). By tradition *cancrizans* signifies that a part is to be heard backwards (*see* RETROGRADE); crabs in fact move sideways, a mode of perambulation that greatly facilitates reversal of direction.

Candael, Karel (*b* Antwerp, 4 Sept 1883; *d* Rotterdam, 27 March 1948). Belgian composer and conductor. He grew up in a family of folk musicians and studied piano and music theory at the Antwerp Conservatory with Blockx, Emiel Wambach and Mortelmans. In 1904 he founded the mixed choir Zangkapel and from 1905 to 1914 organized the Liederavonden voor het Volk. In 1907 he received an honourable mention for his cantata *Genoveva van Brabant* in the Belgian Prix de Rome. Two years later he was appointed conductor of the Royal Flemish Opera. From 1919 he taught at the Antwerp Conservatory. He conducted many large-scale oratorios and cantatas by Flemish composers, notably Peter Benoit. From 1936 he directed the NIR (the Flemish music section of Belgian Radio), but a nervous breakdown obliged him to retire in 1938. He died of a heart attack during a rehearsal in Rotterdam. Until 1920 he wrote mostly vocal music and was influenced by Wagner and Benoit. Later he established his personal style in the exuberant dance music of his ballets. His inventive orchestration links him with the Russian School and Stravinsky. He uses colourful effects in fast tempos, while the more introverted pieces, reminiscent of Debussy, are full of subtlety.

YVES KNOCKAERT

Candeille, (Amélie) [Emilie] **Julie** [Simons, Julie] (*b* Paris, 31 July 1767; *d* Paris, 4 Feb 1834). French composer, librettist, singer, actress, instrumentalist and author. She was the most successful of a small group of women opera composers and librettists in revolutionary France. Her father, Pierre Joseph Candeille, was her principal teacher; early on, he saw her talents as a way of compensating for his own flagging career, and eagerly presented her to the public as a child prodigy. By 1780 she had appeared before the king and in public as a singer, pianist and harpist. At 14 she was engaged as a singer at the Opéra and one year later took the title role in Gluck's *Iphigénie en Aulide*. In 1783 she sang Sangaride in Niccolò Piccinni's *Atys*. In August that year she made her fortepiano début at the Concert Spirituel, performing a concerto by Clementi, in which 'she demonstrated a most brilliant and assured technique', according to the *Journal de Paris*. The following March she performed one of her own concertos.

Candeille took up acting as a way of providing for her family. In September 1785 she made her début at the Comédie-Française; she received mixed reviews for her stage performances, and left the troupe in 1790 for a tour of the northern provinces. It was during this period that she composed her first dramatic music: *airs* for the plays *Le couvent* (1790) and *La jeune hôtesse* (1791). In 1790 she joined the Théâtre de la République, where she made a sensation two years later with *Catherine, ou La belle fermière* (1792), a comedy for which she wrote the words and music and took the title role. This work was her greatest success; it was performed over 150 times during the next 35 years, and also enjoyed great acclaim in the provinces and in the Netherlands.

Catherine is about a young musician and writer, who – like Candeille – finds herself in difficult personal circumstances and seeks solace in her independence, her harp and her writing, and only reluctantly gives in to romantic love. This autobiographical element is the most distinctive aspect of Candeille's dramatic works. Some critics responded positively to the directness of communication, others criticized her for being too self-absorbed.

In 1794 she married Louis-Nicolas Delaroche, a military doctor, and produced *Le commissionnaire* at the Théâtre de l'Egalité. *La bayadère* opened under her name in January 1795 at the Théâtre de la République, but was the subject of a snide review in the *Journal de Paris*, which declared the comedy had met with 'such a mixture of applause and murmuring that it would be impossible to give an accurate account' of it; Candeille replied in an open letter with passion and eloquence. Her two-act *opéra comique Ida, ou L'orpheline de Berlin* (1807) elicited critical reviews also, from the *Journal de l'Empire* and the *Journal de Paris*.

Candeille married Jean Simons, a rich Belgian, in Brussels in 1798 (following her divorce from Delaroche a year earlier). However, they separated in 1802 and she returned to Paris, where she gave piano lessons and published music, essays, memoirs and several substantial historical novels. She sought political asylum in England during the 100 Days, appearing in concerts with J.B. Cramer, Viotti and Lafont in London, but returned to Paris in 1816, having been granted a pension of 2000 francs by Louis XVIII. In 1822 she married the painter Hilaire-Henri Périé de Senovert and they settled in Nîmes.

After his death in 1833 she returned to Paris for the last time, dying of apoplexy early the following year.

Candeille advocated the supremacy of melody and simple harmony. *Catherine*, her only extant stage score, makes effective use of rustic colour, especially in the overture and march. Her *airs* were in the style of her idol, Grétry, and her piano music, composed for her own performances, is marked by brilliance and virtuosity. Throughout her life she promoted the careers of other women musicians. While in London, she acted as an advocate for Sophie Bawr, and she dedicated many of her own works to musicians such as Hélène de Montgeroult and Pauline Duchambge.

WORKS

all printed works published in Paris

STAGE

first performed in Paris, words and music by Candeille unless otherwise stated

Le couvent, ou Les fruits du caractère (1, P. Laujon), Nation, 16 April 1790

Catherine, ou La belle fermière (comédie, 3), République, 27 Nov 1792 (1793), excerpts arr. and pubd separately; 3 nos. ed. in Schleifer and Glickman, iv (1998)

Bathilde, ou Le duo (comédie), République, 16 Sept 1793

La jeune hôtesse (comédie, 3, Carbon-Flins), Français, 24 Dec 1791

Le commissionnaire (comédie, 2), Egalité, 27 Nov 1794

La bayadère, ou Le Français à Surate (comédie, 5), Paris, République, 25 Jan 1795

Ida, ou L'orpheline de Berlin (oc, 2), 19 May 1807

Louise, ou La réconciliation (comédie, 5), Comédie-Française, 14 Dec 1808

OTHER WORKS

Vocal: Rose d'amour, le chant nocturne et 4 autres romances nouvelles, pf acc., op.10 (after 1802); Arsenne, ou L'épître dédicatoire, 3 romances et une chansonnette, op.11; Morceau de musique funèbre en l'honneur de Grétry, 1813; Cantique des Parisiens, 1–3vv, pf (1814); other chansons and romances, some pubd in contemporary journals

Orch: Conc., pf/hpd, orch/str qt, op.2 (1787); ed. in Schleifer and Glickman, iii (1998)

Pf: 3 sonates, vn ad lib, op.1 (1786); Duo, 2 pf, op.3, 1793, in Journal de pièces de clavecin, no.123 (1794); 2 sonates, op.4, lost; Grande sonate, op.5 (1798); Trio ou nocturne, pf, vn, vc, op.11 (1815); Grande sonate, op.6, lost; 2 grandes sonates, pf/hpd, op.8 (n.d.); Nouvelle fantaisie facile et brillante, op.13; Duo, A, 2 pf (n.d.); 7 variations sur l'hymne de la nativité, Théme Portugais (n.d.); other fantasias and variations mentioned by Fétis, mostly lost

JULIAN RUSHTON, JULIE ANNE SADIE/ROBERT ADELSON, JACQUELINE LETZTER

Candeille, Pierre Joseph (*b* Estaires, 8 Dec 1744; *d* Chantilly, 24 April 1827). French composer and singer, father of Julie Candeille. He was educated at St Pierre, Lille. He joined the chorus of the Paris Opéra as a *basse-taille* in 1767, and that of the Concert Spirituel in 1769, holding both places until 1781 except during 1771–3 when, probably after quarrelling with the Opéra director Dauvergne, he left Paris for Moulins. His daughter asserted that he was director of the Concert de Moulins, and that he spent some of this period in Italy and Germany. From 1777 Candeille had ballets and divertissements performed at various theatres including that of the Duke of Orléans, the Comédie Française and the Opéra. He also had considerable success at the Concert Spirituel with his motets and, in 1784, with his First Symphony. His first major stage work was *Laure et Pétrarque* (1778), which failed partly because of Moline's text. From 1784 he devoted himself almost entirely to composition, although his career was marked by failure as an opera composer; only *Castor et Pollux*, which received 130 performances between 1791 and 1800, achieved real success. He rejoined the Opéra as choirmaster (1800–02, 1804–5) and then retired to Chantilly with a pension of 1500 francs, which was continued under Louis XVIII. He received two additional gratuities of 600 francs when *Castor et Pollux* was revived for 22 more performances between 1814 and 1817, after the failure of Winter's opera of the same name.

Candeille was an eclectic composer who conformed easily to prevailing fashions, and showed more dramatic and scenic sense than musical originality. He drew his operas from mythical, historical, exotic, revolutionary (*Brutus*) and contemporary subjects; but even the *Marseillaise* could not rescue *L'apothéose de Beaurepaire*, which was at least performed, if only twice. Usually his operas passed the preliminary stage of acceptance but were rejected after the music had been written because of their poor librettos; Candeille's extensive revisions bore no fruit. *Danaé* was revised three years after its initial rejection, *Roxane et Statira* as late as 1814–17, while *Ladislas et Adélaide* was withdrawn after 22 rehearsals. *Pizarre*, one of his few major works to be performed, was accepted three years before its first presentation in 1785. It is a spectacular and rather cumbersome opera, more effective in scenes, choruses and dances than in formal arias. The attractive instrumentation includes use of castanets for the Spaniards, and of two horns in different keys (Act 4). The impressive dream narration of Act 1 was probably modelled on that of Gluck's *Iphigénie en Tauride*, which may also have influenced Candeille's use of exotic styles and instruments to characterize different peoples. The recitative was considered dull, however, and *Pizarre* had only nine performances. In *Castor et Pollux*, Candeille used a few selected passages from Rameau's original, rescoring it to provide some consistency of texture with his own, far larger contribution. At a time when heroic opera was hardly fashionable, its success was outstanding.

Although virtually all of Candeille's religious music is lost, contemporary comments indicate that his motets

became increasingly italianate. His later Mass and *Domine salvum*, performed in St Eustache, made use of the large forces then in favour.

WORKS

STAGE

first performed in Paris unless otherwise indicated

Les saturnales, ou Tibulle et Délie (ballet entrée, L. Fuzelier), Duc d'Orléans, 1777 [new music to a ballet by C. de Blamont]

Les curieux indiscrets (divertissement, J.-G. Noverre), Comédie Française, 1778

Les deux comtesses (divertissement, Noverre), Comédie Française, 1778

La provençale (ballet entrée, 1, J. de La Font), Opéra, 8 Nov 1778, *F-Po* [new vocal music to an opera by J.J. Mouret]

Laure et Pétrarque (pastorale-héroïque, 1, P.-L. Moline), Marly, Royal, 1778; rev. Opéra, 1780, *Po*

Pizarre, ou La conquête de Pérou (tragédie lyrique, 5, C.P. Duplessis, after Voltaire: *Alzire, ou Les américains*), Opéra, 3 May 1785; rev. version 1791, *Po*, excerpts pubd

Castor et Pollux (opéra, 5, P.J.J. Bernard), Opéra, 14 June 1791, *Po*, excerpt (Paris, n.d.) [rev. of Rameau's opera]

La patrie reconnaissante, ou L'apothéose de Beaurepaire (opéra, 1, [?J.-J.] Leboeuf), Opéra, 3 Feb 1793, *Po*

Unperf.: Les fêtes lupercales (pastorale-héroïque), 1777; L'Amour et Psyché, Bacchus et Erigone (opéra) [rev. of Acts 2–3 of Mondonville: Fêtes de Paphos], 1780; Thémire (opéra), *c*1781; Lausus et Lydie (opéra), 1786; Les jeux olympiques (opéra), 1788; Ladislas et Adélaide (opéra), 1791; Roxane et Statira, ou Les veuves d'Alexandre (tragédie lyrique), *c*1792; Brutus (opéra), 1793; Danaé (opéra), *c*1796; Tithon et l'Aurore (opéra), *c*1796: Ragonde (pastorale-héroïque), *c*1798; Pithys (pastorale-héroïque); other airs de ballet

JULIAN RUSHTON

Candi, Cesare (*b* Minerbio, nr Bologna, 5 March 1869; *d* Genoa, 29 Sept 1947). Italian maker of violins, mandolins, guitars and other string instruments. In 1884, after his father's death, he went to work with his brother Oreste (1865–1938) at the workshop of Raffaele Fiorini in Bologna. Around 1888 he again joined his brother, who now worked for the Fratelli Barberis, a mandolin and guitar making firm, in Genoa. Cesare set up on his own around 1892 and later began to make violins, probably having learned from Eugenio Praga (1847–1901) and Enrico Rocca (1847–1915), who were also working in Genoa.

Candi's style, which underwent slight but significant changes in the course of his long career, is easily recognizable. His work is clean, if at times a little 'cold'. He used a very personal building technique which he later passed on to his many students. An unusual aspect of his violin making technique was his use of linings cut from one piece of wood (like a guitar) that passed over the blocks. The channelling is always very deep and marked (at times even exaggerated). The varnish is generally yellow gold or red-orange in colour, and of variable consistency. He used two different labels during his career, and a brand, C. CANDI GENOVA, which is usually inside the instrument. He made many elaborately inlaid instruments (violins, guitars, violas d'amore, etc.) with great technical skill and taste; these have been rather more appreciated by collectors than players. He received prizes at the exhibitions in Milan (1906), Bologna (1907) and Cremona (1937). A full account of his career is given in E. Blot: *Un secolo di liuteria italiana 1860–1960/A Century of Italian Violin Making* (Cremona, 1994).

ERIC BLOT

Candido (da Montereale), Serafino (*b* ?Montereale; *fl* 1571–2). Italian composer. He was probably born in the province of L'Aquila (in Abruzzo). He may have worked in Augsburg, for he dedicated his *Delle mascherate musicali* for three, four and five voices (Venice, 1571) to Ridolfo Tradel, a young nobleman of that city (the dedication is signed from Venice); moreover, his book of *Concenti nuovi* (Venice, 1572), now lost, is listed in the 17th-century inventory of the Augsburg Kantorei St Anna. The homophonic textures, short passages in sesquialtera and lively declamatory figures of the nine songs in this volume are in the somewhat old-fashioned style of the mascheratas composed for Carnival festivities in Naples and Venice at mid-century. A variety of imploring lovers are represented: milk vendors, soap makers, pilgrims and, in *Urania con Calliope*, musicians. The volume also contains 18 villanellas set in ternary forms, and seven four- and five-part madrigals. Each composition bears a fanciful title, e.g. *La monacella*, *La fanciulla insubria*, *La Cecca ciacca*, *La ninfa Naria*, in keeping with the composer's stated purpose: to delineate amorous encounters with young women of all kinds.

DONNA G. CARDAMONE

Candombe. A dance and song genre of Uruguay. The word 'candombe' (not to be confused with Brazilian *camdomblé*) has had various different but related meanings throughout the 19th and 20th centuries. In the colonial era it denoted the musical practices of the black communities; from the 1930s onwards it has described phenomena associated with the *llamada* (drum call) of the *tamboriles*, while in modern times it has designated a song whose rhythm is compatible with the drummed *llamada* so that it can be superimposed over it.

During the 1940s the term had two further meanings: the first as a form conserved by the *conjuntos lubolos*, black societies in the official Carnival celebrations of Montevideo (together with *milongón* and other Afro-Brazilian or Afro-Cuban genres); the second is associated with the 'traditional', mainly white tango orchestras (especially those of the River Plate), whose repertory – particularly its 'milonguero', or festive, aspect – was

readily compatible with the drummed rhythms of the *llamada* of the *tamboriles*.

In the 1950s, when the tango *candombe* trend was in decline, a third *candombe* type emerged in the repertory of dance bands strongly influenced by commercial Afro-Cuban dance music, such as those led by Amando Oréfice (the Lecuona, later Havana, Cunam Boy), Dámaso Pérez Prado and Xavier Cugat. Pedrito Ferreira (Pedro Rafael Tabares, 1910–80), with his Orquesta Cubanacán, became known as the 'Candombe King' as a result of his *Birincunyamba*, an erstwhile carnival troupe song that became an anthem for the Montevidean black community in 1956.

From the mid-1960s to the early 70s the *candombe* evolved further with the development of a fusion between the *candombe* of the *conjuntos lubdos* and of the 'tropical' dance bands with influences deriving from principally from jazz, but also from rock, Brazilian *bossa nova* and even Indian *tabla* drums as popularized by the Beatles.

The black composer and singer Rubén Rada was one of the most prominent innovative musicians with the singer, guitarist and composer Eduardo Mateo (1940–90). For a short period in the mid-1960s they established El Kinto, a rock-*candombe* fusion band that exerted a key influence within the rich creative movement in Uruguay of the period. As a result of subtle racial prejudice at the time, despite the influence of his band Tótem and his recordings, Rada remained a cult figure, but with a small audience, until the 1990s, since when his lyricism and vocal virtuosity has attracted a wider following. Other musicians following in his wake included rock virtuosi Hugo Fattoruso and and his brother Osvaldo (George), who with Hugo (Ringo) Thielman, formed the cult band Opa.

During the repressive period of military dictatorship (1967–85), another group of performers developed a new way of performing *candombe* with guitar instead of the *tamboriles*, or drum, to accompany sung *candombe* by musicians (including Los Olimareños and Alfredo Zitarrosa (1936–89)), who were associated with a new popular song movement whose roots lay in folk music. From the mid-1970s onwards this strand was further cultivated by younger musicians such as Pajarito (Carlos) Canzani while new musical developments came in particular from groups such as Los Que Iban Cantando, Rumbo and singer Leo Maslíah. In the 1980s Jaime Roos (*b* 1953) enjoyed enormous success by fusing together different *candombe* currents, notably the *llamada* drums with solo guitar, becoming one of the most popular musicians since the tango star Carlos Gardel from the 1920s and Los Olimareños in the 1960s. By the mid-1980s with his band Repique, Roos was creating a new dance music, working with the older folk musician El Sabalero (José Carbajal, *b* 1944) who, like many others of his generation, had returned from a long period of exile.

CORIUN AHARONIAN

Candonio, Floriano (*b* Cividale del Friuli; *fl* 1546). Italian composer. His single volume of madrigals (Venice, 1546) has a preface in which he expressed the hope that his work might reach the hands of 'Donne & Cavallieri' who delight in music. Several of the pieces, written *a voci pari*, were evidently intended for 'cavallieri' alone. The music is for the most part written in a declamatory chordal style with steady rhythmic movement, strongly resembling the equivalent vein in the madrigals of Verdelot.

JAMES HAAR

Cangé Chansonnier (*F-Pn* fr.846). *See* SOURCES, MS, §III, 4.

Cangiasi, Giovanni Antonio (*b* Milan; *d* in or after 1614). Italian composer and organist. He was a Franciscan friar, organist at Vercelli Cathedral in 1590 and at S Francesco, Milan, in 1602; in 1607 and 1611 he was based at the abbey of his order in Locarno. By 1614, when he published his *Scherzi forastieri*, he had become organist at the Chiesa maggiore in Castelnuovo Scrivia, near Voghera.

The part-books of the three-voice *Sacrae cantiones* are dedicated to Giovanni Lussio, a high-ranking official at the Gonzaga court, while the score that was issued with them is dedicated to Francesco Trevano, a member of the local nobility, and bears his arms on the title-page. After an opening sequence of motets for performance on specific saints' days, the book passes to works of more general relevance and finishes with an eight-voice *Magnificat*. His *Psalmodia*, dedicated to the Apostolic Nuncio, whose coat of arms appear on the title-page, makes widespread use of falsobordone writing and concludes with three *Magnificat* settings in different modes. The *Melodia sacra*, published in the following year, includes two dialogue motets, a piece celebrating the life of Carlo Borromeo and his connections with Milan, and *Udite verbum Domini* in which passages for instruments interrupt the vocal dialogue in a style that, in his explanatory remarks to the piece, Cangiasi compared to that of the *canzon francese*. He further explored this manner of writing in the *Scherzi forastieri*, his only volume of purely instrumental music. Some of the descriptive and fanciful titles of these pieces derive from the well-known secular tunes that appear sometimes in modified form, in one or more of the instrumental parts but most refer to their dedicatees. Some of the writing is smooth and imitative, but many of the pieces are multi-sectional and more disjointed, with predominantly homophonic textures. Cangiasi's *Scherzi* are firmly in the Milanese tradition of instrumental canzonas that began in about 1580 and continued until the third decade of the 17th century. Written for four instruments with equal ranges, they are mostly multi-sectional; most make some use of thematic variation. In keeping with a practice that had become increasingly common since the publication of Viadana's *Cento concerti ecclesiastici* (Venice, 1602), Cangiasi's *Scherzi* was issued with a score which duplicates the instrumental parts. The 11 madrigals in the Foá manuscript were probably intabulated from the now lost book of madrigals listed in Tini's catalogue of about 1596 (*MischiatiI*, IV:97).

IAIN FENLON

Caniglia, Maria (*b* Naples, 5 May 1905; *d* Rome, 15 April 1979). Italian soprano. She studied at the Conservatorio di Musica S Pietro a Majella, Naples, and made her début in Turin in 1930 as Chrysothemis in *Elektra*. That year she made her first appearance at La Scala as Maria in Pizzetti's *Lo straniero*, and sang there regularly until 1943, and again from 1948 to 1951. She appeared at Covent Garden in 1937 and 1939, and with the Scala company there in 1950; she was at the Metropolitan during the 1938–9 season. Among the roles she created were Manuela in Montemezzi's *La notte di Zoraima* (1931, Milan), Roxanne in Alfano's *Cyrano de Bergerac* (1936, Rome) and the title role in Respighi's *Lucrezia* (1937, Rome), all of which she sang with her customary involvement.

Caniglia sang most of Verdi's lyric-dramatic soprano roles, from Leonora in his first opera, *Oberto*, produced during the Verdi year (1951) at La Scala, to Alice in Toscanini's *Falstaff* (1935, Salzburg). She was much admired as Tosca, Adriana Lecouvreur and Fedora and recorded several operas with Gigli including *Tosca*, *Un ballo in maschera*, *Aida* and *Andrea Chénier*; but she is heard at her best as Leonora in *La forza del destino* under Gino Marinuzzi, where her gifts as a genuine *lirico spinto* soprano and her generous, outgoing personality compensate for occasional technical fallibility.

Canino (It.). *See* KIT.

Canino, Bruno (*b* Naples, 30 Dec 1935). Italian pianist and composer. While he was still a student of piano and composition at the Milan Conservatory under Calace and Bettinelli, Canino won prizes in the international piano competitions of Bolzano (1956, 1958) and Darmstadt (1960), which launched him on his performing career. An imaginative and versatile musician with a strong physical technique and fluent command of a wide range of idiom, he is noted for his performance of contemporary music. He has travelled widely and has given the premières of numerous works (many of them dedicated to him) by, among others, Berio, Anzaghi, Donatoni, Bussotti, Kagel, Rihm, Xenakis and Rolf Liebermann: the music of Bussotti in particular he has consistently championed. Canino is also a sympathetic accompanist (he regularly played for Cathy Berberian), and was the piano duo partner (from 1953) of Antonio Ballista and a member of the Trio di Milano. He subsequently formed a trio with the violinist Saschko Gawriloff and the cellist Siegfried Palm. He has also worked as duettist with the pianist, András Schiff, notably at Schiff's festival of Schubert and Janáček at the Barbican, London, in 1994. Although principally a performer, he has composed several, mostly chamber, works in an avant-garde style. He was appointed professor of music at the Milan Conservatory in 1961.

Canis [de Hondt, d'Hondt], **Cornelius** (*b* ?Ghent, *c*1500–1510; *d* Prague, 15 Feb 1561). South Netherlandish composer and imperial Kapellmeister. Although several places have been suggested for his place of birth, Ghent now seems the most likely candidate. A letter concerning Canis's retirement in 1555 (cited below) mentions that he was to join his parents in Ghent, which could suggest that, as the family residence, Ghent might also have been the composer's place of birth. Moreover, the earliest documentary evidence concerning his career identifies Canis (Cornelius de Hondt) as 'zangmeester' and teacher of the choirboys in 1532/33 at the confraternity of Onze-Lieve-Vrouw-op-de-rade at the church of St John in Ghent (see Trio and Haggh). In 1539 or 1540 Canis was engaged as one of 24 collegiate canons at the abbey of St Baaf in the same city (see Bouckaert). His family line is unclear; he may have been a relative of Johann d'Hondt, *cantor* and canon of the Onze Lieve Vrouwkerk in Kortrijk. Other musicians who shared his surname include Franz Canis, a lutenist in Charles V's imperial chapel; Gillis de Hondt, singer at the church of St John, Ghent (1503/4); Jan de Hondt, an organist there (1507); and Peter Canis, who served as a tenor in the imperial chapel in Vienna from 1567 to 1583, and who was also employed as *vicarius musicus* in Kortrijk during 1563–4.

Cornelius Canis's longstanding association with the imperial court may first be traced to 1542 when he was delegated responsibility for taking four choirboys selected by Rogier Pathie to Madrid. It is possible that Canis succeeded Crecquillon as 'maistre de la chappelle' not long after he joined the imperial chapel. By 27 April 1547, he was *maistre des enfans*, a post held earlier by Nicolas Gombert. Nicolas Payen and Thomas Crecquillon also served in the Grande Chapelle, and both joined Canis and the organist of the imperial chapel, Johann Lestainnier, in providing the contents of Salminger's *Cantiones selectissimae* (1548). In the list of the entourage of the Diet in Augsburg (1547–8), published by Nicolaus Mameranus in the *Catalogus familiae totius aulae caesareae* (Cologne, 1550), 'Magister Cornelius Canis' is described as 'praefectus sacelli'.

Beginning in 1544, there is evidence of significant gains in Canis's reputation. Gardano's publication of his motet

Ave sanctissima Maria in that year surely came about as a result of the visit of the imperial chapel to Italy in 1543. Attaingnant's inclusion of a work by him (along with others by Crecquillon and Clemens non Papa) in a chanson collection of 1546 was probably occasioned by the meeting of the Order of the Golden Fleece in Utrecht in January, 1546 – a meeting attended by Charles V, François I and Henry VIII. Canis received a token of apostolic favour on 7 August 1548. On 28 July of the following year, he accompanied Philip II to Ypres and, according to the archival accounts of that city, 'iiij Kannen van Wine' were awarded to 'Cornelius Canis, Zancmeestre vanden coninghinne', a mode of address that could be mistaken to mean that he also served as *maître de chapelle* to Mary of Hungary (in fact, Benedictus Appenzeller held the latter post). Canis was awarded another royal prebend (at St Baaf Cathedral, Ghent) on 15 June 1551. Still more pensions followed in 1553 in connection with his appointments as abbot of Floresse and of Notre Dame in Middelburg. In addition, the list of exemptions and subsidies for members of the imperial chapel (dated Brussels, 3 June 1553) shows that at this time he had 12 choirboys in his charge.

By early 1555, Canis was obviously considering retirement. Sigismund Seld, the Bavarian ambassador to the court of Charles V, wrote in a letter to Duke Albert V of Bavaria (28 April 1555) that Nicolas Payen was to succeed Canis as *maître de chapelle* in Brussels. Seld went on to anticipate the effect Canis's departure might have on the music at court, stating that 'musica reservata will become still more the fashion than heretofore, inasmuch as Cornelius Canis could not well reconcile himself to it'. In a letter of 15 September he reported that Canis had already left the imperial court for Ghent, taking with him generous benefits and complete freedom to travel. Canis's departure thus came shortly before the abdication of Charles V, who renounced his powers in the Netherlands to Philip II on 15 October 1555 and his control of Spain, the Italian lands and the colonies on 16 January 1556. All appointments and benefits had to be renegotiated at this time, and perhaps Canis took leave of (or was dismissed from) the imperial court in anticipation of this succession. An official register of the imperial chapel lists those employed there in 1557 as well as those who had left or died since the previous list. The presence of Canis's name in the latter group confirms that he had in fact left the imperial service by 1557.

On 16 June 1557 Canis was appointed chaplain of St Maarten and canon of Onze Lieve Vrouwkerk, both in Kortrijk. According to Hellin's *Histoire chronologique des évêques et du chapitre exemt de l'église cathédrale de Saint-Bavon à Gand* (Ghent, 1772), he died while in the service of Emperor Ferdinand I, but there is no compelling evidence to support this assertion.

Canis's surviving works include two masses, some 35 motets for three to six voices, and 31 chansons. Most of his compositions survive in manuscripts and publications that originated in the Low Countries or Germany from the period 1542–58, the years of his greatest renown. The sacred music shows a superb contrapuntal skill in both the extent and variety of imitative devices employed. A typical motet, such as *Ave sanctissima Maria* or *Tota vita peregrinamur*, includes a host of contrapuntal procedures: widely-spaced, strict imitation, voice-pairing, reworking of motifs in new contrapuntal contexts, stretto, compact imitation of short motifs and free counterpoint. A similar diversity characterizes Canis's melodies, which range from elegantly profiled lines of considerable proportions to short, self-contained motifs that rely on repeated notes and cadential patterns for their decisiveness. His greatest mastery is in the controlled contrast between broad and compact imitation, and between sweeping and square-cut melodic profiles.

The chansons also reflect a variety of approaches. Several are based on pre-existent models by a diverse group of composers including Claudin de Sermisy, Courtois, Gombert, Janequin and Pathie. In these Canis used cantus-firmus technique, generally employing the superius or tenor of a four-part original as one of two canonic voices in his own five-voice setting. The superius of Janequin's *Réconfortez le petit cueur de moy*, for example, appears in canon in the two highest voices of Canis's setting, with the result that a simple Parisian chanson is transformed into a highly complex contrapuntal fabric – one that Bartha called the 'motet-chanson'.

The presence of such men as Claudin, Courtois and Janequin among the composers of Canis's models illustrates his awareness of the Parisian chanson – a fact that helps explain the style of some of his own freely composed chansons for four voices. These pieces cross the line traditionally drawn between the Parisian and Franco-Flemish chanson, combining systematic and extended imitation with such Parisian traits as the use of short, balanced phrases, cadential formulae, dactylic rhythmic gestures, repeated notes and homorhythmic groupings.

LAWRENCE F. BERNSTEIN

Cañizares (Suárez de Toledo), José de (*b* Madrid, 1676; *d* 1750). Spanish dramatist and librettist. He began writing zarzuela texts following the model established by Calderón and others but later developed the form in response to changes in musical taste and style; he likely had an active role in shaping its conventions as 'censor de comedias' for the Madrid theatres early in the 18th century. His texts call for generous musical participation in the form of songs, ensembles, arias, recitatives, *bailes* and minuets. Cañizares worked with all the important composers of his day in Madrid; his best known zarzuelas are *Salir el amor del mundo* (1696) with music by Duron and *Accis v Galatea* (1708) set by Literes. Though the quality of his dramatic verse is inferior to that of others in the post-Calderón generation of librettist-dramatists, his influence on the 18th-century zarzuela cannot be overestimated.

LOUISE K. STEIN

Cannabich. German family of musicians. They were active at the courts of Mannheim and Munich.

(1) Matthias [Martin] **Franciscus** [Franz, Friedrich] **Cannabich** (*b* *c*1690; *d* 12 Oct 1773). Flautist and composer. The earliest known reference to him occurs in a list of the musicians at the Margrave of Baden's court in Rastatt in 1706. In Düsseldorf on 1 January 1715 he married Anna Margaretha Essers (*d* 1725), by whom he had four children; he served there as flautist to the Palatine electors Johann Wilhelm and (from 1716) Carl Philipp. He later moved with the court to Heidelberg (1718) and to Mannheim (1720). In 1727 he married his second wife Rosina Arnold (*d* 8 February 1774), who bore him five children. His name appears, in various forms, in the Mannheim orchestra lists from 1723 to 1773, although by 1756 he had retired; he earned a substantial salary and gave flute lessons to Elector Carl Theodor until 1752. He composed a set of six *Sonate a flauto traversiere solo e basso*, op.1 (Paris, 1741–2), one of which has been edited by P. Anspacher (Wilhelmshaven, 1976), and three of the pieces in Burk Thumoth's *Six Solos for a German Flute, Violin or Harpsichord* (London, *c*1746); his name is given in both publications as 'Canaby'.

(2) (Johann) Christian (Innocenz Bonaventura) Cannabich (*b* Mannheim, bap. 12 Dec 1731; *d* Frankfurt, 20 Jan 1798). Composer, violinist andconductor, son of (1) Matthias Franciscus Cannabich. He was one of the most prolific composers of the Mannheim symphonic tradition and conducted the Mannheim court orchestra during the period of its greatest fame.

1. LIFE. Cannabich was the third of the five children born to (1) Matthias and Rosina Cannabich. He received his earliest musical training from his father. His early promise on the violin enabled him to enter the Mannheim orchestra at the age of 12 as a 'scholar' earning 50 gulden (6 May 1744), and by February 1746 he was earning 125 gulden as a violinist. After instruction in composition and the violin from Johann Stamitz, he studied with Nicolò Jommelli in Rome from about 1752 to July 1753, then followed him to Stuttgart, remaining there until February 1754. In March of that year he visited Milan, where he encountered the music of G.B. Sammartini and other Italian composers. He returned to Mannheim by 1756, when Marpurg reported that he held the position of third violinist under Stamitz and Dominicus Basconi (*d* 1758). After Stamitz's death in March 1757 Cannabich was promoted. By 1759 he was joint Konzertmeister with C.J. Toeschi, receiving 700 gulden per year (200 more than Toeschi) and carrying out new duties that included directing the orchestra and preparing music for various court occasions and performances, in particular the *académies* (court concerts) and ballets. Contemporaries considered him a 'a born Konzertmeister' (Schubart) on account of his conducting technique and violin bowing. Mozart called him the best director he had ever seen (letter of 9 July 1778). His fine musical instruction shaped some of the best performers of the century, most notably Wilhelm Cramer and Carl Stamitz.

On 8 January 1759 Cannabich married Maria Elisabetha de La Motte, who had been in service to the Duchess of Zweibrücken. The marriage produced six children (two

died in infancy) of whom (3) Carl August took after his father as a violinist and composer. Two daughters, Rosina (Rosa) Theresia (bap. 18 April 1764) and Elisabetha Augusta (bap. 11 April 1776), were also musically talented. Mozart taught Rosina during his stay in Mannheim in 1777 and wrote a piano sonata for her (? K309/284*b*); Elisabetha became a singer and studied in Italy in 1793 under a stipend from the Elector of Bavaria.

The period from 1759 to 1778 was the most productive in Cannabich's career as a composer, giving rise to over 50 symphonies and 20 ballets. In the 1760s over 45 of his works were printed in Paris, where he gained recognition through his connection with the Duke of Zweibrücken: the duke routinely invited musicians from his court and from Mannheim to stay at his palace during the winter months. According to the memoirs of the duke's court painter, J.C. Mannlich, Cannabich's first visit was in 1764; Leopold Mozart identifies another, in May 1766, in his travel diary (see L. Mozart: *Briefe und Auchzeichnungen*, i (Kassel/New York, 1962–75, 227). Also in 1766 Cannabich obtained a privilege from Louis XV to publish six symphonies and six trio sonatas dedicated to the duke and his spouse. Other publications, mostly of chamber music, followed quickly in France, Britain and the Low Countries, establishing Cannabich's international reputation. He achieved further acclaim in Paris when he won first prize for a symphonie concertante (? in E♭, 2vn, 2ob, no.42) in a contest on 29 April 1772, receiving a gold medal.

In 1774 Cannabich was appointed director of instrumental music at Mannheim, a title he held for the rest of his life; his salary was listed at 1500 gulden in 1776. Mozart and the Cannabich family became close friends during Mozart's stays in Mannheim in 1777–8. Cannabich's household was a constant centre of musical activity, and the letters of Mozart and his mother describe many performances and social occasions held there, as well as the writing, copying and playing of various compositions. The Mozart family's comments about Cannabich as a composer range from Leopold's of 6 April 1778, describing Cannabich as 'a wretched scribbler of symphonies', to Wolfgang's high praise of an overture of his in a letter of 8 November 1780.

In 1778 Carl Theodor became the ruler of the combined Palatinate and Bavaria, causing the Mannheim court to move to Munich. Cannabich became the director of the merged Mannheim and Munich orchestras on 1 October of that year, again at a salary of 1500 gulden, but the expense of the move forced him to proceed to Munich without his family; despite 35 years of service, he had to plead with the elector for a loan to defray family debts. When the family was reunited in Munich, his home again became a hub of musical activity. His dedication to young musicians was such that he requested funds to pay for firewood for extra practice sessions at his home.

At Munich, in addition to carrying out his normal duties at court, Cannabich was responsible for conducting opera performances and subscription series, and he also conducted the weekly *académies*. Perhaps because of these activities, he composed fewer works between 1778 and his death 20 years later: only 18 symphonies, a few ballets, a piano concerto and music for the melodrama *Electra* are known. No salary increases were offered, and in 1790, after Toeschi's death, Cannabich had to request additional payments to bring his income to 1800 gulden

Christian Cannabich: engraving by Egid Verhelst II, 1779

as compensation for writing the symphonies that had been the responsibility of his colleague. He composed his last symphony in 1794 in Vienna, where the unfinished autograph score, numbered 73, remains; according to Reichardt's *Musikalischer Almanach* he was there in 1796, supposedly owing to the disturbances of the Napoleonic campaigns. On 26 October 1797 Carl Theodor cut the number of his musicians from 95 to 70, and reduced the salaries of those remaining. Cannabich's salary dropped to 1200 gulden. Shortly thereafter he went to Frankfurt to visit his son Carl, and he died there at the age of 66.

2. Works. Cannabich is best known for his ballets for the court theatre and for some 80 symphonies and related works written between about 1755 and 1794. His output of concertos is, by comparison, surprisingly small. Of the symphonies, 65 exist in manuscript parts in Munich (*D-Mbs*) bearing title-pages that are numbered chronologically from 2 to 73, mostly in the composer's handwriting. Those up to no.55 date from the Mannheim period, the remainder from Munich. Cannabich's earliest symphonies, to no.18 (*c*1764), consist of four movements and show the strong influences of the Italian overture and of Cannabich's training with Jommelli. Vogler in his *Betrachtungen der Mannheimer Tonschule* identifies specific traits of Cannabich's symphonies to be 'the use of two violas for decoration, the prominence of the wind instruments, and the crescendos and decrescendos of the parts, especially the raging and fiery crescendos'. The simple triad-based themes and crescendo passages of the opening movements also reflect the influence of Johann Stamitz. Nos.19–41 employ a three-movement plan without minuets and trios. Nos.43–55, the last composed

in Mannheim, are maturer works in sonata form with expanded harmonic interest (including more extensive use of minor keys) and greater exploitation of the wind instruments, especially clarinets. The final symphonies, although never published and little circulated, are fine representatives of the mature Classical style, no doubt influenced by the composer's associations with Mozart.

Cannabich's ballets date mostly from the period 1764–78, when he collaborated with the Mannheim ballet-master Etienne Lauchery. He also wrote the music for four earlier ballets (1758–?1769) by the ballet-master François André Bouqueton. Cannabich was a skilful composer of descriptive overtures and dances, both for full orchestra and for small ensembles, winning special acclaim for his wind writing. Only two ballets are known to date from his years in Munich, no doubt because of budgetary cutbacks and the appointment of a new director (Claudius Le Grand) there.

WORKS

printed works published in Paris unless otherwise stated

STAGE

ballets unless otherwise stated

Ceyx et Alcyone, Mannheim, 1762–3, *D-DO*
Renaud et Armide, Mannheim, 1768, *Bsb*, ed. in RRMCE, lvii (1999); selections arr. for str qt (Mannheim, 1775)

(3) Carl August Cannabich (*b* Mannheim, bap. 11 Oct 1771; *d* Munich, 1 May 1806). Composer and violinist, son of (2) Christian Cannabich. His early training was with his father, but after the court moved to Munich in 1778, he studied the violin with F.J. Eck and composition with Joseph Graetz. By 1788 he was employed as one of six supernumeraries in the Munich court orchestra, and in 1794 he assumed the higher pay of a violinist who had recently died. He gained esteem as a performer, conductor and composer, and in 1796 assumed a conducting position in Frankfurt. While there he married the singer Josephine Woralek. On his father's death Carl immediately requested his position in Munich, including direction of the opera at the Nationaltheater. The position was granted, but Eck acted as Konzertmeister and conductor until Cannabich's engagement at Frankfurt was completed. In May 1800 Cannabich was appointed director of court music, receiving a salary of 1200 gulden plus an additional sum for directing the opera. In July 1805 he requested leave to travel to Paris. By 28 April 1806 he had returned to Munich, where an illness prompted him to write his will. He died on 1 May without issue at the age of 35. Cannabich's works, though popular during his lifetime, were quickly forgotten after his death. They verge on the Romantic, reflecting the style and spirit of the third generation of Mannheim composers such as Franz Danzi and Ferdinand Fränzl, who wrote his obituary for the *Allgemeine musikalische Zeitung* (viii, 1805–6, 529–30, 554–5). In addition to two operas, he wrote two large works for chorus and orchestra, of which *Mozarts Gedaechtnis Feyer*, expressing his admiration for Mozart, was the better known. His concertos for violin are virtuoso works in the style of Rodolphe Kreutzer.

WORKS

VOCAL

Orfeo (op, 3, R. de Calzabigi), Munich, 1802, *D-Bsb*; ov., as op.7 (Munich, 1802)
Palmer und Amalie (op, 3, M. Lambrecht, after C. Pigault-Lebrun: Le Major Palmer), Munich, Aug 1803, *Mbs*; 2 duets (Munich, 1803), aria (Munich, 1805) romance, v, kbd (Paris, n.d.); march, pf (Munich, 1813)
Other: Mozarts Gedaechtnis Feyer seinen Manen gewidmet, solo vv, chorus, orch (Munich, 1797); Vernehmt was zu dieser Feyer (cant.), solo vv, chorus, orch, *Mbs*; Deut[s]che Lieder am Clavier, v, pf (Munich, 1799); Lied aus der Ferne von Matthisson, pf, v (Offenbach, n.d.); Raison et folie, pf, v (Paris, n.d.); Sei canzonette, 3–4vv, op.5 (Munich, 1801); Sei canzonette (P. Metastasio), 3vv, pf, op.10 (Munich, 1802); Sei notturni, 3vv, pf (London, 1807); Terzetto, 3vv, gui, no.5 (Mainz, n.d.); Quartetto, 4vv, orch, *I-BGc*; 4 recits and arias, v, orch, *CH-W*, *D-Bsb*, *Rtt*, *WRdn*

JEAN K. WOLF

Cannatij [Canotij], **Camillus.** *See* ZANOTTI, CAMILLO.

Cannicciari, Pompeo (*b* Rome, 1670; *d* Rome, 29 Dec 1744). Italian composer. From 1694 to 1709 he was *maestro di cappella* of Santo Spirito in Sassia, and then of S Maria Maggiore until his death. His successor there, Sante Pesci, was his pupil. As a member of the Congregazione dei Musici he was *Guardiano della sezione dei maestri* in 1698 and from 1715 to 1718. A representative of the Roman school, he followed Benevoli's sacred polychoral style, with a contrast between tutti and concertante passages. He wrote pastoral masses, occasionally with instruments supporting the voices; he had a preference for writing polychoral masses and psalms. Cannicciari's significance lies in his skilful handling of contrapuntal, polychoral writing, which he deliberately held in balance with a melodically expressive concertato style.

WORKS

42 masses, 4–6, 8–9, 12, 16vv; 1, 4vv, 2 vn; 1, 9vv, 2 vn; 2 ed. in Lück, 1 ed. in H. Bäuerle, *Altklassische Messen*, iv (Leipzig, 1927)
146 grad, 1–6, 8vv; 1, 3vv, 2 vn; 1, 3vv, org, vc
120 off, 1–2vv, chorus; 1–5, 8vv; 1, 1v, 2 vn
266 ant, incl. antiphonae finales BVM, 1–6, 8vv; 8, 1v, 2 vn; 1, 5vv, tpt, ob, vn, vc, org
179 ps, 3–6, 8, 9, 12, 16vv; 1, 4vv, 2 vn
45 hymns, 4–7vv; 1, 5vv, 2 vn
38 responsories, 4, 8vv, org, 2 vn
56 motets, 2–4, 8vv, 2 vn; 1 ed. in Lück, 1 ed. in Musica divina, Jg.i/2 (Regensburg, 1855), 4 ed. in Documenta liturgiae polychoralis, x, xi, xiv, xv (Rome, 1961–3)

SIEGFRIED GMEINWIESER

Cannon, (Jack) Philip (*b* Paris, 21 Dec 1929). British composer of Anglo-French parentage. He studied composition with Imogen Holst at Dartington (1946–7) and with Jacob at the RCM (1948–51), where in 1960 he was appointed professor. His musical personality is characterized by a fierce individualism, reflected in his use of a forthright and uncompromising musical language. The expressive drive that he can achieve with that language, sometimes tonal, occasionally atonal, yet always direct and communicative, is evident throughout his work. From the String Quartet of 1964 (which won two awards in France) his works show an intensification of thought and an endeavour to assert the potentials of the human spirit that prompted one French critic to speak of *Oraison Funèbre de l'Âme Humaine* as 'avant-garde romantique'. Cannon's significant choral output (the choral symphony *Son of Man* was commissioned by the BBC to mark Britain's entry into Europe; the *Te Deum*, by Queen Elizabeth II for the Royal Chapel at Windsor) highlights in particular his rugged individuality and contrapuntal clarity. His songs (especially *Cinq chansons de femme* with harp and *Six Bird Songs*) have achieved extensive performances worldwide. Later works include several concentrated keyboard pieces, notably the popular *Saudade* and *Septain* (originally conceived for John Ogdon), and a symphony for the millennium.

WORKS
(*selective list*)

Ops: Morvoren (2, M. Radford and J. Laidlaw), 1963; The Man from Venus (op bouffe, 1, Laidlaw), 1966–7; Dr Jekyll and Mr Hyde (1, J. Playfair), 1973
Orch: Sinfonietta, chbr orch, 1947; Spring, sym. study, 1949; Concertino, pf, str, 1951; Fanfares, 8 tpt, 6 trbn, tuba, perc, 1963; Oraison funèbre de l'âme humaine, 24 str, 1970; Sym., 1998–9

RICHARD COOKE/RODERIC DUNNETT

Canobbio, Carlo (*b* ?Venice, 1741; *d* St Petersburg, 23 Feb/7 March 1822). Italian composer. After working for a while in Spain he returned to Italy, where he composed several ballets and in 1773–5 led the orchestra at the Teatro S Samuele in Venice; he was also a partner in Marescalchi's publishing firm. From 1779 to 1795 he served at the Imperial Theatres in St Petersburg, combining his activities as a composer with duties as first violin in the orchestra (from 1789) and deputy to Paisiello, the director of the Italian opera. In 1783–5 he again travelled in Italy, and from 1796 led the performances of the Astarita comic opera company in Russia. He wrote operas, ballets and instrumental music, and is best known for his contribution to the 'historical spectacle' *Nachal'noye upravleniye Olega* ('The early reign of Oleg', 1790). (*MooserA*)

WORKS

STAGE

Operas: L'amore artigiano (dg, 3, C. Goldoni), St Petersburg, 1785, lost lib pubd; Nachal'noye upravleniye Olega [The early reign of Oleg] (5, Catherine II), St Petersburg, 15/26 Oct 1790 (St Petersburg, 1791), collab. V.A. Pashkevich and Sarti; other songs, duets, ?lost

Ballets: Don Anchise Campanone, Venice, 1773; Le astuzie amorose, Venice, 1775; La sposa persiana, Venice, 1775; Farnace, Venice, 1776; Armida, Venice, 1777; La schiava fedele, Bologna, 1778; L'idolo cinese, St Petersburg, 1779; Don Juan (3, F. Rosetti), St Petersburg, 1781, orch pts *RUS-Ltob*; Nettuno e Egle, Venice, 1783; Catone in Utica, Naples, 1784; Arianna e Bacco (1, G. Canziani), St Petersburg, 1789, orch pts *Ltob*; Piramo e Tisbe (4, Canziani), St Petersburg, 1791, orch pts *Ltob*; Castor et Pollux (5, C. le Picq), St Petersburg, 1803
